# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

THURSDAY, FEBRUARY 25, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 2:15 p.m., in room 1224, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senators Kasten and Leahy.

## HUMAN RIGHTS VIOLATIONS IN NICARAGUA

## NONDEPARTMENTAL WITNESSES

### OPENING STATEMENT OF SENATOR KASTEN

Senator KASTEN. The subcommittee will come to order.

This afternoon we will receive testimony on the situation in Nicaragua, especially as it relates to the current policy of the Sandinista junta toward the Miskito Indians.

I called this hearing because we are fortunate to have with us the elected representative of the three Indian tribes of Nicaragua.

Mr. Stedman Fagoth Muller is in this country for talks with the U.S. Government, the Organization of American States, various human rights groups, and the United Nations, in an effort to bring attention to the policy of the Sandinista government toward his people. He will be our first witness.

Following Mr. Fagoth's testimony, we will have senior representatives of the Department of State and the Agency for International Development who will present their agencies' views of the current situation in Nicaragua.

As a Senator from Wisconsin, I have a special interest in the people of Nicaragua. Nicaragua has been my State's partner in the Partners of the Americas Program for the past 17 years.

Since 1965, the Wisconsin-Nicaraguan partners have developed a worthwhile working relationship on a people-to-people basis. The goal of the Partners Program is to mobilize resources at the community level for technical and cultural projects, based on the principles of self-help and mutual benefit to both sides of the partnership.

Wisconsin volunteers have assisted in many projects in Nicaragua. This assistance has included a book in the Miskito language on raising poultry; studies on alternate foodstuffs; potable water systems; nutritional training and nutrition centers; agriculture enhancement; the development of income-generating projects; cultural exchanges; community education; and primary health care and midwife training.

As chairman of this subcommittee, it is my responsibility to examine closely the U.S. Government's economic assistance programs—the benefits of those programs and our policies behind them. Since 1979 Nicaragua has received approximately $125 million in economic assistance from the United States. Many of those projects funded by this aid have been abandoned since the Sandinistas closed off the Atlantic coast of their country.

It is a widely held view that the United States backed the Somoza regime and has, through lack of aid since the revolution, thrown the Sandinista junta into the arms of the Cubans.

It is interesting to note that over an 18-year period, the U.S. Government provided the Somoza regime with $252 million in economic assistance; while on the other hand, the United States has provided the Sandinista government over a 2½-year period with $125 million in economic aid. If you average that out, it is $14 million per year during the Somoza regime and $50 million per year during the Sandinistas. If that can be construed as throwing them into the arms of the Cubans, I feel certain that any number of countries would like that same kind of treatment.

I believe that aid shows that this country was hopeful that the revolution in Nicaragua would improve the lot of its people.

The Sandinistas promised a mixed economy—yet are expropriating individuals' property.

The Sandinistas promised respect for human rights—yet churches have been burned; entire villages wiped out; innocent people imprisoned, tortured, and murdered.

Jose Estaban Gonzalez, the national coordinator for the Permanent Commission on Human Rights in Nicaragua is quoted as saying last February that "the Sandinista regime uses methods of torture and repression very similar to those applied in the past by the Somoza dictatorship." Subsequent to that statement, the Sandinistas suspended the activities of this "permanent" human rights group and ordered the files of the organization handed over to the Ministry of Justice.

The Minister of Defense, Humberto Ortega, stated 4 months ago that those who opposed the government "will be hanging from the lampposts along the roads and the highways" of Nicaragua.

This, in my opinion, shows little or no respect for human rights.

The plight of the three Indian tribes of the Atlantic coast is a case in point. How many have been forced from their homes? How many have been murdered, tortured? Is this not a systematic execution of a race?

Yesterday, the President of the United States spoke on his Caribbean Basin Initiative before the Organization of American States. In that speech he said, "The Nicaraguan government even admits the forced relocation of about 8,500 Miskito Indians, and we have clear evidence that since late 1981 many Indian communites have been burned to the ground and men, women and children killed."

Since January of this year, travel to the Atlantic coast of Nicaragua has been forbidden. Our Embassy has been unable to obtain permission to go into this area to confirm the claims of atrocities made by the Indians who have fled by the thousands into Honduras. The Sandinistas have taken over the independent radio station built with AID grants. It was built, incidentally, by the Wisconsin-Nicaraguan partnership on the east coast, and now that station is being used for military broadcasts.

Nicaragua has become an armed camp. Since 1979, their armed forces have tripled in size and become the largest army in Central America. Nicaraguan airfields are being hardened and enlarged—large enough and sturdy enough to support MIG fighters. They are expanding their arsenal to include tanks—Soviet tanks—light aircraft, helicopters, heavy artillery, and now SAM-7 missiles.

I think we have to ask ourselves if we are prepared to support—through our foreign aid programs—this repressive regime, a regime that in the third verse of its national anthem describes the United States as "The Yankees, the enemies of mankind."

Senator Leahy has a brief opening statement, and after Senator Leahy's statement we will proceed with our first witness. Senator Leahy?

### STATEMENT OF SENATOR LEAHY

Senator LEAHY. Thank you, Mr. Chairman. My statement will be brief.

I am sorry and somewhat concerned about the extraordinarily short notice of the hearing on such an important matter. The President of the United States is now requesting several hundred millions of dollars for his Caribbean Basin policy. He will be asking for considerably more—considerably more than the amount of money mentioned in his OAS speech yesterday.

This committee will have a great deal to say on how that money is going to be spent—and will.

I have requested some weeks ago that we have major oversight hearings on El Salvador and the whole of Central America, including Nicaragua. I would hope that when we do have those hearings, that we might do it with a little bit more notice than this hearing has had.

I have done my best, on short notice, to rearrange my own schedule but I am going to have to leave here within the hour because only so much could be rearranged.

I did take advantage of the fact that as one of the members of the Appropriations Committee who is designated to serve also on the Intelligence Committee on behalf not only of the Senate but especially the Appropriations Committee, we had briefings regarding this part of the world earlier today.

I did raise some of the questions that are raised by the nature of this hearing, asked our intelligence community their best knowledge of it. They were good enough to give that to me in a classified manner. I would assume that everything we will hear today will jive completely; but I will also be interested, naturally, if it does not.

I would hope, too, that we go into this on these questions of human rights violations, I think they are extremely important. I think it is important for us to consider this before we vote more money for Central America, before the President's actual request comes up here.

We should go into the whole question of human rights violations involving any country that might be seeking any money from the United States.

I would hope that we would also go to some well-respected independent groups outside the Government, such as Amnesty International or groups like that, ask them also for their analyses of human rights violations by any country that we might send money to—whether it is Nicaragua, El Salvador, Guatemala, or any other country, as part of that procedure.

I am particularly interested in the Miskito Indians. I raised this issue about 1½ weeks ago at some length with the Archbishop of Nicaragua and with both opposition party leaders, those opposed to the present junta and with members of the junta. As might be expected, I received conflicting answers from those in or those outside the government.

Again, it will be helpful to hear the answers today because I will have to leave. Because of the short notice of this hearing I will have some questions, I suspect, for the record subsequently.

Senator KASTEN. Thank you. I would just like to say that Senator Leahy and I have exchanged correspondence on the importance and the necessity of having oversight hearings on El Salvador and the entire Caribbean Basin Initiative. This subcommittee will have those hearings.

This particular hearing came up almost as an emergency, as a result of my becoming aware of Mr. Fagoth's trip to the United States.

Also, we tried to call Amnesty International Thursday and Friday of last week. Unfortunately, they seemed unwilling or unable to return our telephone calls over 2 days. I am hopeful that we would be able to involve people such as Amnesty International and others, either as witnesses or certainly for different types of information.

We would like to proceed, then, to our first witness. Mr. Fagoth, I would like to welcome you here this afternoon. You may proceed with your statement.

## MISKITO INDIAN TRIBE

## STATEMENT OF STEDMAN FAGOTH MULLER, LEADER, MISURASATA; MEMBER, MISKITO INDIAN TRIBE, NICARAGUA

## ACCOMPANIED BY COL. SAMUEL T. DICKENS, USAF (RET.), CONSULTANT, INTER-AMERICAN AFFAIRS, AMERICAN SECURITY COUNCIL

### PERSONAL HISTORY

Mr. FAGOTH. Senators of the United States, allow me to read what in a few pages tells the most dramatic story of my people in their history.

My name is Stedman Fagoth Muller. I am a leader of Misurasata, an oganization of Miskito, Sumo, and Rama Indians from the Atlantic coast of Nicaragua.

I was born in Bilwaskarma on the Rio Coco in Nicaragua on August 5, 1953. I am married to Dina Rivera; we have no children. My mother's name is Edna Muller. Today she is a refuge in Honduras. My father, Phil Fagoth, is dead.

About 15 days ago, the Sandinistas profaned my father's grave when they blew it up with dynamite. I went to San Esquipulas where he is buried a week ago to repair the damage. His gravesite is just a few meters from my home as the Sandinistas would not allow a proper Christian burial. We had to bury him within 4 hours of his death this past July when the Sandinistas took over the house by force.

## HISTORY OF MISKITO INDIANS

The Miskito Indians are an indigenous, democratic, communitarian tribe who have lived in peace for centuries. Today, my people are being massacred, forced into concentration camps and in fact subjected to a policy of genocide by the Sandinista government. I would like to give you a brief description of the relations between the Sandinistas and the Miskito Indians.

Before I begin, it is important to understand a little about my people. We are organized into 256 communities, each of which has a council of elders of 11 men and women, chosen by the community. I was a member of the council of elders from the community of San Equipula in 1973. The council of elders sent a representative to the Magna Assembly where important decisions are made for all the Indian people.

## SANDINISTA ACTIVITIES AGAINST MISKITO INDIANS

In April 1979, we were in contact with the Sandinista front because we wanted to know what their policy for minorities would be. A group of 115 Miskito Indians, led by a member of the council of elders, joined the Front, but when the Sandinistas began to indoctrinate the Miskito with Marxist-Leninist theories, they returned to the Atlantic coast.

The Sandinistas gained the power to govern Nicaragua on July 19, 1979. That first week they attempted to replace each of our 256 council of elders with Sandinista defense committees.

By the first week of August 1979, various Miskito leaders were arrested. The second week of August 1979, the Miskito Indians demonstrated against the government because there were shortages of food supplies which were controlled by the Sandinistas.

The first week of September 1979, lumbering, a major economic activity of my people, was prohibited by the Sandinistas.

The third week of September 1979, Lyster Athers, a leader of the Miskito, was arrested and taken to Puerto Cabezas. He was murdered the third week of October.

The first week of October 1979, the Sandinistas' literacy campaign came to the Atlantic coast, interfering with our traditional educational system. The presence of Cuban teachers with their Marxist-Leninist dogmas caused a great outcry among our people.

We met with the Sandinistas on December 19, 1979, to see if these problems would be worked out. The Sandinistas agreed to remove the Sandinista defense committees from the Atlantic coast, to return the remains of Lyster Athers and punish his murderers. This never was done.

During the first and second week of January 1980, the Sandinistas expropriated Indian land. The Yula Indian Clan property southwest of Puerto Cabezas, the Tuapi Indian Clan property north of Puerto Cabezas, the Tasbapauni Indian Clan property were all expropriated.

Another agreement was signed by the Miskito Indians and Daniel Ortega, Moise Hassan, William Raminez, Carlos Curran. The Foreign Minister of the Sandinista government signed that agreement on August 5, 1980, which included a statement that 80 percent of the values of the resources would be returned to the Indians, 20 percent for the government. That literacy programs would be taught in our language—Miskito, Sumo, and Criolla; a map drawing up community boundaries be made; and punishment of the murderers of Lyster Athers, among other things. These were never initiated, still we are waiting.

A month later, Bosawas, a 9,000-square-kilometer forest belonging in common to the Sumo and Miskito Indians was declared a state forest preserve.

Later in September, demonstrations lasting 3 days occurred in Bluefields protesting the Cuban presence. The Sandinistas prohibited press reports from the area.

In November to December 1980 and January 1981 severe repression—arrests and murders—occurred because the Miskito Indians rejected the Sandinistas' plan for the Atlantic coast. This plan would have made our community property into state property and would have given the Sandinistas the power to choose our leaders. Many leaders, including myself, were arrested. The Miskito exodus to Honduras began in March 1980, when 15,000 to 25,000 Indians demonstrated against the Sandinistas in Waspam, Puerto Cabezas, and Minerales.

While I was in Seguridad Estado Jail No. 3 in Managua on March 18, 1981 at 7 o'clock in the evening Tomas Borge, Juan Jose Ubeda, and Raul Gordon came to my cell and warned me that Sandinismo would be established on the Atlantic coast, even if every single Miskito Indian had to be eliminated.

Until May 1981, I was under house arrest after having been tortured for 59 days by the Sandinistas. I was taken out of jail and put under house arrest because I agreed to go to the Atlantic coast to calm things down. I had also agreed to go to Russia to study the social sciences. I preferred to escape to Honduras instead.

On May 20, 1981, 80 percent of the inhabitants of Sandy Bay fled to Honduras to escape Sandinista repression.

On July 21, 1981, members of the Moravian Church were persecuted and imprisoned because they had been helping the Miskito refugees in Honduras.

Rev. Tillet Mullins, the head of the council of elders, was arrested on August 22, 1981. When he was released on bail, he and half of the council of elders fled to Honduras.

On October 24, 1981, a 14-year-old boy, Felix Peralta, was killed in Saupuka because he shouted, "Long live the Misurasatas" in front of a Sandinista people's army patrol. Over 50 Indians were taken prisoner.

On December 23,1981, there was a massacre in Leimus—35 people were buried alive, some were dug out by their relatives. One survivor, a 19 year old named Vidal Poveda from Waspu lives today in a refugee camp in Honduras.

On December 27, 1981, another massacre occurred in Pilpilia and some Miskitos escaped to Honduras. The inhabitants of Carrizal, Santa Isabel, more than 22 communities of Indians were moved from their homes to Leimus. Also, 300 people from Puerto Cabezas were captured.

On December 30, 1981, 14 people from San Carlos were imprisoned.

From January to February of this year, 49 churches have been burned to the ground in our towns and communities. The council of elders from 42 Miskito communities have determined that at least 393 Miskitos have been murdered and close to 3,500 Miskitos are missing. The council of elders from these communities have many names, but because many of their relatives are in concentration camps those names are not yet public. These concentration camps are located in Risco de Oro, 17 kilometers near Rosita.

Towns along the Rio Coco, which is the border between Honduras and Nicaragua, have been attacked and burned. Some towns are now deserted. Some towns have been subjected to strafing attacks by Sandinista aircraft. At least 10,000 Miskito have fled to refugee camps in Honduras.

I have presented this information to the Inter-American Human Rights Commission.

The Episcopal community of Nicaragua has expressed its concern about these violations of personal rights in a pastoral letter last week. It was printed in La Prensa, in Managua on Friday morning, February 19, 1981.

I call on all those who care about these things to demand that the Sandinistas stop these atrocities.

Miskito Indians are being murdered, burned, buried alive, forced into concentration camps, forced to march to these camps without proper consideration for women, children, the elderly, the weak and sick; our villages, homes, and animals are being destroyed by the Sandinistas.

What I have described is our struggle to preserve our identity, our customs, our traditions, and our lives in the face of ideological-political penetration by the Marxist Sandinism.

## REASONS FOR ATTACKS ON MISKITO INDIAN CULTURE

I feel the Sandinistas are destroying the Miskito Indians and their culture for three reasons:

One, they are determined to carry out a program of indoctrination to convert all the Nicaraguan people to Marxism-Sandinism. The Miskito Indian 256 communities are a specific minority who have cultural traditions and a democratic system of governing which is foreign to the Sandinistas. This unity presents a threat to them. When they found out they could not make us submit to their Marxist-Communist beliefs, they became determined to eliminate the Indian unity.

Two, the Miskito Indians effectively control an important economic sector of the country, extensive forest lands and important mines. The Sandinistas want this economic sector to be controlled by the government rather than any single group.

Three, this same sector of the country, the entire eastern part of the Caribbean Atlantic coast, has important strategic value. The important airfield and military facilities at Puerto Cabeas, as well as the Port of Bluefields, are vital to the buildup of military strength to the Sandinistas. They do not want the Miskitos to exercise continued control over this region and they want to develop their buildup in secrecy.

Colonel DICKENS. He is in your hands to respond to any questions that you might have.

Senator KASTEN. Thank you. I wonder if you, sir, could introduce yourself. You are Colonel Dickens, and you are going to act as his interpreter; is that correct?

Colonel DICKENS. Yes; that is right. I am with the American Security Council as a consultant. I am Col. Sam Dickens, USAF, retired.

Senator KASTEN. Thank you, Colonel Dickens.

## POPULATION MAKEUP OF MISKITO INDIANS

Mr. Fagoth, you have 256 communities which you represent. How many people live in this Atlantic coast region of your country?

Colonel DICKENS. Approximately 190,000 people.

Mr. FAGOTH. It is 1,500 Ramas, 15,000 Sumos, and the big majority is Miskito, 174,000 to 175,000, more or less.

Senator KASTEN. What is the ethnic makeup of these people?

Colonel DICKENS. They are native Indians, legitimate native Indians.

Senator KASTEN. I think it is important to understand, first of all, the emergency nature of these hearings and the emergency nature of your visit here.

The atrocities began in late December, January, and in February. That is something that is happening right this moment.

Now, it is my understanding that the Sandinistas claim that they are moving the Indians out of their villages for their own safety, and the Sandinistas also claim that they are moving the Indians out of their villages because they are collaborating with the anti-Sandinista forces.

Now, can you tell us about the anti-Sandinista activity, if any, in that area before your people were forcibly removed? In other words, what was taking place? Was there any kind of anti-Sandinista activity taking place in that northeastern area before your people were forcibly removed?

Let me expand on that. Specifically, was there any fighting between government forces and anti-Sandinista forces; were the Indians in any way involved in any actual fighting?

Colonel DICKENS. That is one of the most false statements that the Sandinistas have been making while massacring the people. If they think that they are removing these people in order to protect the communities, why do they think that they have to fear our communities? Why would they have to burn them to the ground?

If they are trying to protect our people, why do they feel it necessary to burn someone alive?

The February 13 that just passed, in this particular town of Hassan community this lady who had just given birth to a child, she was in the pain of birth, and because she could not walk the 3½ days of forced march to the camp they set fire to the house. The baby died. It is buried right there at the steps of the church. Her husband, the lady's husband who buried her, is now in the refugee camp.

I ask the Sandinistas, is it necessary to do that in order to protect the Indians? Is it necessary to burn these towns, when in fact these towns are on the Atlantic coast and they are not on the frontier, to say that it is necessary to do that to protect the Indians? Let the Sandinistas answer that question. And then have them say that they are moving us in order to protect us.

## ANTI-SANDINISTA ACTIVITIES

Senator KASTEN. Was there any anti-Sandinista activity in this area before your people were forcibly removed?

Colonel DICKENS. The anti-Sandinista activities on the North Atlantic, they started to develop the first week that the Sandinistas took power. They started precisely when they wanted to destroy our organization. They wanted to take away the council of elders and substitute it with defense committees, and that is why I want to say that these anti-Sandinista activities are not recent because in the very beginning they were against our way of life.

Senator KASTEN. Thank you. I have some additional questions, but at this time I would like to ask Senator Leahy if he has some questions.

Senator Leahy?

Senator LEAHY. Thank you, Mr. Chairman.

## SELECTION OF FAGOTH TO HEAD MISURASATAS

I wonder, Mr. Fagoth, the Sandinista government has originally picked you to be the leader of the Misurasata?

Colonel DICKENS. I would like to clear up that point.

Senator LEAHY. As he clears up that point, for clarity, could he tell how he got into it, how long he was there, and how he left?

Colonel DICKENS. Is the question referring to him being jailed?

Senator LEAHY. No, no, I am talking about they having picked him. Obviously, he served for a period of time and then left. Did that come right at the time he was jailed, before, or how? Just give me the sequence.

Colonel DICKENS. I want to let you know that not in a single moment the Sandinistas selected me to run or manage, or be part of them, or to occupy any single representative position for his country. It was the minorities and the groups of his people that did that.

The relationship that we have always maintained with the Sandinistas, unfortunately, has always been on the defensive because they have always been attacking the principles of the way we live. That is the way that this should be developed, this whole thought.

It is in fact exactly for those reasons that he is here before you now.

I would like to say the following, ask all the questions that you believe necessary so that I can be able to answer and inform you, that you wish to ask, related to this situation.

Senator LEAHY. So I understand, then, the Sandinistas had nothing to do with picking him originally to head the Misurasata. Am I correct in that?

The Sandinistas had nothing to do with choosing him, he was elected totally independent of the Sandinistas?

Colonel DICKENS. That is correct, by his people. If it had been in the hands of the Sandinistas to do this, they would have selected him in order to put him into jail.

Senator LEAHY. I understand.

Colonel DICKENS. Or to die.

Senator LEAHY. I asked the question because on August 26, 1981, the Washington Post had an article about discontent growing on Nicaragua's east coast and said that Mr. Fagoth had been picked by the Sandinistas.

Colonel DICKENS. I can give you the day, the date, and the hour in which I was selected by the people.

Senator LEAHY. I am not arguing the point with Mr. Fagoth, I simply want him to know what was reported here.

Colonel DICKENS. Yes, he understands that you were not suggesting that.

### DETAILS OF FAGOTH VISIT TO UNITED STATES

Senator LEAHY. Your visit to the United States now, Mr. Fagoth, was that arranged by our State Department, or how did you come to be here in the United States now?

Colonel DICKENS. In relationship of the visit I want to say two things.

First, to answer your question and also to say a bit more which you have not asked because I think it is worth it to put it out in front, lay it out in front of you.

The American Security Council—he was saying the Council of Security—he was invited by that institution in order to denounce, precisely, to make statements so that he would be here to be able to inform about the situation.

But I say another thing in order to denounce the actions taken against the people, the Miskito people with clear evidence, with proof in our hands. We will leave copies of information with you of communities of people that have disappeared. A number of names are there. Some, their families are concerned about whether they will be searched after, that they are not persecuted.

I was missing a little bit of the point there, but some names are not put down because they are afraid that they would be persecuted if they revealed their names.

In the second place, to invite the honest newspapermen so that they will go to the places where these things occurred. You do not have to believe him this afternoon, but come to the places where these things have occurred and see it for yourself.

That is why we would give you names and exact places of genocide that has been committed by the Sandinistas because there is a serious problem in the United States because the newspapermen go to Central America. They go to say about how in El Salvador the people are being attacked by junta, a rightist junta, a reactionary rightist junta.

But these newspapermen do not have the dignity to give their presence, to appear in Nicaragua and to see how a Marxist government is committing massacre against their people. That is why I am extending the invitation to these newspapermen so that the Government of the United States before making historic decisions about Central America, they have exact information and data about the real situation.

The third point, distinguished Senators, I would like to make out a call to the United Nations, specifically to the Commission on Human Rights because apparently I have the feeling of their attitudes toward human rights, that it is not going in the proper way, it is in an erratic manner. That they are ready to announce human rights violations in El Salvador, Chile, Argentina, et cetera, et cetera., but why does not this Human Rights Commission see what is going on in Nicaragua?

Are we human, also? Is not this of such magnitude to be of interest and to be compared with other human rights? I am not accusing any institution.

As humans that we are, we think that we are entering into that competition as well.

Go to Nicaragua, to the Atlantic coast, dirty their boots. That they go to the communities, go to the indigenous population communities, see where there are grave sites of common burials so that they gain exact information and not go on with the typical——

What is really upsetting him is that people are going to Managua and taking their drinks there at a bar in a hotel, doing this in the best hotels and restaurants in the capital. They do not dirty their boots in the outside areas.

Senator LEAHY. Mr. Fagoth, I wonder, as I have a passing interest in these hearings as a member of the committee, I wonder if I might just slip a word in here.

Colonel DICKENS. Please, excuse him.

Senator LEAHY. No excuse is needed. I find this fascinating, but I do want to get one word in, a couple of words in.

One, like everybody who holds public office I on occasion may have my disputes with our press. But in strong defense of the U.S. press, I first heard the possibility of killings of Miskito Indians in the American press, and I suspect much of the rest of the world did.

Subsequent to hearing about it there, I then discussed it with our State Department and our appropriate intelligence agencies. One of the local dailies, the Washington Post, has run editorials condemning killings of Miskito Indians.

I have heard our chargé d'affaires ask repeatedly members of the junta in Nicaragua for permission to travel in that area. We have at least one member of the State Department who is here in the room who was present with me on at least one of those occasions when the chargé requested permission to travel in that area.

### OAS ACTION IN NICARAGUA

You made reference to the United Nations. I wonder if you could tell me how effective the OAS might be if they were to make a human rights investigation of the situation.

Let me tell you why I ask the question. As a U.S. Senator I would like very much to see the OAS go into Central America with their own human rights commission and investigate exactly what is the status of human rights violations, whether in Nicaragua, Guatemala, El Salvador, or any other country. How effective could they be in this particular situation?

Colonel DICKENS. I think, yes, they have to be effective. But I cannot let it pass by what our authorities have said, what the council of elders has said before he came here to the United States.

They asked the Organization of American States, why do we have to ask for money in order for us to be able to come to denounce, why do we have to go looking for money in order to be able to make the trip to denounce? That they should come and see us when it is their job to be on top of all these things that are taking place in Latin America and see what is going on.

As we are in this particular place on this planet, it could be possible that there is some other place where there are people who cannot come here. Thank God that I have the opportunity to be here. I found much interest, much receptivity. I advocate that there should be no violation of human rights.

So, he has run into this attitude of receptivity that there should be no violations of human rights.

Senator LEAHY. I would hope that our Government might urge the OAS to make such an investigation.

Let me just clear up one last point. Colonel, you are part of the organization that paid for Mr. Fagoth to come here on this trip; is that correct?

Colonel DICKENS. Yes, we have been paying for all his expenses while here in Washington.

Senator LEAHY. And you received no aid from any other group, any Government group?

Colonel DICKENS. Absolutely not. From John Fisher, president of the American Security Council, a nonprofit organization.

Senator LEAHY. Thank you. I was not asking if there are other groups, I meant specifically, there was no Government agency that in any way assisted?

Colonel DICKENS. No; there is not.

Senator LEAHY. Thank you, Colonel. Thank you, Mr. Chairman.

Senator KASTEN. Thank you, Senator Leahy.

### DETENTION CAMPS

Mr. Fagoth, those of your people that have been removed to the detention camps, can you tell me how many camps there are, and where they are located?

Colonel DICKENS. That is correct, I will inform you. Today we only know of one concentration camp, it is 17 kilometers northeast of Mina Rosita. It is in the central part, it is called Risco de Oro.

The Sandinistas call this "The Promised Land," but in relationship to that there is another situation. In the 42 communities which the people have been removed from, the council of elders has a census of 35,000. The High Commission representative of the United Nations for Refugees says, or states, that there are about 10,000 Miskito Indians in Honduras. The Sandinistas say there are 10,000 in Risco de Oro.

Let the United Nations respond or tell him, where are the missing 15,000? We think that there is another concentration camp.

When he started his trip on February 14 to the United States there was no information about any other concentration camps.

Senator KASTEN. Could you tell the subcommittee anything that you know about the conditions in that one concentration camp, are people being cared for, what is going on? There was some discussion about forced labor. What are the conditions in that camp?

Colonel DICKENS. He says that is correct but, please, note these things to be able to prove them in the future. He states that because the Sandinistas are very able to twist the words and use words. That is why he asks that you take down everything that I have said here.

In this concentration camp of Risco de Oro they eat twice a day, that is the maximum that they do, when they can. In less than 2 months, more than 60 youngsters have died.

Senator KASTEN. More than 16, or 60?

Mr. FAGOTH. More than 60.

Colonel DICKENS. More than 60 children.

Senator KASTEN. More than 60 children have died.

Colonel DICKENS. That is easy to check out by counting the burial places. If they were not living in an inhuman state, the 60 would not have died. That is a judgment or a gage of the situation.

In the second place, many of our young people are being entered into labor without any wage. The United Nations states that this is being done, this work is being done on the basis of them being fed. They are working for their food because there is such a program.

But I call it forced labor. Why do I call it forced labor? Because the Indians do not want to do that kind of work. They would prefer to be at the place at the river fishing, doing their things and not being in this mountainous area that is unknown to them.

Senator KASTEN. How is it that you know so much about this camp, have you been there, or have you talked with people who have been there?

Colonel DICKENS. It would seem that I would be risking my own security in responding to this question. Nevertheless, it is not violating a trust because the Sandinistas also know that it is true, he enters and leaves Nicaragua, certainly the communities that are on the border. That is why personally he knows.

But on the other hand, it is daily contact because people are leaving and entering. This is important in order to be able to respond to your question. Their own community, the indigenous community maintains control. This community does have its direction from the council of elders, it maintains control.

Senator KASTEN. There are a couple of other questions that I have, and possibly other questions that other Senators who are members of this committee have. We will submit these questions to you in writing and ask for your response for the purpose of the record.

At this time, on behalf of the committee, I would like to thank you very much for your courageous statement and for your participation in our hearing.

I would like to ask now that Everett Briggs, Deputy Assistant Secretary for Inter-American Affairs of the Department of State, and Otto Reich, Assistant Administrator for Latin American and the Caribbean for AID come up to the witness table.

We thank you very much.

Mr. FAGOTH. Thank you very much.

Senator KASTEN. I understand that you both have prepared statements. The prepared statements will be made part of the record. You may read the statement in total or simply summarize, whatever suits your purposes.

I would like for Mr. Briggs to go first and then Mr. Reich, and then you can respond to questions to either or both of you.

Mr. Everett E. Briggs.

# DEPARTMENT OF STATE

## STATEMENT OF EVERETT E. BRIGGS, DEPUTY ASSISTANT SECRETARY FOR INTER-AMERICAN AFFAIRS

### PASTORAL LETTER

Mr. BRIGGS. Thank you, Mr. Chairman. My statement is relatively brief.

Mr. Chairman, the recent pastoral letter which was read in all the Catholic Churches in Managua on February 18 underscores the worldwide concern over the plight of the Miskito Indians in Nicaragua.

I have made available to the committee the text of that declaration in translation, an informal translation, that you may wish to make a part of the record.

Senator KASTEN. Without objection, so ordered.

[The letter follows:]

### CHURCH DENOUNCES TREATMENT OF MISKITO INDIANS

(The following is an informal translation of the communique of the Nicaraguan Episcopal Conference issued on February 18, 1982, on recent developments in the Atlantic coast of Nicaragua.)

The events that have occurred in the zone of the Rio Coco, frontier with Honduras, in the Department of Zelaya, Nicaragua, since December 1981, and that have culminated, in part, with the massive transfer of the entire Miskito population toward the interior of national territory and, on the other hand, with the flight of a considerable number of the population of this zone into Honduran territory, have had a painful effect on all the inhabitants—Miskitos, Sumos, and Ladinos of the area.

It is well known that armed encounters occurred in these months and that in this zone these encounters resulted in the deaths of many militiamen and soldiers of the Sandinista Popular Army, as well as the deaths of some uninvolved civilians. As a result of these events there are dozens of detainees and almost all of the towns along the Rio Coco have been evacuated by the army. While it is possible to explain in military terms the evacuation of these towns, nevertheless, we regret, from a human and Christian point of view, the displacement of these Indian groups that have been located in this region since time immemorial. Such displacements include the removal of the population to settlements in the interior of the republic, as well as displacements into Honduran territory where many have fled, driven perhaps by fear or by the manner, at times drastic, with which earlier ones were transferred to the settlements in Nicaragua. As pastors for all our people we feel profoundly the sorrow provoked by the uprooting from their regions of all our brothers and we wish to send them expressions of our sorrow, our worry, our paternal love, and our pastoral concern.

Our thoughts on these events:

We recognize the governing authorities' right to undertake necessary measures to guarantee the defense and the integrity of the territory of the nation.

We also recognize the autonomy of the state and its right to determine the implementation of emergency military measures in all or part of the national territory in order to defend the country.

Nevertheless, we wish to remind everyone that there are inalienable rights that under no circumstances can be violated and we must state, with painful surprise, that in certain concrete cases there have been grave violations of the human rights of individuals, families, and entire populations of peoples. These include: Relocations of individuals by military operations without warning and without conscientious dialog; forced marches, carried out without sufficient consideration for the weak, aged, women, and children; charges or accusations of collaboration with the counterrevolution against all residents of certain towns; the destruction of houses, belongings, and domestic animals; and the deaths of individuals in circumstances that, to our great sorrow, remind us of the drama of other peoples of the region.

Such are the facts that compel us to denounce vigorously such attitudes of those who have the power and force because they must be the first to guarantee observance of these human rights, and, we urge the competent authorities to take the necessary disciplinary measures to prevent a repetition of such events in the future.

On the other hand, we must remember that it is good to maintain the national integrity and that it is a right and historical duty of all Nicaragua to protect the nation's territorial integrity. We must also remember that it is a right and a duty to preserve the legitimate possession and use of the riches of the natural, traditional, and cultural patrimony of the indigenous people of the Atlantic coast. In these we encounter and recognize with pride, not only the ancestry of our race, but also the identity of our ancient, prehispanic nationalities.

Final observations:

After having expounded briefly these facts that denote a situation of disrespect to the dignity of the human person and the violation of their rights, we, as pastors, in open solidarity with the Miskitos, Sumos, and Ladinos of our Atlantic coast request of the competent authorities an objective investigation and adequate measures to promote peace and tranquility through the increase of justice in the region.

To you brothers, Miskitos, Sumos, and Ladinos, who with such love and work during so many years have been evangelized, we encourage you in the valiant effort to conserve, cultivate, and defend your Christian faith and subsequent hope. For our part, as Catholic bishops, we will do all possible in order that the task of evangelization is not halted, assuring you periodic visits of your bishop and of your priests, of your deacons and your nuns and religious workers. This Episcopal Conference, in common with our brothers in the Atlantic coast, asks of faithful Catholics their prayers and generous collaboration in the collection that will take place in all churches of the country in all the masses celebrated on Sunday, March 2, the second Sunday of Lent. Upon decreeing this day of prayer and collaboration in benefit of our brothers of the Atlantic coast, we are conscious that in making this denouncement we are not ignoring the efforts of the government to attend those harmed in the region. Our institution, Caritas Nicaragua, ought to collaborate in accordance with the wishes of the Episcopal Conference. We ask that nonecclesiastical institutions and organizations help our brothers on the Atlantic coast. We ask the government that it offer them facilities to provide this service directly to the needy.

Finally, given the impossibility of being able to directly help those that for the same reasons are in Honduran territory, we appeal to the charity of our brothers of the Episcopal Conference of Honduras and the fraternal generosity of their ecclesiastical institutions.

Under the maternal protection of Mary Immaculate in whose heart is concentrated our country, we make public this message in Granada, February 18, 1982.

ARCHBISHOP OBANDO Y BRAVO AND ALL THE BISHOPS OF NICARAGUA.

## INTERNAL POLITICAL SITUATION IN NICARAGUA

Mr. BRIGGS. The U.S. Government is seriously concerned about the fate of Nicaragua's east coast population.

After the triumph of the Sandinista forces in July 1979, the U.S. Government sought to aid in Nicaragua's reconstruction effort while encouraging the Nicaraguan government to follow a path of pluralism, a mixed economy, and respect for individual liberties. As has been mentioned here, $125 million was allocated for the purpose.

Over 2 years later, what do we find? Nicaragua today is a far cry from the pluralistic, peaceful, independent country the inter-American community had hoped for when it received the formal assurances of the new Nicaraguan government that early elections would be held and human rights scrupulously respected.

Nicaragua has become an armed camp, possessing an army of 25,000 and a militia of 50,000, with announced plans by the government of Nicaragua to double those figures. Compare these figures with Somoza's armed force of 8,000 to 10,000 men. Nicaragua has acquired Soviet military hardware, including tanks and artillery; and is spending over $20 million on French arms—including rockets.

It has been noted that the money which is being spent on arms could so much better be used for the country, and noted by none other than the President of Mexico on the 21st in Managua.

Nicaraguan pilots are currently being trained in Eastern Europe to fly MIG's, and its airfields, as you noted, are being enlarged, presumably for the same purpose. Out of a total of 6,000 Cuban advisers there, 1,800 to 2,000 are military and security personnel.

Behind this shield, Nicaragua's involvement in the internal struggles of its neighbors has deepened. It is the primary transit point for arms and explosives being supplied by the communist states to the Salvadoran and Guatemalan insurgents.

Nicaragua's persistent interference in Salvadoran affairs resulted in the suspension of U.S. aid to the Nicaraguan government in April of last year. Some aid still continues to the private sector, under strict controls. My colleague, Mr. Reich, may wish to address that.

Meanwhile, Nicaraguan aid to the Salvadoran guerrillas has continued to increase, and around 2,000 Salvadoran guerrillas have received training in Nicaragua. This training has stressed leadership, small unit command, sabotage, and demolition.

Domestically, the Nicaraguan government has gradually moved against those who joined the Sandinista guerrillas in the successful overthrow of Somoza. These are the democratic forces, including Social Democrats, Christian Democrats, and others who were long-time victims themselves of the Somoza era.

I should like to interject a comment here. It is not in my statement, but I believe it is worth taking note that in the neighboring country of El Salvador curiously enough the Social Democrats whose social reform program does not differ in any material respect from that of the Christian Democrats, are unaccountably alive with Marxist guerrillas. The alliance between their brothers of the same persuasion in Nicaragua with the Sandinistas has not resulted in any free elections or any other benefits of a pluralistic society to date.

The country's only independent daily, Nicaragua's only independent daily, the prestigious opposition newspaper La Prensa which played a key role in Somoza's downfall, has been closed down six times by the government. To say that its management feels inhibited would be to understate the current climate in which it struggles to survive.

The independent political parties face constant government-inspired harassment and restrictions on normal partisan activities.

The non-Sandinista labor unions have been severely restricted in their activities by the government; strikes have been outlawed.

The church hierarchy has been attacked by the pro-Sandinista press, and Managua's Archbishop Obando y Bravo—possibly the most popular figure in Nicaragua—has been banned from holding Sunday mass on television—a longstanding tradition in Nicaragua. The bishop's statement on the Miskito Indians has just now been denounced in terms which might charitably be described as "menacing" by the Sandinista government.

The private sector has been affected by arbitrary expropriations, denial of credit, Sandinista-orchestrated labor unrest, and by the 4-month imprisonment of three private sector leaders in October for writing a letter which raised questions about the future of the Sandinista revolution.

I might also add parenthetically that the terms of their letter were in many respects less harsh than the statement by the bishops.

## HUMAN RIGHTS SITUATION OF THE EAST COAST POPULATION

Most recently, and of immediate concern to this meeting today, the Nicaraguan government has taken a number of repressive measures against its east coast population. I shall not read the text of my statement now, I think we have heard about those in dramatic detail by one who is obviously much more able to express the views of his people and their fate than someone in Washington.

The native populations are not the only minority being persecuted or harassed by the Nicaraguan government. There are reports of harassment of the black, English-speaking population in the Bluefields region, apparently stimulated by their resistance to being taught communism by Cuban advisers.

Despite all these actions by the Nicaraguan government and at the risk of incurring criticism from those in this country who believe the United States should no longer countenance such an appalling performance, the administration has sought to keep open lines of communication with Nicaragua in the hope that there might yet be a turnabout.

## UNITED STATES-NICARAGUAN RELATIONS

Assistant Secretary Enders' visit to Managua on August 11 and 12 of last year sought to find a way to normalize our relations. Immediately after his visit, we submitted proposals to the Nicaraguan government designed to meet some of its concerns. Other proposals were contemplated. Unfortunately, the Nicaraguans chose not to reply in kind.

To date there has been no sign of Nicaraguan interest in moving to alleviate our concerns which are also the concerns of their neighbors and a widening number of countries and interested groups beyond Central America.

Again parenthetically I might note that the Socialist International was to have held a meeting in Caracas last week. The meeting was canceled.

The information we have was that it was cancelled because of the opposition of social-democratic parties in this hemisphere which did not want the Sandinistas to attend, and the way to get out of the problem was to cancel the meeting.

Now, why do we then say the door remains open? So long as the vestiges of pluralism are present in Nicaragua, we shall keep trying to find a means to reach the current leadership. That leadership itself is not monolithic; there is no one individual—as in Cuba—calling the shots yet.

We have a new ambassador who presently will arrive at his new post, and he will be assessing the situation. There are some recent indications of some willingness on the part of the Sandinistas to lessen restrictions on the political parties and the private sector. We shall be studying these carefully.

It goes without saying that we want good relations with Nicaragua. I think our record proves that. But it is up to Nicaragua whether this will be possible. There can be no improvement as long as Nicaragua continues to support the Marxist guerrillas in El Salvador; as long as the promise of the 1979 revolution remains unfulfilled, and the principles then enunciated by the Nicaraguan government are being systematically betrayed. The fate of the Miskitos is a most dramatic symbol of that betrayal.

I think one last comment, Mr. Chairman, I would make, that in the Department of State we have an interesting symbiotic relationship with a number of human rights organizations—symbiotic may strike some present here as an odd way to put it, but I like the word. We work together—not always at cross-purposes—throughout the hemisphere.

I would hope that in response to your initiative in holding these hearings and others which have taken place today, that some of the American human rights organizations would now show the kind of keen interest in the problem in Nicaragua that they have in problems elsewhere.

Thank you, Mr. Chairman.

Senator KASTEN. I share your hope and your concern. Thank you for your statement.

Mr. Otto Reich.

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### OFFICE FOR LATIN AMERICA AND THE CARIBBEAN

### STATEMENT OF OTTO J. REICH, ASSISTANT ADMINISTRATOR-DESIGNATE FOR LATIN AMERICA AND THE CARIBBEAN, AGENCY FOR INTERNATIONAL DEVELOPMENT

### OVERTHROW OF SOMOZA DICTATORSHIP

Mr. REICH. Mr. Chairman, with your permission I would like to read a brief statement.

I appreciate the opportunity to discuss the U.S. assistance program to Nicaragua. The history of the U.S. assistance program to Nicaragua since July 1979 is illustrative not only of the history of relations between the two countries, but also tells a story about the intentions and the goodwill of the two nations.

In July 1979, the Somoza dictatorship was overthrown by a broad-based coalition. This included workers, students, farmers, peasants, businessmen, and clergy; in effect, practically every sector of society joined in the insurrection. They were united by a common desire for freedom and democracy, for the liberties which we so often take for granted.

### SANDINISTA RISE TO POWER

In the last few months of the rebellion, however, the opposition to Somoza coalesced around the Sandinista National Liberation Front—or FSLN—the only opposition group with access to weapons.

The Sandinistas promised the people of Nicaragua that the new Nicaragua would be a free, independent, and democratic country. Many people around the world also were hopeful that the Sandinistas would adhere to their commitment to democratic pluralism.

Soon, however, after the fall of Somoza, it became obvious that the Sandinistas were not about to share power with the people who had helped them get the power.

### U.S. AID TO RECONSTRUCT NICARAGUA

The Carter administration offered help in the reconstruction of Nicaragua. This action was justified as being in the best humanitarian tradition of the United States. Nicaragua's economy was devastated and its people were hungry and hurt.

In the first few months following the installation of the Revolutionary Government of Nicaragua on July 19, 1979, emergency U.S. shipments of food and medicine, often by air, averted hunger and serious public health problems. In fact, for the first 18 months after the revolution, the United States was the largest single source of assistance to Nicaragua.

This assistance included short-term financial help; wheat and edible oil under title I of Public Law 480; longer term development assistance, particularly in small farmer and urban reconstruction programs; and a variety of technical assistance programs, many involving U.S. and Nicaraguan private and voluntary organizations.

Commitments of economic support funds, Public Law 480 commodities, and development assistance resources total some $115 million since July 1979. Of this total, about $19 million was obligated in fiscal year 1979; $37 million in 1980, and over $59 million in 1981.

### AID TO NICARAGUAN PRIVATE SECTOR

The major segment of our assistance was a $75 million supplemental package passed by the Congress in 1980. The terms of this package required that the government of Nicaragua make available to the private sector at least 60 percent of the dollars and the local currencies generated by the dollars. While we do not yet have the final documentation on the use of these dollars, preliminary indications are that the 60-percent private sector equivalent has been satisfied.

I believe it is important to repeat these figures for the record because the United States is being accused of "pushing the Sandinistas into the arms of the Cubans and the Soviets" by our "refusal" to help. This is the same false charge which formed part of the early propaganda campaign of Castro supporters in this country, that we had pushed Castro into the arms of the Soviets by our refusal to help his revolution.

Fortunately, that second myth has now been put to rest by a definitive source: Castro himself has admitted that he intended all along to aline himself with the Soviet Union and to establish a Marxist-Leninist state.

### PROMISES TO NICARAGUAN PEOPLE BROKEN

While the United States was sincerely helping the government of Nicaragua, that government, almost from the day it reached power, was proceeding to break its promises to its people.

These promises included: The holding of free elections; freedom of speech and free association; freedom of worship; free trade unions and collective bargaining; free enterprise, and respect for internationally recognized human rights.

In addition, when accepting U.S. aid they promised not to cooperate with or support terrorism or violence in other countries or to intervene in the internal affairs of other countries.

### SUSPENSION OF U.S. AID

Their actions left no choice to this administration but to suspend aid. On April 1, 1981, President Reagan took that action. He did waive, however, the requirement of section 533(e) to immediately repay all outstanding loans to the government, left open the possibility for further aid to the government, and did allow the continuation of aid to the private sector. In addition, $15 million was held in reserve for several months for the government should its conduct change in a positive way.

We cannot continue to assist a government which violates the basic human rights of its people, subverts its neighbors, alines its foreign policy with such countries as Libya, Cambodia, Cuba, Ethiopia, Vietnam, and the USSR; threatens regional peace with an unprecedented military buildup, and even insults the United States by calling us, in their official anthem, the "enemy of humanity."

Meanwhile, that same government is carrying out a campaign of repression against the 190,000 mostly Indian and black population of eastern Nicaragua, and we have heard very eloquently from Mr. Fagoth on this subject.

## INTERNATIONAL OPPOSITION TO SANDINISTAS

We are not the only ones in the international community who are repelled by these actions. As my colleague Ted Briggs mentioned, just this month the Socialist International cancelled a meeting because of the issue of Sandinista representation.

It is interesting that the social democrats from this hemisphere, who are much closer to the situation than the European social democrats, insisted that the Sandinistas cannot be considered to be socialist, they are Marxist-Leninist, and therefore do not belong in the Socialist International.

The Socialist International urged the government of Nicaragua to honor its commitments to pluralism and to move away from totalitarianism.

The foregoing should make it clear that it is the FSLN that bears the responsibility for the increasingly confrontational nature of the relationship between the United States and Nicaragua. But confrontation need not be inevitable. As President Reagan said yesterday at the OAS, "We seek to exclude no one. Some, however, have turned from their American neighbors and their heritage. Let them return to the traditions and common values of this hemisphere and we will welcome them. The choice is theirs."

Thank you, Mr. Chairman.

## RECENT HISTORY OF THE SANDINISTA GOVERNMENT

Senator KASTEN. Thank you very much.

Mr. Briggs, I am told that in either 1976 or 1977 the State Department's background notes on El Salvador described the Sandinistas as a Marxist-Leninist group. Also, that within 2 months after the junta, top leaders in the Sandinista movement actually met in Moscow with Soviet leaders. I am also told that the leadership of the revolutionary group was actually put together in a meeting in Cuba.

Were we not aware of the direction that this government was going to take, and if we were, why did we pursue our aid policies? Why is it that we now all of a sudden wake up and see that something has gone wrong there?

It seems to me that the trends and the directions were clear from the very beginning.

Mr. BRIGGS. Mr. Chairman, that is an awkward question for me to try to handle, since my duties in my present job have only dated since last summer. At the timeframe you are talking about, I was serving in Paraguay. Since then I have been in Colombia and in charge of Mexican affairs. So, I have had a degree of lack of personal involvement with this problem until fairly recently.

I cannot confirm, in other words, what the background notes say. I am sure that you are right, that is what they said.

It is true that in 1978 the FSLN broadened its base in order to broaden its appeal, and sought and accepted middle-class support. In other words, it came into power when it came into power in July 1979, already with a broadened base and with some specific promises as to its performance which were given formally to the inter-American community.

## U.S. ASSISTANCE TO NICARAGUA

In the last administration—judgments which I was not involved in—a decision was taken to seek support, economic support, for Nicaragua. This support amounted to, say, about $125 million all told. The biggest item in it was the $75 million appropriation over which there was considerable debate and which contained the caveat or the conditions which Mr. Reich has mentioned on Nicaragua's not promoting terrorism, et cetera, and which in this administration—since it was clear for everybody to see—were invoked last year.

Now, some of the money, some of that $125 million, I understand, which has been given since 1979—since the Sandinista government came in—was in the pipeline and, in fact, it was aid which had been initially designed or intended for Nicaragua under the previous government.

It continued because of the assessment which was made by others in those early days of the Sandinista government that, in fact, the Sandinistas, if given a chance, would go in the right direction.

I think everything that has been said here this afternoon, including Otto Reich's statement itself, leaves perfectly clear that that is not the case.

I think you are right, I cannot second-guess my predecessors, and I do not know what judgment I would have made had I been in their position.

I do not know if that answers the question, but I have tried to give you an honest answer.

## PRESENCE OF EASTERN BLOC ADVISERS IN NICARAGUA

Senator KASTEN. In December, Newsweek magazine reported that approximately 70 Nicaraguan pilots and technicians have received training in Bulgaria. It also stated that Managua is full of Soviets, East Germans, Cubans, Libyans, and even advisers from the Palestinian Liberation Organization.

Does this coincide with your information? First of all, let us talk about the pilots and the technicians in Bulgaria.

Mr. BRIGGS. Yes, sir, it does. We understand that in Nicaragua now there are approximately 70 Soviet air force advisers; possibly another 30 from a number of countries, including East Germany, North Korea, and Bulgaria.

Yes, sir, Arafat has said that he has PLO pilots in Nicaragua training the Nicaraguans. It is hard to tell whether this is boasting or whether it is actually true. I believe Arafat has also claimed that his people are assisting the FMLN, the Marxist guerrilla side in El Salvador.

I believe the number is about 60 or 70 pilots being trained in Bulgaria to fly MIG's. So, as far as I am aware, those statistics you have given me are correct.

Senator KASTEN. It seems to me that there just cannot be any question but that this unprecedented military buildup and training goes far beyond any defensive military needs of the country of Nicaragua. Is that your assessment?

Mr. BRIGGS. Yes, sir; our assessment is that these needs, or rather this buildup, provides Nicaragua a platform, a shield behind which to mount much higher level, much more active insurgency support in the neighboring countries than is now the case.

We know, for example, that in recent weeks efforts have been made to unify the four different groups, Marxist groups, making up the insurgency in Guatemala.

According to recent news reports, Castro has not been altogether successful in this. Those people would be the beneficiaries of a large military presence in Nicaragua, as are the guerrillas, Marxist guerrillas in El Salvador, whose five groups were previously successfully united under Castro's tutelage; as we believe the three branches of Sandinismo were successfully united under Castro's tutelage in 1978.

Now, all of this information as to what went on in Nicaragua and the relationship between the Cubans and the other Communist states and the Nicaraguan government has been a gradual thing. In fact, I think one can make an argument that it has been deliberately so, so as to sort of "baby along" the world.

I think it is very important, though, the points that both of us have made, that the social democrats in the new world are now increasingly aware of the real nature of this government, its leadership in any event, and the growing consensus in the region. Those are very important developments and will obviously affect our attitudes.

I think it is quite obvious that the United States does not wish to get out in front of its neighbors on this. It is really up to the Nicaraguan government how it proceeds. There are things that it can do—both good and bad—which will obviously determine how this relationship between us works out, and if it continues, in fact.

## SUPPORT OF EUROPEAN ALLIES

Senator KASTEN. You have touched on a subject that I want to discuss. I am disturbed that we have been unable to elicit our Western European allies' support for our Central American policies, and we also have some trouble even in our own hemisphere.

The continued French sale of military equipment to Nicaragua is the most immediate case in point and is the most obvious problem.

What are we doing to gain acceptance of our policies, and are we making any progress? Are you suggesting that some progress is being made?

Mr. BRIGGS. That is a very complicated question to answer. Part of it is, what is happening in the area itself—really, what is happening there and what is known about what is happening there.

For example, to the extent that El Salvador, for example, is either depicted or seen in the outside world as a country in which human rights excesses take place, or a country in which the trend is not in the right direction—as we believe it now is—that will influence the views of others.

To the extent that the Nicaraguan government closes down or avoids closing down what is sort of a loosely called pluralism, that will influence the views of others.

Certainly, quite often the Europeans, certain Europeans, tend to look to other Latin American countries to interpret for them what is going on in Latin America rather than to us. This occasionally happens.

It is curious that last summer, for example, when the French and the Mexicans joined in a declaration regarding what should happen in El Salvador, that it was the Latin American countries, the vast majority of them, who issued in effect a counter declaration which, I believe—I suspect in any event—probably caused some interesting effects in various parts of Europe as they realized that the views of one of the community might not be shared by the views of another.

Now, let me say something, you mentioned the arms sales. A rationale for other country support, that is, non-Communist support to Nicaragua, has been to offer the Nicaraguans an alternative to overdependence on the Communist world.

Given the enormous size of the military establishment in Nicaragua it is our view that aid or sales, or whatever they may be, rather than offering an alternative, in fact, become a supplement. Thereby the starting point is somewhat dubious.

Senator KASTEN. Do you have any idea how the French Government in particular responds to the atrocities perpetrated against the Miskito Indians?

Mr. BRIGGS. I do not know, sir. I do not know to what extent the Miskito story has been reported in Europe, quite frankly; I do not know.

Senator KASTEN. Mr. Reich, for the record, how much U.S. aid has gone to the Sandinistas since they gained power? The $125 million, do we agree on that figure?

Mr. REICH. That is correct, sir. That figure includes some money in the pipeline from previous loans.

Senator KASTEN. Not to Nicaragua, but to the Sandinistas since they gained power?

Mr. REICH. That is right, to the country as a whole. There was also, as Mr. Briggs said, some amount in the pipeline from loans to the previous government.

Senator KASTEN. How much Soviet aid has gone to the Sandinistas?

Mr. REICH. I do not have that figure. However, I believe that most of the assistance has been from the Eastern bloc, not from the Soviet Union. I believe East Germany has provided some credits and Cuba has as well. I believe a large proportion of this has been in military equipment.

Senator KASTEN. Well, I think that no matter how we add it up, particularly in the areas of economic assistance, we have to have sent two, or three, or four times as much aid to the Sandinistas as the Soviets have themselves. Do you agree with that?

Mr. REICH. Yes, sir; as I said in my statement, in the first 18 months we were clearly the largest single donor of aid to that government.

Senator KASTEN. Now, Congress was told, and you just told us, that, of the funds going to Nicaragua, 60 percent would go to the private sector.

How confident are you that, in fact, 60 percent has gone to the private sector, without being unduly influenced by the Sandinista government?

Mr. REICH. We believe, because of investigations that we have been making, that that figure is accurate. We have had to hire a consulting firm, an accounting firm, to help us with that investigation. Our source for this information is the private sector groups themselves with whom we are in touch. We asked them whether they were getting the money.

Senator KASTEN. Do you have audits or evaluations that certify this?

Mr. REICH. We are now in the process of carrying out a study of that question.

Senator KASTEN. It is my understanding that it might be difficult to define what a private organization really is. In other words, that in some cases they might be fronts, that the government will have, in fact, nationalized or taken over some of these groups, but have kept it in this private organization phase, if you will, but then money is, in fact, being diverted. Is that true, is that a problem? Or can you tell us that is not going on, absolutely not?

Mr. REICH. Here with me today is Mr. Lawrence Harrison, who was our last mission director in Nicaragua.

We are reasonably sure that the organizations we are dealing with are legitimate private sector organizations because they were all in existence before the Sandinista takeover.

Now, there has been an encroachment on the private sector by the Sandinistas. For example, a number of businesses had participation by the Somoza interests, and they were taken over by the government. But those are in the minority, and we are very nearly certain that we are dealing with the private sector when we disburse funds.

### ACCESS OF U.S. PERSONNEL TO PARTS OF NICARAGUA

Senator KASTEN. Are there any AID people in Nicaragua now?

Mr. REICH. Yes, sir.

Senator KASTEN. Are they monitoring the program?

Mr. REICH. Yes, sir.

Senator KASTEN. What kind of access do they have in various parts of the country? Are there any parts of the country to which their access has been limited?

Mr. REICH. Yes, sir; I am told that they have been denied access to the entire eastern region of the country.

Senator KASTEN. Does our Government—and I guess this would go to Mr. Briggs as well—have any plans to send a factfinding trip into the Atlantic coast region? Have we demanded access to that part of the country, and what is the Sandinistas' response?

It seems to me that with what we have seen in the press, but most particularly what we are concentrating on today, some kind of an effort ought to be made, particularly to go into the Atlantic coast region. Are there any plans in place?

Mr. BRIGGS. Not as such. We have asked for permission to travel there, the Embassy has formally, twice; it has been denied.

That is why I think it would be extremely useful for nongovernmental organizations—perhaps international—to seek to visit the area. They sometimes have greater access than government visitors. We have asked, we have been denied. Our interest persists. At such time that we have access, of course, we will be there.

I do not know whether the AID angle of this is germane to the Atlantic area.

Senator KASTEN. What would happen if I asked to go, would I be denied?

Mr. BRIGGS. That is an intriguing question, sir.

Senator KASTEN. I am told that some people from 60 Minutes were recently down in that area and evidently, after a series of negotiations, had limited or qualified access. Is that true, and could you tell me what happened?

Mr. BRIGGS. I cannot tell you for sure. We are looking forward to what comes out of that ourselves.

Congressman Harkin, who recently was in Nicaragua, was taken to one of these camps, relocation camps. Now, whether that can be translated into access to the Atlantic area or not, I do not know. In any event, a recent Member of Congress was able to get out of the city and into the area where things have happened.

Senator KASTEN. You do not know what kind of limited access he had? Did he look at the burned-out villages or the gravesites?

Mr. BRIGGS. No, sir; he went to the relocation camp, or concentration camp, if you will.

## CONDITIONS IN RELOCATION CAMPS

Senator KASTEN. Is your understanding of the conditions of that camp the same as Mr. Fagoth's?

Mr. BRIGGS. In the part of my prepared statement which I did not read, I have in there a note to the effect that according to our information the conditions in the camp, according to some observers, are absolutely splendid.

The only catch is—perhaps "splendid" is too broad a term, they are not unattractive. According to one report the Sandinistas went to the trouble ahead of time of investigating the soils to see what would grow there, for instance.

The only catch is, and the reason we use the words "concentration camps" is that the people inside the camp are not allowed to leave.

I gather from what Mr. Fagoth said, some may be able to get away. But technically speaking, and this is what some recent visitors have reported to us, that the people cannot leave.

## PARTNERS OF THE AMERICAS

Senator KASTEN. Mr. Reich, in the beginning I said that I had a special interest in this because of the Partners program, and that Wisconsin is Nicaragua's partner under the program.

Now, that program utilizes some AID funds. At the present time are there any Partners programs or activities going on in Nicaragua?

Mr. REICH. There is a $100,000 project with the Wisconsin partners in Nicaragua. It includes health, training of midwives, and activities of that nature.

As you probably also know, the Partners operated a radio station that was used to help in education on the Atlantic coast. It was taken over by the Sandinistas by force and is now being used to broadcast government propaganda, we are told.

Senator KASTEN. What is the status of that $100 million program?

Mr. REICH. It is a $100,000 program.

Senator KASTEN. Excuse me, the $100,000 program.

Mr. REICH. There is the continuation of some of the training aspects of this program. Some small farmers, for example, travel to Wisconsin for training in agriculture.

Senator KASTEN. And that is still going on?

Mr. REICH. Yes, sir; the Partners in Wisconsin are providing assistance to some of the private-sector agricultural groups as well.

## UNDISBURSED AID FUNDS

Senator KASTEN. How much money for the Nicaraguan program remains obligated but undisbursed?

Mr. REICH. Are you talking about the entire program, not just for the Partners?

Senator KASTEN. The entire Nicaraguan program.

Mr. REICH. In fiscal year 1981, we obligated $59.4 million. In fiscal year 1982 we have obligated $528,000 of development assistance funds, all of which was for private voluntary organizations and for program development and support.

Senator KASTEN. Of the $59 million, how much is undisbursed?

Mr. REICH. I do not have that figure. We can supply that information for the record.

Senator KASTEN. Try to establish whether or not you have money backed up in the pipeline.

Mr. REICH. Yes, there is some money in the pipeline. We have not spent it all.

Senator KASTEN. Could you get back to us with that figure?

Mr. REICH. Yes, sir, we will give you the figure.

[The information follows:]

### UNLIQUIDATED OBLIGATIONS

Unliquidated obligations of AID assistance to Nicaragua total $30.2 million as of December 31, 1981. Of this $30.2 million pipeline, $14.1 million—47 percent—remains from funds obligated but not yet disbursed for three projects that were approved since the Sandinistas came to power and for one project that was disbursing before the Sandinistas took over. Disbursements on these projects were frozen on April 1, 1981. When they are unfrozen, the money will be used specifically for them.

### NICARAGUAN DEBTS TO UNITED STATES

Senator KASTEN. Do you know if the Sandinista government owes the United States any money under any loans, or were all of the programs grant programs? Were we involved in any low-interest loan activities?

Mr. REICH. No, the government of Nicaragua does owe, has not repaid all its loans to the United States.

Senator KASTEN. Could you also provide some detailed information of the specific amounts of those loans?

Mr. REICH. Yes, sir.

Senator KASTEN. I am assuming you probably do not have that in front of you, also.

Mr. REICH. No, I do not, but I will provide it for the record.

[The information follows:]

### INDEBTEDNESS ON AID LOANS

Nicaragua owes AID $205 million in principal plus interest. Of that total indebtedness, $55 million—27 percent—was taken on by the Sandinistas.

As of December 31, 1981, the Government of National Reconstruction is delinquent in repaying principal of $1.6 million and interest of $3.3 million. Of the total delinquent payments, no principal but $550,000 of interest is overdue on Sandinista loans.

A detailed listing of delinquent loans follows:

## DELINQUENT LOAN INSTALLMENTS AS OF 12/31/81

### CONCLUDING REMARKS

Senator KASTEN. I have no further questions. There may be additional questions from members of the subcommittee. The record for the hearing will remain open for 10 days, during which time members of the subcommittee may submit questions for the record. We hope that you can answer any written questions for the record within 2 weeks after receipt.

We are hopeful that we can get the details on the money in the pipeline and the loans also back to the committee.

Mr. REICH. Yes, sir.

[The following questions were not asked at the hearing but were submitted for response for the record:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### NICARAGUA PRIVATE SECTOR

Senator KASTEN. In an open letter to the government last November COSEP, the Private Business Sector Association, accused the government of egregious economic mismanagement and an undeniable Marxist-Leninist line.

Four leaders of COSEP were arrested and jailed.

The New York Times reports that businesses refuse to invest, for fear of losing all.

The situation for the private sector looks bleak, especially since the Sandinistas have, according to the Times, made it a crime to publish "false news" damaging to the economy.

And yet a businessman in Nicaragua has said that "they have not yet radicalized beyond all hope."

Is our Government still harboring illusions that the Sandinistas will rethink their position toward private business?

AID would like to continue funding for the private sector in Nicaragua. What assurance do we have that the Sandinistas won't close down businesses we assist or confiscate property paid for with U.S. dollars—as they did with AID programs on the Atlantic coast?

Mr. REICH. For many reasons, AID has provided support for the activities of the national level organizations which represent the various private subsectors of the economy. Many of these organizations are under great pressures by the Sandinista government. Three leaders of COSEP recently spent some time in jail to cite one example. Members of some of these organizations are under pressure to disassociate themselves from the private groups and join officially sponsored and controlled Sandinista organizations. It has been our strategy in providing institutional support to the private groups to broaden their base beyond the original, more affluent membership to include small producers and merchants. These institutions provide their members with technical, legal, and other forms of assistance and they promote an awareness among small producers and merchants that they too are entrepreneurs whose survival is threatened by the course of events in Nicaragua. By broadening their bases, there organizations are also trying to improve their bargaining power vis-a-vis the government.

The political and military actions of the Nicaraguan government against the Miskito Indians did include the seizure of an AID-assisted educational radio station on the east coast. We have suspended this OPG for the time being, but some hope remains that it may be reopened in the future. If this occurs, it will be due largely to the existence and pressure being exerted by PVO's, the private sector, the independent media, independent political parites, and other governments.

### CUBAN ADVISORS IN NICARAGUA

Senator KASTEN. How many Cuban advisors are now in Nicaragua? In what capacity are they there?

Mr. BRIGGS. During a March 10 intelligence briefing, CIA Deputy Director Inman estimated that there are presently 6,050 Cubans in Nicaragua. Of these, 2,000 are military and security advisors. The rest are teachers (2,200), construction experts (750), doctors and other health personnel (500), and other government advisors (600).

### STEDMAN FAGOTH—MISKITO LEADER

Senator KASTEN. Mr. Fagoth has been accused of being a Somoza sympathizer. I also understand that Mr. Fagoth was given a seat in the Countil of State—Nicaragua's legislature in 1979. If he was a supporter of Somoza, would he have been given this position in their legislature? Do we have any evidence to support the charges that he was a Somoza supporter?

Mr. BRIGGS. Fagoth, an early supporter of the Sandinistas, was named to the Council of State in his capacity as leader of the Miskito, Sumo, and Rama organization, MISURASATA. It was only after Fagoth left Nicaragua in May 1981 that the Sandinistas began accusing him of having been an agent of Somoza. We have no evidence to substantiate that accusation.

### ATLANTIC COAST

Senator KASTEN. What is your information on the relationship between the peoples of the Atlantic coast and the Sandinistas? Were the Indians for or against the Sandinistas? Didn't those people in fact aid the Sandinistas?

Mr. BRIGGS. The inhabitants of the east coast did not play a key part in the insurrection that overthrew Somoza in June-July 1979. Though there were people who were sympathetic to the Sandinistas, there were some Somoza sympathizers as well. For the most part, Somoza did not attempt to interfere in the east coast and allowed the Indians to keep their culture and customs. The east coast population did not suffer the repression and atrocities that the rest of the country experienced. For this reason, the east coast remained for the most part neutral during the civil strife.

Senator KASTEN. Do you know of any census figures done in Nicaragua's Atlantic coast region that could give us an idea of the actual number of people in that area in 1981? If so, how many? If not, how can anyone really know how many people there have been arrested, killed, or removed from that area?

Mr. BRIGGS. The actual number of Nicaraguan Indians has been a subject of much debate and controversy. Estimates vary from Nicaraguan Foreign Minister Miguel D'Escoto's estimate of 70,000 to Miskito leader Stedman Fagoth's assertion that there are about 190,000 Indians and 25,000 blacks in the east coast. A census of Nicaragua scheduled for this year has been postponed indefinitely.

On February 15, the Nicaraguan government admitted to relocating 8,500 Miskitos from their homes near the Honduran border. Miskitos who have fled to Honduras have reported hundreds of executions and arrests in the area, but we have no way of confirming these numbers.

Senator KASTEN. There appears to be discrepancy in the reports of how many Miskito Indians were removed from their villages and taken to detention camps. I understand your Department puts the number at 8,500. In an article in the Washington Post on the 7th of this month, the figure of 10,000 was mentioned. Does anyone really know?

Mr. BRIGGS. The Nicaraguan government announced on February 15 that it had relocated 8,500 Miskitos from their homes near the Honduran border. The Washington Post interview quoted a Nicaraguan official who admitted to the relocation of the 10,000 Miskitos. Both figures have come from Nicaraguan government sources. We estimate that an additional 10,000 Miskitos have crossed the border into Honduras.

## QUESTIONS SUBMITTED BY SENATOR LEAHY

### MISKITO INDIANS

Senator LEAHY. Has the Organization of American States investigated the charges made by the Miskito Indians? Has the United States requested such an investigation by the Inter-American Human Rights Commission? If not, why not?

Mr. BRIGGS. The Inter-American Human Rights Commission will send an emissary to Nicaragua in May to investigate the Miskito Indian situation. Since the IAHRC has independently decided to investigate, the United States has not requested an investigation.

## HUMAN RIGHTS

Senator LEAHY. What has been the overall evaluation of the human rights situation in Nicaragua up to this incident with the Indians? What is the view of Amnesty International or other internationally recognized human rights organizations?

Mr. BRIGGS. We note that the human rights performance of the Nicaraguan government deteriorated during 1981, especially with respect to civil and political liberties. Our complete view of the human rights situation in that country is contained in our Country Reports on Human Rights Practices for 1981, sent to the Congress in February.

[CLERK'S NOTE.—This report is being held in the subcommittee's files.]

Amnesty International's 1981 report notes concern about the trials of former national guardsmen. Amnesty International states that there were significant trial irregularities and that those 4,000+ prisoners sentenced by special tribunals have no recourse against alleged miscarriages of justice. Amnesty is also concerned about those prisoners held under the Law for the Maintenance of Public Order.

Freedom House, in its latest report (published in 1980) classifies Nicaragua as "partly free." It notes that torture, widespread killings, and brutality occurred in 1980, especially in rural areas. It also notes that the independence of the judiciary is not well developed, but that the government does not always win in the courts. Freedom House notes that unions are under pressure to join the new government-sponsored federation. Freedom House has also disseminated a report from the Permanent Human Rights Commission of Nicaragua charging that 17 peasants have been summarily executed by Sandinista military authorities May–November 1981. It has also called for an investigation of the status of Indians in Nicaragua, and charged that the government "condoned or directed" a policy of "systematic violence" against its Indian population.

## LA PRENSA

Senator LEAHY. It has been said that the major independent newspaper, La Prensa, has been closed down on several occasions in the past 2 years. Could you please explain the reasons for each closing?

Mr. BRIGGS. Since last July, La Prensa has been closed down six times for 48-hour periods. The first time was on July 10, when the government charged the newspaper with "ignoring the truth" in its reporting on four news items in the La Prensa editions of July 7 and 8. These were:

A July 7 item in which La Prensa said that the closing down of an independent radio station was a "discriminatory act";

A July 7 item accusing a press officer in the Ministry of Exterior of harassing a La Prensa reporter because the reporter objected to Marxism-Leninism;

A July 7 item and editorial comment on the tearing down of religious billboards in the vicinity of the closed radio station implying that Sandinista mobs were guilty; and

A July 8 item which reported that another independent radio station had been told not to mention the closing of the other radio station.

The second closing occurred on July 29, when the government cited an article which included a statement that the government said "made fun of" Sandinista Front founder Carlos Fonseca.

The third closing took place on August 18 when La Prensa reported an interview with Foreign Minister Miguel D'Escoto which appeared in a Mexican newspaper (D'Escoto denied that he had given the interview). The fourth closing occurred on September 28 when the government objected to a La Prensa interview with an industrialist whose business was confiscated. Forty-eight hours later, the GRN closed La Prensa for the fifth time after the paper came out with a strong editorial protesting the fourth closing. The sixth and last La Prensa closing took place on January 14 of this year when units of the Sandinista army occupied the newspaper after an incident the previous night when the government accused La Prensa security guards of firing on an unfriendly mob.

## INDIAN GROUPS

Senator LEAHY. Are Indian groups working with antigovernment guerrilla forces on the Honduran border? Is Mr. Stedman Fagoth involved in this guerrilla activity? Do you have any evidence to suggest that Mr. Fagoth worked as an informer during the Somoza regime?

Mr. BRIGGS. We have received reports that Miskito Indians who have fled Nicaragua have joined anti-Sandinista forces, but have not been able to confirm them.

As to Mr. Fagoth, we cannot confirm whether he is involved in guerrilla activities. And, as stated previously, there is no conclusive evidence which proves that Mr. Fagoth worked as an informer during the Somoza regime.

## MOVING THE MISKITOS

Senator KASTEN. Thank you for your testimony. I think that we may have served a constructive purpose here this afternoon, I would hope we could work on this more as we look at an increasing problem and increasing challenges in the Western Hemisphere, and particularly in Central America. I would like to insert a Time magazine article in the record at this point.

I thank you very much for your help and for your testmony.

Mr. BRIGGS. Thank you, sir.

Mr. REICH. Thank you, sir.

[The article follows:]

[From Time Magazine, Mar. 1, 1982]

## MOVING THE MISKITOS

### NICARAGUA USES BRUTAL FORCE ON ITS PROUD, ONCE FRIENDLY INDIANS

(By Russ Hoyle)

For weeks, Honduran soldiers stationed across the Coco River from the Nicaraguan village of Leimus watched with mounting concern as Sandinista troops began moving into the bustling town, a stronghold of the country's independent-minded Miskito Indians. Then, on a moonlit night just before Christmas, the Hondurans began hearing bursts of automatic rifle fire. An Indian mineworker, Roberto Vidal Poveda, 18, recounted his ordeal to Time Correspondent James Willwerth, who talked to a number of Miskito refugees: "During the night, the Sandinistas took us out and started to kill us, one by one. They made me stand by the river, but I jumped when they started to shoot. Two bullets hit me in my arm. They shot at me as I swam. I finally reached the other side and lay on the beach until morning."

A local farmer, Orvino Gonzales, 37, was coming down the Coco River in a boat the night the shooting in Leimus started. Said he: "It was dark, but I saw maybe 15 people taken out of a building and lined up in a launch on the water. The Sandinistas shot them with automatic rifles. The bodies fell into the water." Two days later the Sandinistas burned houses in Wiwinak, where Gonzales lived. Several miles upstream, the village of San Jeronimo was reduced to ashes.

The reported bloodbath in Leimus, in which as many as 50 Miskito Indians were shot or drowned, was part of an operation ordered by the Sandinista high command in Managua to evacuate a zone some 50 miles deep on the Nicaragua-Honduras border from Santa Isabel eastward along the Coco River to the coast. Beginning in mid-December, Sandinista forces evacuated or burned between 25 and 40 Miskito villages, allegedly killed an estimated 200 inhabitants and resettled 8,500 to 10,000 more at internment camps in the Nicaraguan interior near Rosita and Siuna. Reason for the Sandinista campaign: The Miskitos, some of whom fought alongside the Sandinistas to overthrow Nicaraguan Dictator Anastasio Somoza Debayle, had begun to chafe under Sandinista rule. Some were even known to have joined with anti-Sandinista exiles across the Honduran border.

"Everybody has the same story," said Tom Hawk, the director of the overflowing United Nations-sponsored refugee camp at Mocoron, Honduras. "You hear it again and again." The camp is in a muddy meadow of thatched lean-tos surrounded by jungle. It has become home for 5,100 Miskito Indians who fled across the border into Honduras. Another 3,000 to 5,000 are expected in coming weeks. Food shipments are infrequent, and many of the refugees had not eaten in 3 days when Willwerth visited.

The Sandinista operation was the regime's first concerted military effort to neutralize the Miskito minority, which makes up some 4 percent of Nicaragua's population of 2.7 million and occupies most of the country's vulnerable northeast region. The Sandinistas fear that the porous Honduras border, and the 336-mile Caribbean coastline, might eventually be used as a staging area for an invasion led by anti-Sandinista units. The forcible resettlement of the Miskitos was designed to prevent them from providing food, shelter, and intelligence to the anti-Sandinistas. Whatever the reason, the Sandinista action against the Indian minority was being sharply criticized last week as an indefensible abridgement of human rights.

Besides those killed or forced to abandon their homes, 160 Miskitos were jailed in the coastal town of Puerto Cabezas and 71 were found guilty of counterrevolutionary activity. Early in February the northern part of the department of Zelaya was declared a "military security zone." Even so, the Managua government still has cause for concern. A small but growing number of Miskito refugees who have escaped into Honduras are arming for revenge.

The tension between the Miskitos and the Sandinistas has been growing for some time. After the Sandinistas came to power in 1979, they initiated ambitious reform programs to improve conditions of health care and literacy among the Miskitos. Sandinista volunteers and Cuban cadres made some headway, but the Indians soon bridled at the accompanying ideology—and the fact that literacy classes were initially held only in Spanish. Disgruntled Miskito leaders quickly became a major nuisance for the Sandinistas. Suspecting growing separatist sentiments among them, Sandinista forces last year arrested 33 Indian leaders, and shortly thereafter four government soldiers and four Miskitos were killed during a shootout at a Moravian church in Prinzapolka. One of those arrested was Steadman Fagoth Muller, 27, a militant young Miskito leader feared by the Sandinistas. On his release in May, he quickly fled to Honduras, where he unambiguously declared himself in opposition to the Managua government.

According to Sandinista documents, Miskito leaders have been involved with anti-Sandinista exiles in at least 26 cross-border raids against Nicaraguan forces since November. During one of the antigovernment actions, insurgents are claimed to have driven a stake into the chest of a wounded soldier, disemboweled him, and slit his throat. That grisly incident may be pure propaganda. But there is little doubt that the offensive it was intended to justify—an undeclared war on the mostly peaceful, independent Indians who only recently were among the Sandinistas' friends—marks a new, brutal, and tragic phase in Nicaragua's revolution.

## SUBCOMMITTEE RECESS

Senator KASTEN. The subcommittee will recess and reconvene at the call of the Chair.

[Whereupon, at 3:55 p.m., Thursday, February 25, the subcommittee was recessed, to reconvene at the call of the Chair.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

## WEDNESDAY, MARCH 10, 1982

U.S. Senate,
Subcommittee of the Committee on Appropriations,
*Washington, D.C.*

The subcommittee met at 10:05 a.m., in room 1318, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman), presiding.

Present: Senators Kasten, D'Amato, Specter, Inouye, Leahy, Johnston, and DeConcini.

## DEPARTMENT OF STATE

### Secretary of State

### STATEMENT OF HON. ALEXANDER M. HAIG, JR., SECRETARY OF STATE

### OPENING STATEMENT OF SENATOR KASTEN

Senator **Kasten**. The subcommittee will come to order.

This morning we begin our regular fiscal year 1983 budgetary hearings with an overview presentation by the Honorable Alexander M. Haig, Jr., Secretary of State.

I have a short statement, and then will yield to Senator Inouye for any statement he might have. Then we will ask you, Mr. Secretary, to begin your statement.

Your testimony this morning comes at a time when the United States faces very serious and complex foreign policy questions around the world. Foremost among these problems are the situations in Poland, El Salvador, the Middle East, and our relationship with our NATO allies.

Before we begin to delve into these specific problems, uppermost on all of our minds is the problem of balancing the budget. We worked hard last year and were successful in passing a foreign aid bill for the first time in 3 years. That was a labor of love for all of us, Mr. Secretary, but we are pleased that we were able to work that out. The Foreign Aid bill is critical to the administration's foreign policy.

Again this year we have a very real problem with the budget. The administration is again requesting cuts in domestic programs and asking for increases in security assistance and foreign aid.

91-740 O - 83 - 4

Money is tight, and I think this is a concern that must be addressed.

### SITUATION IN POLAND

The Poland situation has been of particular concern to me. The administration's policy toward the current military dictatorship in Poland has yielded no softening of martial law, and, in fact, the military dictatorship has tightened its grip and strengthened its ties with the Soviet Union.

### FOREIGN POLICY ON EL SALVADOR

In El Salvador the administration's policy is being questioned by the American people. Our foreign policy toward El Salvador has been abandoned by friends and foe alike. How can we hope to succeed with this policy if we cannot line up support of neighbors like Mexico and others, countries that have very real interests in this area?

While many of us want to support the administration's effort in this part of the world, and I do, it is difficult to do so absent a clearer explanation of our interests and more concrete exposés of Soviet/Cuban/Nicaraguan involvement. I believe the efforts of Mr. Inman and others at the CIA in the past 24 hours are helpful in this regard.

If there is evidence of outside intervention in El Salvador, it is imperative that it be brought forward. In order to make an intelligent decision with regard to U.S. policy toward El Salvador, we must have additional hard evidence, including the kind of photographic evidence that we have seen in the past several hours, and as much of that kind of evidence as possible must be made public.

In the Middle East we seem to be, on the one hand, presented with two policies, one by Defense and one by State; and, on the other hand, by uncertainty on the part of our friends in that region as to the direction of our policy.

### CONDITION OF NATO

With respect to the NATO Alliance and you, Mr. Secretary, one of the world's experts on that subject, it seems from this side of the Atlantic that NATO is not in the best of shape. Furthermore, the lack of cooperation we have received from many of the allies on questions of vital interest to the United States is causing great concern both in this country and particularly right now in the halls of Congress.

The administration has stated that the natural gas pipeline from the Soviet Union to Western Europe is not in our best interest, yet we have been unable to solicit support for our policy. Indeed, our allies continue to finance the pipeline.

In addition, our allies are extending credit to the Soviet Union even while they denounce martial law in Poland. Our call for economic sanctions has been ignored. Our continuing efforts to get the allies to increase their defense spending is ignored.

A very distinguished and respected friend and colleague, Senator Stevens, is seriously suggesting that perhaps our response to this lack of cooperation should be the removal of our troops from Western Europe, a position that has some sympathy in both Houses of Congress.

Mr. Secretary, it is in the context of these and other problems that we begin our deliberations on the administration's foreign assistance program. I believe this committee wants to be as cooperative as possible, certainly as cooperative as last year, and, of course, we will need straightforward and complete information on all the problems we discuss here today and in the coming months from you and from the State Department.

I would now like to yield to the ranking member of the subcommittee, Senator Inouye.

### OPENING STATEMENT OF SENATOR INOUYE

Senator INOUYE. Thank you very much, Mr. Chairman.

Mr. Secretary, the administration has brought about a fundamental transformation of the U.S. foreign assistance policies allocating increasing amounts of security assistance programs and comparatively less to economic assistance programs. In fiscal year 1983, for example, a $1,700,000,000 increase is requested for military assistance, while economic assistance programs are held to current year levels.

In our hearings last year you informed the committee that in the Reagan administration:

> In the formulation of economic policy, in the allocation of our resources and in decisions on international economic issues a major determinant will be the need to protect and advance our security.

Clearly the primacy of security concerns in the administration's formulation of foreign assistance policies has become evident to all.

### CONGRESSIONAL PRESENTATION DOCUMENTS

Nonetheless, at this, the first of our regular appropriations hearings on the President's fiscal year 1983 budget request, we are still lacking one of the most important documents which we use to examine the budget. I refer, of course, to the congressional presentation documents which provide details on the President's request for security assistance.

Furthermore, one of the most significant of the security assistance programs being conducted by the administration is that which is providing assistance to El Salvador. On February 4 the Chairman and I wrote to you seeking pertinent information regarding the conduct and implementation of that program, and, Mr. Chairman, this morning I received a partial response.

On Monday I asked the Chairman to postpone today's hearings until such time as you had responded to our mutual request for information and the committee had in hand the congressional presentation documents for fiscal year 1983. He declined to do so and we meet this morning.

### MILITARY ASSISTANCE TO EL SALVADOR

Therefore, Mr. Secretary, I must ask you now to clarify one of these issues. The President used his authority under section 506(a) of the Foreign Assistance Act to provide $55,000,000 in "immediate military assistance" in order to meet "an unforeseen emergency" in El Salvador. Yet, he did not, to my knowledge, comply with the provisions of section 21(c)(2) of the Arms Export Control Act which requires the President to submit a report to the Congress "within 48 hours of the existence of or a change in status of significant hostilities which may endanger American lives."

On the one hand, there is "an unforeseen emergency," and, on the other, apparently the judgment was made that this did not involve "a change in status of significant hostilities." I hope that you can clarify this apparent inconsistency.

The event which triggered the President's use of the 506(a) drawdown authority was the destruction of Salvadoran military aircraft at the Ilapango Air Force Base.

Mr. Secretary, can you assure the committee that no U.S. military personnel were stationed, assigned, or otherwise located at the Ilapango Air Force Base within 48 hours of the attack on that installation on January 27, 1982? Did this attack not represent a change in status of significant hostilities and did it not endanger American lives and property? And, in your view, does the attack on the Ilapango Air Force Base raise questions regarding Presidential responsibilities under section 4(a) of the war powers resolution?

### CORRESPONDENCE

Mr. Chairman, I would at this time ask that the entire record of correspondence relating to this hearing be inserted in the record, and I would further ask that included would be the Secretary's response to our letter of February 4.

Senator **Kasten**. Without objection, so ordered.

[The documents follow:]

## LETTER FROM SENATOR DANIEL K. INOUYE

February 3, 1982

The Honorable Robert W. Kasten, Jr.
Chairman
Subcommittee on Foreign Operations
Committee on Appropriations
United States Senate
Washington, D.C. 20510

Dear Mr. Chairman:

I want to thank you for consulting with me yesterday in reference to the President's announced intention to exercise his authority under section 506(a) of the Foreign Assistance Act of 1961 in order to authorize the furnishing of up to $55,000,000 in emergency military assistance to El Salvador. I am in basic agreement with your view that, because this authority is not directly under the jurisdiction of the Subcommittee on Foreign Operations, and because other relevant Senate committees having oversight responsibilities are currently conducting hearings regarding the exercise of the authority provided under section 506(a), we should not, at this time, hold separate hearings.

However, as I related to you yesterday, I strongly believe the Foreign Operations Subcommittee should thoroughly review this matter when we consider the President's request for fiscal year 1983 security assistance funding, which, as you know, will call for an appropriation to replenish U. S. Department of Defense stocks which have been provided previously to El Salvador under the authority of section 506(a). There can be no question that this is a matter clearly within the jurisdiction of the Senate Committee on Appropriations.

I know that you and I agree that this hearing will be highly significant and could well have a determinative impact on the Subcommittee's judgment regarding funding of Security Assistant programs. Consequently, I believe that we should begin to prepare now for that hearing. May I respectfully request that you, as Chairman of the Foreign Operations Subcommittee take the following actions:

1. Obtain from the Senate Foreign Relations Committee a complete transcript of any and all hearings held on the subject of assistance to El Salvador under section 506(a);

2. Obtain from the Secretary of State a clarification of the President's intention to exercise his authority under section 506(a) to meet "an unforeseen emergency which requires emergency military assistance to El Salvador in the absence of a report by the President (as required by Section 21(c)(2) of the Arms Export Control Act) within forty-eight hours of "a change in status of significant hostilities or terrorist acts...which may endanger American lives or property...";

3. Obtain from the Secretary of State detailed information on the number, rank, and duties of all U. S. military personnel in El Salvador, precise information as to whether any of these personnel were stationed, assigned, or otherwise located at the Ilopango air force base within forty-

eight hours of the attack on that installation on January 27, 1982, and a clear statement of whether the Administration intends to increase the number of U. S. military personnel in El Salvador;

4. Obtain from the Secretary of State, on a classified basis if necessary, a complete record of all communications between the U. S. Embassy in El Salvador and the Department of State from December 1, 1981, to January 31, 1982, to include a comprehensive set of reporting cables and transcripts of telephone conversations.

I believe that this information must be obtained if the Subcommittee on Foreign Operations is to discharge its responsibilities in this critical situation. Please be assured that I will cooperate with you in your efforts to ensure that the Subcommittee acts in the best interests of our country.

Sincerely,

DANIEL K. INOUYE
Ranking Minority Member
Subcommittee on Foreign
Operations

---

## LETTER FROM SENATOR BOB KASTEN

February 4, 1982

The Honorable Daniel K. Inouye
Ranking Minority Member
Subcommittee on Foreign
Operations
Committee on Appropriations
United States Senate
Washington, D. C. 20510

Dear Dan:

This is in response to your letter of February 3, 1982.

I agree with you, and have requested a transcript of the Foreign Relations Committee hearings on assistance to El Salvador under Section 506(a) and with respect to the other matters, the attached letter for your signature is self-explanatory.

Sincerely yours,

Bob

Robert W. Kasten, Jr.

## LETTER FROM SENATORS INOUYE AND KASTEN

February 4, 1982

The Honorable Alexander M. Haig
Secretary, Department of State
Washington, D. C. 20520

Dear Mr. Secretary:

The Subcommittee on Foreign Operations has decided not to hold hearings at this time on the new developments in El Salvador and the Administration's response to those developments. At least three other Committees or Subcommittees have held such hearings in the last several days, giving both the Administration and Congress the opportunity to express their respective views on United States policy toward that troubled Central American country.

However, since this Subcommittee will eventually have to pass on all amounts of economic and military assistance which will flow to El Salvador, it is necessary to notify you that in the not too distant future, the Subcommittee will hold extensive hearings on this matter. You can anticipate that your personal attendance may be required at such hearings in order that all aspects of Administration policy towards El Salvador be examined and explained.

In the meantime, there are a number of questions the Subcommittee has which I would like you to respond to in writing. If necessary, the answers to these questions can be furnished on a classified basis:

1. We need a clarification of the President's intention to exercise his authority under Section 506(a) to meet "an unforeseen emergency which requires emergency military assistance to El Salvador in the absence of a report by the President (as required by Section 21(c)(2) of the Arms Export Control Act) within forty-eight hours of "a change in status of significant hostilities or terrorist acts...which may endanger American lives or property...";

2. Please provide detailed information on the number, rank, and duties of all U. S. military personnel in El Salvador, precise information as to whether any of these personnel were stationed, assigned, or otherwise located at the Ilopango air force base within forty-eight hours of the attack on that installation on January 27, 1982, and a clear statement of whether the Administration intends to increase the number of U. S. military personnel in El Salvador; and

3. Please furnish a complete record of all communications between the U. S. Embassy in El Salvador and the Department of State from December 1, 1981, to January 31, 1982, to include a comprehensive set of reporting cables and transcripts of telephone conversations.

The Subcommittee must have the above information in order to prepare for a subsequent hearing, and in order to discharge its responsibilities in this critical situation.

While the Subcommittee intends to be cooperative, the situation in El Salvador is of such a serious nature that we felt it prudent to notify you at this time of our future intentions.

Sincerely yours,

Robert W. Kasten, Jr.
Chairman
Subcommittee on Foreign
Operations

Daniel K. Inouye
Ranking Minority Member
Subcommittee on Foreign
Operations

---

## LETTER FROM POWELL A. MOORE

Dear Senator Inouye:

On behalf of Secretary Haig I wish to acknowledge receipt of your letter of February 4 in which you request written responses to certain questions regarding El Salvador. The requested information you seek for the Subcommittee on Foreign Operations is being gathered and will be provided to you as soon as it becomes available. I am sending a similar reply to Chairman Kasten.

Sincerely,

Powell A. Moore
Assistant Secretary for
Congressional Relations

## LETTER FROM SENATOR DANIEL K. INOUYE

March 8, 1982

The Honorable Robert W. Kasten, Jr.
Chairman
Subcommittee on Foreign Operations
Committee on Appropriations
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

The Reagan Administration has brought about a fundamental transformation of United States foreign assistance policies, allocating increasing amounts to security assistance programs and comparatively less to economic assistance programs. In fiscal year 1983, for example, a $1.7 billion increase is requested for military assistance, while economic assistance programs are held to current-year levels.

In our hearings last year, Secretary Haig informed the Committee that, in the Reagan Administration, "in the formulation of economic policy, in the allocation of our resources, in decisions on international economic issues, a major determinant will be the need to protect and advance our security." Clearly, the primacy of security concerns in the formulation of foreign assistance policies has become evident to all concerned.

Nonetheless, as we prepare for the onset of our regular appropriations hearings on the President's fiscal year 1983 budget request, we are still lacking one of the most important documents which we use to examine the budget. I refer, of course, to the Congressional Presentation documents which provide details of the President's request for security assistance funding.

Furthermore, one of the most significant of the security assistance programs being conducted by the Administration is that which is providing assistance for El Salvador. On February 4, we jointly wrote to Secretary Haig seeking pertinent information regarding the conduct and implementation of that program. As you know, Secretary Haig has yet to respond.

Mr. Chairman, at this crucial juncture in the evolution of our nation's foreign assistance program, I believe the Subcommittee would be remiss in holding a hearing for which its members had inadequate materials for preparation. Therefore, may I request that you postpone the Committee's scheduled hearing of the Secretary of State until such time as it has in hand the Congressional Presentation documents for the fiscal year 1983 security assistance programs and Secretary Haig has responded to our mutual request for information.

I recognize that a postponement of this hearing will cause some difficulty for the Subcommittee and the Department of State. Nonetheless, I believe this information to be of sufficient importance to warrant this action.

I thank you for your consideration of this request.

Sincerely,

DANIEL K. INOUYE
Ranking Minority Member

---

## LETTER FROM SENATOR BOB KASTEN

March 8, 1982

The Honorable Daniel K. Inouye
Ranking Minority Member
Subcommittee on Foreign Operations
Committee on Appropriations
United States Senate
Washington, D. C. 20510

Dear ~~Senator Inouye:~~ DAN,

Thank you for your letter of this date suggesting a postponement of this Wednesday's hearing at which the Subcommittee will receive testimony from the Secretary of State.

I too am concerned that we have not yet received a substantive response from Secretary Haig to our February 4th letter, although as you know, we have received an interim response from the Department of State indicating that they are gathering the information in order to provide such a response. I am also concerned that we do not yet have the Congressional Presentation document, although we have received, as you know, a paper from the Secretary on the International Security Economic Cooperation Program, which gives a good deal of information. Also, last Friday we received the Main Volume of the Agency for International Development's Congressional Presentation, which has much of the Administration's justification in it. In addition, we should receive the regional A.I.D. justifications later today.

While I agree with you that the timeliness of the Administration's submission of justification material is not ideal, I do not believe it justifies postponing our hearing at this late date. All of our schedules, mine especially with upcoming action on the budget resolution, are horrendous, and postponing this hearing would simply add more problems. I do believe we have sufficient information to go ahead with the hearing, and, of course, we will be able to ask any questions we wish in order to flesh out the record. Nonetheless, because of your letter, I am going to keep the record of Secretary Haig's hearing open for a longer period of time so that we will have more time to submit questions for the record.

Sincerely,

Robert W. Kasten, Jr.
Chairman, Subcommittee
on Foreign Operations

---

## Letter From Senator Bob Kasten

March 8, 1982

The Honorable Alexander M. Haig, Jr.
Secretary, Department of State
Washington, D. C. 20520

Dear Mr. Secretary:

Enclosed is a copy of a letter I received today from Senator Daniel Inouye, the Ranking Minority Member of the Foreign Operations Appropriations Subcommittee.

I share Senator Inouye's concern, and would urge you to respond to our February 4th letter as soon as possible. To the extent possible, I would advise that you respond before Wednesday's hearing, or at least by the end of this week. While I share Senator Inouye's concern, I have not postponed your hearing, although it would certainly be a proper response. Nonetheless, given your schedule, as well as ours, I felt the hearing should go forward.

With respect to the Congressional Presentation documents, I would urge you to instill in your staff the necessity for providing these documents on a more timely basis. It is the principal justification material used by the Committee, and while we have received the shorter paper you provided March 2nd, the detailed presentation is necessary for our deliberations.

In the future, I am sure you will be more cognizant of our requirements, and hopefully more prompt in answering our inquiries so that we can give adequate consideration to the Administration's requests.

Sincerely,

Robert W. Kasten, Jr.
Chairman, Subcommittee on
Foreign Operations

### INTRODUCTION OF SECRETARY HAIG

Senator KASTEN. I think before we get into the specific questions, Senator Inouye, we will give the Secretary an opportunity to give his opening statement, which I understand he will summarize, and then he can respond to your specific questions.

Mr. Secretary, since it is my understanding that you have requested to leave by noon, we will have your cooperation I am sure, and take the time you would like to summarize your statement. Then we will begin questioning by the members of the subcommittee for 5 minutes each, and we will go through as many rounds of 5 minutes each as possible, alternating between majority and minority members.

Mr. Secretary, we greatly appreciate you being here today, and we would like very much for you to begin your statement.

### OPENING REMARKS OF HON. ALEXANDER M. HAIG, JR.

Secretary HAIG. Thank you very much, Mr. Chairman.

It is always a pleasure for me, and in this case a very special one, to appear before the Senate Appropriations Subcommittee on Foreign Operations to present the administration's proposed fiscal year 1983 foreign assistance program.

I think at the outset I want to take this opportunity to thank you, Mr. Chairman, for the leading role that you played in successful passage of last year's security and development assistance bill, the first we have had since 1978, and we have been operating on continuing resolutions during that very crucial period. That is an appalling commentary from my point of view on executive/legislative cooperation, and the consequences were serious.

Now I am not going to read my opening statement, Mr. Chairman, but rather make some general observations, some of which will touch upon the comments that you made and that Senator Inouye made, and also to touch upon some questions which I assume will be foremost in the minds of the members of the committee.

### SECURITY ASSISTANCE LEVELS

A question has been asked, why has this administration raised the level of security assistance request and straightlined, if you will, Senator Inouye, the economic development request of the past year.

I think it is important that we reflect on the consequences of recent American foreign policy directions and policies. It was clear that over the last 4 years, and even beyond that into the period of post-Vietnam and post-Watergate America, it began to become common opinion that military assistance, for example, was evil. And it was the policy of the last administration in their Policy Directive 13 that military assistance should be steadily declined, if not eliminated as a national policy.

### COUNTERING THE POLICIES OF THE SOVIET UNION

It is an unfortunate fact that during that same period the Soviet Union increased its level of military assistance worldwide. It became the largest contributor of arms to the developing world in the order of magnitude to two to three times what the United States was providing on major end items.

Now concurrently with that divergence of American and Soviet policy and outlook we found clear evidence in the Kremlin that there would be an increase in Soviet interventionism worldwide.

We saw that in the early period of 1976 in Angola in the African Continent. It spread rapidly to Ethiopia, to Southern Yemen where a puppet regime was established, and it immediately started operations against its northern neighbor, Northern Yemen.

We saw it in Southeast Asia in the wake of the Vietnam debacle where North Vietnam, now Vietnam, began the invasion of its neighboring state, Kampuchea, where 200,000 North Vietnamese troops are in occupation status and suppression and repression status today.

We then witnessed an intervention in Afghanistan where a puppet ruler was established by the Soviet regime, and even that individual did not meet the criteria of loyalty and discipline. Ultimately a direct Soviet intervention with unprecedented troop levels now reaching approximately 100,000 Soviet troops are occupying and repressing the people of Afghanistan.

And, finally, we have witnessed the long anticipated repression in Poland which is, of course, a source of anguish and concern to all of us today.

So clearly what we are faced with as a nation is the recognition that some of our post-Vietnam conclusions were either devoid of good sense or provided an opportunity, if not an invitation, for increased Soviet aggression worldwide with all of the dangers that that represents to international stability and peace.

So it is true, Senator, that we have had in the context of the great American political dialectic the problem of remedying years of misdirection of policy.

Now it is an unfortunate fact of life that so many forget that history did not start this past January, and we are now beginning to realize the benefits or the disadvantages of a number of months and years of misdirected American policy.

I think it is our obligation in a bipartisan sense, because these mistakes were bipartisan in character, to correct with balance and good sense those mistakes, to seek to preserve our vital interests and to give a fiber and a framework to an American foreign policy which once again recognizes that we, like it or not, have an obligation to lead in a responsible, moderate, and unequivocal way. It is the sustenance provided, the resources provided in the fiscal year 1983 Security Assistance Act that will provide precisely that.

## OTHER GLOBAL DEVELOPMENTS

Now on top of that, it is an unfortunate fact that we have a number of events converging in this coming year, the preservation of peace in the Middle East, the obligations incurred at Camp David for a high level of support to Egypt and Israel, negotiations with the Spanish and soon the Portuguese Governments for our base accesses, retention of our facilities in Greece, and the obligation to maintain stable development of pro-Western policies in the vital alliance of Turkey. All of these problems are facing us in the period ahead and they will, unfortunately, require a higher level of sacrifice by the American people.

How unfortunate it is that these chickens are coming home to roost at the very time when our own economic situation here at home is so difficult, and how it is going to take visionary leadership by the executive branch and by the responsible members of the American Senate and House to not become victims of the political dialectic. Not to assume that history started last January in partisan terms, but to recognize our joint and mutual obligation to make the sacrifices that are necessary to reinvigorate American influence and leadership around the world in the interest of peace and stability and the values that we Americans espouse. To be sure that we view this with vision and foresight, vision in the sense that we recognize the security challenge to the free world today is unprecedented, and that it is in our interest to convince the leadership in the Kremlin that the risks associated with the continuation of these aggressive policies worldwide far outweigh the advantages they will achieve.

Now why it is of particular concern to me that it involves multilateral loan institutions and aid programs for the developing world is that historically we have reached a critical point. So many of our developing leaders seized Marxist/Leninist ideology as a locomotive for political change and as a highway to political power. But what they have learned once achieving that power under Marxist/Leninist slogans is that while it is a locomotive for change, it is not an engine for economic development and growth and realization of the aspirations of their people.

So they are now groping for a new relationship with the Western world, the United States especially. If we turn a deaf ear, if we fail to meet their pressing needs in a time of escalation of energy costs and a decline in the prices they receive for one or two product economies, we are going to find these leaders themselves who have become increasingly skeptical of Marxist/Leninist policies replaced by a new generation of far more radical Marxist/Leninist advocates with a continuation of the cycle of instability, bloodshed, wars of liberation, terrorism and international illegality.

So we are at an historic juncture, and it is going to unfortunately require an unusual degree of vision and foresight and courage not only by the executive branch, but unfortunately by the legislative branch perhaps even more importantly.

## THE NATO ALLIANCE

Now some comments have been made about NATO, Senator Stevens' statement. I have just concluded 2 days of conversations with the West German Foreign Minister, Hans-Dietrich Genscher. Let me tell you why I reject and do not accept for a moment that the agonies or the disarray of the NATO Alliance in any way approaches the proportions that your comments and yours, Senator, might have suggested. Precisely the opposite. I think it is important for us to recognize that the NATO Alliance has become more vigorous and more effective in recent years, especially since Vietnam.

It is also important for us Americans to recognize that our Western European partners, at a time we drew down on our security contributions to the Alliance in an aggregate of about 13 percent over the decade of the 1970's, added in their contributions to something in the neighborhood of 22 percent.

So now suddenly because we have awakened as a nation, long overdue, first led by the American Congress, and subsequently this year by the high levels the President has requested, we say that our allies have been lacking in their sacrifices because the statistics just do not confirm it. It is going to require patient and coordinated work, and let me assure you that no one in the executive branch is happy with the contributions anyone is making to our security needs as we watch the growing threat.

But do not believe that we Americans are the pure ones in the support for the Alliance, because our record over the decade just passed is less credible and less admirable than is the Western European.

Now it is also important, I think, that we Americans who are anguishing about differences over Poland and the failure of our allies to join us in sanctions or conserted policies to emphasize Soviet interventionism in that tragic situation—memories are short. In the case of Czechslovakia in 1968, the collective governments of the Western World, the United States and Western Europe, decided that this was an internal matter, and that was a case in which direct Soviet troop involvement was obvious. The same occurred in Hungary and the same occurred in Eastern Germany in the years preceding.

### SANCTIONS AGAINST POLAND AND SOVIET UNION

On this occasion, despite the more ambiguous character of the Soviet involvement, the West is united. It has condemned what is going on in Poland today. It has attributed responsibility for what is going on in Poland to the Soviet Union. It has not been mesmerized by the ambiguities of internal repression, and it has joined together in sanctions and a policy in which we have concluded that one nation will not undercut the sanctions of the other.

In the intervening period our European partners have increased their level of sanctions, both against Poland where no future credits have been offered for 1982 and in the case of the Soviet Union where political and diplomatic sanctions have been increasingly applied.

I think it is awfully important that, for whatever reasons, we recognize the unusual character of Western unity in this crisis. And let me tell you this. If there is any single factor that will have a meaningful impact on a hoped for Soviet decision to apply moderation in the repression in Poland today, it is the perception of continuing Western unity and solidarity, and we must not forget that.

I for one thank God that our President had the good sense to institute our American policy with a full cognizance of the need to maintain Western unity and not turn an Eastern failure into a Western failure. That has not happened, and it must not in the months and days ahead.

Now with respect to some of the questions you have asked, Senator Inouye, of a more technical nature.

I very much regret that by March of this year with all of the fiscal uncertainties facing the preparation of our budget and the coordination in a year of great difficulty for the American people that we haven't been able to lay out every line in our fiscal year 1983 budget request.

We have though, as you know, provided the draft as it stands now to your staff with the understanding that it is a draft, and I think that is sufficient enough for you to shape your questions today intelligently, and I hope to answer them.

### EL SALVADOR SITUATION

Now with respect to your questions on the Salvadoran issue and the interrelationship of that with the War Powers Act and your certainly understandable concerns about that. As you know, in a letter which was provided to you yesterday, which was a response to a sweeping request for information and data, we pointed out that there were no Americans in that air facility, although there is a training team there ordinarily in working hours. There were none there during the period of your question, during the attack.

The ground rules that the President has established with respect to the American training teams or advisory groups or assistants training team, and I think it is 55 men, does in no way butt up to the obligations established in the War Powers Act. The ground rules of their conduct and performance and duties clearly is designed to prevent any involvement in operations which are military in the context of the War Powers Act.

Now in the days ahead that question may become increasingly important, depending on the level of fighting that occurs in the continuation of their current duties. I think for that reason we are prepared to deal with you on a timely, to consult regularly, to answer your questions which are legitimate and important and to do so I hope in a somewhat more responsive way than you may have felt the answer to your first inquiry was dealt with.

In conclusion, again, Mr. Chairman, I want you to know that I am here to answer any questions the members of the committee feel would be helpful to them either on the esoteric aspects of the assistance program for 1983 or on other perhaps even more significant questions which underline the logic that contributed to the structuring of that program.

Thank you very much.

### PREPARED STATEMENT

[The prepared statement of Secretary Haig follows:]

### Prepared Statement of Alexander M. Haig, Jr., Secretary of State

It is a pleasure to appear before the Senate Appropriations Subcommittee on Foreign Operations to present the administration's proposed fiscal 1983 foreign assistance program. I would also like to take this opportunity to thank you, Mr. Chairman, for the leading role you played in obtaining passage of last year's security and development assistance bill, the first such bill in 3 years. Without your efforts it is unlikely we would have had a bill.

Over a year ago, in my first testimony here as Secretary of State, I committed myself to developing a close working relationship with you, Mr. Chairman, and all committee members so that we could move together to strengthen our Nation's international position. While we have not always agreed on specific issues, I believe we have developed a constructive relationship, your wise advice has been most appreciated.

Together we have made an important beginning as we seek to reinvigorate American leadership abroad. For the first time in 3 years, the Congress has enacted foreign assistance appropriation legislation, giving substance to President Reagan's declaration that "America will not shrink from making the investments necessary for both peace and security."

But we cannot stop here. We must build on the progress we have made. The competition we face is too serious, and our own requirements too great to rest now. A first-rate American foreign policy simply cannot be run on second-rate resource.

The task of statecraft is to master events, not simply to react to them. In this complex age of interdependence, American diplomacy requires broad and flexible assets to deal with a variety of situations. Foreign economic and security assistance is a critical element in giving us such flexibility.

For too long, foreign aid has been misunderstood and underrated, dismissed as naive idealism or ineffective philanthropy. Whatever the accuracy of such views in the past, they cannot be sustained today, we are requesting foreign assistance to serve compelling national security, foreign policy and economic needs.

Today, I would like to explain the President's request for an increase of $1.4 billion in security and economic aid in fiscal 1983. With your permission, I would also like to submit for the record a short but comprehensive report that details the major elements of our fiscal year 1983 foreign assistance proposals.

As you know, the President has already asked for a supplemental appropriation for fiscal year 1982 of $350 million to meet our economic assistance commitments under the Caribbean Basin Initiative and an additional $60 million in security assistance for this area.

Let me be more specific about the risks to American national interests that would be the consquence of inadequate foreign assistance:

We would not be able to help reduce the economic misery in the Caribbean Basin that encourages domestic violence and external intervention.

We would risk critical setbacks to our peacemaking efforts in the Middle East and southern Africa.

We might lose military facilities essential to the defense of Western interests in distant but vital regions of the world. Our access agreements with Kenya, Somalia, Oman, and others help us to sustain a U.S. presence all along the vital oil routes to the Middle East.

We would court the danger of further deterioration in the military capabilities and economics of key allies, such as Turkey.

We might encourage the subversive efforts by Soviet and Soviet proxy forces. Our assistance is vitally important to countries friendly to the West such as Pakistan, Sudan, Yemen, Morocco, Tunisia, Somalia, and Oman that are under growing pressure from Soviet client states.

We risk damage to important markets and commercial ties, today more than one-quarter of our agricultural and manufactured exports goes to the developing world.

Finally, we might weaken valuable multilateral financial institutions which have contributed to economic growth and must continue their role in economic development.

The President's program of foreign assistance is not only a safeguard against all those dangers, but an integral element of the President's foreign policy. It is absolutely necessary if our strategies are to succeed in achieving their objectives. For example, our policy in the Middle East pursues two goals: The search for a just and lasting peace and the urgent requirement that our friends in the region be secure against threats from the outside and from Soviet surrogates and radical forces within the region. These goals reinforce each other. No peace is possible unless local countries are secure from outside coercion; and security will not be achieved if we fail to address the underlying sources of conflict and instability.

Our foreign assistance serves both of these goals. It seeks to advance the welfare of the populations and the economic health of their countries to promote economic and political stability throughout the region. The security and economic health of Israel and Egypt give these nations the confidence to continue on the path toward peace begun at Camp David.

Similarly, our policy in Southwest Asia seeks to insure Western access to oil from the Persian Gulf. Almost all the countries in the area stetching from Pakistan to

Morocco are economically troubled. In addition, they face potential subversion or regional threats, in many cases, supported by the Soviets or their proxies. Our 5-year program of military modernization and economic assistance will help Pakistan to meet the Soviet threat from Afghanistan and facilitate the development essential to internal stability. Our assistance helps Sudan, Morocco, and Tunisia to face threats of subversion or aggression emanating from Libya.

In the eastern Mediterranean, we seek to strengthen our relations with two major allies, Greece and Turkey, to buttress NATO'S vital southeastern flank, and to facilitate the search for a solution to the Cyprus problem. Our assistance is required for a strong Turkey, which lies at a key geo-political crossroad, the intersection of our NATO, Southwest Asia, and Middle East interests. Both security and economic stability are necessary to maintain the momentum toward restoration of democratic institutions in Turkey. Security assistance also helps a democratic Greece fulfill its NATO responsibility.

In the Caribbean, the President's policy seeks to provide both the economic help that the nations of the region need to overcome legacies of poverty and injustice and the security assistance needed to prevent Castro from exploiting those conditions to establish new totalitarian regimes. We must provide the resources needed until increased investment, a strengthened private sector, and expanded export markets enable these countries to achieve economic self-sufficiency. The amounts for security assistance are modest, equalling just over $100 million out of a total aid request of $675 million for the entire basin area.

El Salvador, where insurgents seek to prevent elections and destroy the economy, would be the largest single recipient of both security and economic assistance. Jamaica will continue to need substantial assistance in order to restore the vitality of its shattered private sector. Our support for Costa Rica's rapidly deteriorating economy will help that country to carry out fundamental economic reforms and to preserve the longest democratic tradition in Central America. In Honduras, another move toward democracy faces the dangerous combination of a quickening economic decline and a political-military crisis upon its borders.

To assure the most effective use of our scarce resources, the President has realigned foreign assistance allocations with careful attention to priorities. The promotion of truly lasting economic growth remains one of our key objectives. Our program recognizes that assistance alone will not guarantee economic development. Growth also requires proper economic incentives, national commitment and a reliance on the creativity and resourcefulness of the individual.

The program also responds to the pressing needs of key strategic nations for increased economic support and concessional military sales. Such nations must receive help in order to bolster their defense against outside subversion and to prevent economic crises.

Our new focus on essential strategic and development objectives should not obscure our pride in the continuing American commitment to traditional humanitarian objectives. We remain the major source of assistance to refugees in Africa, Pakistan, Southeast Asia, and the Middle East. We direct the bulk of our development and food aid to the world's poorest countries. These countries—with limited access to private capital markets—depend on concessional assistance to support their development efforts. To meet these needs, President Reagan committed the U.S. at Cancun to maintaining assistance levels to these nations.

## CONCLUSION

Mr. Chairman, I recognize that approval of foreign assistance in this time of austerity will be difficult. But we shall pay a greater price later if we do not act now. America's most essential interests are under attack. The President firmly believes that the resources he has requested are crucial to defense of these interests and to the promotion of a more peaceful and secure world. Our Nation's security tomorrow requires that we make an investment in foreign assistance today.

## TIME LIMIT ON QUESTIONING

Senator **KASTEN**. Mr. Secretary, thank you very much.

We will begin 5 minutes of questioning, and just for the notification of the subcommittee, we will use the light system so we can have a general feeling as to how much time we have.

### THE SITUATION IN NICARAGUA

Mr. Secretary, this morning, attention is focused on Nicaragua, particularly on stories carried on the front pages of some newspapers regarding the report that President Reagan has authorized covert operations against Nicaragua in the form of a 500-man paramilitary force with a $19 million budget.

Yesterday afternoon I spent about an hour with the Nicaraguan Minister of Agriculture, Mr. Jaime Wheelock, in an effort to learn from him as much as I could about the situation there.

I wonder, are these reports true that we have authorized covert operations in Nicaragua?

Secretary HAIG. Well, Mr. Chairman, I think the story you are referring to is a replay of an earlier Washington Post story of about a week ago. I think, Mr. Chairman, you know as well as I that as a matter of consistent and longstanding policy, it would be inappropriate for me to comment on covert activities in a forum such as this. But I would certainly hope that that policy position which is long standing does not suggest a confirmation of the reports in that newspaper.

### MILITARY BUILDUP IN NICARAGUA

Senator KASTEN. We are increasingly concerned, Mr. Secretary, about the growing military buildup in Nicaragua. It is clearly of an offensive and not defensive nature—with the tanks, the 25,000 or 30,000 people now armed, the hardening and the strengthening of the airfields, and the continuing reports about Nicaraguans being trained in Bulgaria and other Soviet satellite countries to fly airplanes.

What can we do to stop this growing buildup?

Secretary HAIG. Well, here again, Mr. Chairman, I think this is an extremely important contemporary question, and I would lament somewhat that the focus of public opinion and the media's attention is almost exclusively on the microcosm of the Salvadoran situation.

This is a situation that is global in character. It involves not only the steps which are being analyzed, dissected, bisected and debated with respect to what we are doing for the economic development of the Government of El Salvador which is threatened by external intervention, but the security needs of that government which we have attempted to meet to enable them to hold their heads above water to continue with the reforms that we so avidly support, land reform, trending toward pluralism and democratic due process, and the interrelationship of that with what has happened in Nicaragua since the successful Sandinista revolution several years ago.

The assurances that we had in the months before the successful outcome of that revolution in Nicaragua that there would soon be a national plebiscite to permit self-determination by the liberated populations of Nicaragua which has been quite to the contrary supplanted by increasing totalitarian tendencies, and even to this day the leadership in Nicaragua insists that the revolution itself constitutes the national plebiscite even though polls taken within the private sector suggest that something in the neighborhood of a quarter of the people of Nicaragua support the current regime and the other three-quarters are violently opposed to its policies, and that there is no hope for an election in that country until even 1985, if then, and contrast that to the efforts of the struggling leadership in Salvador which this month will expose itself to national plebiscite even under the dreadful conditions with which they are operating.

But bear in mind these are the local manifestations of a global problem, the solution to which is not going to be found by the level of assistance we give to El Salvador or don't give or the number of American advisers, but rather on far more critical strategic questions yet to be answered, and they are the questions about future Cuban policy in this hemisphere and future Soviet policy worldwide.

Anyone who attempts to debate in the press or otherwise the prospects for successful outcome in Salvador that fails to assess the broader implications and the efforts that must be undertaken with respect to the Soviet Union and Cuba is, of course, dealing with the leg or the trunk or the tail of the elephant. I hope I have put some balance in the contemporary debates.

### NUCLEAR FREEZE PROPOSALS

Senator **KASTEN**. Mr. Secretary, I would like to ask you about the so-called nuclear freeze proposal that Senators Kennedy and Hatfield are proposing, I believe today. Does the administration believe a nuclear freeze would further U.S. security interests?

Secretary **HAIG**. Well, I had a telephone call from Senator Kennedy last night informing me that this proposal would be put forward suggesting that he regretted that it hadn't been discussed with us before then. I am aware of this freeze proposal, however, because it has a number of supporters, well-meaning supporters, and I would just make the following general comments.

This freeze proposal is not only bad defense and security policy, it is bad arms control policy, as well. It is clear that the Soviet Union over the past 15 years has outspent the United States in the development of their strategic nuclear capability by substantial margins, each year and every year for the past 15. That has enabled them to develop a level of existing and future strategic superiority in especially the instantaneous hard target kill capability and large ballistic missile imbalances have developed.

I would consider it to be very destabilizing were we today to freeze the contemporary balance into an imbalance. That will not contribute to progress in either arms control or meet the vital security interests of the American people.

Now, I want to emphasize that President Reagan's arms control policy is not to freeze at unacceptable levels that we have already reached, but rather to achieve substantial reductions in levels of nuclear armament and to do so in a way that we can verify such reductions have taken place.

Unfortunately, this freeze proposal runs directly against both of those principles, and I am particularly concerned at this time that such a proposal would come forward in the midst of the INF discussions which are underway in Geneva in which we seek to eliminate in the land-based sector the threat entirely by the so-called zero action.

Now the freeze as applied in Western Europe would be to freeze in place a minimum of 3 to 1 Soviet superiority and something more analytically in the neighborhood of 6 to 1 superiority of Soviet systems. The instability and the political disarray of such a proposal by the U.S. side could be devastating not only in terms of the future direction of Western European policy vis-a-vis the Soviet Union, but more importantly to undercut the very initiative that we have just lost in these discussions.

So while one cannot question the well-meaning motivations of this resolution and this proposal, one must analyze the practical consequences of it, and for that reason, I am very concerned about it.

Senator KASTEN. Thank you, Mr. Secretary.

Senator Inouye.

Senator INOUYE. Mr. Chairman, before proceeding with my questions I would like to make some observations.

Mr. Secretary, I agree with you that having to operate the foreign assistance program under continuing resolutions for 2 fiscal years is, as you have noted, outrageous and unacceptable, but I hope the record will note that this committee and this Senate has always passed the bill, and I am certain you know why it didn't pass the other side.

Second, I listened to your statement on NATO very carefully and with great interest and I notice that you were pointing your fingers at the both of us here, but I don't recall any of us making any statements on NATO here.

Third, Mr. Secretary, I notice that many speakers from the State Department and from the administration have tried to assure us that since the numbers are small, just 55 or 50 men in El Salvador, our presence is almost minuscule and should not be of major concern. But I can't help but recall, because I was here then, that our initial involvement in Vietnam was just 50 men.

### THE MEXICAN OFFER TO MEDIATE

Mr. Secretary, can you provide the committee a brief synopsis of President Lopez Portillo's offer to act as a communicator in his effort to resolve the conflict between El Salvador and the United States and Nicaragua? What is the present state of the discussions between the United States and Mexico?

Secretary HAIG. I would be happy to, Senator. Incidentally, there was a comment about NATO and the Stevens' troop withdrawal resolution or threat which had a very unsettling effect in Europe I can assure you, and which I do not believe represents a consensus view.

Senator LEAHY. By whom? I didn't understand.

Senator KASTEN. I made a comment in my opening statement before Senator Inouye was here about the questions in NATO and about the Stevens' Mansfield-like resolution.

Secretary HAIG. Now with respect to your question, Senator, I think it is first important to point out to the members of the committee that last August the United States had discussions with the leadership in Managua which involved proposals designed to deal with what subsequently has become and was even then a serious threat to stability and peace in the hemisphere.

We proposed reductions in the levels of armaments, mutual guarantees that could be applied with respect to threats and the resumption of normal levels of assistance to the Nicaraguan Government for their development efforts. The sine qua non, if you will, of that proposal that we made was that they would cease their interventionism in neighboring El Salvador through training, armaments, command and control and direction.

At the time our efforts were rebuffed. We continued on through the fall and sent several specific fleshing-out proposals, if you will, for certain aspects of those offers for negotiated settlement to which no satisfactory response was provided.

During that period I kept the Mexican Government fully apprised of what we were doing, and we have stayed in fairly close consultation both through President Lopez Portillo and my own contacts with Foreign Minister Castañeda.

Now the recent visit of the Mexican President to Managua included a speech in which there were proposals made for nonaggression assurances between Nicaragua and their neighboring states, the possibility of reduced levels of armaments and the character of armaments that would go into Nicaragua in the months ahead in return for nonaggression commitments from the United States vis-a-vis Nicaragua.

These are extensions, if you will, of the earlier discussions that the United States initiated unilaterally, although they were somewhat broadened by President Lopez Portillo. Before he made those proposals publicly, he informed President Reagan by correspondence precisely what he was doing.

Our analysis of his proposals as we received them and as his speech presented them were that they lacked the sine qua non assurance that we felt was vital to any successful negotiation with the Government of Nicaragua, and that was that they would commit themselves to cease and desist in their involvement in El Salvador and among other neighboring states, for example, Costa Rica where there are already signs of some Nicaraguan activity.

Now this past weekend, after we had had some indications that perhaps the Mexican proposal was not totally insensitive to that requirement, I met with Foreign Minister Castañeda in New York. We spoke for some 2½ hours, and we went through the entire Mexican proposal, our own viewpoint of that proposal, and I think we moved the dialog forward in a constructive way. We will continue these discussions this coming weekend in New York when I will be up there to meet with the other members of the Caribbean Basin Initiative, Canada, Venezuela, as well as Mexico.

So the answer to your question is I can assure you that President Reagan has never rejected the concept of exploring every feasible means possible to bring about a peaceful and acceptable outcome to this crisis in the region. And those discussions have involved all of the contributors to the crisis, Cuba and the Soviet Union as well, as they indeed must. Now they don't lend themselves to day-to-day public exposure, and that perhaps has contributed to some of the skepticism and controversy that you talked about, Mr. Chairman, in your opening statement. But I would hope that the members of this committee and the American people would give their President credit for understanding the seriousness of this situation and the need to avoid further conflict or an expansion of conflict, if that is in any way possible.

This is a two-way street. It is not a decision to be made here by public opinion, by the American press or by the American Congress or the executive branch. It requires reciprocal obligations by those who have brought about this problem in the first instance.

I hope I have answered your question.

Senator INOUYE. May I just follow this?

Senator KASTEN. Yes.

Senator INOUYE. I was pleased to learn that the administration will follow any avenue to bring about a resolution of this problem in Central America. Does this include negotiating with the leftists?

### NEGOTIATIONS IN EL SALVADOR

Secretary HAIG. Well, Senator, I think here again there has been a lot of misinformation on the airwaves. It is not the position of the U.S. Government to negotiate on behalf of the people of El Salvador when they have a responsible government to do that. That government has always been willing to negotiate with the leftist guerrillas even though they recognize they are externally directed and commanded and controlled. There are many elements that are not and that are responsible advocates of a pluralistic democratic outcome. It has always been willing to negotiate.

What does it want to negotiate? It wants to negotiate the provisions for a peaceful plebiscite, an expression of the self-determination of the people of El Salvador. What it has rejected is the kind of negotiation in which the left is insisting on and which many misinformed Americans are supporting, and that is not a negotiation at all, but to sit down and redistribute power between the extreme left and those who are incumbents in El Salvador today, and to do so without reference to the will of the people of El Salvador, much like the great Vietnam solutions that were debated so incessantly and which have reflected the democratic process in the intervening years I don't think.

Now this is President Duarte's view, and we support that view. No one has rejected negotiation in which people would be willing to lay down their arms and sit down and negotiate a formula for the expression of the will of the people in accordance with American values, and I hope future Salvadoran values.

So there is your answer.

Senator INOUYE. Thank you, sir.

Senator KASTEN. Senator D'Amato.

Senator D'AMATO. Mr. Chairman, Senator Specter has a pressing engagement at the White House, and I would like to yield to him at this time.

Senator KASTEN. Fine.

Senator Specter.

### WAR POWERS ACT

Senator SPECTER. Thank you very much, Senator D'Amato. I appreciate that.

As the history has evolved following the Korean conflict and Vietnam, I am concerned about the constitutional power of Congress to declare war and the authority of the executive branch to commit American troops, even for a brief period of time.

It is a concern of mine that we may find ourselves in a situation where there is no real alternative but to continue the path which has been started by the Congress. A fundamental principle of the Constitution requires that the Congress, and the Congress alone, has the authority to declare war.

Does it make any sense, in light of that constitutional requirement, that American troops can be committed in a way which may be irreversible without the declaration by Congress?

Secretary HAIG. Well, Senator, I recognize clearly the implications of your question and the basis for your concern. We have had two involvements in this century, in Korea and Vietnam, which could certainly raise the hackles of responsible legislators. But I think if you go back and examine both of those involvements, and that was before the War Powers Act, that the consultation and the involvement and the consensus of both Houses of the Legislature fully supported the executive branch. Had that not been so, the events probably would not have unfolded as they did. I am just giving you an objective historic observation.

Subsequently we have passed a War Powers Act which places even greater limitations on the executive branch with respect to the concerns you have expressed.

Now I for one am never encouraged or never view with tranquility, if you will, encroaching restrictions on the conduct of the executive branch or the President's ability to conduct our foreign policy.

One of the great misreadings of recent history would be that these definitive limitations contribute to peace, stability, and noninvolvement. I would suggest that a proliferation of inhibitions on executive privilege and authority, which our Constitution also is very clear on, raises the prospects of miscalculation by those who do not share our values and raises the likelihood that they will incur risks that may in the final outcome bring about the very involvement that you are so concerned with.

The American system is one in which the American people choose an executive to lead our country and the Constitution provides authorities with which he can conduct that very onerous and increasingly onerous set of responsibilities. I am one that views with great skepticism and caution any inroads.

The American people also have the ability when their executive leadership misperforms or misjudges or gets out of step with their own concerns to replace him, and that is a pretty solid system, and you also have very many safeguards to shape and direct because you control the purse strings through which these operations take place. That is why I am here today, to deal with the purse strings.

So I would urge you to be very, very careful and not to become hypnotized by contemporary pressures and doubts which I feel have looked less at the broader implications of the Central American crisis than both fact and our interest would suggest.

### COMPARING EL SALVADOR TO VIETNAM

Senator SPECTER. Mr. Secretary, speaking of contemporary pressure, on the recent congressional recess, the concern in my State for the Salvadoran situation was nosed out only slightly by unemployment. My mail runs very, very high on a subject which is of grave concern to the people of Pennsylvania and—on the national level—about El Salvador becoming another Vietnam. That is the simple question on so many American minds.

To what extent is it possible to assure the American people that El Salvador will not become another Vietnam?

Secretary HAIG. Well, El Salvador is not Vietnam. If one would look back at the experiences of our involvement in Vietnam, the creeping involvement of the United States, which I am not a Johnny-come-lately on because I was concerned about it at the time working very close to the policymakers who led our policy decisions at that time. So I am not a Johnny-come-lately.

I thought there were several mistakes in the Vietnam case. One was that no really profound analysis and judgments were made as to whether or not this was a matter of vital interest to the American people. There was a perception that we could have guns and butter, and we could conduct a steadily, ambiguous, escalating involvement and still not disturb the well-being and complacency of the American society here at home.

We believed that it was an internal matter, that Hanoi was an advocate of national liberation and the elimination of the repression that Diem and then the Thieu regime constituted, that the freedom of the press was in jeopardy and all of the other things.

Where are we today? A million butchered, a million and a half set to sea by boats, a million of their neighboring Cambodian brothers butchered. Where is that great voice of American conscience which we are hearing once again in Salvador and which is suddenly being quieted as we watched the repression taking place in Southeast Asia?

Now I happen to believe that had we addressed the issue, is American national interest involved and what were the strategic contributors to Southeast Asia—the Soviet Union, its support for Hanoi. Misunderstood, at the time, ambiguities between Chinese policies in the region and Soviet policies, which as late as 1971 contemporary logic here in Washington suggested if we did anything vigorous against Hanoi we would bring the Chinese hordes into the defense of the North Vietnamese. Why they would have sat back and applauded, and indeed they are today the police force doing the work of the American people in preventing Hanoi from overrunning neighboring Thailand and perhaps Burma and the rest of the whole peninsula.

So that was Vietnam. And, frankly, I don't know that we would have decided that the outcome there was in the vital interest of the American people. If we had decided no, we should have kept out, as the military recommended to President Eisenhower in the earlier French involvement. They said don't get involved. It was Gen. Mat

Ridgway who made that recommendation to President Eisenhower, and he listened to it.

But if you do get involved, be sure you understand the American people can support such an operation only to the degree they have confidence it will succeed and that their interests are involved.

Now we violated all of that in Vietnam, and it is a tragedy because we are still paying the price.

### U.S. INTERESTS IN CENTRAL AMERICA

Now let's take a look at Central America. Here in our own hemisphere. Here is the area that controls the vital Panama Canal, that controls the vast millions of people who are today experiencing socioeconomic deprivation and are seeing that deprivation and state of affairs exploited by external powers in the interest of installing a totalitarian outcome.

Here is an area where half of our trade passes through. Here is an area where half of our energy passes through. Here is an area which is fundamental to our logistic ability to support a conflict in Western Europe should it occur. Here is an area from which today countless refugees, undocumented entries are coming into our society with the social economic burdens that has placed on our State governments and on the Federal Government and on the ability of our society to absorb them.

Why those levels which reached 1.5 million alone will be miniscule compared to what we will witness if totalitarianism spreads in Central America; minuscule. And what then will the American people do? They will want to know why you, Senator, and I let this happen, and why we didn't do all within our power to assist the economic and social needs of those people, our neighboring people, and above all, to insist that external powers keep out.

So I think they are very different areas for American interests.

Senator KASTEN. Senator Johnston.

### SANCTIONS AGAINST THE U.S.S.R.

Senator JOHNSTON. Mr. Secretary, you talked about increased Soviet intervention from Central America to Poland and Afghanistan. Now it seems to me that there are two things that we can do very effectively to sanction the Soviets, and that is to deal with the Soviet gas pipeline and to deal with the Soviet debt, the Western debt in Eastern Europe.

Now my first question is with respect to the Soviet gas pipeline. Is it not a fact that the present plans call for using American technology licensed by American companies through European vendors and cannot we effectively either prevent or certainly slow down and cause a restructuring of that pipeline? You have said it is against our interests. Can't we effectively do it? And if we can slow it down or stop it, why don't we?

Then, secondly, if you would deal with the question of why we should be paying in effect to subsidize the debt to Eastern Europe.

Secretary HAIG. Well, first, Senator Johnston, this is an important question, and I think it deserves a very careful and measured answer.

It is important to recognize, as I pointed out in my opening statement, that history did not start this past January, and too many of us seem to assume that that was the case, and it is convenient for some and maybe encouraging for others.

Now the pipeline negotiations, which began in about 1976 in Western Europe, were unchallenged with much vigor by the American administrations throughout the period.

Now I was a NATO Commander in Europe, and I lived there and I watched the evolution of it, and I expressed my concern frequently about the implications of this. But I think it is important also for the American people to know what those implications are.

We are talking about a dependency level, and I am speaking from the perspective of a West German leader, of about 5 percent of the total energy needs of the West German Government.

They have done studies over the years to analyze whether that level of dependency from their point of view would make them vulnerable to blackmail in time of crisis from the Soviet Union.

Their current level of dependency on Middle Eastern oil and energy resources is manifestly higher, 75 to 80 percent. They felt that they were more vulnerable to a conflict in the Middle East, given the danger there and what could happen in such a conflict and should that energy be cut off. So they wanted to diversify.

Unfortunately, they couldn't pay the prices for some of the North Sea oil and energy and natural gas of the Dutch, which is far more expensive. So they felt on a cost-effective basis, and I am giving you their logic, that that diversity of dependence, which is roughly 5 percent of their energy needs for which they had contingency plans to absorb a total cutoff at any time, was more in the overall interests of Western security than total dependence on the Middle East with all the uncertainties there.

Now during that period contracts were signed, commitments were made, industrial projects were planned and employment was undertaken and that reached a rather high level of sophistication by the time this administration came into office, at which time we concluded that we should do all in our power to dissuade the Europeans from joining in this pipeline or at least to limit their extent of involvement, their two basic lines involved, and maybe cut it in half.

Now what did that involve? That involved an obligation on our part, which we committed ourselves to at Ottawa this last summer, that we would try to offer them some alternative to that excessive level of Middle Eastern dependence which would be cost effective and attractive.

Now in the process of trying to put such an alternative program together, it unfortunately fell within the executive branch and certainly would have within the legislative branch on the rocks and shoals of American economic shortcomings in this current environment, because we look at coal substitutes for Western Europe, and any exploitation of the vast coal resources of the United States would involve port improvements and those port improvements would be very costly and our budgeteers in this austere environment just felt we couldn't make those enhancements, and they went back to the drawing board to try and reshape another attractive program.

In the meantime, there had been a great deal of concern expressed, especially in the light of the Polish crisis, that this pipeline is not in our interests. Well, we Americans have taken that position consistently in this administration.

Senator JOHNSTON. Well, could we stop it if we wanted to?

Secretary HAIG. No.

Senator JOHNSTON. Could we slow it down?

Secretary HAIG. Not meaningfully, and the cost of trying to do so in terms of mutual confidence and allied unity would be substantial.

### EASTERN EUROPEAN DEFAULT

Senator JOHNSTON. How about the Eastern European debt?

Secretary HAIG. The Eastern European debt, you are talking default?

Senator JOHNSTON. Yes.

Secretary HAIG. Well, we have made very careful calculations which are supported by our allied partners as well, and I think most of the economic experts I have talked to, not all, believe that it is best to keep the pressure on the Soviet Union and the Polish Government to be responsible financial partners in the arrangements that have already been agreed upon, to meet their debt obligations and to pay them. Why? Because they clearly are in a cash bind, the Soviet Union is in a cash bind.

Senator JOHNSTON. If we don't put on the sanctions now after Central America and Poland and Afghanistan, what are we waiting for?

Secretary HAIG. It is not a question of being reluctant to be too tough. It is a question of believing that the maintenance of the debt obligation is a tougher outcome for the Soviet Union in this environment than it would be to call the Poles into default and give an excuse for cancellation of obligations.

Now no one has precluded that at whatever moment it appears to be the right thing to do, to be the most effective leverage, to call default, but it is our very considered judgment that that is not the course of action that applies the greatest pressure. It is precisely the opposite. And I think you and I are talking in the same terms, you want to apply pressure.

### SEARCH FOR A FOREIGN POLICY—ALLIED SUPPORT

Senator KASTEN. Senator D'Amato.

Senator D'AMATO. Thank you, Mr. Chairman.

Mr. Secretary, following up on something that Senator Johnston was alluding to, it appears to me that there is a widespread impression that many of our people and, yes, some of our colleagues in the Congress have, that there is a lack of an appropriate response on the part of the United States and its allies, whether it be in terms of the suppression of the Polish people and Solidarity, whether it be in terms of Afghanistan or whether it be historically, going back to the Russians moving into Czechslovakia, Hungry or East Germany. You know, Santayana said it best, that those who fail to observe the lessons of history are doomed to repeat and make the same mistakes.

It would seem that there comes a point in time when we should recognize that rhetoric, that condemnation and empty rhetoric without any kind of meaningful economic sanctions or the kinds of power that we can bring to bear means very little to the Russians. This is their history. And I for one have to indicate my displeasure and dismay at what is perceived by many to be empty rhetoric in connection with the events that have transpired in Poland and our response, and particularly the response of our allies.

Broadening that, it would appear to me that if we have substantial and vital interests, and I do believe we have, that we haven't focused in on it sufficiently enough in terms of the kind of refugee problems that you alluded to in Central America, in terms of the vital interests, in terms of Mexico and what takes place and in terms of the Canal.

Aren't we engaged again in that same kind of undisciplined, and that is the perception of rhetoric without clearly stating a policy clearly defining, and do we have initiatives that can be taken? And I refer to your own statement where you said a solution is not to be found in increased economic aid as such or military aid to El Salvador. That is not the solution.

Do we have and are we charting a course, because certainly the American people want to know that that does not mean the introduction of troops into the area? Are we talking about the kinds of initiatives that might mean an embargo or blockade of Nicaragua or Cuba, because you by your own words said that this is not just the Nicaraguans sending over but it goes back to Cuba and it goes to Russia.

I think those are the kinds of things that the people are concerned with. So it is a twofold question that I put to you.

Then let me give you one third observation.

Secretary HAIG. Well, I hope you see, as I saw, the inherent contradictions in the two theses you put forward. One, to do something against Poland and to do nothing in Central America. I find that replete with contradictions, Senator.

Senator D'AMATO. Well, I see some inherent contradictions, Mr. Secretary, if I might be so bold, in some of the rhetroic that I hear taking place.

Well, then, let's stay on Poland.

Secretary HAIG. But be that as it may——

Senator D'AMATO. Now wait a minute, Mr. Secretary. I have listened to you.

Secretary HAIG. Well, I am grateful that you did. I think that is why I am here.

Senator D'AMATO. And I have supported your propositions and I have supported this committee and seen to it that the economic aid packages have gone substantially in the course that the administration has sought, and I want to continue that support.

Secretary HAIG. Well, that is very good, Senator.

Senator D'AMATO. But I am entitled to know and the American public is entitled to know what have we done and what have our allies done when you talk about sanctions in Poland and to the Russian people.

Secretary HAIG. Well, let's talk about it.

Senator D'AMATO. I think we sound like empty rhetoric.

Secretary HAIG. And maybe misinformed rhetoric. So let's talk about it.

Senator D'AMATO. Well, that is the way it is coming through.

Secretary HAIG. Let's talk about it. I think I have already mentioned in my opening statement and drew the differences between Western response to Poland and the earlier repressions that took place in Eastern Europe, and I think you will concede that this has been somewhat different and certainly history confirms it.

Second, we had——

Senator D'AMATO. Mr. Secretary, if I might on that point——

Secretary HAIG. Do you want to hear an answer? Are we after an answer?

Senator D'AMATO. What does a condemnation by Western Europe and our allies mean on the bottom line to the Russians? Will it deter them? Have we done anything in a meaningful way in terms of economic sanctions?

Secretary HAIG. Well, perhaps, Senator, since you have so many broad observations to make you can tell me what you have in mind.

Senator D'AMATO. I am suggesting that our allies, and I am suggesting that maybe one of the reasons Senator Stevens indicated his displeasure is that we have not seen our allies come together. They have not been able to pay that price for freedom that we have paid. They have not been willing to sacrifice their economic interests in that pipeline.

Secretary HAIG. Senator, I reject that, but I think you have an obligation if you have a will to be critical to state precisely what you believe we should be doing.

Senator D'AMATO. I am asking you. Do you believe that we have done enough in that area? Do you believe that our allies have done enough in that area?

Secretary HAIG. Do I believe they have done enough?

Senator D'AMATO. Yes.

Secretary HAIG. I don't believe any of us have done enough, but I do believe we have done a great deal better than your rhetoric would suggest, a great deal better, and I think it is very important that the American people understand that. And it isn't just condemnatory.

We have isolated Poland totally by collective allied action, except for the welfare and the humanitarian needs of the Polish people. That has placed the burden of Poland, for which we in the West bore billions of dollars of responsibility this past year, directly on the shoulders of the Soviet Union, and that is not a meaningless sanctionary action and my discussions with Soviet leaders confirm that in spades. It is extremely costly to them.

Now in addition to that, and I am being very patient and systematic because your level of rhetoric tends to be a little——

Senator D'AMATO. You have been known to have the same characteristics, Mr. Secretary. [Laughter.]

### EFFECTS OF SANCTIONS ON THE U.S.S.R.

Secretary HAIG. It must be my Irish background. But, seriously, the sanctions taken against the Soviet Union involve not only condemnation, not only direct attribution and responsibility, not only the successful outcome of the CSCE Conference where a united Western condemnation elicited great neutral and nonalined support, but it also involves the limitation of diplomatic activities throughout Western Europe, as well as in our own country and limitations in some instances in that each decision is made in each capital in accordance with the effectiveness and the impact. It has involved reductions in the number of contacts, scientific exchanges; in other words, a continuing isolation of the Soviet Union.

Now don't believe for a moment that the regime in Moscow is immune to the impact of international isolation. They need international legitimacy. It is vitally important to a regime which is experiencing centrifugal pressures and economic decline.

This past month in January, the first month of this year, the Soviet Union sold more gold than in any month in previous months of record, 60 tons versus some 200 for all of last year. Why? Cash problems. Now we are sending a delegation to Europe to discuss the subject of future credits, because, as Senator Johnston pointed out, we never got into that discussion, it is a far more meaningful aspect of policy.

For example, Senator, do you espouse a cutoff of grain, unilateral grain from the United States?

Senator D'AMATO. I didn't say that, Mr. Secretary. I am talking about the pipeline, Mr. Secretary, and I wouldn't suggest to you what you haven't said, and I think you do the dialog and the questioner a disservice when you try to impute that I would say cut off grain or we could even go one step further and take aggressive actions. That certainly isn't what I meant, Mr. Secretary.

What I do mean is that there is a widespread perception that the American public has, and certain Members of Congress, that our allies at many times during the course of dealing with the kinds of problems that we have outlined and discussed are not forthcoming in making the kind of sacrifice economically, et cetera, politically that would be acceptable.

Secretary HAIG. Senator, I would hope that you would sit down and look very carefully at what they have done versus what we have done by way of sacrifice.

Senator D'AMATO. That is the purpose in asking you.

Secretary HAIG. For example, the bookkeeping on the sanctions applied on December 30 by the United States suggests very clearly if implemented in extremes with retroactivity and extraterritoriality it would cost our Western European partners far more than it costs the Americans.

For example, the ultimate cost to the American's commercial interest is in the neighborhood of $200 million. In the case of Great Britain one contract alone, and compare their overall GNP to our own, is beyond $400 million. Perhaps that is something you didn't realize or hadn't thought about.

I think it is awfully important that what we do with respect to Poland involve sanctions against the Soviet Union and the Polish Government, the repression, not sanctions against our partners.

Now you talk about sacrifice. I don't know when you have been to Europe last.

Senator D'AMATO. Not as frequently as you.

Secretary **Haig**. No, when?

Senator **D'Amato**. October.

Secretary **Haig**. Well, I hope you got some indication of the gravity of the economic crisis taking place in all of the Western European capitals. Their unemployment levels far exceed our own. Their debt to GNP ratios are far more grevious. Their economic growth is slackening. It is more worrisome. And this for the first time has even hit Western Germany which has been since the Second War miraculously excluded from these downturns.

Now it is at times like this, Senator, that emotional rhetoric, accusations, and suspicions have got to be very carefully measured against fact. The great tendency in time of economic deprivation is for one to cast his exclusive stare at his own navel and to indulge in protectionism and the kinds of things that some of your remarks might suggest. Nothing could be more damaging to the vital interests of the American people and the values that you and I espouse.

Senator **D'Amato**. The Chairman is growing most impatient and maybe we can return to that when we come around again.

Secretary **Haig**. All right.

Senator **Kasten**. Senator Leahy.

Senator **Leahy**. Thank you, Mr. Chairman.

I assume that the Secretary is not saying that emotional rhetoric is an ethnic characteristic. Considering the dialog going on and the two people involved, as the only member of this committee who is half Irish and half Italian, I might feel a little bit nervous about that.

Secretary **Haig**. It will make you schizophrenic, Senator. [Laughter.]

### NATO CONTRIBUTIONS TOWARD DEFENSE

Senator **Leahy**. Let me just ask one quick question. As I recall during the Carter administration there was an agreement for NATO to commit itself to a 3-percent real growth in its contributions, and I believe you helped play a part in doing that.

Are they presently keeping up with that 3-percent real growth?

Secretary **Haig**. How are they doing on that?

Senator **Leahy**. Are they keeping up with it? Are they making a 3-percent real growth in their contributions today?

Secretary **Haig**. Well, I think some are and some are not. Those who are not are pretty well recognized as being unable to.

Senator **Leahy**. Which ones are?

Secretary **Haig**. Those that are are the important ones. West Germany, 3.4 last year; Great Britain, 4-something last year, despite their dreadful economic situation.

Senator **Leahy**. Are they projecting that same amount for this year?

Secretary **Haig**. I think West Germany is projecting it will meet its 3 percent.

Senator **Leahy**. What about Great Britain?

Secretary **Haig**. Great Britain I believe will, as well. France has done substantially better. They are in the neighborhood of, I think, a 19-percent increase overall in their defense budget last year, and they will be at about 4 to 5 percent.

Senator **Leahy**. I am just interested in NATO countries. What about Italy?

Secretary **Haig**. Italy will meet it.

Senator **Leahy**. Greece?

Secretary **Haig**. Greece will more than meet it.

Senator **Leahy**. Turkey?

Secretary **Haig**. Turkey will more than meet it but, unfortunately, it needs unusual levels of assistance to do so.

## HEARINGS ON CENTRAL AMERICA

Senator **Leahy**. As the chairman knows, I have requested formal hearings on El Salvador, and I realize that the Secretary is here to cover other subjects besides that, as he should. I would repeat that request and hope that this committee would have a full, in-depth hearing not only on El Salvador, but on all of Central America. Senator Specter and every other Senator who has been here today has mentioned that it is a matter of great concern to our constituents. I would like to see a hearing scheduled soon.

I have also asked the Intelligence Committee, on which I serve, to give to the American people a public report of the facts, not policy considerations, but the facts. We need something that they could do without divulging sources and methods. What we have now are the problems of periodic reports, obviously selected leaks, and, unfortunately, contradictory statements by members of the Cabinet in a way that makes it very difficult for any of us who have to make policy to determine just which one is giving us the most accurate information. It also makes it very hard for the American public to get behind whatever the policy might be.

So I would hope that we will have within this committee such a review before we talk about the substantial amounts of money that we are to appropriate.

Senator **Kasten**. If the Senator would yield on that point. We are scheduled on the 17th of this month to have a hearing on the Caribbean Basin Initiative, as you and I have discussed, and at that time we will have an opportunity to discuss some of these issues in depth.

Senator **Leahy**. That is a good way to celebrate St. Patrick's Day.

Senator **Kasten**. As you know also, I share your interest and concern about getting a complete briefing from the Central Intelligence Agency and also the Defense Intelligence Agency to determine what kind of information is available and hopefully between the two of us we can get that information, as well.

## NUCLEAR FREEZE RESOLUTIONS

Senator **Leahy**. I would also note just for the record that the nuclear arms control resolution introduced by Senator Kennedy and by the chairman of this committee, Mr. Hatfield, which I understand from your testimony, Mr. Secretary, that you oppose, does call for mutual verifiable reductions. It has always been my understanding, both from personal conversations with President Reagan and with the reading of his statements, that the President favors mutual verifiable reductions of these awesome weapons of destruction.

I might suggest that it is probably going to be very difficult to have reductions until you stop building them, and I would assume that this is the reason for the nuclear arms freeze.

In this Monday's Wall Street Journal there is an article on El Salvador. The Journal reporter writing from El Salvador, and I mention this because of your fiscal year 1983 request in the forthcoming Caribbean initiative, said: "Many here believe that the money is at best only a stopgap. At worst it could end up in Miami banks as did much of the estimated $1,000,000,000 that has slipped out of the country since 1979."

Now is that a justifiable risk to take with the taxpayers' dollars or is that some kind of new federalism on its way to Miami? [Laughter.]

Secretary **Haig**. Well, Senator, I haven't read the article. So you have me at a disadvantage, and I would like to analyze it carefully. I have great regard for that publication, but on occasions I have been less than enthusiastic about things they have written.

Senator **Leahy**. Do you want a copy?

Secretary **Haig**. Yes, but I hope you don't expect me to read, absorb, and read off the cuff on it. I like to think overnight about what I shoot at.

[Senator Leahy hands a copy of the article to Secretary Haig.]

Secretary **Haig**. Thank you very much, Senator.

Senator **Leahy**. Well, just let me ask a question. Insofar as a lot of the money that we are talking about for El Salvador will go to the private sector, do you see a problem that some of that may end up back in Miami banks as a lot of the money has flowed out of El Salvador? I think we both agree that an enormous amount of money has flowed out of El Salvador during the past couple of years.

Secretary **Haig**. Well, I am not sure that I have those figures to substantiate that an enormous amount of money has. I think any nation that is subjected to the risks that El Salvador is subjected to would find private capital flowing. Sometimes it flows for other reasons, like it is flowing out of Western Europe to get the benefit of the high American interest rates today.

Senator **Leahy**. Let's stick with El Salvador though.

Secretary **Haig**. The same influence would affect that.

Senator **Leahy**. You don't think there might be a little bit more of an initiative for a business person in El Salvador to get his money out of there than there might be for a business person in Stuttgart? One might be looking at an investment and one might be looking at his life.

Secretary **Haig**. It depends a great deal, but I think in an immediate sense, why, of course, there is great nervousness in Salvador today as there is in Honduras and Guatemala, and even more nervousness in the private sector at Nicaragua where they are being thrown into the slammer without due process and some languish there today by a repressive government. So they are nervous, too.

Unfortunately, their capital isn't flowing out because it is flowing in from the Soviet Union and Cuba and other advocates of their philosophy.

Senator **Leahy**. Mr. Secretary, if we could just stick to this particular issue. I have been extremely critical of what Cuba and the Soviet Union have been doing in Nicaragua and other parts of Central America. I yield to no one on that. What I am concerned about is we are going to be asked to pour a great deal of money into Central America at a time when a lot of our constituents are very concerned about a lot of other programs being cut, either it is in upstate New York, Vermont or California or Indiana or anywhere else.

My question to you is, first, I have been told by our intelligence community—something that is not considered all that secret—that an enormous amount of money has gone out of El Salvador into Miami banks and other areas, money as a hedge toward escape, if nothing else.

Do you feel that the money we are being asked to pour in there may be facing those same kinds of risks?

### EL SALVADOR INSURGENCY

Secretary **Haig**. Well, I can't assure you, Senator, that there wouldn't be some of that, but that is not the purpose of the economic assistance levels that we are proposing for El Salvador, but rather to continue on with the efforts that are underway to assist the development of that country.

Now I say again what I said at the outset. You can isolate one single factor against another factor. The fact that the insurgency has held at a very steady and worrisome level, that it is focused on the infrastructure of that Salvadoran society, the power grid, and the transportation. These are very worrisome aspects for any investment opportunity, either external investment from outside of El Salvador or internal investment.

We don't have the luxury because of these risks that you mentioned here, and that may be touched upon in this article, to wash our hands of it and let it go down the tube. Of course there are risks. There are risks in everything we do. There would be risks there even if there weren't an insurgency.

Here is a country that is trying to move from a feudalistic oligarchial system into a modern democracy and there are going to be growing pains and agonies. Because of that do we recoil from doing what we have to do and should do?

Senator **Leahy**. Is that insurgency being controlled completely out of Managua?

Secretary **Haig**. Largely; yes.

Senator **Leahy**. But not completely?

Secretary **Haig**. Largely.

Senator **Leahy**. The quote of the CIA Director in U.S. News & World Report in which he says it is being controlled completely out of Managua; is that a correct statement?

Secretary **Haig**. Well, you know, it depends on how legalistic you want to get. I would say when I use the term "largely" it is synonymous with his interpretation of the term "completely." The facts are that the essential command and control is emanating from Managua.

Senator LEAHY. Is the Director also right in saying that the Mig 23's in Cuba breaches the JFK/Khrushchev agreement to restrict offensive weapons from that island?

Secretary HAIG. Well, Senator, we haven't made what I would call an executive branch determination on that question. As you know, there are a number of so-called exchanges, formal, information, understandings, and modifications that took place in the early 1970's which could lead to a judgment that, yes, the spirit, if not the letter of the understandings, have been violated. Others might in a more legalistic sense or in a subjective sense, if you are on the Soviet side, suggest that, no, they meant offensive weapons to be nuclear weapons and, therefore, you could argue rather intensely and with justification that they are not violated.

We haven't made a determination. We are watching the situation very carefully. I think the point to bear in mind is the level of sophistication of the recent modernization enhancements in Cuba is extremely worrisome and cannot be viewed with complacency here in the United States.

Senator LEAHY. Thank you, Mr. Chairman.

I would assume by that then we can expect that if those are violations that the administration will be the first one to holler on that and let us know.

Secretary HAIG. Well, I would think so.

### NATO CONTRIBUTIONS

Senator KASTEN. Mr. Secretary, I was interested in your statement suggesting that Germany was, in fact, going to meet its 3-percent goal this year. I was at the Vercunda Conference a couple of months ago, and, frankly, the mood there was not as optimistic as your statement this morning. So maybe you have learned something in the last week or so.

It seems to me that we are going to have serious problems reaching that goal. Overall it is frustrating to a number of people on both sides of the aisle and in both Houses of Congress when we view the European situation, and particularly West Germany, in which they clearly are less than cooperative in a number of areas.

In addition, it is our defense dollars which are being used in West Germany. We then get an expert coming over here telling us that it is the deficit that is causing their economic problems. The deficit is caused in part by the United States spending money on defense not only in Europe, but also to protect their oil routes in the Indian Ocean and throughout the world.

So they can't have it both ways, and especially when they come over here and tell us that we have to balance our budget so that their economy can get under control, and then demand that we continue to make these huge military outlays in Europe. I think that is inconsistent.

### DEBT DEFAULT BY EUROPEAN COUNTRIES

I would like to talk for a moment about the debt question. You assume in your responses to Senator Johnston and others that a country going into default is similar to a person going through bankruptcy, and that if default were declared, the debt would in one way or the other be eliminated. That isn't clear from the law, and I can see that you are indicating that is not what you assume.

Specifically, I believe we should declare Poland in default, simply because it is the law. We are now using CCC payments to pay interest and some principal on a schedule. We paid $71 million in February, and we are now pledged for $876 million over the next few years on a month-by-month basis. We have the schedule.

As you know, we have 39 votes on the Senate floor on the issue of not using taxpayers' money to pay off those loans unless we declare default. That is what the law says. It seems to me that we should declare default. It seems to me that we ought to stop the reexports through General Electric and other companies that are going to supply the pipeline.

It seems to me that if we can't stop the pipeline, we can at least slow it up. It seems to me that if we can slow it up even for 12 or 18 months that it would exacerbate the Soviets' problem with hard currency you alluded to earlier.

I am not so concerned about 5 percent or 7 percent of the natural gas, but it is clear that that pipeline is going to provide the Soviets with hard currency, and that hard currency is going to be used to pay off the German banks, in particular, who are already overextended.

It seems to me that we can move in this direction. We can slow up or delay that pipeline. We should be able to put more pressure on American subsidiaries abroad, and we must.

I have been interested in the comments from the committee. We have had hearings on this question. We have had a member of Solidarity before this committee. We have had representatives of State, Agriculture, Treasury, and Defense before this committee. The evidence is overwhelming, in my view, that by declaring default, we can shut down the whole credit situation.

You were correct when you said we and our allies are no longer lending money to Poland. But France is lending money to the Soviet Union in order to finance the pipeline, and a number of our allies continue to lend money or credits to Soviet bloc countries. Those credits are not as long term as they once were, but they are still there.

By declaring Poland in default, we would force a reallocation of funds of the Soviet Union and the Eastern bloc countries to at least make that economy work. Thereby we would have the indirect result but the correct result, I believe, of, No. 1, making their hard currency problem worse; and, No. 2, making them recognize that if they continue to put such a huge proportion of their budget into their offensive military buildup, at the expense of their infrastructure, it will be at the expense of their economy.

Secretary HAIG. Well, Senator, I would like to first suggest that part of your comment might be misleading to someone who didn't really understand the problem on the CCC credits. We are not asking the taxpayers to do that.

These were guarantees. We had, unfortunately, to fill those guarantee requirements last year, and they have come up again this year. All it means is that that debt is transferred from certain private institutions to the Federal Government. We feel that that transferring fact doesn't mean that they are written off, and it doesn't mean that they are being subsidized. It means now that we have that responsibility as a government. It means, therefore, that the additional weight of the Government is substantial in demanding repayment, and that we will do so.

Now it is interesting also that many of the banks have yet to ask us to pick up the commitment. I think only one or two thus far have come in for application of the guarantee. So I think it is awfully important that that picture be clear.

Incidentally there is a congressional group that has just come back from Poland, and I understand has written a very detailed report which I would refer you and deals with this very subject.

Admittedly, this is an extremely controversial issue, and there are knowledgeable people on both sides of it, but the overwhelming weight of the experts of this Government in the Secretary of the Treasury's Office, our monetary experts, and that view is shared by the European Community in that context, the experts, is that at this junction we apply greater pressure on the cash flow crisis which the Soviet Union is experiencing now by maintaining a no-default posture and by insisting that the obligations be met.

Now it doesn't mean that if they are in default and are declared bankrupt that they don't have those obligations, because they do. Past history suggests that if in default, and I understand that probably only one nation has probably been in that status, doesn't change anything. What it does do is lessen the obligation and the sense of urgency to repay. It doesn't obliterate that. It cannot. Nations are like individuals, only more so, in the sense of their credit ratings.

Now with respect to the pipeline, the only aspect of your logic, which I think needs some clarification, is that this is not a cash flow problem in the contemporary sense for the Soviet Union. The estimated $10 billion of hard cash that they would realize from the completion of the pipeline will not be until 1985 or 1986, and it is not an insignificant aspect of the problem. We today are dealing with other aspects of that problem, about whether or not policies that we are talking about apply can indeed delay the pipeline. I think the Central Intelligence Agency's most current estimate is that probably not. It certainly cannot stop it, and the delays would be infinitesimal. Then you have to ask yourself does that delay justify the consequences in the context of Western unity that it would have.

My answer is that our judgment thus far is no. But the President hasn't made a decision on this question. We have Mr. Buckley going to Europe where he will discuss with the European leadership the subject of future credits and guarantees, and it is here that the real leverage is available to us. Why? Because it is true that Western taxpayers have been subsidizing Soviet economic development by offering credit terms well below market prices.

Now I don't include, incidentally, there West Germany. They do not. They offer their credits to the Soviet Union at market prices. They do not subsidize.

As a result, it might interest you to know, and a lot of members of this committee talked about West Germany being totally dependent on trade with the Soviet Union. Their trade with the Soviet Union over the last 5 years has declined from roughly 5 percent to 2 percent of their total trade, less than their trade with Switzerland and Austria. There is a lot of misinformation on the airwaves. Some of it comes, unfortunately, from our executive branch, and therefore I regret that.

Now you talked about the West German contributions. Before the Vercunda Conference everybody was worried about it, and I would think you would overcome that as a platform. When I participated in it over the years I considered it a very important platform generally as a voice of conscience from the conservative side of the West German political spectrum.

Before that meeting and at the time it was held, there were two major questions in doubt about West Germany. One was the host nation support agreements that involved a vast amount of German resources to support American reinforcing requirements, prestocking of equipment and reception facilities for reinforcing troops. Since then they have agreed. They haven't signed the agreement but they have agreed to it, and that is a substantial step forward.

Second, the question of infrastructure was in doubt at the time of that conference that you went to, and there was great pressure I think at that conference about it. Subsequently we have been advised that it will be resolved in the favor of West Germany's meeting its infrastructure commitments and obligations. So the situation has improved since you held those very important discussions in Vercunda.

Now I don't know what to say other than to suggest to you, Senator, that the more these questions of sanctions and the effect of sanctions are analyzed that sometimes the initial impressions fail to sustain themselves under careful analysis.

We have given default a very careful look, and at this particular juncture we think we apply more pressure on the Soviets by not calling Poland into default than to go the other way.

With respect to the pipeline, no decision has been made. We are going to look and see what progress can be made on future credits, both in terms of credit and rates of credit. I am optimistic that you are going to find that we achieve more by that careful coordinated and prudent approach than knee-jerk unilateralism.

Senator **Kasten**. Mr. Secretary, I hope you are right. We are all trying to get to the same goal.

I just want to make two points, and then yield to Senator Johnston for further questions.

### TANK CLAUSES ON RESCHEDULING OF POLISH DEBT

First of all, last April we met with our allies on the rescheduling of the Polish debt. We put together a package which included the so-called tank clause. Our allies agreed with us that under certain circumstances the Polish debt should be called into default. Those circumstances would be essentially the kind of an emergency situation that we have now in Poland. So our allies ought to have expected us to go forward.

The tank clause in fact has been invoked. Tanks haven't come across the border, but the situation of martial law qualifies. We had testimony from State, Treasury, and Defense that the circumstances under which the tank clause could be invoked have, in fact, occurred.

You are right, those are Government guaranteed loans, and it is CCC money. There is a lawsuit pending right now questioning the workings of the Commodity Credit Corporation. The law says that you can use those moneys, and they have been used, but in order to repay that, first, the loans have to be declared in default. We have not declared the loans in default, but yet those taxpayer guaranteed funds are, in fact, being used.

The last point I want to make is that I think you are correct that the West German lending is not at less than market rates for the most part, but it is important to point out the hard currency that West Germany is supplying to the Soviet Union and their needs for hard currency are significant.

I think we have got one question about the credits and the financing, but we have got another question about the problem that the Soviets have with hard currency. Clearly the money that is coming from the West German Government is helping to shore up the Soviet economy.

You know, honest people can disagree on these subjects, and I know that this is a subject of great discussion within the administration. I am pleased that you continue to say "at this time" we believe that default is not the answer. I would hope that you continue to reconsider this policy, and I can guarantee you that we in the Congress will continue to reconsider and work with this policy.

This committee is going to have before it some labor union leaders in the near future discussing the question of trade to the Soviet Union, and particularly our response to the Polish debt situation.

Senator Johnston.

## EL SALVADOR MILITARY ASSISTANCE

Senator JOHNSTON. Mr. Secretary, if we stop military aid to El Salvador who wins and why?

Secretary HAIG. Well, I would like to answer that by making two comments, Senator.

First, the situation in El Salvador is not as grim as some might suggest. I had a lengthy discussion with the Vice President of El Salvador last week. His estimate is that after the failure of the offensive last January the situation has leveled off and reduced itself to what I will call classic guerrilla tactics.

It is clear that over the last month or two the level of arms shipments going into El Salvador has dramatically increased. It has reached a high level somewhat similar to that that occurred just before last January's offensive.

Senator JOHNSTON. To the guerrillas you mean?

Secretary HAIG. Yes. Now it is clear that if we were to terminate our military assistance to a government which does receive assistance from elsewhere, but limited, it has gotten some help from Argentina and from some other Central American governments, Venezuela and others, it would be, I think, a fatal blow to the government's ability to sustain itself. Perhaps even the political-psychological consequences would be greater than the material ones because our level of assistance has not been that high in relative terms. I think it would be a tragedy.

Senator JOHNSTON. You are saying that the only thing standing between a guerrilla victory in El Salvador is American arms?

Secretary HAIG. No. I was really trying to say no, not necessarily. In practical terms the guerrillas are not about to overwhelm the country.

Senator JOHNSTON. But would they be but for the American arms?

Secretary HAIG. I think the American arms are a crucial aspect today even more importantly in political-psychological terms than purely material terms.

Senator JOHNSTON. What does that say for the level of support by the indigenous population in El Salvador for the Duarte regime?

Secretary HAIG. Well, that level of support is very strong, that is the level of support for a government which is not the guerrilla interest. The election coming up this month is probably going to answer your question for you with respect to Duarte, among other democratic and not-too-democratic possibilities.

We know that the church leaders, the trade union leaders, the peasant organizations, and the entrepreneurial class are violently opposed to the guerrilla movement and what it represents and supports the Duarte regime and the election process that will take place later this month.

Senator JOHNSTON. Thank you, Mr. Chairman.

Senator KASTEN. Mr. Secretary, it is roughly 5 minutes before 12, and we said we would try to allow you to leave here roughly at 12. What I would like to do, if I could, is to ask both Senator D'Amato and Senator Leahy to stay roughly within the 5 minutes, and that will mean that you will be leaving at 5 minutes after 12. If that meets your schedule, we will go along with that.

Secretary HAIG. I do have a very tight schedule.

Senator LEAHY. I assume, Mr. Chairman, that we can then submit questions for the record afterwards?

Senator KASTEN. Absolutely.

## MILITARY SALES TO JORDAN

Senator D'Amato.

Senator D'AMATO. Mr. Secretary, one of the things that I am concerned about was the so-called leak in terms of the proposed sale and then there were some comments followed up by an interview with officials in Jordan and the Secretary of Defense in regard to the sale of F-16's and mobile missile launchers.

It would appear that those F-16's and the mobile missible systems really have to be viewed as being a threat to Israel by the Israelis and that consequently we may create a perception on the part of the Israeli Government that may bring about a reaction to various situations, given the tense and dangerous situation that exists in Lebanon, that their restraint might be less than ordinary or traditional, that indeed it may bring about what they might characterize as a preemptive strike, and indeed we may even be occasioning certain of the more militant Arab States to believe that our commitment to Israel is less than what it is and has been traditionally, and thereby facilitate their taking risks and actions that otherwise they might not take.

So for those reasons I have a very real concern that even a discussion of the introduction of these kinds of weapons systems may be totally counterproductive to what I have perceived to be a Herculean effort on your part to calm down and to bring the Camp David Accords with all the difficulties attendant to fruition, to calm down that situation and indeed even again that perception may be a fatal blow to our efforts at normalization in that area of the world.

Secretary HAIG. Well, I think, Senator, your question is very well taken. I make no bones about being concerned about the press play of the F-16 Eyehawk question, and I think Secretary Weinberger has commented along similar lines. I think the main thing to bear in mind at times like this is that the facts have to be stated and reiterated as matter of factly as we can, and that is that there has been no specific request, and above all there has been no decision. Such a decision would involve an internal debate in the executive branch in which all the well taken concerns that you have expressed would be given very heavy weight, especially by me, and then there would necessarily be consultation with the Congress.

So I think we just want to be careful. I made a joke the other day, Senator. You talk about new federalism, and I said I am preparing legislation which will transfer responsibility for foreign policy to our State governments and that way we can reduce the voices of American foreign policy at least in half. So, no, I think we have to be extremely careful here.

Senator LEAHY. Our Governor thinks you already have, Mr. Secretary. [Laughter.]

Secretary HAIG. We have to be careful, and this is a difficult question. But, on the other hand, I think it is also important, and I have reminded our friends in Israel of this, that we certainly can draw no less concern, in fact more concern, when our regimes are armed and equipped by the Soviet Union with the Soviet presence and with even the level of sophistication that in a particular system might exceed what the United States would be willing to provide.

So it is not just a question that is black and white. It is replete with tradeoffs of risks not only to the United States but to our traditional responsibilities to which there have been no change in this administration with respect to the future security and viability of Israel.

Senator D'AMATO. Thank you, Mr. Chairman.

Senator KASTEN. Senator Leahy.

### THE SITUATION IN EL SALVADOR

Senator LEAHY. Thank you, Mr. Chairman.

I will submit other questions for the record, but I would just like to follow up on El Salvador again. I have roundly and strongly condemned the actions of the guerrillas in killing unarmed combatants, and I have done so to their face. I have also roundly and strongly condemned and criticized the killing of unarmed combatants by members of the Government, and I have done that to their face, I think to the surprise of General Garcia who apparently had never been spoken to that way.

I am very concerned, Mr. Secretary, that we are presently supporting a government which has been involved in terror and murder and torture of unarmed people, of noncombatants, and that they have done so on many occasions with American arms and with American equipment. I question just how long such a government or such support by us can exist, and how long before their credibility and our credibility wear thin.

So I would ask just two or three questions that can be answered I think rather briefly.

### ELECTIONS IN EL SALVADOR

Do you feel that there will be elections this month on the 28th in El Salvador?

Secretary HAIG. Yes, I do.

Senator LEAHY. If Mr. D'Aubisson and his Arena party win the election to the constituent assembly, what would be the U.S. policy at that time?

Secretary HAIG. Well, I think it is too early to say. I would make an observation that the outcome of the election, whatever it is, will involve an assessment of the credibility of that election, as well. Is it a representative expression of the will of the people?

Senator LEAHY. Or a will of those of the people who had candidates who were involved in the election or who were allowed to run.

Secretary HAIG. Of course, all of that would go into it. I have made the point that the election, whatever its outcome, is not going to solve the problems of El Salvador.

Incidentally, I want to join you in expressing equal concern about excesses when they come from the right as the concern I expressed when they come from the left. I think any excesses are unacceptable and the American policy is to express our concern for that.

Perhaps the difference is, and this was the point I was making earlier, is that we know that the left is directed and represents interests which are not only illegal and wrong in the sense of extremism, as is the right when it engages in it, but that it is also a matter of vital interest to the United States because it is the implementation of a strategy that is alien and a threat to our interests, to say nothing of those local observations you make.

So I can't say. First, I don't know what the outcome would be, and I think you know that we have to be extremely careful in the executive branch as we should be in the Congress not to intervene except indirectly and quietly in events which could have a public consequence through an election which we hope will be as free as possible and the results which we hope will be as reflective of the will of the people of El Salvador as possible.

Senator LEAHY. It may be I want to see too much of a reflection because there are people who are, for one reason or another, either through fear or other reasons, blocked from running in that election. Do you feel that you could tell us today whether you would recommend a continuation of military aid to a D'Aubisson government?

Secretary HAIG. Well, I again think it is too early to say, Senator.

Senator LEAHY. That is a fair answer.

There have been a number of calls of varying levels within the Congress, for whatever government we have on the 29th of March, that that government enter into negotiations with the guerrilla forces. You may have referenced that already today. Do you anticipate the United States down the road encouraging such negotiations?

Secretary HAIG. As I say, we have supported them in the context of a plebiscite, self-determination. I think we would continue to be strong advocates of negotiations which would lead following the constituent assembly election to an early as possible Presidential election, and we would hope that all of the internal elements in El Salvador would have an ample opportunity to participate, and the negotiation of conditions to guarantee that kind of participation with security and a reduction in violence is something that we would be very much in favor of, as we have been.

Senator LEAHY. Would you accept that some of the people supporting the guerrillas in El Salvador do so because of their own nationalistic feelings than out of control from the Soviet Union or any other outside group?

Secretary HAIG. Absolutely. No question about it. It is a multifaceted movement. There are some genuine democratic elements. After all, Mr. Ungo was a political partner of President Duarte, a social democrat.

The real problem is that both our analysis and history confirm that it is the hard core armed professionally trained guerrilla who will ultimately take over if all things remain equal. Therefore, what we have to do is get the external involvement out, get this external professional running of the operation terminated, and leave the events of El Salvador to the people of El Salvador.

If they choose a leftist extremist government, we would have no basis for complaining here. We might be concerned. If they chose a rightest repressionist, we would regret that greatly. In either case, our future policies would be affected with respect to them, but I don't think we would have the kind of an obligation that our continuing support for the democratic process in El Salvador today requires.

Senator LEAHY. Of course, we are safe to say in the meantime we will do our darndest to try to convince them of just which way they should go, either through economic military aid or other means.

Secretary HAIG. Yes.

Senator LEAHY. Thank you.

Senator KASTEN. Mr. Secretary, thank you for your testimony this morning. I know I speak on behalf of the subcommittee when I say we look forward to working closely with you again this year.

## SUBMITTED QUESTIONS

The record for our hearing will be open for 3 weeks, and we will ask you to respond to questions.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### EL SALVADOR: ADMINISTRATION POLICY

Senator Kasten: Mr. Secretary, as I mentioned in my opening remarks, the Administration's policies towards El Salvador are receiving very little support from the American people or from our allies. In fact, France has announced support for those forces which we oppose. It is an understatement to say that we need a clarified indication of exactly what our interests are, clear and uncontrovertible evidence of interference from Cuba, the Soviet Union and Nicaragua made public, and a clearer understanding of how far this Administration is willing to go to ensure the success of its policies, and in what form that policy may take in the future.

Secretary Haig: Our interests in El Salvador and the Caribbean Basin as a whole are enormous, the threat is ominous, the need for effective action is compelling. For most of our history, the United States has faced no fundamental threat in this region. The Soviets and Cubans have launched a concerted effort to bring countries in Central America under their influence. We have made public information documenting this effort.

We recognize that the problems of the region are not due simply to Soviet-supported Cuban and Nicaraguan subversion. There are legitimate and serious social, economic, and political concerns which must be addressed even as we move to oppose attempts to shift the geo-political balance against the United States. U. S. policy is designed to address the economic, political, and security problems of the area. The Caribbean Basin Initiative provides substantial new opportunities for increased trade, investment, and economic assistance to help with central economic needs. We support free elections and broadly based democratic institutions where each country can pursue its interests in accordance with the wishes of the people as the best way to counter communist inroads in Central America and the Caribbean. Through collective security efforts and security assistance, we are helping democratically oriented governments to resist violent revolutionaries while pursuing the economic and social reforms demanded by the people.

The United States is prepared to do whatever is necessary and prudent to assist the countries of the region in achieving these goals now, and in the future.

### EL SALVADOR: WEAPONS CARRIED BY U. S. PERSONNEL

Senator Kasten: What is the current status of the restrictions governing the carrying of arms by United States advisors in El Salvador?

Secretary Haig: U. S. military training personnel in El Salvador are currently authorized to carry only sidearms in the field. They are authorized to use these weapons only in their

SHOOT ALL PAGES AT 75 %
UNLESS OTHERWISE INDICATED

own defense or in the defense of other Americans.

## POLISH DEFAULT AND THE SIBERIAN PIPELINE

Senator Kasten: Mr. Secretary, there are many who believe, and reportedly Defense Secretary Weinberger is one of these, that one of the most important things the United States could do vis-a-vis our relationship with the Soviet Union is to force cancellation of the natural gas pipeline, and that the easiest way to do this is to declare default on Poland's debts, which would have the necessary ripple effect, forcing cancellation, or at least substantially delaying the pipeline. What is your view of this?

Secretary Haig: The European governments are providing official guarantees for the private financing of exports related to the pipeline, and these credits would probably not be affected by a Polish default. The Reagan Administration has consistently expressed concern about the pipeline which we believe will push the Western Europeans over the threshold of prudent energy dependence and which will also provide Moscow with a significant amount of hard-currency earnings. The allies continue to regard the pipeline as vital to their economic prosperity, both in providing exports of equipment and material to build the pipeline (thus providing needed jobs) and in assuring their energy supply in the late 1980's and beyond. I also do not believe that the U.S. could, in a meaningful way, slow down the pipeline. Moreover, the cost of trying to do so in terms of mutual confidence and allied unity would be substantial.

## DISBURSEMENT OF ESF CREDITS TO ISRAEL

Senator Kasten: Mr. Secretary, it was only because of incredible cooperation on a bipartisan basis--House and Senate, and Congress and Administration--that we were able to pass a Foreign Assistance Appropriations Bill for fiscal year 1982. In the Conference Report was a directive agreed to by all of the conferees--which report was subsequently agreed to in both the Senate and the House--to the Department of State that the ESF funds for Israel should be disbursed within thirty days of enactment of that legislation.

The State Department has ignored that directive, and Mr. Secretary, frankly unless the State Department reverses this decision, I feel the bipartisan coalition we were able to build last year will fall apart and the chances for your fiscal year 1983 program succeeding will be nil.

Can we get assurances from you that you will comply with the directive as soon as possible?

Secretary Haig: As we have noted in several letters to Senators and Congressmen, the conference committee recommendation for total disbursement within thirty days of the signing of the appropriations bill was taken fully into account in our deliberations concerning the disbursement schedule for Israel's ESF. We also took into account the fact that compromises had been hammered out in order to pass the legislation.

We would never lightly go against the wishes of the conferees, but we believed we had no real choice. Policy guidelines decided by the President in response to Israel's action on the Golan only a day or two prior to the Congressional recess, among other reasons, required that we treat elements of our relationship with Israel exactly as we had previously, no more and no less. Therefore, we decided to adhere to the disbursement schedule of the past two years, which is extremely favorable to Israel. As you know, half of Israel's ESF was disbursed December 31. Half of the remaining $403 million was disbursed on March 31 and the remainder will be disbursed in time for the fourth quarter of FY 1982. This disbursement schedule places Israel in a very favorable position.

## FMS CREDITS FOR ISRAEL

Senator Kasten: Mr. Secretary, many of us up here believe that the proper response to Israel vis-a-vis the AWACS' sale is an increase in direct credits under the FMS program.

Not only hasn't the Administration decided to take this course, but it is recommending a $50 million reduction in the direct loan program from this year's level.

Why the reduction?

Secretary Haig: We have increased our request for FMS credits to Israel by $300 million--from $1.4 to $1.7 billion. The additional FMS credit of $300 million was considered many months ago in connection with the F-15 enhancement sale to Saudi Arabia and our broad commitment to Israel's continued technological advantage in the region. We remain convinced AWACS would not pose a threat to Israel's security. We would expect that Israel would use a significant portion of the FMS increase to acquire additional fighter aircraft.

With respect to the portion of the $1.7 billion to be provided as a direct credit I would note that Israel will get nearly 30 percent of all FMS concessional credits. With an eye to budgetary stringency and given the number of other FMS recipients with economic circumstances far more grave than that of Israel we believe $500 million is an appropriate level consistent with the Administration's overall proposal for concessional credits and its fiscal year 1982 proposals.

Senator Kasten: Given Israel's current economic picture, how are we helping her by providing $300 million in loans rather than credits?

Secretary Haig: As noted above the additional credits, whatever the terms, will facilitate Israeli purchase of additional fighter aircraft.

With respect to Israeli ability to repay additional credits, while Israel's total external debt at the end of 1981 appears high at an estimated $18 billion, much of the debt is long term. FMS repayment is 30 years, including 10 years grace on principal repayment. With consistent application of policies designed to encourage exports and restrain domestic demand, Israel should continue to be able to service its debt without undue reliance on commercial borrowing or drawdowns of reserves.

## AID INCREASES/DOMESTIC CUTS

Senator Kasten: Mr. Secretary, the Administration's request for new budget authority for the foreign assistance program is nearly $1.4 billion more than appropriated for the current fiscal year--an 18 percent increase. This comes at a time when we are being asked to cut back domestic programs across the board. How do you justify such a large increase in foreign aid, especially given the tight budgetary situation?

Secretary Haig: Today, the Soviets and their proxies are threatening our most vital strategic interests. We must, and the President has made clear we will, take whatever steps are necessary to guard the peace, defend American interests and not allow allied and friendly nations to fall to outside aggressors.

To achieve these goals requires resources not only to build a military force second to none but also the foreign assistance resources to aid developing nations that are the key to our strategic and economic well-being.

Without adequate foreign assistance we risk the loss of military facilities essential to our defense, setbacks to our peacemaking efforts in the Middle East, and court the danger of growing subversion to nations such as the Sudan, Yemen, Pakistan, Morocco, Somalia, and Oman, which are under growing pressure from Libya and other Soviet client states.

I am well aware of the difficulties associated with appropriating additional foreign aid when we are being asked to tighten our belts at home. Unfortunately, the Soviets have challenged us at this time. Our most vital interests are under attack. The foreign assistance program proposed for FY 1983 has been specifically designed to assure the defense of those interests.

## RELATIONS WITH PAPANDREOU GOVERNMENT

Senator Kasten: Mr. Secretary, the recent elections in Greece brought that country under the control of a socialist government. How do you see that fact affecting U. S. relations with Greece?

Secretary Haig: The U. S. wants to have the best possible relations with the Papandreou government. Successive Greek and American governments have concluded that a close bilateral relationship is in the national interest of both countries, and we intend to continue doing what we can to foster a constructive and mutually beneficial relationship with Greece. American ties with Greece are of long duration and include bonds of kinship and commitment to the same values. Our relationship with the Greek government is positive, and we have indicated our readiness to resume negotiations on a new defense cooperation agreement when the Papandreou government is prepared to do so.

Senator Kasten: How do you see the election of the Papandreou government affecting NATO, and more specifically, NATO's southern flank?

Secretary Haig: Greece continues to participate fully in NATO activities and to play its role in the defense of NATO's southern flank. Greece is a valued member of NATO and an important partner in maintaining the stability of the strategically vital eastern Mediterranean.

Senator Kasten: How do you see the election of the Papandreou government affecting Greece's relationship with Turkey?

Secretary Haig: Tension did increase between Greece and Turkey during the winter. It was focussed on questions of airspace, territorial waters, and continental shelf. The U. S. strongly believes it is very important for both the NATO Alliance and stability in the eastern Mediterranean that there be good relations between Greece and Turkey. For geographic and strategic reasons, the security of both Greece and Turkey is enhanced by their partnership. We continue to urge both nations to exercise restraint and to work to achieve the best possible relationship, a goal we believe is in both countries' national interest.

## EXPORT-IMPORT BANK

Senator Kasten: Mr. Secretary, what is your view of the ongoing retrenchment of the Export-Import Bank?

Secretary Haig: We believe that the retrenchment at Export-Import Bank can be accomplished while continuing to assure that U. S. exporters are not put at a disadvantage by officially-supported foreign competition. By carefully targeting its resources on the competitive cases where financing may be a deciding factor, the Export-Import Bank can assure the international competitiveness of U. S. firms and can also help to persuade other countries to cooperate in our efforts in the OECD to negotiate an end to the use of subsidized export financing.

## DECREASED UNICEF FUNDING

Senator Kasten: Mr. Secretary, rightly or wrongly, UNICEF enjoys a solid reputation as an effective U.N. organization, and enjoys wide popularity in the United States. This Administration is recommending that we cut back from this year's funding level--in fact, it is recommending that we cut back to a level which is only $1 million more than was appropriated in fiscal year 1978.

Since we are talking about a relatively small amount of money--especially considering the huge increases in the military assistance programs, don't you believe it does great harm to this Administration's image? Wouldn't it appear that we are cutting back on assistance to starving children, while at the same time providing for increases in military aid?

Secretary Haig: The Administration's request for a contribution to UNICEF must be considered in the context of the Administration's total request for voluntary contributions to international organizations and programs. The Administration is requesting $173 million for all U. S. voluntary contributions (International Organizations and Programs account) to the United Nations and the Organization of American States in FY 1983. This decrease of $16 million from the FY 1982 request ($42 million from the FY 1982 appropriations level) for the account through which UNICEF is funded reflects the Administration's recognition of the need for budgetary restraint in order to improve the national economy. Reducing the total also has forced a decrease in the amount of our request for a U. S. contribution to UNICEF, which remains one of the largest programs in the account.

Even at the reduced level of $26 million, we believe our contribution for UNICEF, when coupled with the strength of our past support for its programs, should still be sufficient to assure a continued leadership role for this country in the organization.

The request we are making seeks to strike a balance between continued strong U. S. support for UNICEF and the current domestic budgetary stringencies; in no way should our decreased contribution be interpreted as an indication that we no longer remain a staunch supporter of UNICEF. Our belief is as firm as ever that UNICEF serves important U. S. political, economic, and humanitarian interests in the developing world by acting as a catalyst for programs which truly help mothers and children. I am confident that our $26 million proposed contribution will greatly aid UNICEF in its efforts to reduce infant mortality, improve child development through primary education and through helping mothers to care better for their children in some 111 nations.

## DIRECTION OF MUBARAK'S POLICIES

Senator Kasten: Mr. Secretary, can you give us a sense of what direction the Mubarak government is going, both with respect to Egypt's relationship with other Arab countries and to the Camp David peace agreement?

Secretary Haig: We have every confidence in President

Mubarak's continued commitment to the Camp David peace process and his declaration that any improvement in relations with other Arab states will not come at the expense of that commitment or of Egypt's relations with Israel. Mubarak has said that he will not criticize other Arab governments or leaders regardless of what they say about Egypt and that he would welcome improved relations with many of the states of the Arab world, but only so long as they recognize the fundamentals of Egyptian policy.

## ROLES OF BUCKLEY AND MCPHERSON

Senator Kasten: Mr. Secretary, I wonder if you could help clarify the roles Under Secretary Buckley and A.I.D. Administrator McPherson play via-a-vis overall coordination of the foreign assistance program.

Secretary Haig: As you know, under various sections of the Foreign Assistance Act, including section 622, I am responsible for providing policy guidance, general direction and continuous supervision for all U.S. assistance programs. I have asked Under Secretary Buckley to coordinate the allocation of all types of foreign assistance in which the Department of State is involved, and to assure that our assistance programs reflect the foreign policy objectives of this Administration. A.I.D. Administrator McPherson is responsible for budget and policy of our economic development assistance programs and reports directly to me. Mr. Buckley and Mr. McPherson work together closely to assure that all of our foreign assistance programs work to achieve the President's foreign policy objectives.

## SOVIET PRESENCE IN SOUTHEAST ASIA

Senator Kasten: Mr. Secretary, could you review for us Soviet ambitions in Southeast Asia, citing in particular the significant buildup of Soviet forces in the Pacific Basin and the level of economic and military support the Soviet Union is supplying to Vietnam?

Secretary Haig: The most significant Soviet advance in the Far East since 1978 has been in Indochina. The Soviet presence and Soviet influence have increased significantly as Sino-Vietnamese relations deteriorated and Vietnam isolated itself regionally and internationally through its invasion and occupation of Kampuchea. The most tangible benefit to Moscow is the significant expansion of Soviet access to Vietnamese air and naval facilities. Since early 1979 Soviet air and sea units have had continuous access to Cam Ranh Bay, which has facilities for limited repair and service of Soviet ships. Thus, the USSR can more easily maintain a varied naval presence in the South China Sea, in the sea lanes between the Pacific and Indian Oceans, and to a lesser extent in the Indian Ocean. The range, duration, and responsiveness of Soviet air reconnaissance patrols in Southeast Asia have improved substantially.

The Soviet position in Indochina is buttressed by massive military and economic aid to Vietnam, substantial economic assistance to Kampuchea and Laos, and by the presence of an increasing number of Soviet advisors and technicians. Since early 1979 the Soviet Union has delivered to Vietnam military hardware estimated to be worth more than $2 billion. In addition, the USSR has provided logistical support and training, and has helped the Vietnamese and Lao develop a chemical warfare capability. Soviet economic aid figures are not published, but must be estimated on the basis of trade surpluses, probable grant commitments, the value of the work of Soviet technicians, the cost of training for Vietnamese, and the value of subsidized prices for Soviet-supplied imports. Total Soviet non-military economic aid to Vietnam is estimated at something over $1 billion per year, and 1981 agreements suggest that it may grow over the next few years.

## READINESS OF THAI ARMED FORCES

Senator Kasten: What is the state of Thai military readiness? How does Thai military equipment and training compare to that of the 200,000 Soviet-supplied Vietnamese troops in neighboring Cambodia?

Secretary Haig: Thailand faces a serious conventional military threat from Soviet-supplied Vietnamese forces in occupied Kampuchea, underscoring the urgent need to modernize its armed forces. The Thai army and marines are generally effective combat forces, and have handled themselves well in promptly defending against Vietnamese border incursions. However, in general the Thai have been equipped, organized, trained and deployed for counterinsurgency and civic action missions. Thus, they are at a relative disadvantage in defending against a large-scale conventional strike by the better equipped, more combat experienced Vietnamese on their eastern border.

It is in the U. S. interest to assist Thailand, a treaty ally, to strengthen conventional forces and improve readiness. These are important goals of our military assistance and advisory programs.

## ECONOMIC PROBLEMS IN THAILAND

Senator Kasten: Could you review for us the serious economic problems which have faced the Thai in recent years and have inhibited their ability to move ahead with their necessary force modernization? Please give special attention to the impact of high oil prices and the costs of assisting hundreds of thousands of displaced persons from Cambodia, Laos, and Vietnam who are residing within Thai borders.

Secretary Haig: Thailand has experienced steadily widening trade and payments deficits since 1975, caused by increased energy costs and lower prices for exports of rice, rubber, and sugar. The total foreign debt rose by more than $1.5 billion in 1981 alone. Foreign debt was estimated at $7.5 billion as of the end of 1981, a sharp rise from negligible levels in 1973.

About 40 percent of this debt consists of Royal Thai Government obligations and the balance is private.

However, international contributions have paid most of the costs generated by the influx of about one million refugees from Indochina since 1975. Thus Thailand's available resources for its forces modernization program have been impaired by its foreign debt problems, though not by refugee needs. The high cost of foreign capital is probably the most severe problem, including the high interest rates associated with FMS guaranteed credits.

### EXTENDED REPAYMENT TERMS FOR THAILAND

Senator Kasten: In light of the Soviet commitment to Vietnam, could our security assistance effort to the Thai be more responsive to their urgent economic and military needs by granting extended repayment terms? If so, how could U. S. goals and interests in this region be enhanced?

Secretary Haig: Assisting in the modernization of the Thai armed forces while at the same time facilitating sustained economic growth are essential goals of our Southeast Asian security policy. Extended FMS repayment terms for Thailand would help to some extent in achieving these goals. However, this would require specific legislative authorization for Thailand. For FY 1983 we are requesting a total of $91 million in foreign military sales credits for Thailand, of which $50 million would be in direct credits at concessional terms. We are also requesting $10 million in grant economic supporting funds and $2.2 million for grant military education and training. We believe that this request will be effective in meeting Thailand's urgent force modernization requirement, without endangering the economic growth which is so essential to the stability of the country.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### SECTION 506(a) REPAYMENT

Senator Inouye: Mr. Secretary, in fiscal year 1981, the President used his authority under Section 506 (a) of the Foreign Assistance Act to provide $25 million in emergency military assistance to El Salvador. In fiscal year 1982, he again used this authority to provide $55 million in emergency assistance to El Salvador.

The fiscal year 1983 budget appendix shows a request, under Military Assistance, for only $20 million to reimburse military departments for stocks drawn down and services provided under Section 506 (a).

When will the Administration seek appropriations for the remaining $60 million?

Secretary Haig: In fiscal year 1981 President Reagan used his authority under section 506 (a) to provide $20 million in emergency military assistance to El Salvador, which as you point out is in the fiscal year 1983 budget request. The other $5 million was FMS reprogramming and not a Section 506 (a) drawdown. We are planning to submit our request for the $55 million provided in fiscal year 1982 in the fiscal year 1984 budget proposal as the fiscal year 1983 budget request had already been prepared when the drawdown was made.

Senator Inouye: The Administration intends to request a $60 million supplemental for fiscal year 1982 military assistance. Is that correct?

Secretary Haig: We are proposing that the levels of security assistance appropriated be increased to the levels authorized. This requested supplemental would include $62.0 million in military assistance (MAP) funds, $50 million in forgiven FMS, $3.5 million in IMET, and $186 million in FMS credits through the Federal Financing Bank.

Senator Inouye: Will any part of the supplemental be allocated for reimbursement of expenditures under Section 506(a)?

Secretary Haig: We do not plan to use any portion of the supplemental as reimbursement under Section 506(a).

Senator Inouye: When the Administration delays requests for replenishment of stocks provided under Section 506, some people think the Defense Department is subsidizing foreign assistance. Would you agree?

Secretary Haig: There is no delay. We seek to reimburse in the fiscal year following the one in which the drawdown is made.

## U.S. ECONOMIC AND MILITARY ASSISTANCE TO EL SALVADOR

Senator Inouye: Mr. Secretary, in our hearing last year on fiscal year 1982 foreign assistance, you rather confidently made the assertion that "the ratio between economic assistance that has been provided, that is developmental assistance, to El Salvador versus military assistance has been 3 to 1. And we intend to keep that general ratio."

However, a table of U.S. economic and military assistance, which I had prepared earlier this week, shows that the ratio for fiscal year 1982 is now less than 2 to 1.

In view of your earlier assertion, does this not reveal an increasingly disproportionate military involvement?

Secretary Haig: As you know, we initially requested $104.5 million in economic assistance for El Salvador for FY 1982 and $175 million in FMS and IMET, a ratio of nearly 7 to 1. As the security situation grew grimmer, we reprogrammed $8.5 million in MAP and used Section 506 authority to add $55 million, bringing the total to $81 million.

The economic situation is even grimmer. If the Caribbean Basin Initiative Supplemental is approved by the Congress, our economic assistance will rise to $232.5 million and the ratio of U.S. economic to military aid in El Salvador would be 3 to 1. We have also asked for a Security Assistance Supplemental which, if approved, would add $35 million of MAP grant to El Salvador and would reduce the ratio.

It is of critical importance to realize that the foreign-supported Marxist insurgents have intensified throughout the year their efforts to take by force what they cannot win in free and open elections. The Salvadoran armed forces must be adequately prepared to deal with this challenge to El Salvador's security, guarantee the people's right to choose their own future, and ensure that the important economic, social and political reforms go forward. The supplemental request for MAP grant is designed to meet the immediate materiel and training needs of the Salvadoran armed forces in the critical months ahead.

The economy cannot function if the security situation collapses, nor would a successful containment of the security situation be meaningful if the economy lies in ruins. We are attempting to address both problems.

Senator Inouye: What additional amounts of economic assistance will be proposed for fiscal year 1982?

Secretary Haig: We expect to allocate $128 million to El Salvador from the $350 million in Economic Support Funds requested in the Caribbean Basin Initiative Supplemental.

Senator Inouye: How much of the proposed FY 182 military assistance supplemental will be allocated to El Salvador?

Secretary Haig: We would utilize $35 million in El Salvador from the Security Assistance Supplemental we have requested.

## EL SALVADOR: Major D'Aubuisson

Senator Inouye: Mr. Secretary, more than a year has passed since the Committee had its classified briefing on El Salvador. I had understood at that time that a Roberto D'Aubuisson, who had been expelled from the United States for violation of our immigration laws and was also wanted by Salvadoran authorities for his alleged criminal activities in that country, was nowhere to be found.

Now, I find that this cashiered army officer is a leading political candidate in El Salvador.

How has this situation come about, can you tell me?

Secretary Haig: Ambassador Hinton has met with Major D'Aubuisson on several occasions since D'Aubuisson became the leader of the National Republican Alliance Party (ARENA) and entered the electoral campaign for seats in the constituent assembly. Ambassador Hinton met with D'Aubuisson in the course of his normal diplomatic duties; he has met with leaders of all the political parties that participated in the recent elections.

D'Aubuisson's party, ARENA, won 19% of the votes in the March 28 election, second only to the Christian Democrats. It is, therefore, a major political faction in El Salvador. All parties that participated in the March 28 election, including ARENA, renounced violence and pledged to pursue their political ends through the democratic process.

Senator Inouye: Does the State Department have evidence linking D'Aubuisson to the murder of Archbishop Romero in March 1980?

Secretary Haig: D'Aubuisson was arrested by the Salvadoran military in May 1980, probably because he was suspected of plotting a coup. He was released shortly thereafter. We do not know if he was arrested on the basis of a warrant issued by a Salvadoran judge and, if so, what the specific charge was. We assume that both the decision to arrest him and the decision to release him were made by the revolutionary junta. We are not aware of any current warrant for his arrest.

There have been allegations linking D'Aubuisson to the death of Archbishop Romero, however, information is limited and incomplete. No conclusions can be drawn from available data.

Senator Inouye: It seems to me that the United States has a substantial stake in President Duarte's success at the polls. How would you respond if D'Aubuisson and the National Republican Alliance were to win the election? Would you propose a suspension or termination of U.S. assistance?

Secretary Haig: Our attitude toward the government that emerges from the recent election will depend on its policies. We anticipate that the new government will continue to carry out political reforms, implement the land reform program, and work to eliminate violence from the extreme left and extreme right. And that we can, therefore, continue to give it our support.

Senator Inouye: Could the coming election portend the long-awaited coup from the right?

Secretary Haig: The election clearly does not portend a coup--on the contrary, it represents an historic opportunity for the Salvadoran people to decide their own political future, and I am confident that their wishes will be respected.

## CONGRESSIONAL PRESENTATION DOCUMENT

Senator Inouye: Mr. Secretary, to return to an earlier question, when can the Committee expect to receive the Congressional Presentation Documents for the Fiscal Year 1983 Security Assistance programs?

Secretary Haig: We fully expect to submit the CPD to the Congress during the week of April 12. As you know, your staff has been provided an advance text.

Senator Inouye: How do you explain the delay in preparation?

Secretary Haig: The Administration has been careful in taking the needed time to weigh the merits of each country program and to insure that full justification has been established. In the course of the review, it found that certain adjustments were necessary in a few programs, which regrettably meant that our timetable for submission would be pushed back. This fine-tuning process has now been completed and the materials have gone to the printers. We have provided an advance text to your Committee staff.

Senator Inouye: Have they been held up by OMB?

Secretary Haig: It would not be fair to say that any one government agency has held up the CPD. The Administration as a whole has been careful to assess the criticality of each program. This process has taken a considerable amount of time.

Senator Inouye: Are they being reviewed by the Department of Defense?

Secretary Haig: The Congressional Presentation Documents each year are fully coordinated and reviewed with the Department of Defense. As I noted earlier, this process has been completed and the product submitted to the printers.

Senator Inouye: What is the real cause for the delay?

Secretary Haig: As I stated earlier, this year the Administration has been careful to fully assess the merits of the individual country programs in the CPD. Each individual program has been made to answer the question, "Is the need critical?" This has unfortunately resulted in some slippage in our submission timetable.

## PAKISTANI RESPONSIVENESS TO U.S. CONCERNS

Senator Inouye: Mr. Secretary, the economic and military assistance package proposed for Pakistan in fiscal year 1983 totals $532,181,000. Pakistan would thus become the fourth largest recipient of U.S. assistance after Egypt, Israel, and Turkey.

The proposal is, I believe, part of a six-year $3.2 billion assistance package.

Is the Government of Pakistan, in return for this unprecedented assistance, being more responsive to U.S. concerns?

Secretary Haig: We are developing a close, cooperative relationship with Pakistan in a number of areas of mutual interest. We are particularly gratified by Pakistan's increasingly effective cooperation in the area of control of narcotics production and trafficking. We very much see eye-to-eye on Afghanistan, where Pakistan's firm opposition to the Soviet occupation of that nation has been critical to maintenance of the strong international concensus calling for a Soviet withdrawal. While differences of views remain, particularly in the areas of nuclear policy and human rights, we believe that our dialogue with the Government of Pakistan on these issues has been facilitated by the greatly enhanced overall political relationship which we have achieved during the past year.

### PAKISTAN NUCLEAR WEAPONS DEVELOPMENT

Senator Inouye: Has Pakistan ceased development of a nuclear weapon?

Secretary Haig: We believe that Pakistan has continued work on aspects of its nuclear development program which could have nuclear explosives or weapons relevance. Pakistan has not yet achieved the capability of exploding a nuclear device. The Pakistan Government is fully aware of the severe consequences which a nuclear explosion would have for our bilateral relationship.

### INDIAN THREAT TO PAKISTANI NUCLEAR FACILITIES

Senator Inouye: Does Pakistan face a growing threat of a preemptive strike by India against its nuclear installations?

Secretary Haig: While we obviously cannot exclude such a possibility, we see no evidence of Indian preparations for preemptive strike against Pakistani nuclear facilities.

Senator Inouye: How would the U.S. respond to such a strike?

Secretary Haig: I would not want to comment on such a hypothetical question.

### CONDITIONALITY OF AID TO PAKISTAN

Senator Inouye: Is aid to Pakistan unconditional? That is, do we, for example, require some movement toward the restoration of democracy?

Secretary Haig: Our assistance to Pakistan is provided because it is clearly in the interest of our own country--of the United States--to help Pakistan become stronger economically and develop an enhanced military capability to resist Soviet pressure through Afghanistan. At the same time, the closer bilateral relations which have developed over the past year do provide an atmosphere in which we can more effectively pursue a quiet dialogue on matters of interest to the United States.

Such matters do, of course, include human rights, which is an issue which this Administration has chosen to deal with through private diplomacy. In so doing, we take fully into account the intent of Congress, as stated in the Conference Report of the Fiscal Year 1982 Foreign Assistance Authorization bill, "to promote the expeditious restoration of full civil liberties and representative government in Pakistan."

### HAS ZIA OUTLAWED POLITICAL PARTIES?

Senator Inouye: Is it not true that General Zia has outlawed all political parties and has abandoned his pledges to hold free and fair elections?

Secretary Haig: President Zia has dissolved all political parties in Pakistan and there are no current announced plans for early elections. There have been some positive developments in recent months, including the easing of censorship and the creation of a Federal Advisory Council to provide a forum for the public airing of political opinion. President Zia has continued to maintain that his goal is the restoration of democracy in Pakistan, though he generally speaks in terms of development of an Islamic democracy, unique to Pakistan, whose main features remain undefined.

### ARE WE SUPPORTING AN UNPOPULAR DICTATOR?

Senator Inouye: Is the United States tying itself to an unpopular military dictator?

Secretary Haig: Our assistance program is designed to help Pakistan as a whole. There is a quite general recognition all across the political spectrum in Pakistan that that nation is under great pressure from the Soviet Union in Afghanistan. Under these circumstances, we expected criticism from some opposition elements, but believed that a broad spectrum of Pakistanis would consider our effort to help meet quite obvious Pakistani economic and military needs legitimate and highly relevant to the threat that nation faces today. We believe this to be so.

### IS U.S. BUILDING RELATIONS WITH PAKISTANI PEOPLE?

Senator Inouye: How are we building friendly relations, not just with today's military rulers, but also with the Pakistani people?

Secretary Haig: We have tried to make clear the purpose of our assistance program, which is to help Pakistan enhance its own capabilities to resist Soviet pressure through Afghanistan and strengthen the Pakistani economy. Over one-half of our assistance program is earmarked for economic development purposes and will directly benefit all Pakistanis, particularly those in most need and in economically less-developed areas. In addition, we maintain normal contact with a wide range of political personalities in Pakistan, including major figures in the political opposition. We use these contacts to explain our purposes and policies, and to make the specific point that our assistance is meant to strengthen Pakistan as a whole.

### COMPENSATION CLAIMS AGAINST PAKISTAN

Senator Inouye: Mr. Secretary, on November 21, 1979, an uncontrolled mob attacked the U.S. Embassy in Islamabad, Pakistan. The Embassy was destroyed and two American servicemen and two Pakistani employees of the Embassy were killed.

Has the Government of Pakistan satisfied all American claims for damages done to Embassy property?

Secretary Haig: The United States Government has submitted a claim totalling $20,185,586 for damages to government-owned real property. To date, we have received payment of $13,940,709 which represents the cost of rebuilding the destroyed Embassy compound and payment for reconstruction of the American Center in Lahore. The balance of the claim, $7,244,877 represents our claim for furniture and furnishings, equipment vehicles, and personal property.

The subject of our remaining claims on the Government of Pakistan is under active consideration by the Government of Pakistan. Some delays have occurred as we have conducted an extensive review of specific items comprising the balance of the claim.

We anticipate that discussions between our two governments on this matter will continue looking towards resolution of the outstanding claim.

Senator Inouye: Has the government made any payments in compensation for the loss of life?

Secretary Haig: The Pakistan Government has not paid damages to the survivors of the Marine Security Guard and the Army Warrant Officer killed in Islamabad. The respective services have made payments under existing military regulations.

### ISRAEL AND SOUTHERN LEBANON

Senator Inouye: Mr. Secretary, many observers of the continuing instability in the Middle East are fearful that Israel may again enter southern Lebanon and engage the forces of the PLO.

What is the current status of forces in southern Lebanon? Is the PLO engaged in a military buildup?

Secretary Haig: Our position on arms buildups is clear. They add to tensions. We are aware that equipment has been added to Palestinian inventories in Lebanon within the past eight months. In this regard, we have made our position very clear that actions on either side of the border between Lebanon and Israel which exacerbate tensions are not welcomed and should be avoided at all costs. Restraint and caution should be followed, with all parties cooperating to maintain the cease-fire.

Senator Inouye: How are Israeli forces deployed? Is there any evidence that they are being massed on the border with Lebanon?

Secretary Haig: Of course there is substantial Israeli presence in northern Israel and the Golan Heights. We have no evidence, however, that the Israelis are massing troops on their border with Lebanon.

Senator Inouye: If Israel were to cross the border into Lebanon, how would the United States respond?

Secretary Haig: It is difficult to say how we would respond to hypothetical scenarios. The Israelis are aware of our views on the need to maintain the cease-fire. They have said they will not be the first to break the cease-fire.

Senator Inouye: In reference to instability in Central America, you have said the United States would "go to the source." If Israel were to enter Lebanon, would it not be going to the source?

Secretary Haig: Our view remains that the cease-fire is important. No one has died as a result of cease-fire violations since it went into effect last July.

## DISBURSEMENT OF ESF CREDITS TO ISRAEL

Senator Inouye: Mr. Secretary, on February 12, Senator Kasten and I wrote to you in reference to the disbursement of Economic Support Fund monies to Israel. We offered our strong recommendation that ESF funds for Israel be immediately disbursed as called for by the Conference Report adopted by Congress on the Foreign Assistance Appropriations Bill for fiscal year 1982.

Late yesterday afternoon, I received a response from Under Secretary Buckley in which he indicated there would be no change in disbursements for Israel. In effect, Under Secretary Buckley said that policy guidelines decided by the President left the State Department no choice but to continue the disbursement schedule of the past two years.

Do you expect bipartisan support of the President's foreign assistance policies will continue even though the State Department ignores specific recommendations of the Congress?

Secretary Haig: As we have indicated in other responses to this question, we would never lightly go against the wishes of the conferees. The conference recommendation was taken fully into account in our deliberations. We also took into account the fact that compromises had been hammered out in order to pass the legislation.

Our system obviously depends on a partnership of Legislative and Executive branches. With respect to budgetary matters we recognize that we have the responsibility to propose a budget we believe meets both international and U.S. economic realities. We also recognize the ultimate right of the Congress to enact legislation governing the budget. We will continue to work with the Congress in a spirit of bipartisan cooperation and will seek to implement Congressional intentions as best we can.

Senator Inouye: Was your decision not to accelerate disbursement of ESF funds designed to punish Israel?

Secretary Haig: No, it was not. Policy guidelines decided by the President in response to Israel's action on the Golan only a day or two prior to the Congressional recess required that we treat elements of our relationship with Israel exactly as we had previously, no more and no less. Our strong concern for the U.S. budgetary implications of the additional Treasury borrowings required for more rapid disbursement was also a key factor.

Senator Inouye: Do you think a decision which forces Israel to seek costly commercial interim financing and which threatens bipartisan support in the Congress represents a farsighted foreign policy?

Secretary Haig: As already indicated, the cash transfer nature of the ESF monies and the current disbursement schedule places Israel in a very favorable position. While it is true that an even more rapid disbursement schedule would be financially advantageous to Israel, there is no reason to believe that acceleration of disbursements is necessary to prevent hardship. Moreover, accelerating the disbursement schedule is costly to this country.

Senator Inouye: Will you not reconsider this decision and release funds for Israel immediately?

Secretary Haig: We have no present plans to reconsider this issue. As noted above, three-quarters of the ESF monies have already been disbursed and the remainder will be disbursed within the next few months.

## IMPACT OF SINAI WITHDRAWAL

Senator Inouye: Mr. Secretary, on April 25, Israel is to complete its withdrawal from the Sinai. What effect do you think this will have on Egyptian attitudes and policies?

Secretary Haig: It is difficult to look at Egyptian policies in isolation, to consider only the impact of the final withdrawal. Clearly other events in the region could change significantly what might otherwise have been Egyptian policy. But to the extent one can isolate the impact of the final withdrawal, we believe that it may have a positive effect on Egyptian-Israeli relations, at least over time. As President Mubarak has stated, the departure of the last Israeli from Egyptian soil removes a major psychological influence on the way many Egyptians look at Israel. Israel will for the first time become just a neighboring state, not an occupying power on Egyptian territory. This should facilitate both government-to-government relations and popular attitudes.

On the basic issue of Egypt's adherance to the Camp David peace process, we believe this will continue largely unaltered. Egypt clearly sees a broader peace as in its national interest, an objective which can impact in a major fashion on Egypt's concern over regional security threats and the ability of the states of the region to work together to respond to those threats. President Mubarak has clearly recognized that the Camp David process has the essential ingredient of Israeli acceptance and thus remains the only avenue towards such a broader peace. As a result, we believe Egypt will carry forward on its commitment to pursue that process after April 25 just as it has been in the months preceeding the withdrawal.

## LIKELY COURSE OF MUBARAK POLICIES

Senator Inouye: Will you share with the Committee your thoughts on the policies of President Mubarak? Is he likely to seek a rapprochement with Arab countries at the expense of relations with the United States or with Israel?

Secretary Haig: We have every confidence that the policies of President Mubarak will remain very supportive of our key interests in the region, both the pursuit of a broader peace and responding to regional security threats. He has reaffirmed on numerous occasions Egypt's continuing commitment to the Camp David peace process and has stated flatly that any improvement in relations with other Arab states will not come at the expense of that commitment or Egypt's relations with Israel. Similarly, we see no threat to U.S.-Egyptian relations which would come from renewed ties between Egypt and the moderate Arab states. While recognizing the basis of existing differences, we have long been on record in expressing the hope that rapprochement between Egypt and like-minded Arab nations would prove possible. Egypt clearly shares that hope--Mubarak has said that he will not criticize other Arab governments or leaders regardless of what they say about Egypt--but only on the basis that they recognize that the fundamentals of Egyptian policy will not change.

## STATUS OF AUTONOMY TALKS

Senator Inouye: It appears that the autonomy talks are stalled and that there will be no significant movement until after April 25. Is that an accurate reading of the situation?

Secretary Haig: It is true that we were not able to hold the trilateral working level sessions scheduled for last month.

However, we hope the May session will be held on schedule. There were no sessions set for April because many of the Israelis involved also have responsibilities in connection with the withdrawal from Sinai. However, we continue to pursue bilaterally the substantive issues in the negotiations and a number of ideas I put forward during my recent trips to the area are being considered by Egypt and Israel.

## 1983 AID REQUESTS FOR EGYPT

Senator Inouye: Mr. Secretary, the Administration is requesting a combined total of $1,974,711,000 in fiscal year 1983 economic and military assistance for Egypt. Of this amount, $900 million is to be in the form of Foreign Military Sales credits.

I understand the Administration will seek authorization to waive the repayment of $400 million in military credits. Is that correct?

Secretary Haig: The Administration is requesting for Egypt in fiscal year 1983 a combined total of economic and military assistance of $2,321,344,000. $1.3 billion of this total is FMS credits, and we are requesting that $400 million of that amount be forgiven. The figure you quoted for FMS, $900 million, was the fiscal year 1982 total, of which $200 million is to be forgiven.

## EGYPT - CASH FLOW FINANCING

Senator Inouye: The Executive Branch has authorized Egypt to purchase equipment costing more than $3.5 billion even though only $2.05 billion in loan guarantees has been allocated for Egypt. This implies a strong commitment by the United States to provide large amounts of credit in future years.

Can you tell the Committee why the Executive Branch has authorized these purchases and what the consequences would be if the Congress were to deny further military credits to Egypt?

Secretary Haig: We have specifically told the Egyptians that we cannot commit the Congress in advance and that assistance levels in Fiscal Year 83 and beyond must be subject to Congressional action.

We are, however, clearly committed to a long-term support relationship for Egypt on both economic and military fronts. This commitment stems from Egypt's needs and the strong support which it in turn has offered us on regional peace and security issues so vital to our interests. Moreover, this commitment has been fully supported in the Congress and by the public.

It was in this context that we agreed--and so informed the Congress--to fund the Egyptian program under the "cash flow" system. This sytem does permit Egypt to defer funding of out-year payments until the year in which they come due. Rational planning and timely orders, allowing for existing lead times, require utilization of this system if our program is to be responsive to Egypt's requirements. However, while the system does carry with it the assumption that Administration and Congressional support for Egypt will be maintained, the Egyptians fully understand that, should future funding levels be cut, Egypt will still remain responsible for out-year payments. Moreover, termination liability costs are included in the annual schedule of payments on given equipment orders to ensure that U.S. interests would be protected in the unlikely event that funding levels are cut and Egypt cannot meet the remaining obligations from its own resources.

## SUEZ CANAL TOLLS AND U.S. USAGE

Senator Inouye: Mr. Secretary, in fiscal year 1975, following the Sinai II Disengagement Agreement, the United States began in earnest its assistance program for Egypt. As I recall, U.S. Navy minesweepers and ordinance demolition teams cleared the Suez Canal at a cost of about $30 million.

Do you know how much Egypt earns each year in Suez Canal tolls?

Secretary Haig: Egypt earns about $750 million annually in Suez Canal tolls. In the Egyptian fiscal year which ended June 30, 1981, Egypt received $780 million in Suez Canal earnings.

Senator Inouye: Does the Government of Egypt require the U.S. Navy to pay a toll whenever one of our ships transits the Canal?

Secretary Haig: Yes, Senator. According to figures provided by our Defense Attache's office in Cairo, from January 1979 to August 1981, the U.S. Navy paid tolls of about $3.3 million.

Senator Inouye: Do you think this is appropriate? The U.S. paid to reopen the Canal, from which Egypt derives substantial benefit, and now we must pay again for passage of our ships.

Secretary Haig: The U.S. was one of several nations that participated in clearing mines and explosives from the Suez Canal bed. Naval units from Egypt, France, the U.K., and the USSR also participated in the Canal clearance. In addition to USAID funds, Egypt also obtained major loans from the World Bank and Arab donors to finance necessary repairs to allow the Canal to reopen. Egypt itself contributed an estimated $75 million for the initial repair work. Were Egypt to permit toll-free passage to all nations which helped in the opening of the Canal, it would have to forego substantial revenues, funds that make a major contribution to Egypt's economic development, an objective which is a major one for us as well. Moreover, we clearly already receive major direct and continuing benefit for our trade and commerce from the funds and effort that we contributed in helping to restore this key waterway to full operation. It is therefore, I think, appropriate that we and other countries which assisted Egypt continue to pay Suez Canal tolls.

Senator Inouye: Mr. Secretary, I obviously knew the answers to these questions before I asked them. I think the imposition of tolls on the U.S. Navy is unfair, particularly in consideration of the vast amounts of assistance we provide to Egypt.

I do, however, have one further question on this matter. On February 10 of this year, the General Accounting Office informed you and Secretary Weinberger that the U.S. Navy paid an estimated $607,000 in excess toll charges for Suez Canal transits from January 1979 through August 1981.

Has the Department of State or the Department of Defense taken any action to recover these excess payments?

Secretary Haig: No, we have not. As the GAO report notes and as is reflected in the use of the word "estimated" in connection with these apparent over-charges, the record is not precise on the extent of the over-charges which may have been made. The GAO report reflects both under and over-charges and notes that the absence in most cases of tonnage certificates (to be filed by the U.S. Navy with the Suez Canal Authority) meant that fees were charged on the basis of the Authority's estimate of the tonnage. Such estimates can, of course, be challenged, but having failed to file the called for certificates, thus eliminating any question as to the exact tonnage, our position in doing so is much more subjective. Moreover, to seek retroactively to challenge transit charges which were duly accepted at the time and paid without question, further weakens our position.

As a result, we believe, as the GAO report recommends, the appropriate course is to look to the future and take measures to avoid such overcharges henceforth. Embassy Cairo has taken steps to ensure that all transit charges will be examined, first, against any tonnage certificates that may be on file, and, second, where such certificates do not exist, to ensure that the tonnage estimates used by the Canal Authority appear reasonable. Should such estimates appear excessive, the Embassy will withhold payment until differences can be resolved.

At the same time, it is our understanding that the U.S. Navy is seeking on an urgent basis the issuance by the U.S. Coast Guard of the required Suez Canal Special Tonnage Certificates for all classes of ships that might transit the Canal. Once these are on file with the Canal Authority the likelihood of over-charges will be greatly reduced and the basis clearly established for resolving any instances that might occur.

## GREECE - SECURITY ASSISTANCE

Senator Inouye: Mr. Secretary, the Administration is proposing $282,568,000 in military assistance to Greece in fiscal year 1983. The new Prime Minister of Greece, Mr. Andreas Papandreou, has at times been sharply critical of NATO and the presence of U.S. military installations in Greece. What is the present state of affairs?

Secretary Haig: Prime Minister Papandreou promised the Greek electorate a reexamination of Greece's role in the Alliance. Following his election, the Greek government has discussed its approach to the Alliance in several NATO forums. This is an appropriate way to deal with NATO matters. Greece participates fully in the activities of the Alliance and will be represented at the NATO ministerial and summit meetings this spring.

As far as U.S. military facilities are concerned, they continue to operate under previous agreements and arrangements. Both Greece and the United States have for some time recognized the need to update and modernize these arrangements and have entered into negotiations to do so. The most recent negotiations began in January 1981 and were suspended by he Greek government in June because of the Parliament's summer recess. No date has been set, but we will be prepared to resume negotiations whenever the Greek government indicates it wishes to do so.

Senator Inouye: Is the proposed assistance linked to U.S. access to our naval and air installations in Greece? If so, how?

Secretary Haig: The security assistance program for Greece is designed to be an integral part of U.S. policy toward Greece, a key NATO ally, and to provide a continuing indication of American support for a democratic Greece. The specific purpose of the program is to supplement economic resources inadequate for the modernization and upgrading of Greek armed forces and the fulfillment of their NATO responsibilities. Successive Greek and American governments have concluded that a close bilateral relationship is in the national interest of both countries and provides for the common defense. Furnishing security assistance to Greece is consistent with U.S. policy to preserve the balance of military strength among countries of the region, to encourage the peaceful resolution of differences in the eastern Mediterranean and to support a peaceful settlement of the Cyprus situation.

## THE CARIBBEAN BASIN INTIATIVE

Senator Inouye: Mr. Secretary, the President has indicated that he will soon submit a request for a supplemental fiscal year 1982 appropriation of $350 million for the Caribbean Basin Initiative.

Can you tell the Committee how the Administration will allocate this funding? Which countries are to receive assistance and how much will each receive?

Secretary Haig: I would like to submit to the Committee a table which outlines our planned allocation of ESF funds in this fiscal year. The table shows the allocations by country of the Supplemental of ESF already appropriated in the FY 82 budget and the total amount which will be received from these sources if the Congress approves the full amount of the Supplemental request.

| | FY 82<br>Suppl | OYB | Total |
|---|---|---|---|
| Costa Rica | 70 | 20 | 90 |
| Dominican Republic | 40 | - | 40 |
| El Salvador | 128 | 40 | 168 |
| Haiti | 5 | - | 5 |
| Honduras | 35 | - | 35 |
| Jamaica | 50 | 40 | 90 |
| Nicaragua | - | 20 | 20 |
| Belize | 10 | - | 10 |
| Caribbean Reg. | 10 | 20 | 30 |
| LAC Reg./AIFLD | 2 | - | 2 |
| TOTAL | 350 | 140 | 490 |

Senator Inouye: How was the figure of $350 million determined? Did the State Department survey the needs of individual countries and then add them together for a total of $350 million, or was the total set before country needs were determined?

Secretary Haig: The amount of the Supplemental request is directly related to our projections of each country's needs. Even for the countries and activities which we hope to assist through this Supplemental, the needs are in fact greater than our request. Our request is a balance between their real needs, the known and expected contributions of other assistance donors, and our view of the appropriate role of the U.S. within our budgetary limitations in providing incremental aid.

Senator Inouye: So the $350 million is what might be called a notional amount, having no direct relationship to specific country requirements. Is that correct?

Secretary Haig: Perhaps it would be useful to review the process by which we developed the CBI proposals and, incidentally, the request for supplemental financing. About one year ago, we began to explore steps to help Basin countries overcome their economic difficulties. As a first step in that process, area specialists from State and AID developed initial multiyear projections of the likely balance of payments gaps for each country. Those first projections were admittedly rough, but they revealed in stark form the magnitude of problems which we had already recognized in a qualitative, but not quantitative, way. The numbers proved that something beyond a routine approach would be necessary to solve the problem.

Over the past year, those projections have been updated and broadened to include the high-priority, otherwise uncovered needs of Belize and the Eastern Caribbean. We first focussed on those countries suffering the greatest economic distress and then sought to refine our projections. I would like to submit to you tables which summarize the results. As you can see, the tables show, for each country of emphasis, projected current account gaps, net capital inflows including those from our own FY 1982 budget, expected additional finance from the IMF or IBRD, and the amount we are requesting for the country in this Supplemental. The final number is the still unfinanced balance of payments gap resulting after all sources of currently known assistance are taken into account. We are hopeful that these additional needs will be met by new commitments from other donors.

While our projections of payments gaps are just that--projections--and may well vary from the final results at the end of the year, they are far from arbitrary. Thus, our supplemental request is based on our projection of real needs in the most-affected countries, tempered by the President's determination to keep budget requests down to essential minimums.

## ARMS SALES POLICY

Senator Inouye: Mr. Secretary, on March 17, 1975 the Senate Committee on Appropriations issued its report on the fiscal year 1975 Foreign Assistance and Related Programs Appropriations Bill. A particular concern of the Committee was the dramatic increase in U.S. military sales abroad. They have increased from about $1.3 billion in 1970 to $8 billion in 1974.

Can you tell the Committee what the level of U.S. Foreign Military Sales was in 1981?

Secretary Haig: For FY 1981, FMS sales totaled $7,172,894,000.

Senator Inouye: I believe that the rate of arms sales abroad under the Reagan Administration has been higher than it was under Presidents Nixon, Ford, or Carter. Is that correct? To what do you ascribe this increase?

Secretary Haig: The record does not support such a contention. Foreign military sales under President Nixon rose to $8.4 billion, during President Ford's Administration the maximum was $11.5 billion, and sales increased to an all time post-Vietnam high in President Carter's Administration to $13.9 billion. For FY 1981 the total was $7.1 billion as I previously stated. We had estimated foreign military sales at $13 billion for FY 1981, however, actual sales were significantly less as a result of anticipated sales not materializing. It is expected that the majority of the FY 1981 deferred sales will take place in FY 1982. Allowing for these deferred sales we have estimated total FMS sales will be above $13 billion for FY 1982, and will return to about the $13 billion level in FY 1983. These figures do not include military construction sales.

Senator Inouye: Has the Department of State removed restraints on arms sales?

Secretary Haig: We view arms transfers as an essential feature of our defense and foreign policy. The President has made it clear that we will oppose Soviet aggression and help friendly and allied countries to defend themselves. This doesn't mean that we are pursuing rapid or uncontrolled expansion of arms sales. On the contrary, our approach is on a case-by-case analysis basis to ensure appropriate United States Government direction and control. I want to emphasize our belief that lower costs, lower technology systems may be appropriate for many countries. Our decisions are based primarily on the net contribution of the sale to deterrence and defense. Of course, we accord high priority to requests from alliance partners and from friendly countries with whom we have security ties. I would also emphasize that the Administration examines carefully whether the weapons system can be absorbed by the recipient militarily and financially. It should be noted that the Administration is genuinely interested in conventional arms transfer restraint, but we are not going to pursue unilateral restraint that jeopardizes our security position.

Senator Inouye: Does this increase in arms sales concern you? How can this nation become a leader in establishing effective restraints on arms sales?

Secretary Haig: The record shows that U. S. arms sales in nominal terms have remained fairly constant during the past several years or, considering the increased cost of arms even declined. U. S. arms transfers under the Carter administration period averaged about what they were during the previous four years under Presidents Nixon and Ford. During the transition year of fiscal year 1981 the level was lower due to deferred sales as stated previously. However, as I explained, we anticipate sales for fiscal years 1981 and 1982 to average out to about the 1980 level. The United States has, as you know, taken the lead in the past in seeking reductions in world-wide arms transfers. The last Administration sought multilateral restraint through conventional arms transfer talks. These failed for lack of support from our friends and allies, as well as the Soviet Union. During this period the sales of other nations in fact increased significantly. In 1980 France and the Soviet Union surpassed the U. S. as a supplier to the Third World. Despite this record we remain dedicated to the goal of multilateral restraint and will continue to examine means of achieving that goal.

Senator Inouye: Do you have any suggestions about how this could be done?

Secretary Haig: Given the recent history I have outlined I see no immediate solution. For the present we will continue to provide an example of restraint, considering each country on a case-by-case basis, and carefully weighing all factors including the contribution a given sale would make to our security.

---

## QUESTIONS SUBMITTED BY SENATOR LEAHY

### EL SALVADOR: FORCE LEVELS

Senator Leahy: Mr. Secretary, I have some questions about the military situation in El Salvador and your request for additional funds. What is the current strength of the El Salvador armed forces?

Secretary Haig: The total strength of the regular armed forces (Army, Navy, and Air Force) is approximately 16,000. Public security forces (National Guard, National Police, and Treasury Police) total approximately 9,000.

Senator Leahy: What are the estimates of the guerrilla force levels?

Secretary Haig: We estimate that there are approximately 5000-5500 guerrilla cadre and perhaps an additional 5000-8000 guerrilla support personnel.

### EL SALVADOR: FORCE RATIOS

Senator Leahy: Given the rule of thumb developed over the years on guerrilla war, that is, you need to have a 10 to 1 ratio of regular troops to guerrillas in order to win, what would the necessary troop strength be for El Salvador?

Secretary Haig: Given our estimates of guerrilla force levels, to obtain a 10 to 1 ratio would require a Salvadoran force level of about 50,000 men, assuming no increase in guerrilla strength. However, it must be kept in mind that the 10 to 1 ratio, derived from the British experience in Malaysia, has never been validated. Additionally, a multitude of factors impact on the optimum force ratio for guerrilla war. Not the least of these is the attitude of the populace towards the government and the guerrillas. The Salvadoran people have demonstrated repeatedly their rejection of the guerrillas, most notably in the massive turnout for the March 28 elections, despite guerrilla attempts to intimidate the people not to vote. We would also note that guerrilla forces have had little success in attracting new recruits in the past months.

Senator Leahy: How likely are they to achieve that level?

Secretary Haig: To reach a 10 to 1 force level in terms of equipment would not be possible under current U. S. security assistance levels. The Salvadoran military has no difficulty in recruiting, however, and could easily recruit the personnel for a 50,000 man armed force.

Senator Leahy: What is the morale of the Salvadoran army?

Secretary Haig: The morale of the Salvadoran army is high.

Senator Leahy: What is the AWOL rate?

Secretary Haig: We have no precise information on the AWOL rate but all indications are that it is low.

Senator Leahy: What is the rate at which arms have been lost or reported missing?

Secretary Haig: We do not have reliable figures, which, in any case, would have to come from the El Salvadoran government. Moreover, even it may not have entirely accurate figures. It should be noted that a favorite tactic of the guerrillas is to isolate and overrun small government outposts, thereby capturing weapons and equipment. Frequently, these are civil guard type units with older weapons such as M-1 carbines and Garand rifles. Most modern U.S.-made weapons in the hands of the guerrillas were furnished from stocks captured in Vietnam.

## EL SALVADOR: HELICOPTERS

Senator Leahy: How many helicopters does the army have now?

Secretary Haig: The Salvadoran military currently has 14 UH1H transport helicopters supplied through our security assistance program. It has some additional small helicopters purchased through commercial channels.

Senator Leahy: How many helicopters do you need for each 1000 troops in order to achieve a satisfactory level of mobility?

Secretary Haig: A UH1H will carry approximately 10 combat-equipped Salvadoran soldiers. Thus, it would require about 100 helicopters for one lift. However, the normal means of employment is shuttling of troops which reduces the number required. Precise needs would depend on the distance travelled, altitude and other factors. Certainly, the mobility of the Salvadoran army would be improved with more helicopters, but we must balance the cost of such equipment against other security assistance requirements, pilot availability, and maintenance capabilities.

Senator Leahy: How many helicopters would be necessary to equip adequately an army in El Salvador?

Secretary Haig: The question of what is "adequate" is difficult to assess because we must balance mobility needs against cost, pilot availability, and other priority requirements.

Senator Leahy: How many pilots does El Salvador have now?

Secretary Haig: There are approximately 20 UH1H-qualified pilots on the Salvadoran Air Force.

## EL SALVADOR: FY 1982 MILITARY ASSISTANCE PROGRAM

Senator Leahy: What is the current request for military assistance to El Salvador?

Secretary Haig: For FY 1983, we are requesting $60 million in Foreign Military Sales credits, $50 million of which would be on concessional terms. We are also requesting $1.3 million in grant training funds under the International Military Education and Training (IMET) program.

Senator Leahy: What does it include?

Secretary Haig: The FMS credits would be used to purchase additional helicopters, patrol craft, vehicles, engineering and communications equipment, arms and munitions to give the armed forces the mobility to counter guerrilla tactics and stem the flow of materiel from their foreign supporters. The IMET program will provide essential training at U. S. military schools in the U. S. and in Panama, a key element in our strategy to develop a more disciplined force and minimize abuses of the civilian populace. It would also be used to fund U. S. military training and technical teams (MTT's) requested by the Salvadoran government to conduct in-country training to increase their force levels and gain proficiency in the use and maintenance of equipment received from the U. S.

Senator Leahy: How many helicopters?

Secretary Haig: The precise number we might provide in FY 1983 has not been determined.

## EL SALVADOR: DEFEAT OF THE INSURGENCY

Senator Leahy: Can you give us a projection, based upon current estimates of the insurgents' troop strength, of the time needed to defeat the insurgency on the basis of the Salvadoran army's current state of readiness?

Secretary Haig: Our support for the Salvadoran military efforts is only one component of our program to arrest the spread of subversion in the area. We believe we are making significant progress. However, we believe that only a policy addressing the problem of external support for the guerrillas as well as the endemic social, political, and economic problems that have contributed to and been exacerbated by the insurgency can lead to a stable, prosperous El Salvador. We believe that the electoral process, now in train, along with the economic reforms undertaken over the past two years and the Caribbean Basin Initiative will lead to such a solution. Meanwhile, the Salvadoran military must have the capability to protect the people and the democratic process.

Senator Leahy: At the readiness level to be achieved by the proposed additional United States expenditures in FY 1983?

Secretary Haig: It is difficult to make a time estimate of this sort since much depends on the course the leftist guerrillas and their foreign supporters choose to take.

## LATIN AMERICAN BLOCKADE

Senator Leahy: Mr. Secretary, other options have been raised in Central America. It has been suggested, in fact, you have indicated yourself that the United States might need to take action against the alleged flow of arms between Cuba and Nicaragua into El Salvador.

If the United States initiated a naval blockade, what other nations do you think would participate in such an effort?

Secretary Haig: It is neither possible nor helpful to speculate as to how other countries might act in a hypothetical situation such as that described.

Senator Leahy: Would we have to pay their costs?

Secretary Haig: Since we are not presently contemplating a blockade, it would be both difficult and inappropriate to talk of costs in various hypothetical situations.

Senator Leahy: How much would it cost the United States taxpayer to pay for an adequate military blockade?

Secretary Haig: It would be inappropriate and unhelpful to speculate on or estimate the costs of a hypothetical blockade.

Senator Leahy: Does Secretary Weinberger feel that such a blockade would be feasible? Successful?

Secretary Haig: You would have to address Secretary Weinberger as to that.

Senator Leahy: Do you and Secretary Weinberger have any disagreements over our military policy toward El Salvador?

Secretary Haig: The President articulates our foreign and military policies. The decisions are his. The Secretaries of Defense and State advise the President on these matters, in many facets and on many issues. Both of us have contributed to the formulation of these policies and both of us support the President's decisions on these matters.

## HONDURAS-NICARAGUA: JOINT BORDER PATROLS

Senator Leahy: Mr. Secretary, in light of your concern about arms shipments, does the Administration have any objection to the offer by the Government of Nicaragua for a joint border patrol to be maintained by the Honduran and Nicaraguan armies to monitor the alleged arms flow over their joint border?

Secretary Haig: Joint border patrols do not adequately resolve the issue because arms trafficking involves more than border crossings. That is why the Hondurans have set forth a more comprehensive proposal involving international supervision and monitoring. We support the Honduran initiative and we propose that the OAS or any other mutually agreeable regional organization be called on to provide on-site verification of these agreements at ports, airports, border areas, and strategic sectors, as outlined in the Honduran proposal.

Senator Leahy: Because of our relationship with Honduras could we feel secure with such an arrangement?

Secretary Haig: The idea of joint border patrols does not address the problem adequately. We therefore do not support it. Instead, we offer our support to the more comprehensive and extensive Honduran initiative involving on-site international verification.

## INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT (IFAD)

Senator Leahy: This Subcommittee last year prevailed on the Senate and ultimately the House and Senate conferees not to provide funding in the FY 82 Appropriations Bill for IFAD. One of the reasons was that we did not expect others -- particularly the OPEC nations -- to fulfill their pledges to IFAD's replenishment before next summer. I was one who wanted to see us provide funds in the bill anyway on the chance that they would.

Now, however, the tables are turned. At a meeting in Rome last January, OPEC countries came up with an additional $20 million, completing their share. IFAD's replenishment was formally agreed to by its Governing Council. The Saudis, the Canadians, and the OPEC Special Fund have already made available their contribution not just for the first year, but for all three years.

It is my impression that we are now beginning to hear from other countries who are concerned that we will not come through with a payment in the months before FY 82 ends, and -- worse still -- that we may not meet our $180 million commitment during the 3 years allowed. In your view, how important is it to the United States and the Administration to meet its obligations to IFAD?

Secretary Haig: I believe it is particularly important for the United States to carry through with the provision of new funding for IFAD. I say this not only because this is a valuable development institution, but because of its importance to our relations with other major donor countries including European allies and key members of the OPEC group. Saudi Arabia, for example, has recently paid in its contribution in cash and would simply not comprehend lack of commensurate effort on the part of the United States. Moreover, since the United States was able to obtain agreement to certain measures including a staff freeze and increased OPEC contributions as conditions of our participation, we may be accused of having negotiated in bad faith if we do not now follow through with our contribution.

Senator Leahy: If a way could be found to make a payment before FY 83 would you support that approach?

Secretary Haig: The Administration originally requested $45 millon for IFAD for FY 82. For reasons of budget austerity, the request was subsequently reduced by 12 percent to $39.6 million. Although the Congress authorized $180 million, it did not include an amount for IFAD in the FY 82 appropriation. In this context, our FY 83 request is for $65.4 million and the Administration plans to request the balance of the $180 million for FY 84. We are prepared to discuss with appropriate committees alternative ways of assuring adequate funding on a timely basis consistent with the Administration's budget strategy.

### EL SALVADOR: PROSPECTS FOR A POLITICAL SOLUTION

Senator Leahy: In the past, the Administration has stressed that we are working for a political--not a military--solution in El Salvador. What are your plans for continuing along the lines of a political solution after the forthcoming elections?

Secretary Haig: The U. S. seeks a political solution to the Salvadoran conflict through democratic reform. We have strongly supported President Duarte's efforts to move toward a peaceful resolution through free elections. The March 28 constituent assembly election was an important step in this direction. We have repeatedly expressed our willingness to facilitate contacts among the various political elements in El Salvador to achieve the broadest possible participation in the electoral process--a process which is only beginning. We will continue to work to ensure that all political groups which now wish to participate peacefully in this process...the work of the constituent assembly, organization of elections for a national assembly, etc., will have the opportunity to do so.

## QUESTIONS SUBMITTED BY SENATOR CHILES

### NARCOTICS CENTRAL POLICY

Senator Chiles: The source of much of the illicit drugs (cocaine, marijuana, illegally produced Quaaludes) that are coming into the United States is South America. I recognize that a variety of considerations go into the formulation of our foreign policy with any country.

What priority does the State Department place on a drug producing country's willingness to work with the United States on joint drug eradication programs?

Secretary Haig: A drug producing country's willingness to work with the United States on drug control programs is a high priority in developing our overall policies and cooperative programs relating to that country. It is a virtual requisite for establishing joint drug control programs, since we clearly can do nothing with or in a foreign country until we have that country's blessing. The Department gives high priority to achieving and maintaining a positive political environment for our drug control initiatives in producing countries. Narcotics control is a standard topic for discussion during my meetings with the leaders of major narcotics producing countries. My senior advisors follow the same practice.

### NARCOTICS AND FOREIGN ASSISTANCE

Senator Chiles: For those countries (Peru, Bolivia, Jamaica), does the State Department plan to make general foreign assistance contingent upon their cooperation with the United States in crop eradication and other drug control programs?

Secretary Haig: The degree of their cooperation in drug control is a factor in determining our overall relations with all three countries, and thus our policy on general foreign assistance to them. We are currently negotiating with the Government of Bolivia several measures, including a coca control program, which are expected to demonstrate that Bolivia is taking effective anti-narcotics actions before we resume foreign assistance. Peru has embarked on a major rural development/coca control project with us in the Upper Huallaga Valley, the major coca producing area of that country. We are working closely with the Jamaican government in encouraging its attempts to establish a course of action against narcotics trafficking and marijuana crop controls.

## NARCOTICS CONTROL BUDGET REQUEST

Senator Chiles: Mr. Secretary, we have been trying to send out a signal to the Latin American countries which are the sources for illegal drug production that we are serious about cracking down on drug trafficking. As I look at the 1983 funding requests for International Narcotics Assistance to some of the Latin American countries (Brazil, Colombia, Ecuador and Mexico) I see that these requests are lower than in previous years.

How do we explain lower funding or, at best, very moderate increases to countries that we want to step up efforts?

Secretary Haig: Our narcotics control funding projections are based on three general criteria: 1) our greatest resource to be applied to this problem is not money, rather the linkage of this concern, by diplomatic efforts, with our overall interests and actions; 2) our estimate of the host government's need for and ability to utilize effectively U.S. assistance, and, 3) our best anticipation of opportunities to advance narcotics control in FY 1983 when the projections are formulated. Should new opportunities or approaches to drug control arise after any budget submissioning, I assure you we will take all possible actions, either by reprioritization within our resources or, if necessary, by going back to the Congress.

## STATUS OF AERIAL HERBICIDE MARIJUANA ERADICATION

Senator Chiles: In 1976, the United States assisted Mexico in financing an aerial herbicide program to eradicate poppy fields. This program was then extended to eradicate marijuana fields as well. The program was a major success, with most of the credit going to the Mexican Government because of their willingness to undertake such steps.

Now that Congress has cleared the way for the U.S. to once again provide assistance for herbicide eradication, has there been any attempt to convince other Latin American countries to initiate such aerial eradication programs? If so, where? And what has the response been?

Secretary Haig: We have one additional legal requirement to fulfill before we may engage other governments in discussion on marijuana eradication with paraquat which had been precluded until the recent amendment. Under provisions of the National Environmental Policy Act (NEPA) we must assess the potential impact on the United States of a major federal action abroad. We are now following the NEPA requirements to determine whether or not paraquat sprayed on marijuana abroad might have a health impact in the United States; this should be completed by September.

## NARCOTICS SHIP FOR COLOMBIA

Senator Chiles: In 1980, as part of the large infusion of aid to Colombia for narcotics control, a sophisticated ship or cutter was included for interdiction purposes. My understanding is that this cutter has been one of the most effective tools used by the Colombian Government in its narcotics interdiction strategy.

Are there any plans to provide Colombia with another ship of this type?

Secretary Haig: The cutter you refer to was turned over to the Colombian Customs agency in September 1981. The Colombian Navy, having seen it in operation, decided to purchase a similar one for its own narcotics interdiction effort utilizing funds appropriated in FY 1980. We are assisting the Navy in arranging construction with the U.S. supplier.

## DISCRETIONARY OR SPECIFIC AID

Senator Chiles: From a broader standpoint, does the Secretary think that perhaps providing narcotics control equipment, such as the cutter supplied to Colombia, might be more effective than just providing descretionary aid? Could we be targetting our funds in a better fashion?

Secretary Haig: We do not consider any narcotics control assistance discretionary in nature, in the sense that it is outside a strategy of narcotics control and specific programmatic objectives. In the case of Colombia, the majority of our assistance is specifically programmed to support the National Police's efforts to interdict marijuana as close to the cultivation source as possible. Notable success was achieved in 1981. We still believe the most effective control method is, however, of the crop itself and we hope that program possibility develops.

## PERUVIAN ASSURANCE ON COCA CONTROL

Senator Chiles: In staying with this point, I see we have a requested increase for narcotics control in Peru.

What assurances do we have from the Peruvian Government that they plan a campaign against coca production or against any other drug?

Secretary Haig: The Peruvian government has said publicly and has made clear to us its policy of controlling coca production to that level needed to meet the needs of traditional chewing of coca leaf and the legal export of coca and its derivatives. We believe the Peruvian government has already demonstrated its strong commitment to a campaign against coca production, witness the U.S.-supported "Green Sea" I and II operations of 1980 and 1981 which resulted in coca eradication and destruction of processing facilities. The new element in this on-going campaign, for which we are requesting increased assistance, is a major five-year rural development/coca control project we began with the government last September. This project, in which AID and the Bureau of International Narcotics Matters are linked with Peruvian ministries, seeks the integrated objectives of eliminating coca cultivation in the Upper Huallaga Valley, Peru's major coca producing area, and the development of that area's economy.

## CROP SUBSTITUTION

Senator Chiles: Has there been any work in the area of crop substitution programs for a country that willingly undertakes a herbicide spraying program?

Secretary Haig: I would prefer to expand the question to crop control in general, since herbicide spraying is but one method, even of eradication, in achieving crop control. With that preface, I can say "yes" there has been work by the United Nations Fund for Drug Abuse Control (UNFDAC) which we support, and by the United States, in crop substitution programs with governments achieving the reduction or elimination of traditional though illegal narcotics cultivation. UNFDAC has had such programs for some years in Burma and Thailand, although in both cases the programs are either of a pilot nature (Thailand) or at the early stages of application (Burma). The United States, State and AID, are supporting rural development/crop substitution programs in connection with agreed or prospective crop control actions by the governments of Pakistan, Peru, and Bolivia.

## BAHAMIAN COOPERATION ON NARCOTICS

Senator Chiles: One important way to control drug trafficking is to work with countries in the Caribbean basin that serve as conduits in the drug trade, either for the drugs themselves or for the profits generated by illegal drug trafficking.

The Bahamas now seems to have become a staging point for bringing cocaine and marijuana into Florida. All one has to do is look at the criminal complaints filed in the courts of South Florida to verify the extent to which smugglers are using the Bahamas as a conduit.

What is the status of the United States' international agreements with the Bahamas with respect to sharing information (e.g. tracking airplanes and ships, sharing information concerning financial transactions) which would assist in efforts to stop drug trafficking? What changes in current agreements, if any, would the State Department recommend to promote more effective cooperation?

Secretary Haig: There are no formal agreements between the United States and the Bahamas which regulate sharing information on vessels, but the U.S. Coast Guard and the Royal Bahamian Defence Force have for some time had a good informal system of cooperation, which appears to be functioning to the mutual advantage of both parties.

Limited cooperation exists between U.S. Customs and the Bahamian authorities, implemented on an ad hoc basis without any formal framework agreement. Recently, a new, also informal, arrangement is being tested whereby Bahamian authorities will provide flight plan information to U.S. authorities on selected private aircraft operations out of the Bahamas.

There are also no agreements currently in force between the United States and the Bahamas with respect to sharing information on drug-related financial transactions. The Departments of State and Justice have been attempting, unsuccessfully, for some time to interest the Bahamas in concluding a treaty on mutual assistance in criminal matters similar to that which is in force between the United States and Switzerland and to that which has been concluded but not yet come into force between the United States and Colombia.

## AGREEMENTS ON NARCOTICS WITH THE CAYMAN ISLANDS

Senator Chiles: The Cayman Islands is reputed to be an "off shore laundry", where drug traffickers are able to transfer profits out of the United States, and then bring them back again, to compete with legitimate businesses. Last year, Congress directed the Justice Department and the State Department to move quickly to negotiate financial information sharing agreements with the Cayman Islands and other offshore banking havens, so that financial records held overseas could be used to trace drug profits back to high level drug traffickers.

What is the status of those negotiations, and when can we expect to see these kinds of agreements take effect?

Secretary Haig: The Departments of State and Justice are actively exploring with governments in the Caribbean area where offshore banking havens exist the possibility of concluding agreements for sharing financial information relating to drug trafficking. U.S. efforts to obtain such information with respect to the Netherlands Antilles should be significantly enhanced upon the entry into force of the Treaty on Mutual Assistance in Criminal Matters recently concluded between the United States and the Netherlands, and made applicable to the Netherlands Antilles. Furthermore, the Government of Jamaica has agreed to conclude a similar treaty with the United States and negotiations are expected to resume shortly. Other than these two notable developments, no other negotiations or agreements in this area are currently in sight.

## FOREIGN ASSISTANCE CONDITIONALITY ON NARCOTICS

Senator Chiles: To what extent will the United States condition other aspects of its relations with such countries, including foreign assistance, on cooperation and progress in arriving at such agreements?

Secretary Haig: The Department will give full weight to the issue of narcotics control in formulating its policy toward these and other countries which play some role in drug trafficking to the United States. I cannot make a more concrete guarantee on policy formulation because of the many variables affecting U.S. interests in each bilateral relationship. But I, and other senior Department officials, are prepared to address any concerns you may have regarding our policies in more specific contexts.

## SUBCOMMITTEE RECESS

The subcommittee will stand in recess until 10 o'clock tomorrow morning when we are going to hear from Mr. Peter McPherson on the fiscal year 1983 budget request for AID.

Secretary **HAIG**. Thank you, Mr. Chairman.

Senator **KASTEN**. Thank you very much.

[Whereupon, at 12:10 p.m., Wednesday, March 10, the subcommittee was recessed, to reconvene at 10 a.m., Thursday, March 11.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

THURSDAY, MARCH 11, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 10:15 a.m., in room S–146, the Capitol, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senators Kasten and D'Amato.

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### STATEMENT OF HON. M. PETER McPHERSON, ADMINISTRATOR

### OPERATING EXPENSES

Senator KASTEN. The subcommittee will come to order.

This morning our principal witness is Mr. M. Peter McPherson, Administrator of the Agency for International Development.

Mr. McPherson will provide the subcommittee with overview testimony on his Agency's programs, and specifically on the operating expenses of the Agency for International Development.

At a later date we will receive detailed testimony from other AID witnesses.

Mr. McPherson, we will insert your entire statement into the record, and ask that you summarize it at this time.

I might say for all of us it is going to be a confusing day. If we don't have another Senator here, I am going to have to adjourn for about 15 or 20 minutes, because it looks like the Senate will be in session. We will work through this the best we can.

Thank you very much.

### OPENING REMARKS OF M. PETER MCPHERSON

Mr. MCPHERSON. Thank you for giving us the opportunity to present our program. Frankly, I think it would probably be the best use of your time not to even go to the statement that I have submitted.

Over the past year we have had numerous conversations, and you know basically, I think, what we are trying to do. Let me just emphasize two or three points, and we can go into questions and I think probably we can get at the matters of most interest to you.

First of all, let me thank you, Mr. Chairman and the subcommittee members, for the kind of help you gave the administration and AID during the past year. It is a difficult situation and one we need to build on, at least, not having built for several years, and we appreciate it.

I would like to note the kind of interest that the President himself has shown in our assistance program, shown by his Cancun speech, his strong support of legislation, and close working relationship with this committee, and his state of the Union message. He continues to show a great deal of personal interest in the development of security assistance. I feel he has been very helpful to all of us by doing so.

Let me underline the interest the administration has in the Caribbean Basin. The CBI, with its trade, investment and aid thrust, is something that we consider very important. I personally have spent some time in recent months in El Salvador, and we continue to follow matters in Latin America and more recently in Central America and the Caribbean. It is my belief that this is an important program.

### PREPARED STATEMENT

Those are briefly my comments this morning, Mr. Chairman. As I say, I think probably the most productive way is to get any questions you might have.

I offer my prepared statement to be inserted in the record.

Senator KASTEN. It will be inserted in the record at this point.

[The statement follows:]

## PREPARED STATEMENT OF M. PETER MCPHERSON

### ACTING DIRECTOR, INTERNATIONAL DEVELOPMENT COOPERATION AGENCY
### AND
### ADMINISTRATOR, AGENCY FOR INTERNATIONAL DEVELOPMENT

Mr. Chairman, and Members of the Subcommittee, it is a pleasure to have the opportunity to appear before you to discuss the I.D.C.A. and A.I.D. budget request for fiscal year 1983.

I am especially glad to make this request in the context of our enacted appropriation for the current year. Your leadership, Mr. Chairman, has helped to foster a new awareness of the importance of foreign economic assistance and the role it plays in U.S. foreign policy. We will continue to work closely with you and with members of your staff as we strive to further the progress made over the past year.

### GENERAL DISCUSSION

In his statements during the past year at Ottawa and Cancun, as well as in his speech last fall before the World Affairs Council in Philadelphia, President Reagan made clear his intention that U.S. leadership in the area of foreign economic assistance will continue to grow.

Our concern with assisting the development of countries of the Third World is based on a growing convergence of interests between them and the United States. There is, first, a commonality of security interests between ourselves and many developing countries. They are important for our national security, as we are important for theirs.

Major aid recipients are located in areas of strategic importance--in the Middle East, Caribbean and Central America, in the Pacific Basin, the Horn of Africa and Southwest Asia. Other AID recipients are important suppliers of energy and other raw materials essential to our economy. In addition, the local and regional defense efforts of developing countries contribute to international peace and security, and thus enhance our flexibility and capability to respond to problems on a worldwide basis.

Second, U.S. political interests and our continuing role of leadership in a market-oriented international economy can be substantially buttressed or hampered by the cooperation or hostility of developing countries. There are a variety of worldwide issues, from protecting the environment, controlling the illicit drug trade, maintaining a functioning international monetary system, and preventing nuclear proliferation on which the cooperation of developing countries is vital to an outcome consonant with our national interest.

Third, interdependence continues to be the overriding reality of international economic relations. When we and other donors provide substantial development assistance to stimulate agricultural productivity in developing countries, the pressures on our own supplies and prices are lessened. When our aid encourages policy reform conservation and development of alternative energy sources in the developing countries, energy-related problems of our own economy are eased. When our assistance succeeds in helping slow down excessive population growth, it reduces future pressure on scarce economic resources, and it becomes less likely that a recipient country will require our assistance at some future time. When the U.S. and multilateral institutions help countries through difficult balance of payments crises, we preserve our trading partnerships and private-sector financial relationships. When development assistance is used to promote sound policies and stimulate economic growth in poor countries, we hasten the day when these countries can participate fully in the international economy and become strong and growing markets for U.S. goods and services.

Fourth, the humanitarian character of our assistance programs, a thrust that makes this a unique government agency, is evident throughout our FY 1983 request. Our focus continues to be on the basic needs of people in developing countries. We will continue to use funds in our economic assistance programs administered by A.I.D., to the maximum extent possible, to address the major problems confronting the recipient countries -- interrelated problems of food scarcity, excessive population growth, inadequate infrastructure, depletion of natural resources and dwindling energy supplies. The Development Assistance & Economic Support Fund, together with the P.L. 480 program and refugee assistance program, play an important role in assisting the poor majority.

Our objective in development assistance is to pursue a balance between the needs of the present and the future. Current urgent needs must be dealt with, and we shall continue to help those individuals to address these needs. But development is first and foremost long-term. In the long-term, foreign trade and private financial flows will represent the major source of economic growth for most developing countries. However, we can assist and support the developing countries in establishing sound economic policies which will affect their economic performance and use our assistance to help them help themselves in preparing for the future.

Long-term development depends, to a large degree, on the nature of the policies followed by the developing countries themselves. By concentrating development assistance in those countries willing to pursue more open economies, and by seeking policy change in others, we intend to encourage adoption and implementation of policies conducive to indigenous private enterprise. We will thus be supporting of the economic growth and social development which are necessary to demonstrate that the free market is an efficient, effective vehicle offering the best hope of meeting the basic needs of the poor majority.

Our agency-wide private-sector thrust mobilizes U.S. private institutions -- academic and agricultural, business and volunteer services -- in support of our assistance strategy. We seek mechanisms to share with developing countries the science, technology, and management techniques of the U.S. private sector. Perhaps most important, our bilateral development assistance program will be increasingly a program of institutional development, a program essential to removing the roadblocks to technological innovation and productivity improvements.

Finally, we will work with the private sectors in the U.S. and the developing countries to devise measures that could lead to greater direct private investment and private sector participation in the development process. Included will be developmentally oriented private sector projects, and advisory assistance to encourage open host country investment policies, investment institutions and information.

Despite the progress I noted earlier, the problems of the Third World remain substantial. Notwithstanding success in increasing food production by introducing improved technologies and removing disincentives from the food production system, the ability to provide adequate food for all citizens remains a major concern for many of the developing countries. Deforestation and attendant soil erosion has not only reduced fuel supplies, but has also reduced the amount of land suitable for farming. Excessive population growth continues to inhibit our progress in solving development problems. Lack of adequate health facilities and educational services not only mean a greater incidence of disease and illiteracy, but also further stifles developing nations' productive capacity.

The magnitude of development problems is such that we cannot rely solely, or even primarily, upon official economic assistance to solve them. We must adopt a coordinated approach embodying several mechanisms -- greater private sector involvement, more emphasis upon technical assistance and institutional development, and more careful targeting of our resources to those countries which have policies consonant with sound and broadly-based economic development.

## FY 1983 BUDGET REQUEST

The budget request for FY 1983 reflects the Administration's continued concern with striking a balance between the need to limit the growth of Federal spending and the need to provide adequate resources and incentives to meet our important foreign policy and development objectives.

Let me turn first to the budget request for A.I.D. The economic assistance budget request represents, in total, a small increase over the FY 1982 enacted appropriation. It reflects increased attention to the initiatives we began last year, particularly that of stimulating greater involvement of the private sector in our development efforts.

Our FY 1983 budget reflects particular attention to effective targeting of limited foreign assistance resources. Country and regional activities have been reviewed carefully to ensure that proposed programs serve U.S. foreign policy and development objectives. The planned program in functional areas is concentrated in those activities where the United States has particular expertise: food production, eduction and training, energy, population and health.

For the FY 1983 bilateral economic assistance program A.I.D. requests an appropriation of $4.7 billion including $1.8 billion for Development Assistance and $2.9 billion for the Economic Support Fund. Development Assistance includes funding for functional Development Assistance programs, the Sahel Development Program, American Schools and Hospitals Abroad, International Disaster Assistance, Operating Expenses, and the Foreign Service Retirement Fund.

Approximately $1.3 billion of the amount requested for Development Assistance is for the five authorized functional accounts. Of the amount allocated directly to country programs, 86% would go to "low income" countries -- those with an annual per capita income below $730.

For the Agriculture, Rural Development and Nutrition program, we are requesting an appropriation of $700 million. This account remains the largest portion of the request for Functional Development Assistance, in response to the problem of inadequate food supply in the developing world. As I indicated, despite impressive gains in food production in some developing countries, many remain unable to meet their minimum nutritional needs.

The A.I.D. rural development program has three principal objectives: (i) to help increase and sustain the productivity and income of small farmers; (ii) to assist in the creation of employment opportunities for the rural poor; and (iii) to help improve access to, and utilization of, food.

To achieve these objectives, A.I.D.'s program stresses the removal of economic policies inhibiting broadly based growth, the development of private and public sector capacity to foster increased agricultural production and employment expansion, the development and use of improved agricultural technologies, and the improvement of human resources, rural infrastructure and the natural resource base.

More than 40% of the request would go to Asia, the region with the largest share of the world's most seriously malnourished, where government policy reforms in countries such as Bangladesh and Indonesia are helping to increase host-country food production. Another 21% would go to Africa, where policy reforms are also underway in some countries, to help reverse the long-term trend of declining per capita food production.

Funds from this account also would be used to help developing countries address the problem of accelerating deforestation, which is threatening many areas in Africa, the Caribbean Basin, and Asia, resulting in critical shortages of fuelwood and causing extensive environmental degradation.

As in the past, a substantial portion of the funds requested would finance activities specified under Title XII of the Foreign Assistance Act, much of which is channeled through U.S. land-grant universities and other institutions eligible under that Title.

For Population, we request an FY 1983 appropriation of $201 million. Excessive population growth in the developing countries is one of the primary obstacles to the expansion of per capita food production, reduction of malnutrition and chronic disease, and LDC conservation of dwindling non-renewable resources. Despite recent encouraging reductions in birth rates in several developing countries, population in many others continues to grow at unprecedented rates.
The slight reduction in FY 1983 population budget below FY 1982 does not indicate a reduced priority for population planning. Rather, the slight drop is principally the result of a one-time increase in the program in FY 1982 to make up for short-falls in the FY 1981 programs in Asia.

About 40% of the funds are for country programs, with the largest portion going to Asia, where several major national family planning programs are well underway. The balance of the request is for A.I.D.'s centrally funded programs to support family-planning activities throughout the world, information, and commodities, plus related policy initiatives and applied research.

A.I.D.'s programs emphasize the provision of voluntary family planning services for the rural poor through paramedical workers and the private sector. I wish to stress that the program does not fund or in any way encourage abortions, or research on this topic. In response to Section 104(d) of the

Foreign Assistance Act, our population activities stress the importance of the links between family planning and the impact of programs in agriculture, rural development, health and education.

We are requesting an appropriation of $114.1 million for Health activities in FY 1983. Approximately 37% of health funds will go to Africa, reflecting the enormous need for basic health services in that region. Much of our assistance to Africa will support rural water and sanitation programs and immunization campaigns to combat the diseases of early childhood, as well as tropical diseases such as malaria and schistosomiasis, which are major causes of death and disability in the region. Primary health care programs are well under way in Asia and Latin America. In these regions, our focus is on expanding access to basic health services. In FY 1983, we will be giving increased attention to programs in health planning and management, operations research, and in the transfer of proven health technologies.

Our request for Education and Human Resources Development totals $116.4 million. The education situation in developing countries remains critical despite sizable increases in their budgetary allocations to education and significant gains in school enrollments over the past several decades. Most countries still have severe shortages of trained manpower available to administer development and other programs effectively. One out of every four school-age children in LDCs does not even enter primary school, and only half of those who enter will stay in school long enough to acquire basic skills. More than one-third of the 2.1 billion adults in the developing world are illiterate.

While the need for resources to assist the developing countries with their educational requirements far exceeds the availability of funds, our program provides assistance in selected areas where the United States has recognized expertise. The FY 1983 program reflects the Administration's concern with increasing attention to manpower development and training, and the management capacities of educational institutions. The largest portion of our planned program is for training of administrators, managers, and scientific personnel to help recipient countries build the indigenous capacity to carry out their own development efforts. The program also provides continued assistance with the improvement and expansion of basic primary education for children and with vocational and technical training, support for labor organizations, and related education activities.

More than one-third of the request would be allocated to Latin America, for manpower development activities and continued efforts to help reduce that region's high primary school dropout rates. About one-fourth would go to Africa where the acute shortage of trained administrators remains a major obstacle to development.

For the Energy, Private Voluntary Organizations, and Selected Development Activities account, we are requesting authorization and appropriation of $166.8 million for FY 1983, including $10 million for activities in the Science and Technology program also authorized under this account.
The increase in the Section 106 account reflects our intention to fund several very high-priority activities aimed at a number of development problems, including growing demand for energy, environment and natural resources problems such as loss of agricultural land and water pollution, growing unemployment and problems associated with rapid urban growth.

As I have already pointed out, the planned activities place high priority on mobilizing greater involvement of the private sector -- both U.S. and LDC -- in development, including greater reliance on private and voluntary organizations. Approximately one-third of the request would be used for private enterprise activities. half of which would go to Latin

America for such activities as promotion of cooperative banking, small business development and technology transfer. More than $20 million would go to the new Private Enterprise Bureau for investment packaging, technical assistance, and related activities.

The request also includes substantial funding for energy-related initiatives (such as energy management and research on alternative energy sources) and for support of U.S. private and voluntary organizations.

For programs of scientific and technological cooperation, we are requesting $10 million for FY 1983 within the amount proposed for Section 106, under which such activities are authorized for FY 1983. The request includes funding for small competitive grants to stimulate innovative research approaches to development problems, and to build indigenous science and technology capacity in the developing countries.

For the Sahel Development Program, we are requesting an FY 1983 appropriation of $93.8 million to fund the sixth year of U.S. support of a multilateral effort to help drought-ravaged West African countries achieve greater regional self-sufficiency in food production and general self-sustaining development. In response to past problems, A.I.D. is taking a number of steps to improve financial management of the program, including measures to assure better control of funds at the project level and to strengthen host-country financial and program management.

For American Schools and Hospitals Abroad, we are requesting $7.5 million for FY 1983 to continue support of overseas U.S. schools, hospitals and libraries which serve as demonstration centers for American ideas and practices in education and medicine. We plan to continue to give emphasis to geographic dispersion of the program, with special priority to institutions in less developed countries.

We are requesting $25 million for FY 1983 to provide emergency assistance to countries struck by natural disasters such as floods, hurricanes and earthquakes, and by war, civil disturbances and other natural or manmade catastrophes. The program also supports assistance in disaster prediction and preparedness.

The FY 1983 request for the Economic Support Fund is $2.9 billion for economic assistance in support of critical U.S. foreign policy interests in areas of strategic concern to the United States. More than one-half of the request, a total of $1.6 billion is for the Middle East, principally for Egypt and Israel, to support continued U.S. efforts to bring peace to the region.

The ESF request also includes a total of $326 million for strategically important countries in Central America and the Caribbean Basin, including $105 million to continue support for the government in El Salvador.

$350 million will go to Turkey, as part of a multi-donor effort to help that country deal with its balance-of-payments problems. A total of $325 million is allocated to countries and regional programs in Africa; and $234 million is provided to Asian countries, of which $175 million is for Pakistan.

In addition, the request includes $75 million for a high-priority ESF Special Requirements Fund, to permit quick U.S. response to unforeseen needs for economic assistance instrategic areas. $50 million of this amount is earmarked for the Caribbean Basin and is included in the $326 million.

I would like to turn now to the request for other programs in which I.D.C.A. is involved.

P.L. 480

Food aid remains a principal element of our foreign economic assistance program. We use food to address the problems of agricultural development in LDCs (production and policy reform) and health and malnutrition, thereby increasing productivity to help break the vicious cycle of low production and extreme poverty. In the past year, we have increased our efforts to integrate P.L. 480 programs more fully with our overall country strategies and programs. We hope through our efforts not only to provide food to those who are in need, but also to teach them to help themselves to meet future food requirements.

The FY 1983 P.L. 480 request totals $1.5 billion for all titles. The slight increase in the P.L. 480 dollar level from FY 1982 to FY 1983 must be viewed in context. The total FY 1983 P.L. 480 program level increased by $28 million or 2% over FY 1982 levels, although when discounted for inflation, it will provide for the shipment of approximately 175,000 less tons of food than that shipped in FY 1982 due in part to projected higher commodity prices.

The Title I request is $859 million, including $91.6 million to meet the cost of shipping at least 50% of P.L. 480 commodities on U.S. flag vessels. FY 1983 funds will provide for the shipment of approximately 3.25 million metric tons of food. We expect to have Title III Food for Development Programs totaling $146 million in FY 1983 (18% of total country allocations).

For FY 1983, the Title II request is $650 million, including $250.0 million for ocean transport and overland delivery to land-locked countries. We will provide 1.2 million metric tons of food for non-emergency programs of Voluntary Agencies and the World Food Program, and 400,000 metric tons for emergency/refugee requirements. This total tonnage is less than FY 1982 principally due to reduced estimates of emergency/refugee needs. In FY 1983, approximately 890,000 tons of Title II food, valued at $243.5 million, will be donated to Voluntary Agencies and 314,000 tons of food, at a cost of $75 million, will be allocated to fulfill our pledge to the World Food Program.

Overseas Private Investment Corporation

The Administration is requesting authority that would permit O.P.I.C. to issue up to $100 million in loan guarantees and $10 million in direct loans in FY 1983. These funds' guarantee authority will be used with O.P.I.C.'s insuranceauthority, to finance private investment projects in developing countries, with special emphasis on projects in the Caribbean Basin. O.P.I.C. plays an invaluable role in the foreign assistance program because it facilitates the participation by private American investors in the economic and social development of Third World countries.

Voluntary Contributions to International Organizations and Programs

The budget request for voluntary contributions to international organizations and programs totals $173.25 million. This request supports voluntarily-funded development and humanitarian assistance programs of the United Nations (UN) and the Organization of American States (OAS). More than three-quarters of the requested funds are for two major UN programs - the UN Development Program and UNICEF. Other significant but more specialized assistance funded by this account includes U.S. contributions to the International Atomic Energy Agency, the UN Capital Development Fund, and the assistance programs of the Organization of American States.

Trade & Development Program

The Fiscal Year 1983 request for the Trade and Development Program (TDP) totals $10.5 million. TDP plays a unique role in fostering the development of middle income countries while promoting trade opportunities for the U.S. and generating revenue from the sale of technology, goods and services. We plan to target TDP's funds increasingly at the critical stage of the planning process where U.S. firms competing with foreign firms are in the final stages of bidding for feasibility studies for large-scale projects. We are instituting procedures to seek reimbursement from U.S. firms that perform feasibility studies on projects funded by TDP and are subsequently awarded contracts.

International Fund for Agricultural Development

The Fiscal Year 1983 request for the International Fund for Agricultural Development (IFAD) totals $65.4 million. This amount represents one installment of the $180 million U.S. contribution authorized by the Congress. The Administration supports IFAD's objective; that is, to assist the developing countries in increasing food and agricultural production in support of the broader goal of reducing hunger and malnutrition. Concern over the level of contribution by OPEC members and attempts to expand the Fund's permanent staff, which resulted in denial of an appropriation for FY 1982, has been resolved with an agreement to freeze permanent staff positions and a replenishment agreement to increase OPEC members' contributions to $450 million.

Multilateral Development Banks

The budget request for multilateral development banks (MDBs) reflects the Administration's commitment to honor cost-sharing arrangements which have already been negotiated internationally. For all institutions, except one, arrangements had already been negotiated prior to 1981 and the budget request provides funds to meet these commitments.

For the World Bank, the request provides the final $16.3 million in arrearages from the 1977 Special Capital Increase and the second installment, $109.7 million, of the U.S. paid-in share of the Bank's General Capital Increase. For the International Development Association, the FY 1983 request is $945 million. For the Inter-American Development Bank, our request is $62.4 million for the capital window, completing U.S. financing under the last capital increase, and $221.7 million in soft-window financing for the IDB's fund for special operations. The request for the Asian Development Bank and Fund includes $248 thousand in arrears to the hard window and $131.6 million for the last installment of ADF III and partial arrearages remaining from the prior replenishment.

Only the $50 million request for the African Development Fund represents a newly negotiated MDB contribution. Earlier this month, the U.S. reached agreement with other donors that subject to obtaining legislative approval it would provide $150 million over FY 1983 to 1985 to the third replenishment of this Fund, compared to the $125 million the U.S. supplied under the prior replenishment. The administration is requesting no appropriations for the African Development Bank, pending that institution's formal opening to non-regional membership.

## MANAGEMENT INITIATIVES

Mr. Chairman, I would like to return to the role of A.I.D. Administrator and give a brief summary of my overall management objectives for A.I.D.: what we set out to do last year, what we have accomplished and what we plan to accomplish in Fiscal Year 1983.

Implementation improvement began last spring with a top management analysis of A.I.D. projects obligated in prior years. Special attention was given to troubled projects, particularly those not being implemented in a timely fashion.

This review resulted in the total FY 1981 deobligation of $74 million. Through this exercise, we sensitized A.I.D. management at all levels to the need for rigorous portfolio analysis as a continuing process. We made it clear by this action that we are willing to make hard decisions when our projects are not working. On a semiannual basis, it is now expected that operating bureaus will refer troubled projects to responsible Washington staff or to Missions for corrective action. This continuing process will produce either deobligations or corrective action, sometimes requiring radical restructuring of individual projects.

One factor previously inhibiting performance in the field was the limited ability of Assistant Administrators and Mission Directors to act on their own authority. This has been changed. We have increased the delegation of project authority to the Assistant Administrators in Washington, and from them to the Mission Directors, from $10 million to $20 million. We have selectvely authorized the Missions to approve projects with a longer life, doubling their authority to approve projects from five-years duration to ten years. On a selective basis, we have also increased the Missions' authority for operational program grants to U.S. private voluntary organizations from $0.5 million to $1 million. Through these expanded delegations of authority, we expect to slash considerable time and cost from the contracting and project-approval processes.

The second area of administrative streamlining at A.I.D. was our program of reductions in personnel. We made every effort to implement the reduction program without crippling our operational capacity overseas. Since the bulk of our programsare actually implemented in the field, we felt that it was important not to impair our ability to carry out our responsibilities. We have been able to meet our lower personnel ceilings without reducing either flexibility or capacity in our country Missions.

Also, we were determined to reduce redundancy and inefficient use of Washington personnel. For instance, in the 10% reduction in headquarters, we eliminated numerous duplicative policy and contract review procedures conducted by the various bureaus. The reductions forced limited reorganizations within the headquarters units, the effect of which was to reduce the shuffling of paper and layers of review within those bureaus.

We are also carefully examining a number of different functions both in the field and in Washington which might be contracted out. To the extent that contracting out is cost-effective, we would hope to achieve both lower personnel levels and the attendant lower operating costs. Contracting out is not a panacea, but it is an important element of flexibility.

We have achieved a substantial personnel decrease in Washington without utilizing the "reduction-in-force" (RIF) mechanism. I am committed to strong management, and I intend to take all necessary steps to avoid the management problems a RIF creates. To achieve the reduction through attrition, we have instituted a selective Washington hiring freeze, and, began a replacement program to put occupants of eliminated positions into vacancies in continuing positions. We will complete this program later this summer.

At the same time, we are maintaining the staffing levels for the Inspector General's program at a time when the Agency is reducing its overall personnel levels. In fact, our Inspector General program was exempted from the sharp personnel reductions in on-board strength imposed elsewhere in Washington. Currently, only the Inspector General's office is proceeding with normal hiring.

## OPERATING EXPENSES

AID is requesting $376.0 million in new budget authority to fund its FY 1983 operating expenses. This represents a $45.0 million increase over the FY 1982 appropriation of $331.0 million. However, it should be noted that $9 million of this increase is to cover the FY 1983 cost of the October 1981 pay raise and the January 1982 lifting of the cap on salaries of federal employees, costs which are not included in the FY 1982 appropriation of $331.0 million. In spite of an overall decrease in personnel from FY 1982 to FY 1983 of 100 workyears, FY 1983 salary and benefit costs will remain at about the same level as the FY 1982 levels adjusted for the pay raises which took effect this year. This reflects full-year funding in FY

1983 of the FY 1982 pay increase and various provisions of the Foreign Service Act of 1980.

The Agency has taken several steps in the past year, and plans further actions in the future, to minimize the impact on the operating expense budget of rapidly escalating prices overseas and in Washington. The use of the Section 636(c) authority in the FAA to purchase residences and office buildings in past years is beginning to pay off. Funding required for rents and utilities overseas is projected to increase only 6 percent from FY 1982 to FY 1983. While no funds are available in FY 1982 to cover Section 636(c) acquisitions, we are requesting $3.0 million in FY 1983 so that we may continue this trend in reducing rental payments in future years. Unfortunately, this avenue of relief is not available for our Washington operations.

As a result of our increased review and analysis of Foreign Affairs Administrative Support (FAAS) budgets and bills received from the Department of State, sharp reductions in this element of costs have been possible. We project a $3.0 million increase in FAAS costs in FY 1983, for a level of $23.0 million. An increase in funding for training of the Agency's staff is being requested in FY 1983. Training is essential if we are to increase the efficiency and effectiveness of our personnel, especially increased language training being given to personnel scheduled for overseas assignments. While language training is the largest single category in our training budget, other types of training are equally important such as that relating to project design and implementation, management (both project and non-project), and specialized training in areas such as agriculture, energy, and population.

AID's budget request for 1983 is the minimum amount necessary to carry out the operations of the Agency. However, it must be emphasized that the inflationary effects of doing business overseas accounts for almost three-fourths of the increase included in this request. For example, the cost of moving employees, family members, their household effects and related office supplies will increase $2 million in FY 1983. Nevertheless, the Agency will continue to maintain its scrutiny and management of the operating expense budget to ensure that it represents only the minimum essential requirements of the Agency.

Thank you, Mr. Chairman, I would be happy to respond to any questions you or your colleagues might have.

### TRANSFER AUTHORITY

Senator KASTEN. Senator D'Amato.

Senator D'AMATO. I don't have a statement.

Senator KASTEN. There has been some controversy regarding the transfer authority. It is clear that Congress intended that this authority be used only in unforeseen circumstances, and certainly not to change any congressional mandates.

Before asking my questions, however, I want to compliment your Agency and your people for consulting on this matter. This consultation led to your reconsideration, I believe, and avoided what might have been a serious problem.

Can we get your assurance that you will use this transfer authority only in cases which arise out of unforeseen circumstances, and of course within the law as prescribed by the appropriation legislation in exchange for, frankly, the subcommittee allowing the Agency to attain such transfer authority?

Mr. MCPHERSON. Well, I guess I would like to think carefully about the problem here. I am a lawyer, and I think I care specifically about the words, but certainly pursuant to our discussions in recent weeks which were productive, and which I thought were very helpful to us, I view that transfer authority as being used in an unusual kind of situation that we would proceed to handle in careful consultation. We certainly would not view it as a day-to-day management authority to get around congressional directives.

### ABORTION RELATED RESEARCH

Senator KASTEN. We are still getting expressions of concern from different groups of people that AID funding is being used in some cases, they say, directly, and other cases indirectly, to support abortion related research, activities, and promotion.

The argument is that funds which AID provides to certain organizations frees other money which they then use for these abortion related activities. Could you discuss this?

I know we discussed it briefly before, but what have you done to try to stop this and to limit the use of AID funds for abortion related activities?

Mr. McPHERSON. Senator, this has been a concern of mine, as you know, from the very beginning. In fact, before I was even confirmed I made the statement that I intended as Administrator to cut off the funds that were related to abortion research.

There was an amendment to the law a couple of years ago that prohibited the use of funds for abortions, but we were doing some abortion related research. Shortly after becoming Administrator I then gave the directive that I wanted to have those grants phased out, not renewed and terminated.

## REPORT ON TERMINATION OF GRANTS

Just recently I received a detailed report on that termination of those grants and was assured—and I would be more than happy to provide the committee with that—of the termination of all of those activities.

[The statement follows:]

## THE DISCONTINUANCE OF A.I.D. SUPPORT FOR RESEARCH ON METHODS OF ABORTION

Since 1974, in accordance with authorizing legislation, the Agency for International Development has not provided support for abortion services and a number of other abortion related activities, such as the provision of abortion equipment, or the motivation of persons to practice abortion. The Agency, however, had continued to fund research on methods of abortion until January, 1981 when this Administration decided to discontinue such funding. This report describes actions taken in the last year and a half to discontinue support for research on methods of abortion. The actions have been consistent with directions laid out in early 1981 and with Section 302(b) of the International Security and Development Cooperation Act of 1981 (enacted December 29, 1981) which prohibits development assistance funds from being used to pay for biomedical research which relates to methods of, or the performance of, abortions or involuntary sterilization as means of family planning.

The following projects have been affected:

1. *Johns Hopkins University*

The project entitled "Simplified Techniques of Fertility Control" had $444,000 for ongoing research on improved methods of abortion in early 1981. The Agency has obligated no further funds for the project since FY 80 and the abortion research activity was discontinued in September 1981.

2. *Program of Applied Research in Fertility Regulation of Northwestern University (PARFR)*

Under this project there were several subprojects totalling $197,675 with ongoing abortion method research in early 1981. All such projects had expired by the end of calendar 1981 and no further abortion method research projects have been initiated.

3. *International Fertility Research Program (IFRP)*

This project had $7,267 of support for research on methods of abortion ongoing in early 1981. All such activities had expired by September 1981. No further abortion method research has been undertaken.

In all of the projects described above, funds for projects ongoing in early 1981 had actually been obligated in FY 1980 and previous years.

4. *World Health Organization (WHO) Research Program*

Consistent with then existing authorizing legislation the Agency contributed $3 million in FY 81 to the WHO program. A small portion of the WHO program (approximately three percent) goes to research on methods of induced abortion. Prior to committing the $3 million to the WHO program, however, the Agency received written assurance from WHO officials that funds provided by A.I.D. would not be used for research on improved methods for the performance of abortion. The Agency is statutorily prohibited from providing FY 1982 funds to support the WHO program, and has no intention of seeking to alter this prohibition.

In addition to the foregoing actions, the Agency has adopted specific language to be incorporated in all relevant grants, contracts, etc., as follows:

(a) No funds made available under this agreement will be used to pay for any biomedical research which relates, in whole or in part, to methods of, or the performance of, abortions or involuntary sterilization as a means of family planning. Epidemiologic or descriptive research to assess the incidence, extent or consequences of abortion is not precluded.

(b) The Grantee shall insert paragraphs (a) and (b) of this provision in all subgrants, subcontracts, purchase orders, and any other subordinate agreements hereunder.

### AID MONEY SUBSTITUTE

Mr. McPHERSON. Now, the question of whether or not AID money was substituted for other money is one that obviously has been of concern to me, as well. We have provided a very careful accounting to be sure that our money was used for what we said it was to be used for. I think within those parameters we have been quite successful in being certain that our money was used properly.

Senator KASTEN. Let me first indicate that I find it particularly gratifying, and my staff does, dealing with people who are professionally responsive, and I want to compliment you in that regard.

Mr. McPHERSON. Thank you. We are glad to work with you on that.

### AMERICAN SCHOOLS AND HOSPITALS ABROAD

Senator D'AMATO. I would like to make notice that there is a very disturbing trend which has appeared in the distribution of aid for American hospitals and schools abroad. I am referring to various levels and reduction of those levels over a period of years.

I recognize that 1970 may not be an appropriate year to pick because you had very extraordinary events, but in 1970 94.7 percent of the American schools and hospitals funds went to the Near East region. In 1975 that was reduced to approximately 53 percent, and it was cut about in half.

Now we see that distribution is further reduced in a percentage of ASHA money which has dropped to below 50, down to 43.6. The answer is we had to do this last year. We had a proposal of $8 million initially and this committee went to $12 million and Congress went up to $20 million.

We see the same kind of thing this year, $7,500,000 down from $20 million. Now I am saying what kind of signals are we sending out? We think it is counterproductive, and we note there were 58 applicants to ASHA for $85 million of American aid, and 38 of these in the Near East. The largest applicant pool, with 9 of the 26 grants for 1981 went to the Near East.

It is not a question that these aren't programs that have paid handsome dividends in terms of humanitarian effort and educational efforts and in terms of building relationships between the United States and its allies and those who are in need; and they do just the kind of things we want.

I suggest that although the $1.593 million the President has asked for may be somewhat below the targeted activity in 1982 the fact of the matter remains it is quite a substantial sum. I don't intend to support more money going down to other areas, even to Central America, if we are going to start to make these nickel and dime cuts in this area. I am not going to vote for it, and I am not going to support massive shifts of our allocations if we are going to allow that.

You have seen productivity of these programs, and what is your attitude with regard to this? Do you believe that we can sustain a cut from $20 million down to $7,500,000? And if this is bargaining I don't like it.

Mr. McPHERSON. Well, Senator, let me try to reply.

Senator D'AMATO. What would be the effect? I gave you my speech, and now let me ask you, what is the effect of cutting $20 million down to $7,500,000? You will virtually eliminate some of those very effective programs, many programs that the Congress has been very interested in would have to be cut back.

Mr. McPHERSON. There is no question about that.

Senator D'AMATO. And eliminated.

Mr. McPHERSON. Probably in some cases, yes.

Senator D'AMATO. And hospitals?

Mr. McPHERSON. Well, you get some.

Senator D'AMATO. And schools?

Mr. McPHERSON. There is no question that some of the financing for schools would have to be cut back.

Senator D'AMATO. And worthwhile projects in your opinion?

Mr. McPHERSON. Frankly, it seems to me that the financing often would end up going for almost middle-class hospital care and education, in contrast to building or trying to extend the primary health care in a poor country in Africa. That is the bottom line, and I would rather put my money into sending primary help.

Those are honestly the facts, as opposed to the kind which is often near middle-class hospital care. Now the facts are that every year the Congress comes back and tells us that we ought to spend $20 million, and we get that money, and we try our darnedest to spend it carefully and wisely. We try to consult carefully with Congress on how that might be most appropriately spent. The man in charge of the program is David Santos. Frankly, I would like to have them come down and review with you where our 1982 programs may be going.

We have an advisory committee that makes recommendations for us, and they have done that, and in the next few days I expect to review their recommendations.

Senator KASTEN. Could I interrupt for just a minute? Could you continue the hearing, and when you are finished with questions, just recess. I will be back in about 15 minutes.

## CHALLENGE CONCEPT

Mr. McPHERSON. There are a lot of things that we can do. We try to do it in this way: One of the concepts that I am trying to do is have a challenge concept.

Senator D'AMATO. Let me get into this a little. These are not middle-class, these schools, they do have some facilities with hot and cold water, and they have heat and when you compare them with jungle life in Africa, that is fine. But on the bottom line I think we do a great disservice to set up bargaining then, where people have to come in the last minute and say, "My God, you are going to take us on an appropriation level which hasn't been increased in the last 5 years."

Obviously as a result of inflation it has been reduced in half and now you are going to say that we are going to cut that in half, or we are going to come to a position where we say that the needs are so great that we are not going to give you anything. I am not going to debate with you about what is middle-class or not middle-class, but that has historically been an important point in our relationships and particularly in the Middle East which is volatile, and we are going to talk about diplomacy.

If you want to create the impression that we are not interested in the countries that are involved, that is certainly a great way to do that. I doubt that any economic saving can be justified in terms of the impressions that we create. It is just very, very damaging.

Mr. MCPHERSON. Let me tell you, if you review the kind of things that we are doing and talking about and doing for next year, you will find them attractive or at least reasonably so, and productive. I find, frankly, that I really have to be a hard-nosed negotiator with some of these colleges and schools. They come in and tell me that the sky is going to fall in, and then I look at the amount of tuition they are collecting, and I say, "It is not the U.S. taxpayer's responsibility to do this, and why aren't you demanding more tuition?"

I have gone through two different schools since I have had this job, where we demanded a financial plan, and we find the schools have no financial plan set up.

### FINANCIAL PLAN REQUIREMENTS

Senator D'AMATO. That $20 million doesn't even begin to meet the needs in that particular area. It doesn't begin to meet the needs. So if you judiciously spend that money, no one here has any problem with that. But I do have a very real problem with taking the level of $20 million, and you are mixing two cases up, let me tell you, and let me suggest once again, no one here at this time is suggesting that you should give money to a particular institution that doesn't have an economic plan.

You say they come in and we ask them for a plan, and you are absolutely right. That is one problem. Reducing $20 million to $7,500,000 is a totally different thing. I didn't suggest that you lower your standards. You are not suggesting to me that you have three times as much in the way of resources to meet all of those applicants and all of the worthy needs in that area, are you?

In 1962 you had three times as much money as you needed and you could have gotten away with $7,500,000. You are not really suggesting that, are you? As a practical matter, we are going to increase this, and we are absolutely going to bring the rate back up to the $20 million, and you know that. Then when we do this, we are liable to take the funds and cut them from something that the administration wants in some other area. Isn't that counterproductive?

What I am suggesting to you is that we are going to put that $12,500,000 back, and it is going to have to come from some place.

One of the problems we run into then is one of the areas that you might need or think is important and would be subject to a cut.

Mr. McPherson. I submit that if the administration came in with $20 million, it might well end up that we had $40 million in that basket, and that would be that much more out of primary health care systems or other vital programs in Africa. But we lose, to be honest, just to lay it on the table.

Senator D'Amato. You mean this is a negotiating process?

Mr. McPherson. As a practical matter.

Senator D'Amato. As long as you are going to have to look for another $12 million——

Mr. McPherson. When you look at the amount of money we put into Egypt and Israel in economic assistance, and at the same time places like the University of Cairo are coming to talk to us for programs like this, and various Israeli schools come to us, I have competing requirements of trying to establish the situation in Sudan, of trying to keep the economic growth in Honduras moving.

Senator D'Amato. How many tens of millions of dollars did we put into Sudan, over and above what we put in in prior years? It is tens of millions, and this committee has appropriated it.

Mr. McPherson. You did a nice job, and we appreciate it.

Senator D'Amato. Don't continue to come back to this one area because you will not have the sympathy of at least one Senator.

Mr. McPherson. I need your sympathy, Senator, and I need to respond accordingly.

Senator D'Amato. I am just suggesting in the preparation of this kind of document that it is a bargaining technique after awhile, and it is old hat. Then we are going to have to find $12 million because we are not going to fund in that area. Other areas are increasing, and you are not going to find much sympathy I think for all of these areas.

Let me turn to another question, and you have defended that point very adequately and were I in your position I probably would not have been able to do nearly as capable a job, in the light of the facts as they exist.

One of the things I think the United States responds to quite generously was to the terrible tragedy that took place with one of our NATO allies. I am talking about Italy and the earthquake and the disaster in that region.

## ITALIAN EARTHQUAKE RELIEF

Sometimes people don't know, the citizens of the United States fail to recognize the tremendous contribution that Italy has given to the United States and the NATO; with the strategic bases; with its constant support in that area; it is something that we have been remiss in not stressing, and something that the Italian Government feels quite upset about in the terms of being viewed as some kind of second-class partner as opposed to someone who is vital.

We responded quite generously in the appropriation of $50 million, and then last year we extended it, and that was for relief and reconstruction. I am impressed at the manner in which those funds were administered and in terms of the schools that are under construction. We earmarked $10 million of the international disaster assistance fund for that purpose, of which $8 million was categorized for outright grants and $2 million to be used for matching funds, so that we could leverage that up to $4 million.

I would be very interested in hearing from you how that money is being spent and where we are at this particular juncture, and if in your opinion assistance of the same form will be required.

Mr. McPHERSON. First of all let me agree with you, that the strong and good alliance that we had with Italy is one that is not appreciated sufficiently. For example, I don't think that most Americans understand the austerity of the time in Italy; that Italy is proposing to increase its defense spending by 3 percent or more, and that is not like everyone else we are working with on this defense expenditure question. We have, as you indicated, a $46.9 million pipeline and 12 schools are being built and those seem to be coming along very nicely. The $10 million earmark of last year for fiscal year 1982, the disaster assistance program, has $2 million for PVO's. The remaining $8 million was the primary focus of your question, and we are sorting through how we might be able best to use that money. I will be getting recommendations from our AID representative in Italy, and from the Near East Bureau on how we can do that.

Senator D'AMATO. You suggest we be in contact with those officials?

Mr. McPHERSON. We will be in touch with you when we have some concrete recommendations.

### LEVERAGE OF FUNDS

Senator D'AMATO. I am getting quite a bit in the way of inquiries in terms of those funds. What is taking place to see to it that they are leveraged, and I very much appreciate the importance of that.

Mr. McPHERSON. I wonder if we can leverage them. I am not aware of how much leverage we have done with that $2 million last year.

Senator D'AMATO. Well, the $2 million was what we looked to have matching funds for, and the $8 million with direct grants. I am not talking about the $3 million left over from the $50 million, of which some $40 odd million was used for schools, but what I would like to know is where are we in terms of that $2 million and what about that $8 million and are we working with organizations. You have some sources that do have the amount to go on out and raise money, such as the Catholic Relief Services, and Bishop Roderick in New York is very much a part of that. I think that we should really take advantage of that kind of thing, and that is why we broke it down. Instead of just asking for outright grants, we should get the private sector more forthcoming in this particular area.

Mr. McPHERSON. We are finding that this leverage concept is one that we can use broadly, and I would like to get back to you with ideas on how we are going to use that money.

Senator D'AMATO. Senator Leahy has some questions that he would like to submit, and I will submit them for purposes of the record, and if you would respond to Senator Leahy I would appreciate it. Inasmuch as the chairman will be back soon—the chairman will be out another 5 minutes—I have another committee meeting, we will stand in recess until Senator Kasten comes back.

Before we recess I would like to thank you for your cooperation, for your diligence in defending an almost indefensible position, and I commend you for your work in a very, very sensitive area in terms of trying to build and maintain relationships because we really are fighting for the good will of some nations, and so many people.

We stand in recess.

Mr. McPHERSON. Thank you.

[A brief recess was taken.]

## DEOBLIGATION—REOBLIGATION AUTHORITY

Senator KASTEN. The subcommittee will come to order.

Last year we talked about your desire to have the deobligation and reobligation authority reestablished, and I believe that you remember I indicated this would probably be a reasonable approach which the subcommittee would be anxious to support and work with you on.

We have not received the request to do this. What is the status of that now? Do we assume you no longer want the deobligation and reobligation authority?

Mr. McPHERSON. We are very interested in the concept, Senator, because in fact it was an excellent management tool. One of the things I did earlier, that I think was most important to the agency when I got there was the deobligation of that $28 million a few months ago, because it told the agency and the governments we deal with that we were prepared to really match excellent programs.

As a practical matter, it is difficult in an on-going way to get an institution as big as ours, and get governments on the other end of things to continue to evaluate projects in a tough way. We continue to have modest amounts of deobligations, but that authority would be of great interest to us. However, there are proving to be numbers of intrinsic kinds of problems and we have not been able to satisfactorily work those out with OMB and generally within the Government.

The problem is that it appears, at least some suggest, the Budget Act would require that when we deobligate and reobligate this would be counted as if it was a new appropriation. And thereby requiring it would in effect reduce the money that we had available for obligation for other programs. It is these Budget Act problems that have caused us to be concerned.

There have been some suggestions that if you made all of the money on the books retroactively into no-year money, we might have the same sort of problem. You see, the distinction here historically is that up until—Jim Bond and Richard Collins would know—probably 1977, when Congress began to appropriate money for 1 year—we could, if we deobligated for a specific project, reobligate again and we didn't need the reobligation authorization.

But then in 1977 Congress made it single-year money and since then, if we obligate it during that year and then the next year we want to deobligate, the funds automatically return to the Treasury. There are a number of technical problems, and we would appreciate your continuing to be able to work with us and the majority and minority staff on this matter because I think, as you obviously tend to believe, that this is a very important managerial tool.

Senator KASTEN. We look forward to continuing to work with you.

### AID PROJECTS IN NICARAGUA

For the record, and separately, I wonder if you could send us a report detailing the current status of projects in Nicaragua funded by the Agency through the Partners of the Americas. Wisconsin has an interest in this, but I am particularly interested because of the different problems in Nicaragua. There was a radio station, for example, that was funded through AID that the Wisconsin Partner Group was operating that has now been taken over and is evidently broadcasting Marxist-Leninist propaganda. They sent the Wisconsin people home. There are a number of different projects down there instituted over a 17-year relationship with Nicaragua. In Wisconsin we had a number of people traveling back and forth to Nicaragua. I would like some information as to what projects are still operating. I want to track them. They are closing a lot of them down, and I am concerned about it.

Mr. MCPHERSON. Yes, it seems to me that it would be very valuable for the administration to do that. We would like to keep you regularly informed and keep the people in Wisconsin informed of such a development.

[The information follows:]

### PARTNERS OF THE AMERICAS ACTIVITIES IN NICARAGUA

The Wisconsin Partners is one of the most active and productive Partners groups in the U.S. and has been for years. For example, they were invaluable following the 1972 Managua earthquake.

Nevertheless, in mid-February of this year, the Government of Nicaragua informed the Wisconsin Partners personnel that all activities on the east coast of the country were to be shut down. At the time the personnel were engaged in a number of projects, including a rural radio station and a water pump project. In addition, for the past fifteen years the Wisconsin Partners were conducting a variety of health training and service activities among the Miskito Indians on the east coast. These activities involved the training of village health leaders and midwives for the purpose of improving health care services in the areas of child care, nutrition and hygiene. Yet another activity involved the installation of a two-way radio system operating among a number of villages along the east coast which was used for imparting emergency health information on those occasions when health personnel were not immediately available. This was a highly successful activity. As a consequence of the shutdown of these activities, the Partners' efforts have been redirected toward other parts of Nicaragua.

In November 1980, the USAID Mission in Nicaragua made an omnibus three-year grant to the Partners in the amount of $450,000. Activities undertaken under the grant include projects in agricultural, municipal services, community education and preventive medicine. Of the grant total, $190,000 remained in the pipeline for east coast projects when the shutdown occurred. This amount will also be used to conduct similar projects elsewhere in Nicaragua.

## COMMITTEE DIRECTIVES

Senator KASTEN. There were a number of directives contained in the committee's report on the fiscal year 1982 appropriations bill which I would like to discuss. First is the committee's concern with the downgrading of the Office of Legislative Affairs, where the Assistant Administrator spot was given to one of your personal assistants. I believe it was your decision to downgrade the legislative office which has possibly had an adverse impact. That was something that we addressed in our committee report, and I want to ask you to give some thought to reestablishing the old order.

Mr. MCPHERSON. Of course I carefully reviewed the committee report language, and on a couple of occasions I have had an opportunity to discuss it with you and the staff. It is my judgment that, in fact, the relationships have worked quite well in terms of the institutional structure but your ongoing concern, and that of others, about this obviously causes me to continue to review it, and I will do so.

## INSPECTOR GENERAL'S OFFICE

Senator KASTEN. The Committee expressed a number of concerns with respect to the operation of the Inspector General's Office. First of all, I want to compliment you for indicating your support for that office in your statement, and also, in general, the work you have been doing. But more specifically, have you now responded to the recommendations we made in the fiscal year 1982 report? We talked about having adequate resources to cover the necessary responsibilities.

Mr. MCPHERSON. I would like to respond in detail in writing, if I could, but let me make a couple of comments. I believe the Inspector General's Office is very important. One of the things I was able to do last year was to get an office open in West Africa in Abidjan. There was a general feeling that we needed to have a presence there, so as to do a more effective job. I think Congress and a number of people in the Agency have been concerned about that, and we were able to work that out with the State Department.

There are of course a number of budgetary questions and concerns that bump into each other in these kinds of matters, but I think in most ways we have been able to respond. I think the general feeling is that that office is, or at least it is my feeling it is, playing a very constructive and aggressive role.

[The information follows:]

### COMMITTEE CONCERNS ON A.I.D.'S INSPECTOR GENERAL OFFICE

In further response to the Committee's query on the status of the Inspector General's office in A.I.D., I want to assure the Committee that I strongly support the requirement for an active and capable IG function within the Agency. I intend to keep that office as fully staffed as our overall personnel levels will permit.

Specifically, the Committee should be aware that we have held the staffing line on that office at the January 31, 1981, level. We plan to hold at that level throughout this fiscal year and on into the FY 1986 period, the end year of our current personnel planning cycle. The significance of this is that in the face of our current constrained Agency personnel authorization, and the planned continuing yearly reductions in the out years, the Inspector General's personnel levels are being held steady. It is not planned that that office share in future Agency staffing reductions which, overall, I am committed to carry out.

I am aware that even with this special effort to protect IG staffing the office is considered by some, including, I am informed, the GAO, to be inadequately staffed. I share that concern, and I want the Committee to be aware that over time I intend to be alert to any possibility that may arise that might permit even very marginal increases in our IG staff. In the final analysis, however, I must look to the Inspector General, as I do to other senior officers of the Agency, to manage and employ his limited resources with utmost effectiveness and aggressiveness.

On another point of Committee concern, adequate operational travel funds, I am pleased to be able to report that for the current fiscal year that situation has sharply improved. We have, in fact, been able to increase the IG's travel funds this year to the point where the IG has assured me they are fully adequate to support his planned and anticipated requirements.

## MANAGEMENT IMPROVEMENT INITIATIVES

I would like to say, and I hope there isn't any puffing, I think in fact that the whole Agency is very aware of my intense interest in organizational efficiency. On our termination of projects we made it very clear that contractors that don't effectively perform should be terminated, and we have done so in some cases, and we are going to continue to do so.

In some ways it is a lot easier to be tough on a manager today than it might have been a few years ago. Also, I might say we think, or I think, the AID employees are particularly dedicated, and unusually educated, and a good group of people, but really in this area we need to be effective.

We have a selection-out system, for example, on the books. I believe the selection-out system hasn't functioned for years, and we are now putting it in place. It takes time and careful discussion but in fact I have every intent to make the selection-out system work. I think, frankly, the vast majority of our employees are a good deal more dedicated to what they are doing than many Government employees. I have been around this town for a good while, and I have a good source of comparison.

## SCIENCE AND TECHNOLOGY

Senator KASTEN. As you know, the Science and Technology function came under a lot of criticism last year. That was largely because it planned essentially to farm out a lot of its work to the National Academy of Sciences. What are the specific plans for the $10 million that is being requested this year?

Mr. MCPHERSON. Approximately $5 million of that will go to the National Academy of Sciences. We have worked with them, and they are in a position to do some things and provide technical support in a number of ways that Dr. Brady, who is the head of the Bureau of Science and Technology, feels can do some unusually inventive and interesting things. The other $5 million will be used for modest sized projects all over the world that are sort of innovative, quick things that we think can have a fairly dramatic impact. I would like to respond in some detail on that.

Senator KASTEN. Could you give us a list of all of the contracts with their purposes and the amounts that AID has with the National Academy of Sciences?

Mr. MCPHERSON. I will do that. I think, given that half of that money is going to that organization and to a third organization, or a second organization, the utility of that is something that is worth spelling out to you in detail.

[The information follows:]

AID CONTRACTS WITH THE NATIONAL ACADEMY OF SCIENCES

Most of AID's contracts with the Academy go to the Board on Science and Technology for International Development (BOSTID), which is responsible for examining ways of applying science and technology to problems of economic and social development. The principal objectives of the BOSTID's Program are:

- To help developing countries strengthen their own capabilities for dealing with important development-related problems and for moving toward greater scientific and technological self-reliance.

- To stimulate and support research and development within and among the developing countries on problems of high priority for development and human welfare.

- To provide developing countries with greater access to the scientific and technological knowledge and expertise that exist in the United States and other countries.

- To provide a focus within the U.S. scientific and technical community for assistance to the developing countries and to encourage greater interaction with colleagues in the Third World.

In addition to BOSTID, AID has contracts with the Academy's Assembly of Behavioral and Social Sciences and with the Food and Nutrition Board. The Assembly's objective is to bring to bear the knowledge, analytical tools, and methods of the behavioral and social sciences upon major domestic and international problems in efforts to understand them better and to assist in their alleviation. The objective of the Food and Nutrition Board is to advise Federal Agencies and the general public on scientific and technical issues relevant to food and nutrition. The Board interprets the results of research for agency action to ensure an adequate and safe food supply and, to the extent possible, to deal with special aspects of nutrition in developing countries.

NAS relies on members of the scientific and engineering communities to participate in its AID funded activities. Selected for their expertise, these scientists and engineers contribute their time and services gratis as study committee members and participants in overseas programs. Their work with counterpart groups in developing countries helps strengthen local scientific and technological capabilities related to important problems in agriculture, environmental planning, energy, forestry, health, natural resource management and conservation, nutrition, water supply and quality, and other areas. BOSTID's overseas activities also address national organization and planning needs in applying science and technology to development.

There are currently 11 active contracts and grants with the Academy as listed below. Eight of these are scheduled to end either in 1982 or 1983.

I. BOSTID

TITLE: Program for Applying Science and Technology to Development

AMOUNT AND PERIOD OF OBLIGATION: $36,000,000 January 1981 -

December 1985.

PURPOSE: To identify underexploited technologies of potential economic value to developing countries and fund networks of developing country research institutions to explore and improve those technologies.

This is the grant funded under the Scientific and Technological Cooperation Program. This grant enabled AID to move forward quickly on that program's mandate to explore the potential uses of new and emerging technologies for development and to strengthen the capacity of less developed countries to take advantage of these new technologies. Most of the grant funds support a research program which is directed by a committee of distinguished scientists from both the United States and developing countries. This grant will support research in up to 12 research areas for research to be done in developing countries--not in the United States.

Following the selection of a research area, organizational meetings of representatives from interested developing country institutions and experts from the United States and other industrialized countries are convened to advise the Committee on the most promising research strategies, and to propose cooperative activities and mechanisms for coordination. These meetings initiate and facilitate communication among institutions in developing countries working within a project area. Proposals are solicited in each project area. A typical grant might entail funding of approximately $150,000 over a 3-year period, although grants for shorter periods and varying amounts will be made. The grant recipient contributes to the research by providing partial support of the research staff, laboratory and/or field testing facilities, and administrative services.

Another major portion of the grant undertakes studies that suggest innovative applications of technologies relevant to major development problems. Important factors in the selection of a topic include its widespread importance and timeliness, and whether or not it has already received broad attention. Study reports bring together the latest information on the state of the art and specific work under way on a topic. They not only make better information available to administrators and scientists, but also generate important national and international R&D efforts and actual applications (i.e., winged bean, ferrocement). Scientists from developing countries serve on each study panel.

TITLE: Technologies for the Rural Poor Project in India

AMOUNT AND PERIOD OF OBLIGATION: $225,000 March 81 - June 82

PURPOSE: To identify through small advisory groups and seminars R&D projects related to biomass energy and postharvest food conservation technologies that are suitable for collaboration between U. S. and Indian institutions.

TITLE: Underexpoited Village Resources of Southest Asia

AMOUNT AND PERIOD OF OBLIGATION: $85,000 March 81 - December 82

PURPOSE: To produce a realistic assessment of the merits of underexploited Asian plant and animal species that seem to have exceptional economic promise. Proposed for study are Acacia mangium and Calliandra (plant species), banteng (animal species), and wildlife farming.

TITLE: Systems Analysis/Operations Research for Tunisia

AMOUNT AND PERIOD OF OBLIGATION: $54,965 September 78 - September 82

PURPOSE: To assist the Government of Tunisia in activities that will focus on scientific problems of issues related to the application of science and technology to the social and economic betterment of the Tunisian people.

TITLE: AID Cooperative Activities in Indonesia on Science, Technology, and Research Policy Development

AMOUNT AND PERIOD OF OBLIGATION: $630,000 July 79 - January 83

PURPOSE: To assist organizations of the Government of Indonesia in formulating effective policies and programs for the use of science and technology to improve the social and economic conditions of the Indonesian people.

TITLE: Sahel Regional Aid Planning and Coordination

AMOUNT AND PERIOD OF OBLIGATION: $285,000 September 81 - March 83

PURPOSE: To assist the governments and organizations in the Sahel with the development of programs directed toward the stability and production of the region's food supply systems.

TITLE: Applied Science & Technology Research, Egypt Phase II

AMOUNT AND PERIOD OF OBLIGATION: $2,015,000 August 81 - October 83

PURPOSE: To provide various services necessary to implement Phase II of this research project under the following project areas: policy planning and management; research and development sub-project support; demonstration sub-project support.

TITLE: Support of a Cooperative Program with Portugal

AMOUNT AND PERIOD OF OBLIGATION: $495,000 February 82 - February 85

PURPOSE: To assist Portugal's National Board for Scientific and Technological Research in planning and implementing programs in selected areas of science and technology; help identify personnel needs related to the selected areas and assist in the the organization of orientation, specialized research, study and fact-finding opportunities in the U. S. for key Portuguese scientists and science administrators; help identify relevant science and technology information networks in which the National Board can participate; and lay the foundation for greater cooperation between scientific and technical institutions in Portugal and the U. S.

II. ASSEMBLY OF BEHAVIORAL AND SOCIAL SCIENCES

TITLE: Committee on Population and Demography

AMOUNT AND PERIOD OF OBLIGATION: $1,536,492 April 77 - March 82

PURPOSE: To formulate detailed reviews of levels and trends of fertility and mortality in the developing world. The three major tasks are: to evaluate available evidence and prepare estimates of levels and trends of fertility and mortality in selected developing nations; to improve the technologies for estimating fertility and mortality when only incomplete or inadequate data exist (including techniques for data collection); and to evaluate the factors determining the changes in birth rates in LDCs.

TITLE: Study of the Determinants of Fertility Change

AMOUNT AND PERIOD OF OBLIGATION: $1,322,563 September 79 - September 82

PURPOSE: To develop a research agenda for studying fertility determinants; to perform a detailed analytical study of the key variables that affect fertility behavior; to work on measurement problems related to fertility determinants analysis; to study conditions affecting fertility declines in selected countries; and to study the effects of the proximate determinants of fertility such as age at marriage, breastfeeding, etc.

III. FOOD AND NUTRITION BOARD

TITLE: Nutritional Analysis of P.L. 480 Title II Commodity

AMOUNT AND PERIOD OF OBLIGATION: $239,990 October 80 - April 82

PURPOSE: To produce a study containing an historical review and analysis of the Title II program; evaluation of commodities; recommendations for Title II commodities and criteria for selection of commodities; and recommendations for future commodity research.

## INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT

Senator KASTEN. I would like to turn to your favorite subject now, the International Fund for Agricultural Development.

Mr. MCPHERSON. I have a full team behind me on that.

Senator KASTEN. As you know, we have had a number of concerns in regard to IFAD and stated very clearly that before we could agree to funding, substantial progress ought to be made in eliminating some of these concerns.

I would like to review some of those concerns and see where we stand today. I assume that the books on the first replenishment are now closed. Did the U.S. contribution exceed 20 percent of total contributions to the fund?

Mr. MCPHERSON. No, we did not.

Senator KASTEN. Have the OPEC countries in the new replenishment increased their share to 50 percent? That is what we were told they were going to try to do, and that, of course, is what the legislation in the very beginning called for.

Mr. MCPHERSON. They have come up with a formula whereby the OPEC countries will contribute 43 percent and the non-OPEC countries 57 percent.

Senator KASTEN. Have they made any moves to reduce their staff?

Mr. MCPHERSON. These figures, as you know, represent a complex set of situations.

Senator KASTEN. But the answer to the question is no, they are at 43.

Mr. MCPHERSON. I might add that the Saudis are putting in $160 million in cash up front. Given the fact that other donors, most particularly the United States but some of the other OECD donors also are not putting up cash for a period of years perhaps, that $160 million is drawing interest in the meanwhile and all of that is a very substantial amount.

Senator KASTEN. Has IFAD made any move to reduce their staff? One of the points brought up is that it is still nearly three times the size of the needed staff, and what was told to the Congress that it would be when the first replenishment was approved.

Mr. MCPHERSON. This was a matter of great concern to us. John Bolton, the Assistant Administrator for Program and Policy Coordination, went to Rome for a meeting a few weeks ago where we proceeded to argue that there should be a reduction or staff freeze and we fought this out carefully. We were able to obtain the support of the donor community generally, and there is now a staff freeze in employment.

Senator KASTEN. So, they have not reduced staff, but have frozen staff.

Mr. MCPHERSON. Now, given the augmented volume of operations and disbursements with no increase in size of the organization, that is the ratio of dollars to staff, at least we have a de facto staff reduction. A smaller staff would be better, but to me it is a fairly major achievement to get a staff freeze.

Senator KASTEN. What kind of commitment did they make in terms of time? Is that 6 months, a year, or indefinitely?

Mr. McPherson. Their annual meeting is from year to year, and so the commitment is for this year, but I feel confident that that staff freeze concept is going to be continued. I can assure you that our position is going to be very adamant. We were very aggressive in this matter, Senator. These international organizations, we all know, have a tendency to bloom in staff, and it was a significant achievement.

I don't know of any other situation where there has been a staff reduction. I presume there has been one, but none to my recollection.

Senator Kasten. Has there been any effort by IFAD to go back to its original plan as a fund rather than an agency, which is one of the reasons the staff has tripled, because they switched their initial mandate.

Mr. McPherson. I think there is some thought that the fund approach—at least in some things—is important, because their staff is in position to develop and to track projects in a major way. I know in its activities around the world, IFAD in some places is a cofinancer in some projects.

Most of the things I hear about IFAD are in fact coupled with somebody else's project instead of something that they themselves initiated. I told Dr. Brady that IFAD should, to the extent feasible, keep a fund orientation. We don't need or want another international operation that has to have its own empire and its own bureaucracy and its own problems. We need to have what we intended, which in large part was a fund.

Senator Kasten. Well, that was the point, I think, when it was initially put together, and all of the various assurances that were made to the Congress was that it was to be a fund and not an agency. Clearly, they have switched or at least deviated from the initial idea.

### AID OPERATING EXPENSES

Your operating expense budget has increased from $271 million in 1980, to a current request level of $376 million in the new budget. In other words, that is a 40-percent increase in operating expenses.

Mr. McPherson. This year we have $331 million.

Senator Kasten. My numbers may be wrong. I have $376 million.

Mr. McPherson. It is $331 million in fiscal year 1982.

Senator Kasten. In 1980 you were $271 million and in 1983 you are asking for $376 million. That is a 40-percent increase in just that 3-year period of time.

Mr. McPherson. Well, our problem that we have is that inflation in many if not most of the countries in which we currently work is considerably in excess of U.S. inflation, and so our costs, and especially housing and office operation costs have just zoomed. To exemplify it, let me talk about the increase between 1982 and 1983 where we are going from $331 million to $376 million. First of all, we have an $8 million pay hike adjustment that was plugged in there. And two-thirds of the increase is because of increased overseas expenses.

In other words, the big bulk of our jump in cost is because of the overseas component, and that overseas component is very high because inflation in these countries is substantially higher than U.S. inflation.

Senator KASTEN. Are these mostly salaries, is that basically it?

Mr. McPHERSON. It is everything. It is housing, the salaries of our host country nationals, but the operating expenses just go up very high. You take places like Nairobi, food, everything is very expensive. The key point is that the costs jump substantially faster than they do in the United States.

Senator KASTEN. That is just an area that I guess we are going to have to look into. We are looking for places to cut the budget, and we could use some additional information on that.

Mr. McPHERSON. My experience with this subcommittee is that that is a matter we will have many conversations on, and we look forward to that, that annual opportunity.

[The information follows:]

## AGENCY FOR INTERNATIONAL DEVELOPMENT OPERATING EXPENSE CHANGES BY OBJECT CLASS 1980 TO 1983

($ Millions)

## AMERICAN SCHOOLS AND HOSPITALS ABROAD

Senator KASTEN. There are a number of questions which I am going to submit, and you can respond for the record.

Senator D'Amato talked about the American schools and hospitals abroad program, and I don't know how you answered his question, but that is a political football. You can send it to us one way, and we will send it back to you another.

Mr. MCPHERSON. He complimented me as an advocate lawyer, but he didn't agree.

## EGYPTIAN PROGRAM

Senator KASTEN. Egypt's funding pipeline remains very large, and we continue to receive reports that for one reason or another many of these projects are in trouble, and they would be abandoned if it were not for the fact that Egypt would lose the money associated with these projects.

Could you comment, No. 1, on the pipeline and, No. 2, on the status of these projects, and are our reports correct?

Mr. MCPHERSON. The pipeline is approximately $2 billion. The amount which was appropriated last year roughly equaled the amount which was expended and this fiscal year, 1982, we anticipate that the amount which Congress will appropriate will be less than the amount which we expend. We will reduce our pipeline.

What you had in Egypt was a situation where a large amount of money was authorized or appropriated, and there wasn't time to get these projects rolling, so it took some time to kind of get up to full speed.

Last year we really—in terms of full speed—kind of broke even, and it is our expectation that this year we will reduce our pipeline, and it is my hope that the pipeline will in time gradually be reduced and, hopefully at some time will be reasonable for the size of the program.

In terms of the effectiveness of the projects, equipment is such a huge part of the overall agency portfolio that obviously I worry a lot about it. There are some things there which I have concern about. We do a great deal to make those things move along, and there is no question that there is sensitivity to deobligation, and that matter must be carefully worked out.

I would be less than candid if I did not say that. There is no question that to deobligate and reobligate—the authority that you made reference to—is of interest in particular because of Egypt.

But again we are not in a position logistically to be able to present it to you. I think when we discuss deobligation and reobligation, Egypt is going to be a principal focus for us both.

Senator KASTEN. You do have some projects that are in trouble, and if you had a little more flexibility you might make some changes?

Mr. MCPHERSON. If I had more flexibility, I am sure that there would be an additional careful review.

## SAHEL DEVELOPMENT PROGRAM

Senator KASTEN. Last year we drastically reduced funding for the Sahel development program because of our concern with the management of those programs. They were not able to account for certain of the funds spent, plus a number of other concerns.

What is the situation there now, and what specific actions have you taken to try to get that under control?

Mr. MCPHERSON. We had an outside accounting firm who came in and helped us carefully study that and came back with a number of accounting and other procedural recommendations as to how to handle that.

Those recommendations have been implemented, and it is my feeling that we probably have got a pretty good handle at this hour on the financial side of things. Now, the facts are, of course, that when you are in an LDC, it is never very easy to be absolutely sure in the same way that you ought to be able to be in Milwaukee or Detroit or Boston, but we think we have a reasonably good handle on it.

Now, within the Agency we just had a major review of the Sahel program. We had that office draft up papers and AID's PPC bureau came in and challenged various things, and I chaired the session.

I have a number of concerns about how, in the next decade or so, we can make a bigger impact there. The Sahel review was concluded by my directing the Africa Bureau to review again how we might augment or increase the technology that should be used or could be used there, and a number of other recommendations.

For example, sorghum and millet are essential crops, but no research has been done on major crops for the Sahel. I want to augment that kind of thing. In short, in terms of accounting for moneys, it would appear that things are much improved and in terms of an overall program we are in the process of refining that. I suspect that we will have something more as to technical orientation.

## VOUCHER PAYMENTS

Senator KASTEN. Over the years AID auditors have continued to find that AID has made payments to contractors for unsupported expenditures for goods and services not delivered, for ineligible goods and services and the work performed outside the terms of certain contracts. It is our understanding that in January of 1982, the AID Inspector General reported that in reviewing roughly 40 million dollars' worth of paid vouchers, the AID auditors found that $6,500,000 were of questionable validity.

It is our further understanding that the Inspector General concluded that you do not have reasonable assurances that voucher payments are proper and valid, particularly those, evidently, which are not subject to the customary AID project officers' administrative approval prior to payment.

Do you see these as problems within the Agency with the management, and how can they be corrected?

Mr. McPherson. If I may make a few comments, I would like to have my Assistant for Management, Tom Rollis, sitting behind me, respond perhaps in more specific detail. There is in my judgment, and always will be, a need for a constant effort to maintain tight management over a worldwide operation in sixty countries, an environment where financial accountability in the local country often is not put at a premium. It is a tough situation.

There is constant struggle between trying to require Big Eight accounting firm accountability and the need to get things done in the country. If we are not careful, we can just suffocate our whole effort, and we can discourage innovative activity. At the same time, the taxpayers of this country obviously demand and deserve reasonable accounting for what we do, and that is the constant struggle, and one that I think we are doing a pretty good job on.

But let me ask Mr. Rollis, my Assistant for Management, a CPA himself, of course, to comment on this.

Mr. Rollis. The report was mentioned in the statement. We received it in January, and we have it under study. The $6.5 million, or 16 percent, is somewhat illusory because the $6.5 million of questionable payments actually included findings either already reported in other audit reports, which go back at least to 1979, or are a result of payments made to a contractor over a 9-year period. This latter, in particular, was not part of the original sample, but was reviewed as a result of a finding during the audit of the sample.

In other words, if the percentage of questionable disbursements had been based on findings from the actual sample initially established, it probably would have been less. We do not have the dollar total of the voucher sample available to us. However, the deeper issue is one that Peter is talking about, and that is the different degrees of support that we owe, considering as to whether it is a payment to a government or payment to a contractor. We have received a preliminary response from the Comptroller's shop to discuss with Herb Beckington, our IG, but we haven't held that conference yet. In fact, we intend to convene an Agency-wide task force at the deputy assistant administrator level to modify our system of payment verification. We can assure you that we are as concerned as the IG with the validity of payments, and we do plan to make policy changes as a result of that audit.

### PROJECT MANAGEMENT

Senator Kasten. How many projects are managed from Washington, requiring personnel to travel back and forth to the project? Is that the majority of the projects?

Don't you think it might be a good idea if the management of some of these projects could be turned over to people located in the country, or at least located in the regional office?

Mr. McPherson. Well, I don't have an immediate percentage on the tip of my tongue, but surely the vast majority of the money is not managed here in Washington, but rather is managed in the missions.

If we include Israel, where we have a big chunk of money, we do have a couple of major pots of money in Washington—in the Bureau of Science and Technology and the Office of PVO's, and the Public Law 480 money—but in general we are making a major effort to try to move management, as opposed to conceptual overview of projects, out to the field.

Senator KASTEN. In general, you are trying to get the management out into the field?

Mr. MCPHERSON. In some cases we want to retain here the conceptual approval of projects. The concept of projects in science and technology, for example, rests in the hands of Nyle Brady's office, who has a scientific broad view, but once a project is approved for research to be based in Kenya or elsewhere, Brady in Washington should substantially get out of it.

Senator KASTEN. Could you elaborate for the record the number of projects that are managed from here and the ones managed overseas, so we can get a view of it?

Mr. MCPHERSON. The process of trying to divide projects between Washington-based activities and those where we give the management to the missions—especially in the case of the centrally funded projects–is a very involved one, and I won't bore you with that now.

But I think if you could take the time to get into that a little bit it will be a pretty important thing in terms of your understanding of what we are trying to do. We welcome your doing so.

[The information follows:]

## OVERSEAS VERSUS WASHINGTON AID ACTIVITIES

Of the 886 projects[1] for which there were obligations during the last fiscal year (FY 1981), 579 projects were managed overseas and 307 projects were managed in Washington. However, the number of projects and their management locus are not the most meaningful indicators of AID activities: Those projects managed overseas constituted 88 percent of the $3.5 billion in funds obligated in FY 1981. In addition, we have determined through an internal agency review that, of the so-called "centrally-funded" Development Assistance projects managed in AID/Washington, more than three-fourths of the funds actually supported programs in the developing countries—through assistance via AID's field missions or international and private organizations, through commodities distributed overseas, or through grants to indigenous organizations. Thus, in total, at least 95 percent of the FY 1981 obligations supported activities which took place in the developing countries.

---

[1] Includes projects in Development Assistance, the Sahel program, American Schools and Hospitals, and the Economic Support Fund.

## INTERNATIONAL RICE RESEARCH INSTITUTE

Senator KASTEN. You just mentioned rice research. It has come to our attention that the International Rice Research Institute in the Philippines is evidently in need of extra funding. Inasmuch as this Institution is of such significant benefit to most of the world through its research on rice, wouldn't it be appropriate for AID to increase its support?

Mr. MCPHERSON. Well, there are a couple of things here. The Rice Institute has had enormous impact over the years, and I think we are very aware of the kind of impact it can have. The immediate head of that was Dr. Brady, who is now head of the Bureau for Science and Technology. I know the people there myself, and I worked with them in times past. I think that we are fairly much on top of their needs, although your calling this to our attention will cause us to look at it again.

Senator KASTEN. So you think that it might in fact——

Mr. MCPHERSON. Well, the Rice Institute is one of a group of thirteen international research centers all over the world. They are supported by an informal group called CGIAR, standing for the Consultative Group for International Agricultural Research. Under the leadership of the World Bank, this group has a session every year—a pledging session, if you will.

The United States for many years has put in up to 25 percent of the total amount raised by that group. We made the decision this last year that we weren't simply going to put in up to 25 percent, period. We were going to work within the CGIAR to insure that sufficient funds go to the most effective of those programs. We pledged to put in 25 percent of the amount up to a certain amount, I think about $41 million. We decide how our share will be allocated between the centers. The Rice Research Institute got a pretty good chunk of it—I think it was about $5 million.

There are a number of separate projects that we do with the Rice Institute. I can't give you an exact figure but we provide millions of dollars.

## OVERSIGHT OF PRIVATE AND VOLUNTARY ORGANIZATIONS

Senator KASTEN. One of the things expressed in the Senate report last year had to do with problems associated with the private and voluntary organizations added to AID oversight evaluation of the private and voluntary organizations.

What have you done concerning this issue?

Mr. MCPHERSON. We have spent many meetings and many months, it seems, in trying to work out a PVO policy that would both allow us to provide adequate oversight and direction to PVO's, but at the same time preserve their independence. We have developed a paper which will be presented to the PVO community in New York on the 25th of this month for their comment at the March 25–26, 1982, public business meeting of the Advisory Committee on Voluntary Foreign Aid in New York.

What it does—it is a very complex, and I think quite an innovative paper—but what it does, to be somewhat simplistic, is provide guidelines for AID oversight of PVO's in the field and to some degree in Washington. But it allows, on the other hand, the PVO's to be more involved in thinking through our country strategy in these countries, and also tries to insure the independence of the PVO's by requiring that they put up 20 percent of the resources, by an involved formula, but that they continue to make major contributions to the programs that they do abroad.

Frankly, the PVO's fear that we could get so involved in their business and tell them in such detail what they ought to do that they no longer have the vitality that they should have, and that is a real fear. But at the same time we are accountable for the money that you appropriate to us and we think we have to be fairly involved in deciding how the money should be spent.

So we solved this problem, we think, by getting the PVO's more involved in deciding what we should be doing in a country and also requiring that a PVO be certain to put up a significant percent of the money that it has spent, thereby being sure that when they go to the bargaining table and are talking about what should be done, that they have something to bargain with.

### PVO FUNDING

Senator KASTEN. One of the things we talked about last year was how much should be contributed to any private voluntary organization, and at what point are they really a creature of yours. If you contribute 75 or 80 percent of the money, you do have some grounds to believe you contribute too much.

Mr. MCPHERSON. We have some groups to which we contribute more, in excess of 90 percent.

Senator KASTEN. Then can you really call them a voluntary organization?

Mr. MCPHERSON. We think that that comes seriously in question. What we did, or what we proposed, is a rule to provide no more matching grants or operational program grants to an organization that does not put up at least 20 percent of its international program costs, and Congress last year recommended the same figure, and there has been upon occasion discussion of increasing that.

Senator KASTEN. You mean at least 20 percent private and 80 percent government? That even seems high to me: 50–50, theoretically, would be proper. Fifty percent would be a joint partnership, and if you are over 50 percent you control it.

Mr. MCPHERSON. Well, you have a question that comes up on that. As far as I am concerned, the more additional resources we can leverage with our money, the better—we were the ones that proposed the 20 percent rule a few months ago; that is the point where we could leverage the money better. There is a question though, that if you went up immediately to 50 percent, for example, probably only old and established, very established, organizations would be in a position to participate.

That may be all that we should really be looking to, but on the other hand, there are many groups that would say, "That is not fair. If you did that to CARE 30 years ago, CARE would not be CARE." CARE has been able to pick up their support and strength over the years for the functions that they play for the Government. I don't know just what the percentage of private funds should be but I can tell you that I am committed to moving in the direction of cost-sharing, beginning with effectively enforcing a 20-percent rule. Within a year or two I think, or some time, that needs to be looked at again.

Senator KASTEN. You said that you were going to have a meeting and put together a paper or guidelines? Are you negotiating with key people that are in the private voluntary community, or are you essentially dictating and saying this is the way we are going to do it from now on?

Mr. MCPHERSON. We like to look at them as important constituents.

Senator KASTEN. They are partners.

Mr. MCPHERSON. Yes, and therefore we have provided what in effect will be a public hearing on this document. My expectation is that they will come in with recommendations and there will be some changes that will be helpful to both of us, and it will be resolved through that meeting.

Senator KASTEN. That is good.

Mr. MCPHERSON. I might note that there is an Advisory Committee on Voluntary Foreign Aid under the Federal Advisory Committee Act, with a history that goes back 20 years, that the PVO's use as a forum to present their views, and it will be to that committee on the 25th that we will be presenting our views.

Senator KASTEN. We have a number of additional questions I will submit for the record, and there are questions from other Senators, as well. We will ask you to respond to them. They will be inserted in the record at the conclusion of this hearing. Senator Leahy is evidently on his way, and we will give him 2 or 3 more minutes.

## UNIVERSITY PROGRAMS

We have had some discussions with people about funding which we provide through American universities. Is that money being accounted for, and is that money being spent well and is it beneficial to the third world, or are we ending up with a whole lot of middle men in these programs?

Mr. MCPHERSON. I don't think so. I have been particularly interested in this part of our program. I served on a university advisory committee before I became Administrator. We have done a number of fairly innovative things here that I think will make use of the university community very well. We have set up, or tried to work out some longer term relationships with particular universities for the purpose of doing this, and in the process of doing so agreeing on specific functions that these universities might be performing over a long term, allowing them to be more efficient and allowing us to demand more from them.

We just recently called upon the university community in connection with a standard of excellence for university contractors, and I think out of that is likely to come some additional activity. In a number of other ways we have made things a little easier for universities to perform their functions and the next step is going to be a demand for even higher standards of performance.

I think the universities are an enormously productive pool of expertise, that AID has sometimes taken advantage of and sometimes not. We hope we are in the process of taking very good advantage of them. That is to our mutual benefit.

Senator KASTEN. Senator Leahy has changed his mind. There are a number of questions that we have that we will submit to you for the record. The record will remain open for 10 days, during which time members may wish to submit questions, and we would hope you can get answers back to us within 2 weeks.

Mr. MCPHERSON. We will try very hard, thank you.

Senator KASTEN. I want to thank you. We have had the pleasure of working with you over the last year, and I look forward to also working with your staff here. We have all learned a lot, and I think we are doing better in this area. I appreciate the job you and your staff are doing, the people who are with you are doing, and as we go forward into difficult budgetary items, I think it is going to be tougher and tougher for these kinds of programs.

Frankly, we have to demonstrate more results. I look forward to working closely with you and others of your Agency in the coming year.

Thank you very much.

### SUBMITTED QUESTIONS

At this point in the record, the submitted questions referred to earlier will be inserted.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### SUPER-GRADE EMPLOYEES

Senator Kasten: Your agency would seem to have an overabundance of "super-grade" employees. For example, if you compare it with the Small Business Administration, it has roughly the same number of people and roughly the same number of field offices and handling roughly the same amount of money. You find that SBA has 56 super-grades, whereas A.I.D. has 427.

Take another comparison: The National Aeronautics and Space Administration has about five times the number of people, yet the super-grades are about the same. At A.I.D., 10 percent of the positions are super-grade, whereas NASA only about 2.5 percent are.

How do you justify these numbers?

Mr. McPherson: The projection of 427 "super-grade" employees is considerably above current employment and position levels projected by the Administration as a result of staffing reviews with the Office of Management and Budget which followed our FY 1983 submission to the Congress. A.I.D. had 315 EX, FA, SES, SFS, and GS/AD 16-18 employees as of March 31, 1982 with an additional 38 vacancies for a total of 353. Of this total 19 were positions for personnel assigned to international organizations or to other U.S. Government agencies.

Our actual percentage of "super-grade" employees is about 6% which we believe to be reasonable in view of the complex nature of our program activities in 69 countries. Management of these programs require ministerial level dialogue in a multiplicity of technical fields in addition to the high level of management responsibilities vested in our USAID Mission Directors. The managerial scope of these senior officer's responsibilities is not limited to U.S. and Foreign National employees in our overseas missions, but includes the direction of individual, university and commercial contractors as well as personnel from other U.S. Government departments under Participating Agency Agreements (PASA's).

### U.S. OWNED EXCESS BURMESE CURRENCY

Senator Kasten: What is the status of U.S. owned excess Burmese currency?

Mr. McPherson: The Burmese Government is now fully current on all loan repayments of local currency to the U.S. Government and has in fact pre-paid one old PL 480 loan. At the present time the U.S. Government owns the Burmese local currency equivalent of about $15.5 million in an economic development account and approximately $11.3 million in a U.S. uses account.

Senator Kasten: Is any of this being used now? If not, why not?

Mr. McPherson: A.I.D. is now discussing with the Burmese Government various ways to make use of these excess Burmese currencies. The economic development money may be used to help finance the local costs of A.I.D. health and agriculture activities in Burma. Some of the funds in the U.S. uses account are being used to offset the cost of the U.S. Embassy's operations and other possibilities are being explored as well.

## FUNCTIONAL ACCOUNT APPROPRIATIONS

Senator Kasten: We have received your justification material, which indicates that your budget requests for A.I.D. functional accounts are as follows:

$700 million for Agriculture;
$201,040,000 for Population;
$114,063,000 for Health;
$116,383,000 for Education; and
$166,757,000 for Selected Development Activities.

Are these numbers your final request for these accounts--that is, there are no transfers or other agenda anticipated.

Mr. McPherson: Those levels are the amounts I would like to have appropriated for the functional accounts for FY 1983. At those levels, no transfers or other adjustments would be necessary to fund the program A.I.D. has proposed and hopes to be able to implement. Of course, there is always a chance that unanticipated developments would cause us to take a different view of our requirements. Let me assure you that if such unforeseen developments do materialize, A.I.D. will consult closely with you and your staff before taking any action and, as in the past, we will strictly abide by the letter and spirit of relevant legislation.

## ADVERSE INSPECTOR GENERAL REPORTS

Senator Kasten: The Inspector General comes out with numerous, although critical reports, every month which, I know, you view as a good management tool.

When there is an adverse I.G. report, which would obviously reflect on some individual's performance, is this systemized in any way so that his performance records would reflect the adverse report?

In other words, do adverse I.G. reports reflect on an individual A.I.D. employee's performance record?

Mr. McPherson: The initial responsibility for placing adverse information in an employee's performance file lies with the supervisor as a part of the Agency's continuing performance evaluation requirements. Should specific information be added to an employee's personnel folder, the employee must be notified and given an opportunity to appeal or comment on the decision to place the data in the file. The final decision concerning disposition of such material is made by the Chiefs of Washington or Overseas Personnel Divisions.

Should the Inspector General or any other source develop allegations of a serious nature, an investigation would be initiated involving officials of Employee Relations, General Counsel and the Inspector General's Office and, if necessary, the Department of Justice in accordance with joint State-AID-USICA regulations.

## FUNDING FOR W.H.O. SPECIAL PROGRAM OF RESEARCH IN HUMAN REPRODUCTION

Senator Kasten: The current legislation contains language prohibiting funds from going to the W.H.O. Special Program on Research, Development and Research Training on Human Reproduction.

Do you have any plans to fund this program in fiscal year 1983?

Mr. McPherson: A.I.D. does not plan to fund this program in fiscal year 1983.

## SUPPORT FOR LAND TENURE CENTER, NRECA, AND ENTENTE FUND

Senator Kasten: Last year's report under the agriculture function discussion indicated strong support for the NRECA, the Entente Fund, and the Land Tenure Center. What has been your response both in Fiscal Year 1982, and Fiscal Year 1983?

Mr. McPherson: The Senate Appropriations Committee report recommended $540,000 in support for the Land Tenure Center in FY 1982. Based on a jointly agreed upon workplan for FY 1982, which under our cooperative agreement is the mechanism for establishing levels of support, we have concurred with the Land Tenure Center on a program of activities requiring $549,132 in support.

The support level for FY 1983 will be based upon the workplan for that fiscal year which will be developed in September 1982. In our FY 1983 Budget Submission, we have projected the level of additional funding required for the Land Tenure Center at $400,000.

We have continued our strong support for NRECA by proposing FY 1982 funding of $600,000 and an equal amount in FY 1983.

Regarding the Entente Fund, the proposed 1983 budget includes a new Entente Rural Development project with a life of project funding of $18 million in grant funds plus a $5 million dollar loan. Of these amounts, A.I.D. has proposed obligations of $3.5 million ($2.5 million grant, $1.0 million loan) in FY 1982, after an evaluation of an earlier, related project has been reviewed. An additional $3 million grant is programmed in FY 1983. The Entente will also continue to advance private sector development in the region through the African Enterprise project for which sufficient A.I.D. funds remain in the pipeline. This project promotes small and medium enterprises including agro-industrial development in rural areas and market towns. In addition, the Entente is receptive to utilizing its loan guarantee program to promote U.S. investments in the five-country Entente region.

## INSPECTOR GENERAL

Senator Kasten: Within your Operating Expense Account what do you have allocated for the Inspector General's Office?

Mr. McPherson: In FY 1983 we propose to allocate $7,345,600 for the Inspector General's Washington operations, $1,021,700 for operational travel of their overseas personnel, and $1,818,000 for security equipment for a total FY 1983 allocation of $10,185,300. This amount does not include overseas costs such as post assignment travel, R & R travel, salaries, housing expenses, office operations, etc., which are covered by the mission of the country where the IG personnel are located and thus not separately broken out. We estimate, however, that these other unallocated overseas costs will be about $7,649,600 in FY 1983.

Senator Kasten: How does that compare with last year?

Mr. McPherson: In FY 1982, the allocation to the IG is $6,997,400 for Washington operations, $668,700 for operational travel of overseas IG personnel, and $500,000 for security equipment for a total of $8,166,100. This again excludes the unallocated overseas costs I referred to in answering your earlier question, which are estimated at $6,764,400 for FY 1982.

## IDCA

Senator Kasten: Why do you continue the "fiction" of the International Development Cooperation Agency? It is now just a shell, is it not?

Mr. McPherson: IDCA continues to serve as the Administration's central coordinating and policy-making unit for international development activities supported by the United States.

The IDCA Director serves as the principal advisor to the President and the Secretary of State on international development matters. His responsibilities as Director include preparing the comprehensive economic assistance budget and, as Chairman of the Development Coordination Committee, overseeing the preparation of the annual Development Issues Report. He also continues to serve as Chairman of the Board of the Overseas Private Investment Corporation, which is a component of IDCA along with the Trade and Development Program. In addition, the Director provides advice on development policy to the U.S. Executive Directors to the multilateral development banks, and participates in budget decisions concerning U.S. contributions to the MDBs. The IDCA Director is also responsible for the establishment of overall development assistance policy for U.S. participation in international organizations such as certain UN agencies and OAS programs whose purpose is developmental in nature.

The authorities and functions necessary for IDCA and its Director's office to carry out its responsibilities are supported by the IDCA components and AID personnel.

## LEGISLATIVE AFFAIRS

Senator Kasten: What do you have allocated under the Operating Expense Account for the Office of Legislative Affairs?

Mr. McPherson: The proposed FY 1983 allocation, which includes salaries, travel, and overhead costs, is $791,600.

Senator Kasten: How does that compare with last year?

Mr. McPherson: The FY 1982 allocation is $872,000. The reduction in FY 1983 is the result of the departure of a Department of State employee currently on detail to the Office of Legislative Affairs, and a slight reduction in the number of workyears in FY 1983 versus FY 1982.

## POLICY RESPONSIBILITY FOR ESF

Senator Kasten: I notice that you have taken some time to talk about the Economic Support Fund. While the Agency for International Development is charged with implementing programs under this account, isn't it true that the State Department has the entire say-so over policy with respect to the account?

Mr. McPherson: Section 531 of the FAA gives the Secretary of State responsibility for policy decisions and justifications for Economic Support Fund programs. The legislation also states that this responsibility is exercised in cooperation with the Administrator of the agency primarily responsible for administering the programs under Part I of the FAA. (As a result of Section 6 of the Reorganization Plan No. 2 of 1979, this responsibility as it relates to the Administrator was transferred to the Director of IDCA.) IDCA/AID play an active part along with the Department of State in determining levels and which countries should receive Economic Support Funds. IDCA/AID participate in discussions and reviews of Economic Support Fund programs with the State Department throughout the year beginning with a review of policy statements submitted by the overseas missions. This dialogue continues through the spring Inter-Agency reviews and the summer budget presentation to the Office of Management and Budget, and culminates in the establishment of an Operating Year Budget, when decisions are made on country levels within the authorized and appropriated levels. IDCA/AID also participate in discussions with the State Department on reprogramming of funds and/or any additional country requirements during the course of the budget year.

## MONITORING HOST COUNTRY CONTRACTORS

Senator Kasten: Are A.I.D. Project Officers in the field trained, equipped, and capable of monitoring the performance of host country contractors?

Mr. McPherson: Generally A.I.D. project monitors participate in the design of projects involving host-country as well as direct A.I.D. contractors chosen to assist in the implementation of A.I.D. supported projects. During the design stage project and contract benchmarks are established which serve to assist A.I.D.

employees in their monitoring of activities once the project is in the implementation stage. In addition controller, program and legal staff are available to project monitors to assist with specific issues throughout the life of a project. Most Missions conduct periodic project reviews during which all aspects of project implementation including contractor performance are analyzed.

Host country contracting is part of A.I.D.'s project implementation course. Since January 1981 there have been eight such courses involving 252 A.I.D. employees. These courses are given in Washington and in the field on a rotating regional basis approximately once every two months. All geographic regions have sponsored at least one course. In addition special implementation courses have been given in individual missions (such as Egypt) where the size of the staff justifies the expense.

## AUDIT OF HOST COUNTRY CONTRACTS

Senator Kasten: As host countries assume a greater role in project implementation, they also are expected to participate more extensively in seeing that project expenditures are proper and in accordance with contract provisions. For this reason, host country contracts include a clause which allows host countries and A.I.D. to audit contractor records and contract performance. Have you determined the extent host countries are, in fact, performing such audits and whether such reviews have provided greater assurance that payments to contractors for project expenditures billed are proper?

Mr. McPherson: The matter of adequate audit oversight of host country contracts in the foreign aid program is of concern to me. Our standard agreements under this form of foreign aid delivery place the primary responsibility for audit oversight upon the host country. In practice, we have learned that many recipient nations have very limited capacity to seriously and adequately perform this task. To examine our current system and recommend modifications, I have asked our Management head to chair a task force with our Inspector General. The mission of the task force is to define our types of expenditure and related level of responsibility and to recommend modifications to our current system to adequately carry out that responsibility.

Senator Kasten: What steps are you taking to assure that there is adequate audit coverage of host country contracts?

Mr. McPherson: With regard to ensuring adequate audit coverage of host country contracts, we have been exploring the use of private accounting firms operating under contract and conforming to GAO standards as monitored by A.I.D.'s Inspector General. Specifically, our Mission in Egypt has initiated this approach in the auditing of its A.I.D.-financed host country contracts. Quite frankly, we have encountered very slow going in putting this initiative in place, but I am confident now that we are close to a workable arrangement. Based on the results of the pilot program, it would be my intention to expand this approach to other country programs.

Senator Kasten: We understand that A.I.D. is letting a contract with a commercial accounting firm for auditing host country contracts in Egypt where the bulk of such contract activity exists. How will A.I.D. assure that the commercial auditors will take into account specific legislation and A.I.D. regulations in conducting these audits?

Mr. McPherson: The main task to be performed by the American CPA firms, in association with affiliated Egyptian accounting firms, will be to verify costs allowable under specific host country contracts, and to determine compliance by contractors with provisions of the A.I.D.-approved host country contracts, which incorporate specific requirements of A.I.D.'s legislation and regulations.

## HOST COUNTRY CONTRACTING POLICY

Senator Kasten: In 1979, the I.G. reported that the A.I.D. host country contracting policy tended to create problems in many recipient countries, such as delays in contracting for the needed goods and services with consequent slow-downs in project implementation. Has there been a recent determination or study made that would indicate that the policy is freeing A.I.D. personnel for the tasks of project design and monitoring?

Mr. McPherson: A.I.D. has not conducted such a study because the purpose of using the host country contracting mode is not to free A.I.D. staff for other tasks but to involve host countries in their own development, thereby increasing their sense of responsibility for the projects and their institutional abilities in contracting and project management. In addition, while the host country contracting mode requires less A.I.D. monitoring, A.I.D. staff must ensure that host country ministries receive the goods and services for which they contracted.

Senator Kasten: How does A.I.D. determine the relative success of the host country contracting policy in terms of its impact on the development process?

Mr. McPherson: While we have not made any formal determinations, our experience indicates that after years of using the host country contracting mode in many of their projects, the institutional capacities of the ministries in the more advanced developing countries such as those in Latin America have so improved that direct contracting becomes the exception rather than the rule

A.I.D. has recognized, however, that the host country contracting mode is not appropriate for every host country ministry, project, or contractor. We have, therefore, recently revised our host country contracting policy to leave the decision on the type of contracting mode to be employed to the senior A.I.D. official in the host country where the work is to be carried out. In making this determination, that official will consider such factors as the particular host country ministry's ability to contract for and monitor the work, the type of work to be performed, the likely support required by the type of contractor to be employed, and the host country's capacity to support such a contractor.

## HOST COUNTRY CONTRACT DATA SYSTEMS

Senator Kasten: A 1979 A.I.D. I.G. report pointed out that A.I.D. did not have a centralized control system for all host country contracts and recommended that A.I.D. establish such an inventory. Has this been accomplished?

Mr. McPherson: A.I.D. has not established a continuing inventory of host country contracts because the statistical data contained in such an inventory would not provide sufficient information to assist A.I.D. in its project management responsibilities. However, any specific request for information regarding A.I.D.'s use of host country contracts can be answered by obtaining current data from A.I.D.'s overseas missions.

A.I.D.'s project management responsibilities require a continuous tracking of all activities under individual projects, whether they are funded through a direct or host country contract, a grant to a private and voluntary organization, or a project implementation order for participant training. Thus, a host country contract is but one instrument by which a project's activities may be carried out. Host country contracts are monitored by A.I.D.'s overseas missions as part of their overall responsibility for ensuring effective implementation of the projects in their countries. At the same time, A.I.D.'s Regional Bureaus, to maintain a program overview, monitor all project implementation by their missions to ensure that scheduled implementation is proceeding as planned. When project implementation problems arise, the mission and/or the Bureau take appropriate action.

Senator Kasten: Would such inventory of all host country contracts aid the Agency's management in assessing the policy and the effectiveness of internal controls over project expenditures?

Mr. McPherson: Not very effectively. Host country contracts are monitored as a part of project expenditures. A project may involve a number of contracts, direct and/or host country for services and commodities, as well as a participant training element. The most appropriate and, in fact, the current location of responsibility for managing and assessing the effectiveness of controls over project expenditures is the overseas mission where the project is being carried out and/or its parent Regional Bureau. A central inventory would merely be a data bank of limited usefulness, requiring a substantial amount of effort to keep reasonably current.

Senator Kasten: Does A.I.D. have any data system which allows the accumulation of information on host country contracts worldwide so that performance and cost data among contractors could be monitored and compared?

Mr. McPherson: A.I.D. does not have a centralized data system. The comparability of cost data from any two countries is questionable because countries have different methods of costing the services by a contractor. For example, one country might pay very high salaries and very limited allowances; another country might pay very high allowances and a rather low salary. The net cost to A.I.D. and income to the employee may be the same in both countries, but comparing such raw data could prove highly misleading. However, our Office of Contract Management, at the request of overseas missions, does provide overhead rates for individual contractors based on U.S. Government-wide experience with those contractors. These rates are then used, in combination with other factors, during the negotiation process.

With respect to performance data, our overseas missions are responsible for monitoring the host country and/or its ministries to ensure that it receives the services and commodities for which it contracted. As part of this role, there is a steady stream of communication among missions regarding past experience with particular contractors.

Senator Kasten: For foreign assistance spent on projects implemented through host country contracts, what is your view of A.I.D.'s responsibility to see that the host country does not violate the provisions of the project agreements and does not disburse funds contrary to the contracts?

Mr. McPherson: To assure that the host country system or method of awarding contracts is adequate to carry out the project and that the terms and conditions are satisfactory to warrant disbursement of funds, A.I.D. approves all host country contracts exceeding $100,000 in value. In addition, in order to protect the Agency against either violation of the terms of the project agreement or improper disbursements thereunder, each project loan or grant agreement includes a provision authorizing A.I.D. to audit the agreement and all expenditures.

### HOST COUNTRY CONTRACT OBLIGATIONS

Senator Kasten: It is A.I.D.'s policy to have host countries implement their own development assistance projects, to the extent they have the capability to do so. Thus, considerable development assistance funding is spent on commodities and technical services under contracts issued directly by the host countries. Do you know how much money was obligated in fiscal year 1980 and 1981 for host country contracts, as opposed to A.I.D.-direct contracts?

Mr. McPherson: A.I.D. funded an estimated $1 billion in host country contract activities during FY 1980 and FY 1981. A.I.D. also let approximately $271 million in direct contracts in FY 1980 and $280 million in FY 1981.

Senator Kasten: Does A.I.D. accumulate this information as part of its overall management system?

Mr. McPherson: Information on individual host country contract obligations is recorded as part of the obligations of the project of which it is an element. This information, along with obligation data on other activities under a project such as those funded through direct contracts or grants to private and voluntary organizations, is used by A.I.D. to help monitor project implementation.

## QUESTIONS SUBMITTED BY SENATOR RUDMAN

### TANZANIA FOOD SITUATION

Senator Rudman: I would be interested to have your comments concerning reports of famine in Tanzania, due to poor harvests this year. I understand that we are in the process of negotiating a sale of rice and corn to Tanzania and that further food aid is being considered. Has the Tanzanian food shortage reached famine proportions?

Mr. McPherson: No, at present we believe there is sufficient food in country to meet the current needs. The U.S. Mission in Tanzania works closely with the Government to monitor possible food shortages in-country. Upon receipt of recent reports indicating critical food shortages, our U.S. Mission dispatched special teams to the regions identified by the Bread for the World organization in their appeal for emergency PL 480 Title II. The Mission reported their findings which indicate that while there are pocket areas of food shortages in the regions of Dodoma, Shinyanga and Tabora, the situation does not warrant diversion of food-aid already on the high seas. In response to those findings, the U.S. and the Tanzanian Government are now working to identify and allocate food shipments from existing in-country stocks to the areas with shortages. The Tanzanian Government is presently shipping grain into Tabora and Dodoma. Also, Catholic Relief Services (CRS), which operates feeding centers throughout the country, has sent food into the food shortage areas and in several cases has reopened feeding centers. Donor provided food imports (approximately 150,000 tons) continue to arrive at port. The U.S. Mission will continue to closely monitor the food situation and we have requested that the U.S. Mission provide us with regular up-dates.

Senator Rudman: What further food-aid is being considered?

Mr. McPherson: For FY 1982 we have approved donated food-aid under Public Law 480, Title II totalling $3.1 million. This food aid is being distributed through the United Nations World Food Program and Catholic Relief Services. The former is involved in rural development projects using food aid and the latter operates a maternal child-health feeding program throughout the country.

Additionally, we are planning to provide $5 million in food commodities under the PL 480 Title I concessional sales program. We expect to negotiate an agreement in the near future.

If the food situation warrants, we are prepared to consider providing emergency food from our Title II unallocated reserve.

## US PRIVATE INVESTMENT AND THE G.O.T. ROLE

Senator Rudman: The FY 83 AID budget presentation notes the following with respect to Tanzania:

> Despite differences in our social and economic system, Tanzania has welcomed U.S. private investment. Opportunities for additional investment are limited. We are attempting to promote greater incentives for agricultural production and a diminished central role in production and marketing.

In what areas have private U.S. investments been made in Tanzania?

Mr. McPherson: Energy and agri-business seem to offer the best potential for U.S. private investment. The Tanzanian Government recently entered into a joint venture with Agrico Chemical Company based in Tulsa, Okla. to build and operate a fertilizer facility. Agrico's international branch, known as the Agrico Overseas Investment Corporation (AOIC), will manage the facility.

The plant is being constructed at Kilwa which is near the Songo-Songo natural gas reserves off-shore. The plant will be fueled by the natural gas. When completed it will produce 1150 tons of ammonia and 1725 tons of urea daily for export.

The Tanzanian Government is now looking for partners to co-finance and build the natural gas line, complex and facilities for the off-shore natural gas at Songo-Songo. Our Trade and Development Program funded the feasibility study for this natural gas line project.

In February the Tanzanian Ministry of Energy and Water visited Washington seeking recognition for this joint venture, citing its viability and potential for generating foreign exchange. He met with State, AID and OPIC officials. OPIC has agreed to consider an application from AGRICO for private investment insurance for the joint fertilizer venture.

Senator Rudman: How is AID attempting to bring about a diminished central government role in agriculture production and marketing in Tanzania?

Mr. McPherson: Although we believe that the Tanzanian central government attempts to exert too large a role in regulating and managing the economy, there are opportunities for U.S. assistance to help the private individual and demonstrate the benefits of a market-oriented economic system. Some GOT policies provide a framework within which U.S. assistance can be directed at those goals. Recently, our efforts have emphasized assisting the Tanzanian government to devolve responsibility and decision-making authority for rural development to regional, district and village levels. This assessment has been carried out through projects to train village and district officials, expand the credit management capabilities of the profit-oriented Tanzanian Rural Development Bank, and help the Arusha region plan and implement its own development program.

Senator Rudman: Has the strong role of the Tanzanian Government impaired the effectiveness of AID's programs there?

Mr. McPherson: Such a possibility is of great concern to me. Government policies which dictate communal production and discourage individual initiative cannot form the basis of a sound country development strategy. This Administration has taken a careful look at our assistance to Tanzania. Our request for FY 1983 represents the level at which our assistance can be effective and contains a set of activities which avoids fostering an inappropriate government role. We believe it is possible to work cooperatively with the Tanzanian government to implement effective U.S. assistance programs.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### DEVELOPING COUNTRY POLICIES

Senator Inouye: I find myself in basic agreement with your statement that "long-term development depends, to a large degree, on the nature of the policies followed by the developing countries themselves."

What measures do you consider appropriate for AID to take when it finds a developing country's policies to be an impediment to development?

Mr. McPherson: My concern is that AID as a donor agency make the best possible use of the limited volume of our assistance to bring about the institutional and policy changes needed in aid recipient countries for them to utilize that assistance effectively.

Once we are clear in our own minds concerning the policy changes needed in a given country, the essential first measure that is appropriate for AID to take is to introduce our proposed changes into our on-going policy dialogue with the developing country's government. We can then link the policy dialogue to specific elements of existing and future AID programs in that country. Within the limits set by our country allocations, we can adjust the composition of the AID program to reinforce our negotiating position on overall macroeconomic policies or on sector policies. We can also reduce total allocations and postpone elements of the program.

Senator Inouye: If AID finds policy impediments to development in a recipient country, should AID withhold further assistance?

Mr. McPherson: Complete withholding of further assistance is a last-resort option which would be implemented only after careful consideration of the political ramifications by AID, the Department of State, and other concerned agencies.

## CONDITIONING DEVELOPMENT ASSISTANCE POPULATION

Senator Inouye: On page 28 of the Main Volume of AID's Congressional Presentation, I find the statement, "AID provides population assistance only when requested..."

If AID were to determine that a country's policies regarding population planning are impeding economic development, would AID encourage a change in those policies? Would AID withhold further assistance if the country did not change its policies?

Mr. McPherson: AID bilateral assistance is provided at the request of developing country governments. In countries where continued high population growth rates appear to be eroding economic development, AID includes this factor in its policy dialogue with the government. In fact, AID has sponsored development of a variety of tools for analyzing and demonstrating the impact of rapid population growth on economic progress, and has made these programs (e.g., RAPID) available to LDC governments as they examine the full range of their development objectives, programs, and problems.

AID's experience has been that fertility declines are greatest where governments are committed to curbing excessive population growth, and where this commitment is translated into a clear population policy and support for strong voluntary family planning programs. While we do not believe that it is in the U.S. interest to make all development assistance conditional on the host government adopting a particular population policy, we actively seek and respond to opportunities for policy dialogue on family planning as in other areas of development.

## ACQUISITION OF LAND AND STRUCTURES OVERSEAS

Senator Inouye: Will you explain the proposed expenditure of $3 million for the acquisition of land and structures overseas?

Mr. McPherson: Under Section 636(c) of the Foreign Assistance Act, A.I.D. is limited to $3 million per year for acquisition of land and structures overseas. From our analysis of field requests, current and projected requirements amount to some $12.5 million. While it is difficult to say what specific projects of the $12.5 million in requirements the Agency will fund in FY 1983, examples of approved FY 1982 projects include: architectural and engineering studies and construction of USAID offices on the Chancery compound in Niamey, Niger, $1,285,000; purchase of the land and office building which is currently occupied under lease by A.I.D. in Bamako, Mali, $1,166,000; and purchase of an adjacent residence to be used as additional office space by the USAID in Salisbury, Zimbabwe, $80,000. In view of the overall need, $3 million per year for FY 1983 and beyond is a modest investment in view of the benefits, both long and short-term.

Senator Inouye: Will this expenditure result in long-term savings?

Mr. McPherson: Our experience has shown that this type of expenditure does result in substantial long-term savings to the United States. For example, the purchase of five residences in FY 1981 at a cost of $621,000 will be completely amortized in an average of 7.3 years (FY 1989). In one case from South East Africa, houses of the type we purchased sell for approximately $105,000 and annual rent averages $18,000 per year; in this instance, the purchase price of $81,000 was an investment which will be amortized in about 6 years. In another East African country where the housing shortage was even more acute, a residence was finally located and purchased for $130,000--including modifications for security and suitability standards for U.S. housing. Normally, this type of residence rents for about $1,800 per month, when available. In this country, however, most owners decline to rent since the government imposes a 70 percent tax on rental income, so property owners prefer to sell. Even if A.I.D. could have rented this residence, it would have cost $21,600 per year. Instead, the U.S. Government will amortize its investment of $130,000 in 6 years.

Senator Inouye: In the short term, will this expenditure reduce rental costs of the Agency?

Mr. McPherson: Savings in rental costs accrue to the Agency immediately upon acquisition of the real property. Instead of maintaining a liability, our purchase converts this to a capital asset for the U.S. Government which will be amortized within a few years.

## FIVE YEAR INCREASE IN OPERATING EXPENSES

Senator Inouye: If the Congress were to approve your fiscal year 1983 budget request for AID Operating Expenses, it would result in a $103,926,000 increase in Operating Expenses, over a four year period.

How can you possibly justify an increase of this size?

Mr McPherson: In examining AID's Operating Expense budget over the past several years it is important to bear in mind that the Agency operated under Continuing Resolutions in both FY 1980 and FY 1981. The FY 1980 base, as a result of the restrictive funding under the Continuing Resolution, is abnormally low. We had to defer costs to future years wherever it was possible to do so. These deferrals resulted in 1980 obligations for equipment and other services which were much lower than they were in FY 1979, especially after taking the inflation factor into account.

The largest single increase during the past four years has been in salaries and benefits for our employees. These increases are the result of annual pay raises for all Federal employees plus the special increases in salaries and benefits provided under the Foreign Service Act of 1980, which only began impacting on the budget in FY 1981. The "Other Services" category, the second largest area of increase, reflects deferrals from FY 1980 to later years, an increased reliance on contract services overseas to offset personnel reductions, and the impact of inflation on such costs as guard services, building and equipment maintenance, language training costs, the automated Washington accounting system, development of an automated mission accounting system at selected posts, janitorial and other related services overseas, payments to the Defense Contract Audit Agency for the auditing of various AID contracts, mail service costs, etc.

The chart which we have provided for the record shows the increases by each of the major categories of expense from FY 1980 to FY 1983.

Senator Inouye: Can you point to any other government agency whose operating expenses have increased as rapidly?

Mr. McPherson: I am not familiar with the budgets of other agencies, so I cannot say whether our increase is unique among government agencies over the past four years. Comparisons would be difficult, if not impossible, to make between AID's Operating Expense budget increase over the past four years and increases in other agencies for two basic reasons. First, as I indicated in responding to your earlier question, AID was on a Continuing Resolution for all of FY 1980 and FY 1981, the only government agency of which this was true to my knowledge. Thus AID's FY 1980 level was at an exceptionally low level due to expenses deferred to FY 1981 and beyond. Second, as a Foreign Affairs agency with a large number of its employees living and working in the high cost countries of the third world, comparisons with domestic agencies, or even with the other Foreign Affairs agencies whose employees are concentrated in countries other than those in which we have a presence, are not meaningful.

I would like to assure you, however, that I am doing everything possible to monitor our operating expense costs to ensure that we incur only those costs considered essential to the proper administration of the Foreign Assistance Program of the United States.

| | FY 1980 | INCREASE | FY 1983 |
|---|---|---|---|
| Salaries and Benefits | $ 162.5 | $ 35.4 | $ 197.9 |
| Other Services | 22.6 | 21.6 | 44.2 |
| Rents, Util., & Comm. | 26.9 | 15.1 | 42.0 |
| Travel | 24.7 | 11.6 | 36.3 |
| FAAS | 17.8 | 5.2 | 23.0 |
| Equipment | 8.5 | 4.1 | 12.6 |
| Supplies and Materials | 5.3 | 4.0 | 9.3 |
| 636(c) and (d) | 3.0 | 2.5 | 5.5 |
| Reclassification of Program Costs | - | 2.0 | 2.0 |
| Security Equipment | - | 1.8 | 1.8 |
| Printing and Reproduction | 1.5 | .7 | 2.2 |
| Claims | .3 | (.1) | .2 |
| Total | $ 273.1 | $ 103.9 | $ 377.0 |

## TRAVEL AND TRANSPORTATION

Senator Inouye: Your budget request for transportation and travel represents an increase of $2.3 million. I had thought that the President was cutting back on government-funded travel. Will you explain the increase?

Mr. McPherson: The President is indeed cutting back on government-funded travel, including travel by AID employees. Our requested increase of $2.3 million represents an 11 percent increase over FY 1982. This is in spite of the fact that due to inflation and general price increases, the average cost per trip for operational travel overseas will increase by almost 21 percent in FY 1983. In addition, this overall 11 percent increase must cover increased travel costs resulting from the provisions of the 1980 Foreign Service Act which provide for R & R in the United States, travel of dependents when the employee goes on extended trips, increased provisions relating to medical evacuations, etc.

Senator Inouye: How important is travel to AID's operations?

Mr. McPherson: Travel is critical to AID. As is shown in our Congressional Presentation, almost 80 percent of our travel budget is for our overseas missions. This represents not only the costs associated with enabling our employees to visit our development projects, but also the cost of getting the employees there for post assignments, R & R visits, educational travel for dependents, medical evacuation travel, etc. Even the 20 percent of the travel budget allocated to Washington offices and bureaus is, in large part, spent on direct support of overseas missions for such activities as impact evaluations, administrative and project support provided to missions, etc. As indicated previously, over $1.0 million is budgeted for use overseas by the Office of the Inspector General.

## USE OF FIRST-CLASS TRAVEL

Senator Inouye: Does AID have a policy of not allowing first-class travel by its employees?

Mr. McPherson: With regard to first-class travel, we follow the general rules established by GSA in the Federal Travel Regulations, and our controls are very tight. In FY 1981, for example, only one-tenth of one percent of our trips worldwide involved first-class.

Senator Inouye: Are there any exceptions to this policy?

Mr. McPherson: We do authorize it for emergency medical evacuation, but all other use must be approved by the Deputy Administrator trip-by-trip and requires a strong justification. I have used it myself a few times for extended overseas flights so that I could prepare enroute for an important meeting upon arrival. For the same reason, we have recently authorized this alternative for our Assistant Administrators on overseas flights of seven hours or more, but only when business class is not available.

## REDUCED LEVELS FOR POPULATION ASSISTANCE

Senator Inouye: Mr. McPherson, your statement is that the reduction in the fiscal year 1983 population budget below fiscal year 1982 "does not indicate a reduced priority for population planning." The Congressional Presentation suggests that the decline in funding is "principally the result of a one-time increase in the program in FY 1982 to make up for shortfalls in the FY 1981 programs in Asia and a continuation of the effort begun in FY 1982 to fund a larger portion of joint population-health activities out of the health account."

Does this not, in fact, suggest a reduced priority? The request for the health account is, after all, less than the amount provided for fiscal year 1982.

Mr. McPherson: The slight reduction in population program levels from FY 1982 to FY 1983 does not indicate a reduced priority for voluntary family planning programs. In fact, the FY 1983 request reflects the outcome of an Administration review of the funding of population planning programs in which the option of significantly reducing the program was explicitly considered and rejected.

A.I.D. closely monitors all foreign assistance expenditures to ensure that the tax dollars appropriated to us are well-spent. Recently, we took a careful look at A.I.D.'s family planning programs. As a result of that review and other available data, I am convinced that voluntary family planning programs are an important component of U.S. development assistance.

As for the decline in A.I.D.'s request for health programs in fiscal year 1983, I believe that this reflects a temporary hiatus in programming while the Agency is taking a careful look at its health policies and programs. Health projects have proven more difficult than others to initiate, partly as a result of the reluctance of recipient countries to commit themselves to the high future recurrent cost burdens characteristic of primary health care initiatives. Furthermore, primary health care projects, which now comprise the bulk of A.I.D.'s health portfolio, tend to be less costly than either curative, hospital-based care or facilities-construction programs.

## QUESTIONS SUBMITTED BY SENATOR LEAHY

### NEW POLICY FOR PVOs

Senator Leahy: We understand that AID is developing new policy regarding its support with Government funds of the activities of United States Private and Voluntary Organizations. Please describe that Policy and indicate the ways in which it respects the private and non-governmental nature of private agencies.

Mr. McPherson: In the past several months, AID has been conducting a major review of its relationship with Private and Voluntary Organizations (PVOs). The purpose of this review has been to identify issues and make recommendations that will result in a more effective relationship between AID and PVOs. The Advisory Committee on Voluntary Foreign Aid is now considering the paper and the PVOs' reactions to it and will be making recommendations within the next few weeks. We will consider these views prior to our final approval of the policy statement.

The major goals of our policy are:

- to increase the economic development impact of PVO programs through increased program integration and focusing resources on field programs;
- to avoid undue dependence on U.S. Government financing of the international development programs of PVOs;
- to simplify management and administrative procedures to the maximum extent possible and create a strong focal point within the Food for Peace and Voluntary Assistance Bureau (FVA) to urge consistent implementation of PVO policy and broad information sharing within AID and with the community; and
- to ensure that AID funds are used in ways that reflect our legislative mandate, yet do so in a way that calls into full play such unique capabilities of voluntary agencies as their knowledge of the local situation and their programming and managerial flexibility.

Among the changes which are being proposed in the policy statement are: increased emphasis is placed on country program integration in order to maximize the effectiveness of development resources in Third World countries; a test for privateness is added as a requirement to qualify for the PVO grant program rather than a condition for PVO registration; increased emphasis is placed on the utilization of the existing USPVO capacity to undertake field programs; and categorization of PVO grants and administrative relationships with AID are to be simplified, taking into account the diversity of the PVO community.

There are several ways in which the policy respects the private and non-governmental nature of private agencies. One of these is the privateness test which I have referred to. This test requires that an organization obtain at least 20% of its financial resources for its international programs from private or non-USG sources in order to qualify for matching grants and operational program grants. The purpose of the test is three-fold: (1) to discourage PVO dependence on USG financing for their international programs and thereby ensure the PVOs maintain their independence of action; (2) to ensure the PVOs continue to leverage additional private financial resources for development; and (3) to simultaneously build awareness of Third World development issues among the American public.

In addition, we intend to encourage greater cost-sharing of PVO grants. AID links the concepts of cost-sharing and program independence in its grant relationships with PVOs. AID gives PVOs, which cost-share, greater independence to program funds. The new policy proposes that a portion of the non-U.S. Government support of operational program grants be derived from a direct cash contribution by the PVO.

We are also proposing to more actively encourage the participation of PVOs in the development of Country Development Strategy Statements (CDSS). The CDSS is the basic document in which AID analyzes a country's economic and social development situation and defines an assistance strategy to address the constraints. Our purpose is to ensure that AID missions consider adequately the potential of indigenous private organizations and the appropriate role of U.S.-based PVOs working in that country. Through this process, we can fashion a more collaborative relationship which takes into account the interests and capabilities of the PVOs while enhancing their appreciation of the development context in which AID seeks to operate.

## BASIC HUMAN NEEDS

Senator Leahy : Mr. McPherson, as I understand it, under the basic human needs mandate, A.I.D. is charged with the responsibility of creating a set of criteria to assess commitment and progress toward the widespread participation of the poor in the development process.

Again, as I understand it, this performance criteria is included in the Country Development Strategy Statement (CDSS) which is written for each country receiving aid.

Have you developed this performance criteria? Could I see an example of how it has been applied in Central America?

Mr. McPherson: We have developed such criteria, which are mandated by section 102(b)(4) of the Foreign Assistance Act. They include:

(1) the country's performance in fostering economic growth;

(2) the economic policy context, particularly the recipient's attitude toward market solutions to development projects;

(3) the degree to which growth benefits the poor;

(4) the country's ability to maintain and increase agricultural production and productivity;

(5) the country's performance in developing its human resource base, with particular emphasis on health and education; and

(6) the country's policy with respect to population control where overpopulation is a potential or actual problem.

An example of the application of these criteria in a CDSS is Costa Rica. The performance of Costa Rica in these six areas was an important element in our positive perception of Costa Rica's commitment to development.

## SUBCOMMITTEE RECESS

Senator KASTEN. The subcommittee will stand in recess until 2 p.m. March 16, when it will continue its oversight hearings on the Polish debt situation.

[Whereupon, at 11:30 a.m., Thursday, March 11, the subcommittee was recessed, to reconvene at 2 p.m. Wednesday, March 17.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

WEDNESDAY, MARCH 17, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 2:05 p.m., in room S-146, the Capitol, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senators Kasten, Rudman, Inouye, Johnston, Leahy, and DeConcini.

## DEPARTMENT OF STATE

### BUREAU FOR INTER-AMERICAN AFFAIRS

### STATEMENT OF THOMAS O. ENDERS, ASSISTANT SECRETARY, BUREAU FOR INTER-AMERICAN AFFAIRS, DEPARTMENT OF STATE

### CARIBBEAN BASIN INITIATIVE

Senator KASTEN. The subcommittee will come to order.

This afternoon, the primary topic is the President's Caribbean Basin Initiative for which this subcommittee has a major responsibility. In addition, a number of members have requested that more extensive questioning be allowed on the El Salvador situation, both with reference to the fiscal year 1982 supplemental and the fiscal year 1983 program.

The witnesses today include Donald deKieffer of the U.S. Trade Representative's Office; Assistant Secretary Thomas Enders; and Otto Reich, the Assistant Administrator for the Agency for International Development.

While the President announced his program on March 1 in an address before the Organization of American States, the formal proposal was only released this morning. This initiative is part of a multilateral effort being made by the United States, Canada, Mexico, and Venezuela, which was originally conceived of last July.

The main thrust of the CBI, which is why we have asked Mr. deKieffer to testify, is the offer of one-way free trade with countries of the Caribbean Basin. The second thrust of the program calls for an investment initiative for potential U.S. investors in the Caribbean Basin. The third thrust, for which this subcommittee will have direct responsibility, is the economic assistance program supplemental totaling $350 million.

The President's Caribbean Basin Initiative has received initial strong support from Congress, support which I believe is justified for a program which seeks to help solve the problems of that region through peaceful means.

The administration's policy toward Central America is at a major crossroads, and there is a distinct feeling that decisions that will be made in the next few months with respect to U.S. policy toward this part of the world will have a long and lasting effect, an effect which may well influence other relations around the world.

We have observed what many consider to be inept handling by the State Department of a number of facets of this policy. The most recent incident was the Nicaraguan guerrilla who was paraded in front of the U.S. media, only to turn around and denounce El Salvador and our policy in Central America.

The American people do not support, and will not support, the administration's policy in this part of the world without a clear understanding of the U.S. interests, and more graphic and continued hard evidence of outside interference.

Mr. Enders, I and many of my colleagues want to support the administration's policy, and I will support the administration's policy, but unfortunately right now this administration is making it hard for us to do so.

## SITUATION IN NICARAGUA AND EL SALVADOR

Last Friday afternoon, I attended a briefing with Bobby Inman and others from the CIA, on Nicaragua and El Salvador. I am absolutely convinced of the Cuban and Nicaraguan support and control of the terrorist guerrillas in El Salvador. There is no question whatsoever in my mind that we have got to bring that information into public view. We must let the people of this country know what is going on right beyond our borders.

Hopefully, the subject of today's hearing, the Caribbean Basin Initiative, will help turn what is now nearly a tide in American public opinion from anti- to pro-administration policy. These might be tough words, but I think you know that they reflect reality.

The American people were embarrassed by this country's inability to deal with Vietnam, Iran, Nicaragua, and a number of other incidents. This administration held the promise of a tough, confident, and rational foreign policy, and it is again embarrassing to the American people that we have not been able to take firmer control of the situation in our own backyard.

As we look around now, we see unprecedented military build up—an offensive and not a defensive military build up—first in Cuba and now growing in Nicaragua and other countries. The trends are going against us. In this atmosphere, we see danger.

Strong, private sector economic strength in these countries can be the very best defense against the dangers that we see building from the other side in the military area. That defense of a strong economy can be better than any weapons, better than the kind of security assistance programs that we have and we must have.

So I am pleased that you are here today to present to the committee the Caribbean Basin Initiative.

### OPENING REMARKS OF ASSISTANT SECRETARY ENDERS

Mr. **Enders**. Thank you very much, Mr. Chairman.

I have a statement which I would like to submit, if I could, for your record, but perhaps you would permit me to make a few remarks at the start.

Senator **Kasten**. Please.

Mr. **Enders**. Mr. Chairman, the President remarked this morning, in submitting his message to the Congress, that this is an extraordinary proposal that we are making. He noted that we were making it at a time of economic difficulty at home and at a time of budget cutting.

Why are we taking such a far reaching measure involving an unprecedented one-way free trade area, involving substantial additional economic assistance credits, involving investment incentives, and other measures of this type?

The reason is that this is, as you said yourself, Mr. Chairman, an area of fundamental importance to us. Half of our trade comes through the Caribbean, half of our imported strategic materials, including oil, come through the Caribbean.

We are a country that never has had to fortify our southern border, which is a great strategic contrast between this country and the Soviet Union in that respect. Yet, should we find a proliferation of hostile, or potentially hostile states, our strategic position would change.

It is also clear that this country has been a magnet for migration, in recent years, much of it undocumented. We know well that further convulsions in the region would lead to yet higher migration to the United States.

So it is an area of fundamental importance to us.

Second, it is an area in economic, social, and in some cases political turmoil. The economies of the area, after a generation of pretty good achievement after the Second World War, have run into very serious problems. They are all small, and the degree to which they can prosper on the basis of staple commodities is limited. They have all had more trained and experienced labor than they can employ, and a combination of falling prices for commodities other than oil, and the continued demands of developing social systems in those countries, and encouragment of social change have led to, in many cases, economic distress and, in some cases, economic collapse.

### POLITICAL ACTIVITIES OF CUBA

Then, of course, coming on top of this, Cuba, their neighbor has moved in very fast, changing its tactics in the last 3 years from one of essentially standing aside from the area, to a very aggressive effort to unify the left in the area, train its members, and turn them against the government.

A combination of these two factors, Cuban activism on the one hand, economic and social trouble on the other, have produced an extraordinarily explosive mixture.

## COORDINATION WITH OTHER COUNTRIES

The proposals that we are making today are designed to deal with the economic and social aspects. We are not proposing to deal with them alone. A number of other countries have already started, and since we have begun working with them in a group that was first called the Nassau Four, which is now called the New York Five, now includes Colombia, Venezuela, Mexico, Canada, as well as the United States.

Other countries are making very important efforts. Mexico and Venezuela together are giving some $700 million a year through their oil facilities to the area. Colombia, a developing country itself with an average income of less than $1,000, has just come up with an important package of assistance to the area—new credits, new trade preferences, bank swaps. A remarkable effort on the part of one developing country for another. Canada is doubling its aid effort to the area and gives a wide range of tariff preferences.

The program we are putting before you, Mr. Chairman, is a program which is designed to catch up with what the others are doing and build on what others are doing in a coordinated fashion.

Secretary Haig, Bill Brock, and I met over the weekend with the foreign ministers of those other four countries. They warmly welcome and very strongly support the proposals that the President has made.

We will stay in very close coordination with those countries in order to insure the sufficiency of this effort overall. Together, we are inviting countries from Europe and Japan, in order to encourage them to increase their assistance.

A second element, which is very important, is that this is basically a program designed to help the countries of the area help themselves. It has an aid element in it, $350 million worth of emergency assistance to a number of countries. But this is designed as an emergency element, as a bridge to enable countries that, in some cases, are prostrate and, in other cases, may well become so very early, to survive over the next year, while the other authorities get into place, and while an effort is made to generate some local economic growth.

We think that a long-term program of economic assistance at a very high level is neither desirable nor possible. Not desirable because it would put these countries permanently on the dole in ways that they would regard ultimately as unsatisfactory. Not possible because the American taxpayer would not be prepared and should not be prepared to take on that burden.

Mr. Chairman, this is not the only part of our policy toward the area. We think that it is an essential part of any competent policy toward the area, but there must be other elements, too.

## EMERGENCY ECONOMIC AND MILITARY ASSISTANCE

In countries like El Salvador, and above all in the present El Salvador in which there is an active insurgency, we believe that it is appropriate that the United States provide military assistance, enough military assistance and military training so that the insurgency can be held off, while essential reforms are being undertaken at home.

In the case of El Salvador this means in particular getting on with the all important land reform, getting on with the all important political reform, the creation of democratic institutions, so that there will be in Central America, finally, an alternative to left-wing or right-wing dictatorships. Up to the present time there has not been that alternative.

We think that there also ought to be an effort to use whatever political contacts and negotiation possibilities there are to lessen conflict, and remove the causes of insurgency. As you said, Mr. Chairman, Nicaragua is deeply involved in the insurgency in El Salvador. The Nicaraguans deny that they are, or at least are as a government. On the other hand, the evidence that we have, although it cannot all be made public, is overwhelming.

What we have told them is: We understand what you are doing. You don't have to confess to us and tell us that you are doing it. We want you to stop it. We are in a position to know that if you do stop it, we will know it. However, we are prepared on our side to make an effort to remove the causes of friction that you see with us.

Nicaraguans profess that they are worried about being invaded by the United States. We said: All right, we will propose to you a nonaggression pact of sorts, to be a solemn political undertaking on both sides.

They have said to us: We are worried about Nicaraguan exiles in this country. We have said: All right, we are prepared to address that. They have said to us: We want very much to have renewed American economic aid. We said: In the context of an overall settlement, we would be prepared to ask the Congress for additional economic assistance for Nicaragua.

We have told them that two things must be done on their side. One is that they must stop their support for the insurgency in El Salvador. Two is that they should join with other countries of the area in an effort to prevent a new arms race.

We are all worried about heavy offensive weapons coming in, the threat of Migs being added to the tanks that are already in Nicaragua. We have said to them: Why don't you join with the other countries of the area in a multilateral agreement that says that no country will import heavy offensive weapons into the area, and no country will import tanks and Migs, or the equivalent.

We have added: Why do you have to have all those foreign military and security advisors? Why shouldn't we have a multilateral agreement between all countries of the area that says that nobody should have more than a small number of foreign military and security advisers, a reasonable low number.

Mexico and some of the other regional powers, Venezuela, have given us an opportunity to pursue these contacts. We will take advantage of Mexico's good offices to put people together that might otherwise find it difficult to meet, although we will propose to handle any of these contacts as purely bilateral contacts.

So, Mr. Chairman, I see the President's proposal as one element of four elements of a regional strategy. Yes, we must address the economic and social problems of the area through the program we are putting before you. We must have enough military assistance, not to win a military victory in El Salvador, but to permit an ultimate political victory, you must have social change in El Salvador and you must have it on a large scale through land reform and political reform. Then there must be a negotiating track.

Thank you very much, Mr. Chairman.

[The prepared statement of Mr. Enders follows:]

## PREPARED STATEMENT OF THOMAS O. ENDERS

## ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS

The President on February 24 announced a comprehensive program of U.S. measures to reverse the economic decline of the Caribbean Basin and restart the process of self-sustaining growth. Today he transmitted this program for Congressional action.

This program responds to an economic crisis which is real and acute. Falling prices for their exports, worldwide recession, continued high prices for energy and capital imports, high interest rates, the drying up of capital flows -- all these external factors have hit these small and vulnerable economies very hard. These external blows, falling on economic structures which were in many cases already brittle, have resulted in internal economic conditions which are disastrous. Unemployment in many countries is 20 to 30 percent or more. Few have experienced any significant growth, and some have had repeated years of negative growth. Inflation of 40 or 50 percent is not unusual. There is a severe crisis of confidence of local business, extending even to small savers, resulting in massive capital flight and severe balance of payments problems.

Let me describe in somewhat greater detail just two examples of the problems which this area faces.

Honduras is a nation moving steadily toward democracy, in a region of revolution and instability. The newly-elected democratic government has pledged a strong fight against corruption and dedicated efforts to put the economy on a sound footing. However, it faces significant economic difficulties -- falling coffee and banana prices, high oil prices, investor fear of regional instability, capital flight, and internal management problems in some institutions. The estimated growth rate for 1981 is only 0.3 percent. Foreign exchange reserves fell last year by $71 million.

As the least sophisticated institutionally and the poorest country in the Central American region, Honduras is less able to sustain an economic crisis than its neighbors. Over the longer term, however, Honduras has an essentially sound development program which is supported by the IMF and the IBRD.

A combination of internal policy changes, some additional foreign assistance, and improved market access for its exports will allow Honduras to weather the current storm. Within about three to four years, the bulge in development spending should be over and the country will begin to benefit from substantial improvements in infrastructure. There is thus good reason for optimism that the economy will return to its previous pattern of significant growth.

A second example is Jamaica. Between 1973 and 1980, Jamaica experienced seven consecutive years of economic decline. Real GDP over this period fell by 22 percent per capita; the unemployment rate in November 1980 was 26.8 percent.

The Seaga government, which replaced the Manley regime in October 1980, is committed to a stabilization and recovery program stressing private sector production. The program is supported by IMF and other assistance. In 1981, a 1.5

percent growth rate was recorded, and the consumer price index rose only five percent.

While the new government has made an encouraging start in implementing policy reforms, it still faces tough challenges. Foreign exchange earnings from commodity exports and bauxite have been lower than expected because of weak world market conditions. While a large number of foreign direct investment leads are being developed, the actual realization of new investment has lagged. Meanwhile, imports have exceeded projections.

To maintain growth and to prevent a further loss of foreign exchange reserves in 1982, Jamaica will need additional external support. Without such support, the country will endure a forced contraction of imports which would affect such basic items as food, petroleum, agricultural and industrial raw materials, and capital goods. The growth rate could be brought close to zero during 1982, and the decline in unemployment since Seaga's election would be reversed. Social and political discontent would intensify, and we would risk another downward spiral in economic activity.

At the same time, the foundations for full recovery leading to self-sustaining growth are being laid. Resolution of the short-term foreign exchange scarcity problem and access to developed country markets for Jamaica's exports are critical to the continued success of Mr. Seaga's recovery program.

Mr. Chairman, as these two examples graphically point out, we are now at a crossroads with regard to our economic relationship with this region.

As the President pointed out in his February 24 speech, these countries are our neighbors, and what happens there affects us here. We cannot just pull up stakes and move to another part of this globe.

Certainly this program is not costless. But the costs of inaction and indecision are far greater. I need not point out to this Committee what a string of hostile states to our south would mean for our security expenditures. Nor do I need to point out what social upheavals in that area would mean to our own society in terms of absorbing large numbers of refugees and migrants, as well as simply in terms of the vision of massive human suffering right in our neighborhood.

The crisis in the Basin countries is just that -- a crisis. We need to act effectively, otherwise we will simply be throwing our money and efforts away. We need to have a program which has the "critical mass" necessary to affect the attitudes and behavior of the people that really matter.

And by that I mean the people who are making these economies work or not work -- not just high government officials but also local businessmen struggling to keep their little businesses going; not just the big corporation deciding whether or not to build a new factory but also the small farmer deciding whether to plant just enough for his own family or to plant enough for a marketable surplus. Taken together, the decisions of small economic actors have as large or larger an impact upon entire economies as do the decisions of the large investors. We thus need a program of sufficient impact to reverse the pessimistic expectations of workers, farmers and businesses to survive within their own economies.

The program which the President seeks is one which does have the necessary "critical mass." First, it has been carefully designed as an integrated program combining several different types of economic measures -- trade, investment and aid. It includes a balance between measures having immediate or short-term impact addressing the emergency needs of the region, as well as longer-term measures which will sustain and strengthen the economic development of these countries after recovery has begun. It is carefully focused at the productive sector to make sure that goods and services and jobs are produced as quickly and efficiently as possible. In this way also, it will help to restore the confidence of the people who are the economic and political backbone of these societies in the continued viability of these societies.

Second, the President's program is not just an isolated U.S. effort. It has been carefully coordinated with the efforts and plans of many others. We have consulted closely with the governments and the private sector of the Caribbean Basin countries. Our program reflects not only our own assessment of their needs and resources, but also their own priorities and plans. We will continue to consult closely with the governments and private sector leaders in these countries on the programs which they will undertake to promote their own development.

We have also consulted carefully with other potential donors. There is now in place or being established an interlocking framework of multilateral consultations among donor countries, recipient countries, and international financial institutions. This network will ensure that our efforts will be enhanced by the effects of other complementary programs.

Last weekend in New York, Secretary Haig and Ambassador Brock met with their counterparts from four other countries, each of which is making very significant contributions to the region -- Canada, Mexico, Venezuela and now also Colombia. These countries are expanding their already impressive financial, technical and trade support for the Basin countries. Canada is doubling its aid to the region and has duty free or preferential access on 98 percent of the Basin's exports. Mexico and Venezuela are offering concessional financing on oil which is valued at approximately $700 million. Colombia has now also joined this effort by initiating a whole range of measures, including new credit lines and reciprocal credit agreements.

The scope of the effort is particularly impressive since three of these countries are themselves still developing and face considerable economic challenges of their own. However, each of these countries has decided that the needs of its neighbors in the Basin are so acute as to call forth additional efforts. And each recognizes that they have a long-term interest in the stability and prosperity of the neighborhood which we all share.

Third, this program is designed to help these countries help themselves. These countries want and need external support. But in the last analysis, our program -- indeed any program of outside support -- will only be successful if the people of the region make it so. I believe that most of the countries in this area are ready to undertake the difficult but necessary reforms to turn their economies and societies around. They need our support to make those reforms effective quickly, so that their people can see that their sacrifices today will result in a better life tomorrow.

Finally, the President's program is necessary to advance our national interests in the Caribbean Basin. It will help alleviate the root causes of human misery which have stimulated a major and sustained flow of people from the Caribbean Basin into the United States. It will promote long-term self-sustaining growth, thus reducing the need for future assistance from the United States. It will enhance the security of and prospects for democratic political evolution in the area by offering a credible alternative to the thesis that economic progress can only be achieved through violent change and the imposition of undemocratic Marxist governments. And it will protect our strategic and economic interests in the area by promoting the establishment of stable democratic governments friendly to the United States.

It is not the sole component of our policy toward the Caribbean Basin. We must continue our vigorous support for the evolution of democratic institutions throughout the area -- helping to strengthen those institutions where they now exist and supporting their establishment when they are not yet present. We must also be prepared to continue to provide military assistance in the form of equipment and training to those countries which are under active attack or threat of attack by forces supported from outside. But the President's economic proposals form the centerpiece of our long-term commitment to the region.

In sum, we are proposing a program that serves our vital interests by promoting the establishment of a region at peace with itself, free from outside threats, able to devote its energy and attention to economic programs and the development of free political institutions. The alternative to action by the United States and other concerned nations is a region increasingly unstable, increasingly hostile to the United States, and increasingly attracted by the empty promises of radical groups supported by Cuba.

# EXECUTIVE OFFICE OF THE PRESIDENT

## OFFICE OF U.S. TRADE REPRESENTATIVE

## STATEMENT OF DONALD deKIEFFER, GENERAL COUNSEL, OFFICE OF THE U.S. TRADE REPRESENTATIVE

### DUTY-FREE ACCESS TO CARRIBBEAN PRODUCTS

Senator **KASTEN**. We will submit the prepared statements of Mr. deKieffer and Mr. Reich for the record. Mr. deKieffer, would you like to make a brief statement?

Mr. **DEKIEFFER**. Thank you, Mr. Chairman.

I will not reiterate the comments that the Secretary used to introduce the entire area, nor will I comment in any detail upon the situation in Central America. But I think there are a couple of items that do deserve to be emphasized regarding the entire CBI package.

First, this area is vitally concerned with the question of whether the products of new or expanded production in the region will have liberal access to the markets in the United States. A very high percentage of Caribbean products now can enter the U.S. market duty free under our generalized system of preferences.

Many potential Caribbean exports have never been included in this scheme. Other products have been eliminated from eligibility through GSP petition process or by the competitive need limitations built into our existing law.

Mr. Chairman, accordingly, the President has requested the authority to grant duty-free access for all Caribbean Basin imports, with the exception of textiles and apparel items subject to the textile agreements, particularly the multifiber arrangement for a period of 12 years.

We think that such an immediate extension of duty-free access on products that have not previously been included in the GSP scheme is currently warranted and does not pose any threat of injury to any potentially affected American industry.

Should there be a threat of injury at some point, however, Mr. Chairman, we will retain the ability under existing law, particularly sections 201 and 203 of the Trade Act of 1974, to provide the kind of protection that an affected American industry may need at some point in the future.

### INVESTMENTS IN CARIBBEAN REGION

Mr. Chairman, the second impediment in the view of the Caribbean Basin governments, that has been expressed to our Government and private sector representatives, is the relative unattractiveness of the Caribbean to prospective United States, and for that matter even foreign, investors.

Under present circumstances, if an American firm chooses to invest in the Caribbean, it would be disregarding the favorable tax treatment of fixed asset expenditures which is available in the United States under the domestic investment tax credit.

There is a simple, and we believe equitable, solution to this problem. It is our proposal to extend the same type of tax treatment for investments in Caribbean Basin property as is now available for domestic property. This treatment will be extended to qualifying beneficiaries for a period of 5 years.

So in the case of both our trade and tax proposals, the impact of the measures will depend solely upon the initiatives of the private sector. A more amenable climate for commercial opportunities is being created, but market forces, we believe, ultimately will determine the success of our joint efforts.

## CONCESSIONAL AID

There has been an urgent request by several of the beneficiaries for relief in the form of concessional aid. They have sought this concessional aid because it is the only practical solution to their very serious balance of payments and debt problems.

The prospect for many of these economically depressed nations would be far worse, Mr. Chairman, if there were insufficient credit to support even the basic private sector borrowing needs.

Today, the sums that are needed for this purpose are manageable and the costs that could be incurred from a failure to take immediate remedial action now would be far greater than the provision of these financial resources.

The Caribbean Basin Initiative also contains certain proposals regarding Puerto Rico and the Virgin Islands, which we believe are extremely important to the success of the entire package. We want to assure you that in reducing impediments to the economic revitalization of the Caribbean Basin generally, we will be establishing a relationship with Puerto Rico and the Virgin Islands which encourages these islands to play a dynamic role in the region.

One important consideration in this regard was the potential effect on their revenues of the duty reduction on rum. Accordingly, we are proposing that all excise taxes on all imported rum be rebated to Puerto Rico and the Virgin Islands. Of similar importance will be the granting of tax benefits to these territories which will eliminate any semblance of fiscal discrimination.

Other steps are proposed, such as the treatment of territorial goods under the trade arrangements rules of origin which will be of mutual benefit to our territories and to their neighbors in the basin.

What we are seeking, Mr. Chairman, in the final analysis, is to help the people of the Caribbean Basin build for themselves a better life, not just economically but across the whole spectrum of human needs and aspirations.

Mr. Chairman, I have spoken today about the serious impediments to renewed economic activity which the Caribbean Basin Initiative is designed to address. The initiative represents a mutual commitment to reduce impediments and to renew economic activity in the Caribbean Basin. We know and believe that it will be successful.

I believe I would like to stop right there and defer to my colleagues.

Thank you, Mr. Chairman.

Senator KASTEN. Thank you very much for your presentation.

[The prepared statement of Mr. deKieffer follows:]

### PREPARED STATEMENT OF DONALD E. DEKIEFFER, U.S. GENERAL COUNSEL, OFFICE OF THE U.S. TRADE REPRESENTATIVE

Chairman Kasten and members of the committee, On behalf of the United States Trade Representative, William E. Brock, I would like to discuss briefly the Administration's Caribbean Basin Initiative. The President today has transmitted to the Congress the legislation necessary to implement this Initiative. Before Congress now is what we believe to be a innovative program for economic cooperation and economic partnership within this hemisphere. It is a multi-dimensional program, combining carefully crafted and focused trade-, aid-, and investment-related measures.

We are faced in our own hemisphere with a region which is adrift in the world economy, and which is nearly defenseless today against the vagaries of the international economy. As the Basin economies have been battered by the oil price hikes and more recently the fall of sugar and other commodity prices, internal tensions have mounted. The Caribbean Basin Initiative is a response to regional economic problems which must be addressed if this country hopes to live in a hemisphere free from the suffering that is now so vividly apparent in the Caribbean.

Let me now review with you the impediments that the Caribbean nations identified during our consultations and explain how the Initiative's elements respond to these problems. First, the nations of the Basin were virtually concerned with the question of whether the products of new or expanded production in this region would have liberal access to markets in the United States.

While a very high percentage of Caribbean products can now enter our market free of duty under the Generalized System of Preferences, many potential Caribbean exports have never been included in this scheme. Other products have been eliminated from eligibility through the GSP petition process or by the competitive need limitations.

Accordingly, the President is requesting the authority to grant duty-free access for all Caribbean Basin imports, with the exception of textiles and apparel items subject to textile agreements, for a period of 12 years. We think that such an immediate extension of duty-free access on products that have not previously been included in the GSP scheme is warranted, and does not pose a threat of injury to any affected U.S. industry. Should, however, a threat of injury, or injury itself, actually develop, we will retain the ability to safeguard U.S. industry from Caribbean products using the remedies available under Sections 201 to 203 of the Trade Act of 1974.

A second impediment in the view of Caribbean Basin governments and private sector representatives is the relative unattractiveness of the Caribbean to prospective U.S. investors. Under present circumstances, if a U.S. firm chooses to invest in the Caribbean, it would be disregarding the favorable tax treatment of fixed-asset expenditures which is available in the U.S. under the domestic investment tax credit. The simple, and we believe equitable, solution to this problem is our proposal to extend the same type of tax treatment for investments in Caribbean Basin property as is now available for domestic property. This treatment would be extended to qualifying beneficiaries for a period of five years.

So in the case of both our trade and tax proposals, the impact of the measures will depend solely on the initiative of the private sector. A more amenable climate for commercial activity is being created, but market forces ultimately will determine the success of our joint efforts.

There has been an urgent request by several of the potential beneficiaries for relief in the form of concessional aid. They have sought concessional aid because it is the only practical solution to their very serious balance of payments and debt problems. The prospects for many of these economically depressed nations would be much worse if there was insufficient credit to support even the most basic private sector borrowing needs.

Today, the sums that are needed for this purpose are of manageable proportions. The cost that could be incurred from a failure to take remedial action now would be far greater than the provision of these financial resources.

The Initiative also contains certain proposals regarding Puerto Rico and the Virgin Islands. We want to assure that in reducing impediments to economic revitalization in the Caribbean Basin generally, we will be establishing a relationship with Puerto Rico and the Virgin Islands that encourages these islands to play a dynamic role in the region.

One important consideration was the potential effect on their revenues of a duty-reduction on rum. Accordingly, we are proposing that all excise taxes on imported rum be rebated to Puerto Rico and the Virgin Islands. Of similar importance will be the granting of tax benefits to these territories which should eliminate any semblance of fiscal discrimination. Other steps are proposed, such as the treatment of territorial goods under the trade arrangement rules-of-origin, which should be of mutual commercial benefit to our territories and to their neighbors in the Basin.

What we are seeking, in the final analysis, is to help the prople of the Basin build for themselves a better life, not just economically but across the full spectrum of human needs and aspirations. I've spoken today of the serious impediments to renewed economic activity which the Caribbean Basin Initiative is intended to address. The Initiative represents a mutual commitment to reduce the impediments to renewed economic activity in the Caribbean Basin.

Thank you.

# AGENCY FOR INTERNATIONAL DEVELOPMENT

## BUREAU FOR LATIN AMERICA AND THE CARIBBEAN

### STATEMENT OF OTTO REICH, ASSISTANT ADMINISTRATOR, BUREAU FOR LATIN AMERICA AND THE CARIBBEAN, AGENCY FOR INTERNATIONAL DEVELOPMENT

### ASSISTANCE TO LATIN AMERICA COUNTRIES

Senator KASTEN. Mr. Reich, do you wish to make a brief summary?

Mr. REICH. Thank you, Mr. Chairman.

As you know, the CBI consists of mutually reinforcing trade, aid, and investment measures. The major objective of the aid component of the CBI will be to assist the countries of the region in overcoming their external economic disequilibrium over the next few years through stabilization and recovery programs.

This will require large and immediate infusions of foreign exchange for balance-of-payments support. It is primarily for this need that we require the $350 million of economic support funds [ESF] requested, as well as the $140 million of ESF already appropriated.

Participation by the United States in the stabilization and recovery program is especially important for strengthening private sector confidence, both domestic and foreign, but primarily domestic.

It is crucial, in turn, to the countries of the Caribbean Basin that they obtain other external resources in the form of commercial bank lending, supply of credit, and direct foreign investment. Our resources alone are not going to turn the tide.

AID will play an important role in assisting the Caribbean Basin countries to design programs that will permit them to use foreign exchange efficiently to meet their economic needs and development objectives and to utilize local currency generations in accordance with those needs.

Within those overall stabilization and recovery programs, ESF assistance will be primarily to encourage allocation of resources toward private sector imports of raw materials and intermediate goods, thus facilitating domestic production and employment without a further deterioration in the balance of payments.

At the same time, we will be discussing with policymakers in the Caribbean Basin and with international organizations, such as the International Monetary Fund and the World Bank, possible measures to insure that ESF and other outside assistance is utilized effectively, so as to have the greatest possible effect on production and employment.

While the ESF resources will permit AID to focus increased attention on the short-term stabilization, we realize that development is a long-term goal and a long-term problem. Our development assistance will be increased in the region, both in traditional and nontraditional ways, in order to try to accomplish the development objectives of the President's Caribbean Basin Initiative.

### PREPARED STATEMENT

I would like to stop there and submit the remainder of my statement for the record.

[The prepared statement of Mr. Reich follows:]

# PREPARED STATEMENT OF OTTO J. REICH

## ASSISTANT ADMINISTRATOR FOR LATIN AMERICA AND THE CARIBBEAN

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### A.I.D.'s Role in the Caribbean Basin Initiative

Mr. Chairman, it is a pleasure to be here today to discuss A.I.D.'s involvement in the Caribbean Basin Initiative. The CBI exemplifies the President's commitment to economic development. In announcing this initiative at the Organization of American States on February 24, President Reagan said that "we must help because the people of the Caribbean and Central America are in a fundamental sense fellow Americans. Freedom is our common destiny. And freedom cannot survive if our neighbors live in misery and oppression."

Mr. Chairman, as you know, the CBI is an integrated package of trade, investment, and aid measures designed to assist the countries of the Basin in coping with an unfavorable international economic environment and in implementing more effective economic policies that stimulate private investment and employment in directly productive activities. A.I.D. will have a major role in planning and implementing the aid component of the CBI. It will also play a major support role in assisting the Caribbean Basin countries to take maximum advantage of the opportunities which will be made available by the trade and investment components. Through complementary efforts in trade, investment and aid, we hope to assist countries in the Basin to resolve their short-term financial problems, contribute to a revitalization of their private sectors, and support the adoption of a more positive set of government economic policies, thus laying the groundwork for sustained economic growth and solutions over the long run to their prinicipal development problems.

The major objective of the aid component of the CBI will be to assist the countries of the Basin in overcoming their external economic disequilibria over the next few years through sound stabilization and recovery programs. This requires large, immediate infusions of foreign exchange for balance-of-payments support. It is primarily to this need that the additional $350 million of Economic Support Fund (ESF) assistance requested for FY 1982--as well as the $140 million currently programmed--is directed. Although these new resources will substantially increase total U.S. aid to the Caribbean Basin, our resources alone cannot bring about the degree of recovery needed to contribute to a relaxation of the social and political tensions now threatening U.S. interests in the Caribbean Basin. Thus our programs have to be viewed as part of a larger package of assistance which includes resources made available by other donors, including Canada, Mexico and Venezuela, plus the International Monetary Fund, the World Bank, the Inter-American Development Bank and other multilateral assistance agencies.

Participation by the United States in these stabilization and recovery efforts is especially important for strengthening private-sector confidence, both domestic and foreign. This, in turn, is crucial if the countries of the Caribbean Basin are to obtain other external resources in the form of commercial bank lending, suppliers' credits and direct foreign investment. An improved climate of confidence will also slow and ultimately reverse the flight of domestic capital abroad.

A.I.D. will play an important role in assisting Caribbean Basin countries to design programs that will permit them to use foreign exchange efficiently to meet their economic needs and development objectives and to utilize local-currency generations in accordance with those needs. Within these overall stabilization and recovery programs, ESF assistance will be used primarily to encourage the allocation of resources toward private-sector imports of raw materials and intermediate goods, thus facilitating domestic production and employment without a further deterioration in the balance of payments. At the same time, we will be discussing with policy makers in the Caribbean Basin countries themselves and with other donors, including the International Monetary Fund and the World Bank, possible reform measures to ensure that ESF and other external assistance is utilized effectively so as to have the greatest possible impact on production and employment.

While additional ESF resources will permit A.I.D. to focus increased attention on stabilization and recovery over the short term, increased levels of Development Assistance will enable A.I.D. to continue working toward our principal long-range objective in the Caribbean Basin--the establishment of self-sustaining and broadly-based growth within a democratic framework. Our Development Assistance program for the Caribbean Basin in FY 1982 will total $211 million, compared with $167 million in FY 1981. Our FY 1983 request is for $218 million. These resources will support new and ongoing programs in agriculture, rural development, nutrition, population planning, health, education, human resource development and other activities. Particular emphasis will be given to technology transfer, institution-building and training.

Policy and other reforms, as well as additional resources for key development projects assisted by A.I.D. and other donors, will be supported by P.L. 480 assistance. Programmed P.L. 480 resources for the Caribbean Basin countries total $123 million in FY 1982, and $121 million is requested for FY 1983. These resources will provide additional balance-of-payments support for the Caribbean Basin countries, while the local-currency generations will help finance development activities. At the same time, key foodstuffs will help countries overcome food deficits without creating disincentives to local production.

The trade and foreign investment components of the CBI are intended to have a longer-range impact. In the short run, they will assist mainly by eliminating duties on sugar imports. The identification of new export opportunities in the U.S. market and construction of the physical plants and supporting infrastructure needed to supply this market may take two or more years. This is illustrated even by the case of Jamaica, where the government is strongly committed to the type of development strategy this Administration believes is necessary to achieve sustained economic growth.

There are many opportunities available for A.I.D. to facilitate new domestic and foreign investment oriented to both external and local markets. In the less developed countries of the English-speaking Caribbean, for example, our proposed new FY 1983 projects include a sector structural adjustment program to support the identification and implementation of needed policy changes in the productive sectors of the economy, the second stage of an agricultural research project to improve small-farmer productivity, a vocational skills development program to provide the human resources needed by a growing industrial sector, and an interisland shipping and marketing project with private sector involvement to provide markets for increased agricultural production in the Eastern Caribbean.

Increasingly, we are emphasizing administrative and managerial training to improve the efficiency of both the public and private sectors. In FY 1983 we will initiate training projects in Jamaica and the Dominican Republic, and the expanded LAC regional training initiative will be continued. In Haiti, a new project will assist the government in implementing policy and administrative reforms. A.I.D. will also continue to support training for other segments of the labor force. In addition to the Caribbean project already noted, a work force development project will be implemented in FY 1983 in Panama, and a basic skills training program in Jamaica will receive additional support.

In agriculture, we will be looking for more opportunities to support crop diversification and agribusiness enterprises. New projects in FY 1983 include a Central America regional package to support research on promising nontraditional export crops and a loan fund to encourage production and export of these crops by the private sectors of these countries.

A.I.D. will also be supporting increased private sector development in industry and related sectors. Projects to be initiated in FY 1982 include a small industry loan in the Dominican Republic, an export credit loan in Costa Rica, and a regional private-sector promotion fund in Central America.

A.I.D.'s recently established Bureau for Private Enterprise (PRE) will focus its efforts on new private-sector initiatives in the Caribbean Basin countries. The PRE Bureau will provide technical assistance: (1) tc host country governments, providing policy guidance and, where required, recommending changes to improve the investment "climate" of the host country; (2) to indigenous private enterprises, to strengthen their managerial, financial, marketing and/or technical skills; and (3) to host country institutions, to develop the financial infrastructure required to support a growing private sector. PRE programs also will provide the assistance needed to bring together investors, both from the U.S. and Caribbean Basin countries, who are interested in establishing business ventures in the Basin. To support these efforts, in conjunction with commercial banks and/or other financial institutions, PRE will provide financing for the private enterprises identified, either by direct loan, through an intermediate financial institution or in a co-financing arrangement with another financial institution.

Another resource available to the U.S. Government, through the International Development Cooperation Agency (IDCA), is the Trade and Development Program, which facilitates the undertaking of feasibility studies while enhancing opportunities for U.S. firms to benefit from any new investments that might be generated by these studies. Also under IDCA is the Overseas Private Investment Corporation, whose investment promotion programs likewise can facilitate additional U.S. investment in the Caribbean Basin.

In summary, A.I.D. has both a short-run and a long-run role to play in helping to implement the Caribbean Basin Initiative. In the short run, we will be cooperating with international agencies and bilateral donors in assisting Caribbean Basin countries to overcome their balance-of-payments problems and to design and implement economic stabilization and recovery programs based on policies that stimulate productive activities and avoid the reappearance of serious fiscal and balance-of-payments disequilibria. We will work with Caribbean Basin countries to find the most efficient possible ways to use ESF resources to provide foreign exchange for key imports of raw materials and intermediate goods by the private sector. A.I.D. also has an important role to play in working with the countries of the Basin to ensure that local-currency generations from ESF resources are used primarily to support the short-term local currency credit needs of the private sector, while those from P.L. 480 resources will support public- and private-sector development activities with longer-term payoffs.

Development, we recognize, is a long-term process. We cannot focus on the short term alone. It will take several years before the benefits of the trade and investment components of the CBI have a significant impact. Meanwhile, complementary Development Assistance activities are needed now to enable public- and private-sector managers and administrators to take maximum advantage of these opportunities and to help provide the agricultural, industrial, and export credit that will be required. Other investments in human resources and in such activities as agricultural research have payoff periods that are even longer. We know that the rates of return to these investments are high, and we will continue to support them.

### MILITARY ASSISTANCE

Senator **Kasten**. Thank you for your testimony.

Mr. Secretary, your prepared testimony makes no reference to military assistance, although in the President's remarks before the Organization of American States, he did make mention of a military assistance supplemental.

Do I, therefore, understand correctly that any military assistance is not considered to be part of the Caribbean Basin Initiative, and that that will be coming to the Congress in another form?

Mr. **Enders**. That is correct, Mr. Chairman. It is an entirely separate proposition. We are working on a proposal for our military assistance supplemental to be submitted separately. We expect it to be an appropriation and not an authorization bill. That is to say, to fit within the existing authorization.

Senator **Kasten**. There are a number of people, when presented with the Caribbean Basin Initiative, who will say that this is too little, and it might also be too late. I think, without question, we see the explosive military buildup coming from Cuba and now Nicaragua. We see Soviet tanks. We see more and more Cuban advisers.

Can you tell us that this program is going to be sufficient to stem the tide which is so clearly going against us at this particular moment in Central America?

### TIMING OF ASSISTANCE PACKAGE

Mr. **Enders**. Mr. Chairman, I think there is no question that we should have done this a long time ago. We would be in much better shape if we had done it a long time ago. Probably the program that we would have had to put forward would have been less expensive than the one we put forward now.

By the same token, if we don't do this one now, the bill in the future could be really large, as we well know. If, in fact, the situation deteriorates as badly as you suggested just now, the implications for the United States, in terms of required defense efforts alone, would be very substantial, and far out of proportion of even magnitudes we are talking about here.

Let me emphasize that this is not the only step that the United States should take. We, obviously, are not proposing to try to deal with the current situation in El Salvador by tariff cuts.

What we are proposing is that those countries that are not now in the grip of an insurgency, or are not now seriously menaced by outside subversion, have a chance to improve their economic situation, to improve their social and political situation, and to put themselves beyond the reach of the kind of thing that is now happening in El Salvador, and much earlier in Nicaragua.

Costa Rica is an obvious case in point, a strong democracy, so strong that it has resisted a year of bankruptcy or near bankruptcy and then bankruptcy, a terrific compression in the living standard, without having anything more than scattered violence. But it has got to have help. It has got to have help on a really large scale, and our $70 million is designed to be inserted in a larger program that could help save that country.

It is going to have to make self-help efforts, too, cutting down its own budget deficit, raising electricity and fuel prices, et cetera. There are all kinds of things that have got to be done by Costa Rica, but that country can be, with some effort, put beyond at least many of the dangers that are in the present situation.

You have got the case of Jamaica. Jamaica had a turnaround after the 7 years of consistent economic decline, a turnaround that was voted by the public overwhelmingly, voting out a government that was bringing the Cubans in, that was training a large number of Jamaicans in Cuba in paramilitary forces. But if this government doesn't succeed, then there will be no future for democratic, pluralistic, open societies in the Caribbean area as a whole. It is a testing case.

Some results have been achieved by Mr. Seaga in the last year, but they have been plagued by the downfall and the bulk side price, so they will need more help.

This is not the only thing we must do. We must have military assistance, in the cases where there is fighting. We must have political change, as in El Salvador. We should have had it earlier in some of the other places. We must also take advantage of whatever opportunities there are to do some negotiating.

### CUBAN INTERFERENCE IN LATIN AMERICA

Senator **KASTEN**. A number of countries in the area are, as you have said, currently menaced by Soviet backed Cuban interference?

Mr. **ENDERS**. There is no question about.

Senator **KASTEN**. You mentioned that one of the factors in our policy toward the Caribbean is the reaction toward the Soviet backed Cuban interference in a number of these countries. Can you tell the subcommittee, first of all, how many countries in Central America have either Cuban military advisers or Cuban arms within their borders?

Mr. **ENDERS**. Of course, the primary country is Nicaragua. It has no less than 1,800 to 2,000 Cuban security and military advisers, and I use both words, Mr. Chairman, because they come from the Ministry of Interior and from a variety of state organs of Cuba, as well as from the armed services of Cuba.

The Soviet Union has in Managua more military personnel as advisers than we have as military assistance officials in El Salvador, just the Soviet Union. Then there are the Eastern Europeans, there is the PLO, as well as the Cubans. There are quite a lot of foreign advisers.

Weapons that have been provided by Cuba, or whose supply has been arranged for by Cuba, have been sent to insurgents in El Salvador, Honduras, Guatemala, and now there are some showing up in Costa Rica, Colombia. Practically every country in the area has been threatened in one way or another.

Senator **KASTEN**. Senator Inouye.

Senator **INOUYE**. Mr. Secretary, has the administration determined how much you are requesting for your supplemental military assistance?

Mr. **ENDERS**. Not finally. At the time the President made his speech on February 24, I gave the figures as up to $35 million for

El Salvador, up to $17 million for Honduras, with up to $8 million for other countries in the region, but our final decision has not been made on that.

### FUTURE UNITED STATES POLICY TOWARD EL SALVADOR

Senator INOUYE. If the rightist party of Robert D'Aubuisson gained control of the government in the March 28 election, do you still propose to give military assistance to this new government in El Salvador?

Mr. ENDERS. We propose, Senator, to support, through economic and military assistance, a government in El Salvador that is headed in the fundamental reforming direction that has been the basis for U.S. policy in that country under two administrations.

That is to say, we are interested in seeing a government that makes progress in controlling human rights abuses, that is moving ahead with its land reform, that is moving ahead with the political reforms, creating democratic institutions—these elections are constitutional assembly elections, and they are the first step in that direction—asserting effective control over the armed forces.

All of those are directions that we think the Salvadoran Government should move in, and our assistance would be designed to support such a movement. That will be the message that we will give to the new Salvadoran Government when they emerge from this election, as well as the old one.

Senator INOUYE. Do you agree that the organization headed by D'Aubuisson is in tune with your policy?

Mr. ENDERS. I think that the policy to be adopted by a government that emerges from that election will have to be examined and debated at that time, Senator. But I don't think there is any question at all about the kind of government, the kind of direction that we can support in El Salvador.

### ALLOCATION OF THE ASSISTANCE PROGRAM

Senator INOUYE. How do you propose to allocate this $350 million ESF assistance program?

Mr. ENDERS. $70 million of it would go to Costa Rica, again in the context only of internationally headed stabilization program as negotiated through the International Monetary Fund, whose sessions are underway. The Dominican Republic would receive $40 million of it.

El Salvador would receive $128 million, which will bring the total El Salvador economic assistance in fiscal year 1982 to $232.5 million. That will still not be enough, Senator Inouye, to prevent a decline in the income of El Salvador again this year.

Over the last 3 years, the income of El Salvador has fallen by 20 percent as a result of commodity price changes and the war, the flight of capital. As you know, the insurgent strategy is to strike against the economy, and they have destroyed 1,000 buses in the last 2 years, to give you an idea of the damage that they have done to the capital stock, power lines, bridges. This sum we think is needed to prevent a catastrophic fall in the economy of that country.

A small amount to Haiti, $5 million, bringing our total assistance to Haiti to $36.5 million.

Thirty-five million dollars to Honduras, a country that is just returning to a democratic system after 12 years of military rule. There was an election with very wide popular support there. A country that has serious economic difficulties, and is also threatened by the creation of a united left under Cuban auspieces.

Fifty million dollars for Jamaica for the purposes I indicated earlier, to make sure that they get through this recession year and keep on toward working their way out of the deep depression that they fell into in the Manley years.

Ten million for Belize, a small country threatened by a number of forces, economic as well as political, just in its first year of independence.

Ten million dollars for the Caribbean islands as a whole, each of them have been hit by the present circumstances in various ways. We have $2 million in regional programs for free labor development.

## CONTRIBUTIONS FROM OTHER COUNTRIES

Senator **Inouye**. What resources will be made available by Canada, Mexico, and Venezuela?

Mr. **Enders**. We received confirmation in New York this weekend that the Mexicans and the Canadians will continue their oil facility under which last year they gave $700 million together. We expect them to give the same amount this year.

In addition to that, Mexico is adding new trade preferences. Canada has a program for the area of some $500 million over a 5-year period, it is building up to that, it is doubling its aid level overall. Given that Canada is a country one-tenth the size of this country, that is a substantial program.

I remarked before you came in, I think, Senator Inouye, that Colombia, a country with less than $1,000 in income, has come up with a substantial package worth over $50 million for the countries of the area, quite a gesture.

We think the multilateral banks can do more. There are two regional groups that are organizing, and they expect to increase their outlays.

I have been to Japan, and I have been told that the Japanese are looking for ways to increase their own economic aid to the area, which is now on the order of $25 million, and could be increased substantially.

The Europeans have rather important programs, and they expect to increase them. We have just had Mitterand here who welcomed this program, and told us that he expected both France and the European Community countries as a whole to do more.

## FUTURE ASSISTANCE PROGRAMS

Senator **Inouye**. The President has indicated that this will be a sustained commitment over a long period of years. Do you have any projections for fiscal years 1984, 1985, and 1986?

Mr. **Enders**. In terms of aid?

Senator **Inouye**. Yes.

Mr. **Enders**. We have a fiscal year 1983 budget. You will notice that the total amount of economic assistance is less than the amount that is projected for this year, if you include in this year the supplemental. We think that somewhat higher levels are required, but not necessarily levels at this high point.

It is a sustained commitment in the sense that the trade measures and the investment measures will not work, Senator Inouye, unless they are available and reliable to investors and businesses in general over a long period of time.

Senator **Inouye**. Thank you very much.

Thank you, Mr. Chairman.

Senator **Kasten**. For the benefit of the members of the subcommittee, we will try to stay roughly within 5 minutes for questions per member, and we will try to make a number of rounds of questions. Secretary Enders is able to be with us for certainly an hour or so longer, if there are questions.

Senator Rudman.

### MEXICAN ASSISTANCE

Senator **Rudman**. Thank you, Mr. Chairman.

Mr. Secretary, I wonder if you might just tell me, from your statement, I assume that Mexico, Venezuela, and Colombia, are going to eliminate import duties to these nations, such as we are intending to do; is that accurate?

Mr. **Enders**. They do it in a different way. To be quite precise, Mexico, which has rather high duties, actually rebates those duties to the countries involved.

Senator **Rudman**. The net effect is the same.

Mr. **Enders**. The net effect is a cash flow. Actually, the trade doesn't grow as much as it otherwise would because these are, as I said, very high duties.

Senator **Rudman**. What about concessional oil pricing?

Mr. **Enders**. They will continue that. The current oil facility, in effect, rebates some 30 percent of the total cost of the oil to the countries involved. We have been told that in spite of the lower price of oil, they will maintain that facility, and that is substantial in importance.

### ROLE OF THE EXPORT-IMPORT BANK

Senator **Rudman**. This morning, in the President's statement, he has essentially said that he wants the Export-Import Bank to do more to aid these countries and their private sectors in importing critical materials. Yet, coming before this subcommittee in the 1983 budget request for Ex-Im Bank will be a reduction from last year's level, again.

So the President is going to ask us, in his request, to go from the fiscal year 1982 level of $4,400 to $3,830 million. I simply want you to help me with a very confused mind here.

How are we supposed to be commiting more to help the Caribbean Basin countries on the one hand, when another arm of the administration is going to come in here and ask us to reduce further the Ex-Im Bank loan authority?

Mr. **Enders**. We are not asking for additional Ex-Im Bank authority for the Caribbean Basin, not a special one. On the other hand, the bank will look much more vigorously than it has, and in a more forthcoming way, on the guarantee of supplier credits for the area. The supplier credits have become, in fact, a major problem in the area.

A number of the countries are so bad off that regular 1-year credits are very hard to obtain on a sustained basis. This doesn't help countries like El Salvador that are really in desperate condition economically, or for the moment even Costa Rica until it gets itself a stabilization program. But a number of other countries, it will help.

Senator, you are absolutely right, I think it is indicative of the budget squeeze that we are all in. The overall budget is still in our proposal being cut while we are rearranging what we use it for.

Senator **Rudman**. It is my understanding that they want to reduce guarantees by $1,200,000,000. I will only say to you that it is all well and good to have a statement saying that we want to encourage greater economic activity in the area, and one of the ways we would like to do it is through the Ex-Im Bank. But I think it is inconsistent to do some of these other things on the other side, thus placing a greater drain on the Ex-Im Bank in trying to fulfill some new responsibilities. I will just make that as an observation.

Mr. **Enders**. It has got to cut down its other activities even more.

## TAX INCENTIVES TO RELOCATE IN CARIBBEAN

Senator **Rudman**. We have had testimony here that that cutdown has been very deleterious for many American companies, and so we simply exacerbate the problem.

Let me just go to one further question. One thing that was said here, I believe by you, Mr. deKieffer, but either one of you can answer the question.

It is my understanding, if I understood your testimony correctly, that you are going to propose to extend investment credits in our Tax Code, for domestic American corporations and I assume other incentives to those companies which engage in economic activity in the Caribbean Basin.

To give labor intensive industries domestic tax credit equivalency to locate facilities in the Caribbean Basin will have an inevitable impact on employment in this country because, unquestionably, as a corporate manager putting up a new labor intensive facility to employ 500 people, I would rather do it with the wage structure in Guatemala than I would with the wage structure in Nashua, N.H., or Burlington, Vt.

How do you answer that?

Mr. **deKieffer**. As I mentioned in my comments earlier, Senator, one of the factors that will still be in place with the Caribbean Basin Initiative is the so-called escape clause in terms of the sections 201 and 203 of the Trade Act of 1974.

So, to the extent that labor intensive American industries are, in fact, hurt, they can seek and gain relief by petitioning through the International Trade Commission, if they can demonstrate that they have been injured by increased imports.

Senator **Rudman**. I can tell you that this would not be good enough for me because, when you are trying to create employment in this country, with declining employment, I don't want those jobs to leave the country, and then have to start petitioning the bureaucracy, which I have had some experience with, trying to get the jobs back.

I can tell you, I will not only oppose that section of the Caribbean Basin Initiative, but I will try to build opposition to it. I don't think that we should be exporting jobs through tax credits.

I think that is one part of your plan that I don't like, even though I support most of it.

Mr. **Enders**. Senator, perhaps I could put this in a different perspective for you.

At the present time there are some things in the Caribbean Basin which attract investment, as you say, the Guatemalan wage rate. There are other things that don't attract investment. For example, the transport rates in the area are quite unfavorable in many places at the present time. Skilled labor is not available on the same scale or the same sophistication as in the United States. You balance all these things out.

A number of the countries of the area offer tax incentives for investment. But under our present tax laws, Jamaica offers zero taxes on an American company located down there, and the company makes some profits and then remits them, it does not receive a credit. Under our tax law the U.S. taxes the remitted profit exactly as if there had been no tax incentive at all. Jamaica's tax incentive goes into the U.S. Treasury.

Our purpose is to offset that to some degree by the best way we could find. All this does is make the area almost equal to the United States, not more attractive than the United States. It is getting the same tax credit as the United States. It will not make it more attractive than the United States, and it will offset somewhat undesired effect of the United States collecting the equivalent of these taxes.

Senator **Rudman**. I understand your position, Mr. Enders.

My time is up, Mr. Chairman. I just want to comment that I have seen companies in New England, with the absence of tax incentives, moving to Mexico with small products that are labor intensive, and that the cost of transport is not significant.

I, frankly, think that we should look very carefully at exporting jobs at this time. Although the rest of the project and the initiative I agree with, I think that this is one aspect that causes great dissatisfaction among many people. I don't think you can count how many jobs this might cost this country, and it is not good to tell people, "If it does cost you your job, there is an administrative process to get your job back." That is not very good for people who are about to run out of employment.

I do suggest this is one section that we really ought to look at. I appreciate your candor.

Thank you, Mr. Chairman.

Senator **Kasten**. Senator Johnston.

### PUERTO RICO AND THE VIRGIN ISLANDS

Senator JOHNSTON. Thank you, Mr. Chairman.

Along that same line, Mr. Secretary, or Mr. deKieffer, either one of you as appropriate.

Puerto Rico has section 936 and Virgin Islands has section 934, I believe those numbers are, which give them the special tax credit. What you envision is the same kind of protection for other nations in the Caribbean Basin?

Mr. DEKIEFFER. No, not exactly, Senator. In the case of both Puerto Rico and the Virgin Islands, our investment there is further encouraged by the accelerated cost recovery provisions of the Economic Recovery Tax Act of 1981 signed by the President last year.

Specifically, the act extends the provisions of ACRS to properties predominantly in Puerto Rico and other possessions, which are used or controlled by certain U.S. taxpayers, that are not allowed these benefits under present law. So, there will remain, in effect, additional provisions for Puerto Rico and the Virgin Islands.

Senator JOHNSTON. That is ACRS principally?

Mr. DEKIEFFER. That is correct.

Senator JOHNSTON. That is the new provision in the new tax code?

Mr. DEKIEFFER. That is correct.

Senator JOHNSTON. Other than that, it would be pretty well the same?

Mr. DEKIEFFER. The leasing provisions.

Senator JOHNSTON. The leasing provision, Mr. Dole said that it is going to be repealed on February 18. [General laughter.]

Mr. ENDERS. Then this is a proposal to repeal it for everybody, including Puerto Rico.

The difference between Puerto Rico, the Virgin Islands, and the Caribbean countries, under this proposal, there would only be one tax incentive for the Caribbean countries, the investment tax credit.

Senator JOHNSTON. My colleague spoke of the loss of jobs in the United States, and that also includes Puerto Rico and the Virgin Islands. They are American citizens, and they cannot survive economically without some real advantage over their neighbors down there.

After all, Barbados and the other nations down there, they don't have minimum wage, and they don't have the EPA, and other expenses of doing business which we, as the American Government, impose on them. So, I hope that they will continue to have the real advantages they do because, without them, their business will leave. It is just that simple.

### DUTY-FREE ENTRY FOR CARIBBEAN PRODUCTS

Mr. ENDERS. You are exactly right, Senator.

Senator JOHNSTON. Mr. Secretary, as I understand, 87 percent of the goods in the Caribbean Basin are presently duty free. If that is true, then where do you expect releasing of the duty on the rest to have an impact?

What goods would you see being manufactured and imported into the United States, and how much, particularly in terms of dollars and jobs, would you see that producing?

Mr. ENDERS. To put that into perspective, Senator, if in fact one of the countries down there exported only coffee to us, then 100 percent of its export to us would be duty free.

The reason that figure is so high is that the countries make mainly traditional kinds of staple products that largely enter duty free. We have in addition to that, as Mr. deKieffer said in his statement, used our system of preferences in order to give additional advantages in some cases.

So, what we are looking at is opening the full range of the American market, with the exception of those products that come under the textile and apparel agreements, in order to present for a limited period very substantial market opportunities.

We have attempted estimates, I think the USTR has attempted estimates of the trade impact of that. Frankly, I don't think they are worth anything. I don't really know on what basis one can give an accurate figure on this because we don't know how well the islands and the mainland countries will respond. We don't know yet, also, how well the U.S. industry and the European industry will take advantage of this. We have not put a number on it, Senator.

Senator JOHNSTON. Not in terms of numbers, but what products, potentially?

Mr. ENDERS. We think that a range of light manufactured products, as well as the traditional ones, can be introduced. Indeed, that is already happening to some degree. The Barbados is just beginning to do a little bit of minor electronics stuff. Baseball gloves are appearing in Haiti.

A few of those products are beginning to appear, and then we want to get the entrepreneurs' attention to this, and see whether they can't look across the border and see what other light manufactured products, but not automobiles, obviously, or not anything that is heavily capital intensive.

Senator JOHNSTON. Not sugar, surely. [General laughter.]

Mr. ENDERS. And not more sugar, Senator, than has come in in peak years in the past.

Senator JOHNSTON. Along the lines of Puerto Rico and the Virgin Islands, businessmen presently can take, as you know, tax deductions for conventions held in those areas.

Mr. ENDERS. Right.

Senator JOHNSTON. Would that same advantage be extended to other areas?

Mr. ENDERS. Senator, you may know that it has been extended by treaty to Jamaica. We have taken the position that we are prepared to discuss with, negotiate with, other countries in the area for new tax treaties that could contain a number of provisions that we want to have in them, such as discovery and disclosure provisions, as well as a number of provisions that they want in them, which in some cases would be the convention tax relief provision.

I don't know how many of those treaties will, in fact, be negotiated, but we would propose to be in touch with the relevant committees before undertaking any such negotiations.

Senator JOHNSTON. Let me just say, I am sure you are aware that there is an acute distress in Puerto Rico particularly, and to a lesser extent in the Virgin Islands, because of the cutbacks in the budget recently, as well as the general economic slowdown.

Anything that is done to take away their advantages or share those advantages with other areas is going to accentuate that distress. I just urge you to be very sensitive to that as we flesh out the provisions of the Caribbean Basin Initiative.

Mr. ENDERS. I agree entirely, Senator.

You may have noticed that the Governor of Puerto Rico strongly supported the President's initiative, and he has worked with us very closely in developing it. In fact, he was the person with whom it was discussed almost a year ago, before anybody else. There has been a major effort to reach a balance of advantages with Puerto Rico. You are absolutely right, it is a very sensitive matter.

Senator KASTEN. Senator Leahy.

Senator LEAHY. Thank you, Mr. Chairman.

Listening to the answers to Senator Rudman and Senator Johnston, I wonder if I could get a breakdown by country of those exports which are now subject to duty, but under the CBI would no longer be. Could that be submitted for the record?

Mr. ENDERS. Yes Senator.

Senator LEAHY. Do you have it now?

### EXPORT/IMPORT CHART

Mr. DEKIEFFER. Senator, I have a chart showing the total exports and imports for each of the countries, but it is not broken down into those that are eligible for GSP treatment and those who are not eligible for GSP on the chart that I have with me today. We certainly can submit it for the record.

Senator LEAHY. You would be doing that anyway, would you not?

Mr. DEKIEFFER. Certainly.

[The information follows:]

# 1980 U.S. IMPORT LISTING
## U.S. IMPORTS FROM GUATEMALA
## NON-GSP, NON-TEXTILE, NON DUTY FREE

| TSUS | GSP | DESCRIPTION | A.V.E. DUTY | TOTAL IMPORT VALUE FROM CTRY | % OF TOTAL VALUE | VALUE OF TOTAL U.S. IMPORTS |
|---|---|---|---|---|---|---|

### ECONOMIC EFFECTS OF FREE TRADE

Senator **Leahy**. I heard of the preliminary analysis of the economic effects of the free trade area done by the Department of Commerce. Is that correct, is there such an analysis?

Mr. **deKieffer**. There has been a preliminary analysis done by both the Department of Commerce and our agency, with the Interagency Group, including the Department of State.

Senator **Leahy**. Is that available to us?

Mr. **deKieffer**. Yes; we can make it available.

Mr. **Enders**. Yes, Senator, but again with the caveat that we don't stand by that.

Senator **Leahy**. It would give us, though, an idea of where we are going.

[The information follows:]

## PRELIMINARY ANALYSIS

### ECONOMIC IMPACT OF THE FREE TRADE AREA

### Introduction

The objective of the free trade area (FTA) is to stimulate trade and investment in the Caribbean Basin (CB) countries. Under the FTA all CB exports to the United States, except textiles and apparel subject to textile agreements, will enter the United States duty-free. There are special arrangements for sugar imports from the CB countries. In order to be granted duty-free treatment, a product must meet a rules of origin test, defined as at least 25% local value added. Effects on the consumption and production patterns in the CB countries, the United States, and third countries are described below.

### A. Short-run Impact

Summary: Our analysis shows that in the short-run a one-way free trade area would affect a small absolute amount ($800 million) and a small percentage (19 percent) of 1980 total non-petroleum CB exports to the United States 1/. The exclusion of textiles and items likely to be rejected for rules of origin reasons causes the proportion of dutiable CB exports potentially affected by the FTA to fall from 100 percent to 64 percent. The FTA has relatively less effect on the small Caribbean islands, as measured by the proportion of total exports and the proportion of total dutiable exports to the United States granted duty-free status under the FTA. For some countries the major potential impact of the FTA is the restoration of duty-free status to items currently excluded from GSP due to competitive need. The prospective product coverage of the FTA is low in some of the small Caribbean islands due to a large number of items that would likely be rejected for failing to meet the rules of origin criterion.

### Discussion

In the short-run, before the CB countries are able to invest in new productive capacity and to expand significantly production, the direct production effect of the FTA will be a limited expansion of currently dutiable exports coming from industries with idle capacity. The immediate impact of the FTA will be simply to give duty-free status to the current volume of eligible CB exports now entering the United States at MFN rates of duty.

CB exports are currently dutiable for one of the following reasons: (1) the item is not a GSP item and has a MFN rate of duty, (2) the item is a GSP item, but the country is excluded from GSP due to competitive need, or (3) the item is a GSP item, but was denied GSP treatment for administrative reasons such as incomplete documentation or failure to meet rules of origin regulations.

Data is not collected on the reason for a GSP administrative reject. For purposes of this paper we assumed that all items currently excluded from GSP for administrative reasons are rejected because they fail to meet the rules of origin criteria, rather than because they lack complete documentation.

Furthermore, we assumed that these items would also be rejected from the FTA for failure to meet the rules of origin. This methodology somewhat understates the benefits of the FTA for two reasons: (1) not all GSP administrative rejects are attributable to failure to meet the rules of origin and (2) the rules of origin for the FTA have been liberalized relative to GSP (25% local value added rather than the GSP 35% value added) so that some items failing to meet the rules of origin under GSP will meet the FTA's rules of origin. As stated above, due to the lack of information about the local value added of GSP items, we were not able to refine our analysis to correct the understatement of benefits introduced by (1) and (2) above.

---

1/ Petroleum and petroleum products account for approximately 60% ($6 billion) of U.S. imports from the CB countries. However, only three countries (Trinidad and Tobago, the Netherlands Antilles, and the Bahamas) account for virtually all of these imports. We have excluded this trade from the analysis, in order not to obscure the effects of the FTA on other products.

Table 1 shows for each CB country the amount of trade that would be affected in the short-run by the FTA under the assumptions that textile and apparel imports 2/ are excluded from the free trade area, and that Basin imports currently excluded from GSP for "administrative reasons" will fail to meet the rules of origin test in the proposed free trade area. There are several points to note. The first is the small amount of exports in absolute terms and as a percentage of current total CB non-petroleum exports to the United States that is affected by the FTA. In 1980, roughly $800 million of CB exports would have been given duty-free status under an FTA arrangement in addition to those items already receiving GSP or MFN duty-free treatment. Due to the large share of trade already entering the United States duty-free, these items represent only 19 percent of total 1980 non-petroleum U.S. imports from the CB. Second, the two sources of exclusion--textiles and items failing to meet rules of origin criteria--cause the amount of trade that could potentially be affected by an FTA to fall by approximately one-third. Table 2 shows that, given these exclusions, rather than 100 percent, only 64 percent of total dutiable non-petroleum CB exports to the United States would receive duty-free treatment under the proposed FTA.

The third important observation is that the magnitude of the potential impact of the FTA varies greatly among the CB countries. The FTA affects a low percentage of the total non-petroleum exports to the United States in the small islands of the Caribbean. The percentage of total current exports affected in Antigua, the British Virgin Islands, the Cayman Islands, Dominica, Grenada, Montserrat, the Netherlands Antilles, St. Chris-Nevis-Anguilla, St. Lucia, St. Vincent, and the Turks and Caicos Islands is 16 percent or less. The FTA has a relatively greater impact on some of the larger Caribbean islands, with the percentage of current total non-petroleum imports affected by the FTA ranging from 23 percent to 38 percent for Barbados, the Dominican Republic, Haiti, and the Bahamas. There is no dominant pattern among the Central American countries.

For some of the countries the major impact of the FTA would be the restoration of duty-free status to items currently excluded from GSP due to competitive need. In the Dominican Republic, Haiti, the Netherlands Antilles, and Panama over half of the trade that would be affected by the FTA are GSP items currently falling under competitive needs limitations. Table 3 lists all imports from the CB countries that in 1980 were excluded from GSP due to competitive need.

As Table 2 shows, the degree of success the FTA has in terms of coverage of currently dutiable goods varies tremendously among countries. Again, the smaller Caribbean islands would have a low product coverage ratio. In Antigua, the Cayman Islands, Dominica, Grenada, Montserrat, St. Chris-Nevis-Anguilla, St. Lucia, St. Vincent, and the Turks and Caicos Islands the percentage of total dutiable non-petroleum imports affected by the FTA would be 20 percent or less. The FTA extends duty-free treatment to a large percentage of current dutiable non-petroleum imports from the larger Caribbean islands and Central American countries. The percentage of dutiable shipments affected by the FTA is 69 percent or higher for the Dominican Republic, El Salvador, Guatemala, Honduras, Nicaragua, and the Bahamas.

The low dutiable product coverage for some of the small islands is not due to the exclusion of textile exports from duty-free treatment, but rather to the large amount of trade that currently fails to meet the rules of origin requirement under GSP. The large number of current GSP administrative rejects was one of the factors motivating the liberalization of the rules of origin relative to GSP. It is hoped that the liberalization of the rules of origin for the FTA (25% local value added rather than 35% under GSP) will increase the product coverage, and therefore the benefits of the FTA, for the smaller Caribbean islands.

---

2/ Under the proposed legislation, only textiles and apparel subject to textile agreements will be excluded from the FTA. In order to simplify the data analysis in this paper, all textiles and apparel imports (TSUS Schedule 3) were treated as exclusions from the FTA.

## B. Long-run Impact

The FTA is intended to provide to Caribbean countries an incentive to expand production of those items guaranteed duty-free access to the United States under the FTA. The long-run impact of the FTA on CB countries will be the increased volume of exports to the United States resulting from the expanded productive capacity of existing industries and the diversification of production into new industries.

Some of the factors that will influence new investment include the degree of the tariff preference introduced and the existence of established export markets, which is reflected by current high absolute levels of shipments. However, a country's ability to increase shipments in the long-run depends not only on current trade levels or the degree of tariff preferences but also upon the country's competitiveness, vis-a-vis third country suppliers and U.S. producers, and on the level of new investment to expand productive capacity.

The FTA will stimulate investment only if other impediments to investment do not exist or are small enough to be offset by the advantages derived from the FTA. In particular, political instability, energy and/or transportation constraints, and the economic policies in CB countries may stifle investment even with the FTA in place. The other elements of the CBI program are designed to help alleviate some of the existing impediments.

Annex I lists all 1980 dutiable non-textile imports from the CB countries in descending order of value of 1980 exports to the U.S. In terms of dollar value the most significant non-textile dutiable items currently exported by the CB countries to the United States are:

| Product 3/ | TSUS | 1982 Duty | 1980 Imports from CB ($ millions) | CB Imports as % of total U.S. Imports | Major CB Exporters |
|---|---|---|---|---|---|
| Beef | 10610 | 2¢/lb. | 222 | 14% | All Central American countries |
| Electronic tubes | 68758 | 5.8% 4/ | 58.6 | 1% | Barbados, El Salvador, Haiti |
| Baseball Equipment | 73456 | 5.8% | 32.5 | 83% | Haiti |
| Capacitors | 68580 | 10% | 28.2 | 10% | Dominican Republic, Haiti, El Salvador |
| Cigars | 17066 | 86¢/lb.+ 4.5% 4/ | 24.9 | 71% | Honduras, Nicaragua, Jamaica, Costa Rica, Dominican Republic |
| Resistors | 68610 | 6% | 17.6 | 10% | Barbados, Costa Rica, El Salvador |
| Benzenoid drugs | 40785 | 1.7¢/lb.+ 12.5% 4/ | 14.3 | 8% | Bahamas |
| Analgesics | 41222 | 10.9% | 12.7 | 54% | Bahamas |
| Leather handbags | 70607 | 10% | 8.9 | 9% | Nicaragua, Haiti, Dominican Republic, Trinidad |

---

3/ Although a high value import from the Caribbean, sugar (TSUS 15520) is not included in this list due to the limitation on duty-free imports of sugar under the FTA.

4/ 1980 duty rates.

| Product | TSUS | 1982 Duty | 1980 Imports from CB ($ millions) | CB Imports as % of total U.S. Imports | Major CB Exporters |
|---|---|---|---|---|---|
| Tobacco | 17060 | 16.1¢/lb. | 8.9 | 9% | Dominican Republic, Guatemala, Honduras, Jamaica, Nicaragua |
| | 17010 | 36¢/lb.4/ | 3.6 | 43% | |
| | 17080 | 17.5¢/lb. | 3.2 | 6% | |
| | 17045 | 20¢/lb. | 3.0 | 76% | |
| Pineapples | 14896 | 27¢/2.45 cu. ft. | 5.1 | 91% | Honduras |
| Welded iron or steel pipes | 61032 | 1.9% | 4.2 | 0% | Bahamas |
| Luggage, handbags | 70660 | 20% 4/ | 3.6 | 1% | Nicaragua, Haiti |
| Leather footwear | 70035 | 8.5% | 3.3 | 0% | Haiti, Costa Rica, Guatemala, Dominican Republic |
| Rum | 16914 | $1.62/ gallon | 2.6 | 99% | Jamaica |
| Gloves, rubber or plastic | 70586 | 27.1% | 2.3 | 74% | Barbados |

The magnitude of the advantage offered by the FTA varies across products, depending on the height of the U.S. tariff that is being removed. Products with higher U.S. rates of duty will gain the largest advantage relative to the Basin's current position vis-a-vis third country and U.S. suppliers. In 1980 some of the imports from the CB countries with the highest rates of duty were: avocados, rum, citrus juices, gloves, watch bracelets, mushrooms, and lace.

---

4/ 1980 duty rate.

II. Impact on the United States

In the long-run the expanded CB productive capacity and export levels will have the effect of: (1) filling increased demand for the product(s), (2) replacing uncompetitive U.S. production, or (3) replacing imports from third countries. Increased CB exports will have a long-run impact on U.S. industry to the extent that the increased CB production displaces existing U.S. production and/or prevents expansion of competing U.S. industries.

In addition, as the CB countries develop and expand their productive capacity in response to the CBI and other measures, their demand for imports will grow. Table 4 shows that in almost every Caribbean Basin country, the United States is the principal supplier of imports, in most cases capturing over 25% of the total import market. Given the strong U.S. position in Basin markets, the United States can be expected to fill a significant part of that additional demand. Currently the largest value U.S. export items to the CB countries are: chemicals, fertilizers, motor vehicles and parts of motor vehicles, kraft paper, refrigerators, airplanes, generators, pre-fab buildings, chickens, corn, wheat, rice, cigarettes, soybeans, oils, tallow, flour, and alfafa. Thus, another long-run benefit of the FTA will be the increase in jobs and profits from expanded demand by the CB countries for U.S. imports.

Finally, U.S. consumers may enjoy the benefit of lower prices for CB imports. U.S. firms that invest in the Caribbean Basin may enjoy higher rates of return made possible by the trade and investment measures in the CBI.

Although analyses of the likely costs and benefits of the FTA on a state-by-state basis have not been undertaken, we have examined the effects of the FTA on Puerto Rico and the Virgin Islands, since these U.S. possessions and territories have a similar industrial and agricultural base as the CB beneficiary countries. The rum industry in the Virgin Islands and Puerto Rico may be affected by the provision of duty-free access to rum under the FTA. To protect the revenue that the Virgin Islands and Puerto Rico derive from the excise tax on rum sold in the United States, the CBI legislation includes a provision rebating the excise tax on all imported rum sold in the U.S. to the Virgin Islands and Puerto Rico. Other industries in the Virgin Islands that produce items currently exported by the CB countries to the United States are benzenoid drugs and analgesics. Other major industries in Puerto Rico that produce items exported by CB countries to the United States are electronics and tobacco.

## III. Impact on Third Countries

The FTA will affect third countries to the extent that (1) expanded CB exports to the United States replace third country exports or (2) third country suppliers fill part of any increased demand by the CB countries for imports for consumption or as inputs for production. The major third country suppliers of the largest categories of dutiable imports from the CB are:

Beef: Australia, New Zealand, Canada
Electronic tubes: Malaysia, Singapore, Japan
Baseball Equip.: No other major third country suppliers
Capacitors: Japan, Mexico, Taiwan
Cigars: Mexico, Philippines, Netherlands
Resistors: Japan, Mexico, Canada
Benzenoid drugs: Ireland, Italy, Japan
Analgesics: Canada, Ireland
Leather handbags: Hong Kong, Korea, Colombia
Tobacco: Cameroon, Mexico (TSUS 17010)
  Brazil, Korea, Canada (TSUS 17060)
  Mexico, Brazil (TSUS 17045)
  Korea, Brazil (TSUS 17080)
Pineapple: No other major third country supplier
Welded steel pipe: Canada, Japan
Luggage, handbags: Taiwan, Korea, Hong Kong
Leather footwear: Korea, Italy, Taiwan
Rum: No other major third country suppliers
Gloves, rubber or plastic: Hong Kong, Philippines

Expanded CB exports of these and other products will affect third country suppliers differentially. Also, CB exports may displace exports from some of the minor suppliers not listed above. In the short-run, the overall displacement effect should not be large, due to the small volume of CB imports that would be affected and the limited amount of idle capacity. In the long-run, the displacement effect will be limited by the fact that overall potential industrial capacity of the CB countries is not large relative to total world production.

For years other than 1980: foreign trade statistics of relevant country
n.a.: not available

## Revenue Foregone from the Free Trade Area

Total duties collected in 1980 on imports, other than textiles and apparel (TSUS schedule 1) and sugar (TSUS 15520), from the potential beneficiary Caribbean Basin countries, excluding Cuba were:

$50,320,275

It is appropriate to exclude the duties on textiles and apparel because textiles and apparel will continue to be subject to duties under the CBI free trade area.

In 1980 duties on petroleum were suspended from January to June 1980. During July - December 1980 the value of petroleum imports from the CB was $2.7 billion and the duties collected were $10.2 million. The value of petroleum imports from the CB from January - June 1980 were $3.2 billion. Therefore in order to reflect a full year's duty on petroleum an additional $12.1 million* would have to be added to the above figure, bringing it to $62.4 million. (Duties on petroleum have been in effect since July 1, 1980.)

The duty on sugar (TSUS 15520) was raised in December 1981 from 0.625¢/lb. to 2.8125¢/lb. Under the CBI, three countries (Dominican Republic, Guatemala, and Panama) will receive duty-free treatment on a quota of sugar, whereas without the CBI these three countries would be subject to duties. The total quota of sugar under the CBI from these three countries is 1.1 million metric tons per year. If these countries fill their quota, the tariff revenue foregone on sugar is $71.3 million. However, if there is a significant rise in the world price of sugar in 1983 or thereafter from the current depressed levels the duty on sugar may fall.

Therefore, the estimated yearly revenue foregone from the free trade area is:

$133.7 million.

---

*The ratio of July - December to January - June shipments is .84. Dividing $10.2 duties by 0.84 gives $12.1.

### ALLOCATION OF CBI FUNDS

Also I have been told that $50 million of the CBI economic assistance is unprogramed at this time, is that correct? Is it as high as $50 million?

Mr. REICH. No, sir, not out of the $350 million ESF supplemental request for fiscal year 1982. Ambassador Enders gave you the breakdown, which adds up to $350 million.

Mr. ENDERS. There is $2 million, which is intended for regional use, and there is $10 million which is planned for the Caribbean regional program for the small islands. We have not made a breakdown for these regional programs.

Mr. REICH. It is all earmarked for specfic country or regional programs.

Senator LEAHY. None of the economic assistance is unprogramed?

Mr. REICH. No, sir.

Senator LEAHY. Early on before this committee, there was a discussion of land reform in El Salvador. I know the administration has strongly supported it. We have all been saying that it is necessary for the long-term economic development of Central America.

### LAND REFORM IN GUATEMALA

Are there land reform efforts underway in Guatemala now that we are supporting?

Mr. ENDERS. The land question in Guatemala is a different one. El Salvador is a very populated country, with a very unfavorable ratio of people to land. Guatemala doesn't suffer from that.

In addition to that, the Government of Guatemala has for a number of years been distributing title to land in that country on quite an active basis. I think over the last 2 years, if I can recall from memory, Senator, some 40,000 hectares have been divided by the government, a very substantial amount.

That is not an activity which is supported by the United States.

Mr. REICH. No; not at the present time. However, we have been financing a pilot settlement program for 3,500 landless poor to test a land settlement approach for unused lands.

Senator LEAHY. So, there is no land reform program that we have set forth in Guatemala now?

Mr. REICH. No, sir.

Congressman Long was in Guatemala just recently, and he asked if we would look into this. We have requested the AID mission to contact the Government of Guatemala to get some information, but that is the extent of it.

Mr. ENDERS. But the land problem is quite different there.

### LAND REFORM IN HONDURAS

Senator LEAHY. What about the Honduras, are we supporting any land reform program in the Honduras?

Mr. REICH. We have an agricultural loan in Honduras, and I will be pleased to provide you information on the extent of our involvement through this loan in the land reform program there.

[The information follows:]

### HONDURAS LAND REFORM

Under AID's ongoing Agriculture Sector loan, we have assisted Honduras' land titling system and have financed cadaster surveys. In fiscal year 1982, we plan a Small Farmer Titling and Services project which will assist the government to improve its land reform program management.

### PRIORITY NEED FOR RESOURCES

Mr. ENDERS. Once again, there is not the same problem at all, Senator. It is a country of small holdings, practically no large scale accumulation.

Senator LEAHY. You see no need for a program of land reform there?

Mr. ENDERS. No.

Senator LEAHY. Do you feel there is a need for program beyond what the Guatemalan government has done?

Mr. ENDERS. I think it is a very useful question to investigate, as Congressman Long indicated. Whether it will show that this is a priority need for resources is, I think, uncertain.

Senator LEAHY. Will you be responding to him on that?

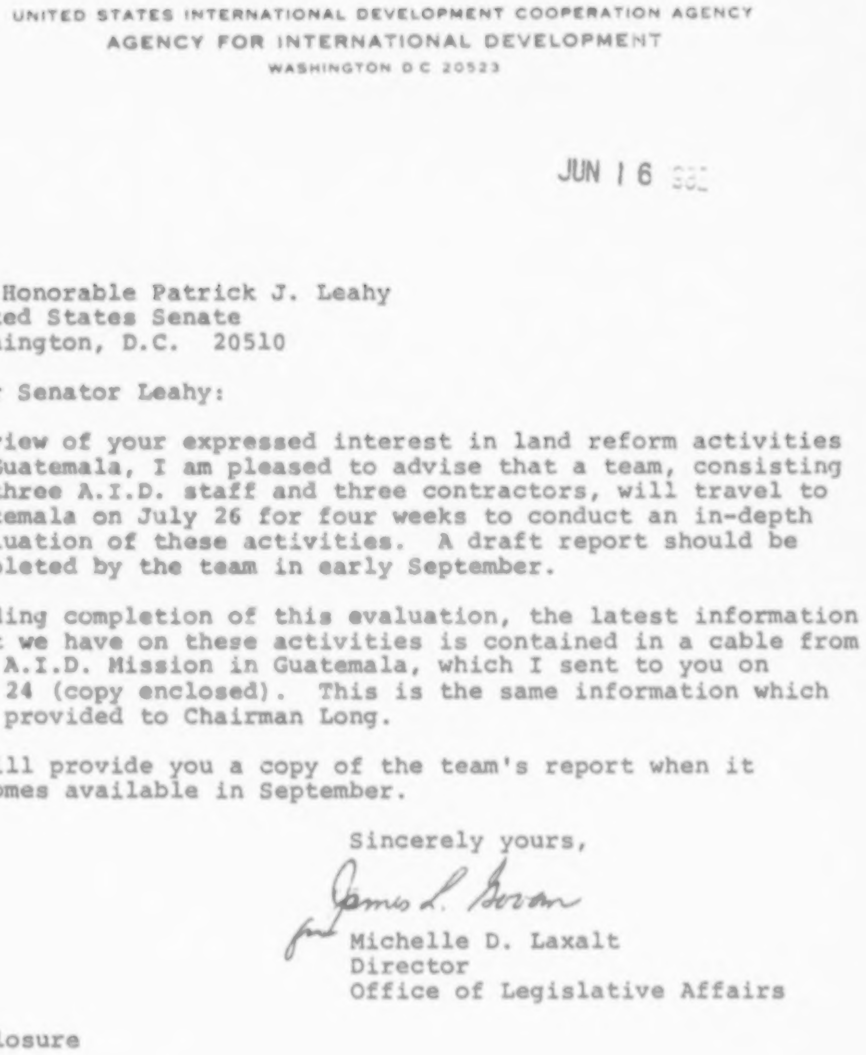
Mr. ENDERS. Yes.

Senator LEAHY. Will you let us know?

Mr. REICH. Yes, sir.

[The information follows:]

## LETTER FROM MICHELLE D. LAXALT



UNITED STATES INTERNATIONAL DEVELOPMENT COOPERATION AGENCY
AGENCY FOR INTERNATIONAL DEVELOPMENT
WASHINGTON D C 20523

JUN 16

The Honorable Patrick J. Leahy
United States Senate
Washington, D.C. 20510

Dear Senator Leahy:

In view of your expressed interest in land reform activities in Guatemala, I am pleased to advise that a team, consisting of three A.I.D. staff and three contractors, will travel to Guatemala on July 26 for four weeks to conduct an in-depth evaluation of these activities. A draft report should be completed by the team in early September.

Pending completion of this evaluation, the latest information that we have on these activities is contained in a cable from our A.I.D. Mission in Guatemala, which I sent to you on May 24 (copy enclosed). This is the same information which was provided to Chairman Long.

I will provide you a copy of the team's report when it becomes available in September.

Sincerely yours,

for James L. Bovan

E.O. 12065: N/A
SUBJ: ASSESSMENT OF GUATEMALAN AGRARIAN REFORM

REF: STATE 054482

THE FOLLOWING ASSESSMENT PROVIDES AN OVERVIEW OF AGRARIAN REFORM EFFORTS IN GUATEMALA. THIS ASSESSMENT IS PRELIMINARY AND WILL BE FOLLOWED BY A MORE IN-DEPTH ANALYSIS OF CONSTRAINTS TO IMPROVEMENTS IN LAND TENURE AND PRODUCTIVITY. IN THE MEANTIME, THE FOLLOWING INFORMATION SHOULD PROVIDE SOME INSIGHT INTO GUATEMALAN EXPERIENCE AND ACCOMPLISHMENTS UNDER THE PRESENT AGRARIAN REFORM PROGRAM. AS WILL BECOME APPARENT THIS PROGRAM IS HIGHLY EVOLUTIONARY DRAWING ON EXISTING GOG LEGISLATION AND PRESIDENTIAL INITIATIVES.

A. BACKGROUND:

1. DURING THE COLONIAL PERIOD IN GUATEMALA, THE SPANISH CROWN DISTRIBUTED MOST OF THE FERTILE LAND TO SPANISH COLONISTS AND/OR THEIR DESCENDANTS AS WELL AS TO THE CHURCH. THE INDIAN POPULATION WAS ASSIGNED TO WORK ON THESE ESTATES UNDER THE "ENCOMIENDA" SYSTEM, A VARIANT OF SERFDOM, WHICH ENSURED A RELIABLE SOURCE OF AGRICULTURAL LABOR. THE PRODUCTION OF THE "LATIFUNDIOS" OR LARGE ESTATES WAS HEAVILY ORIENTED TO MERCANTILIST TRADE WITH SPAIN, A PATTERN WHICH CONTINUED UNTIL THE EARLY 1800S.

2. FOLLOWING INDEPENDENCE FROM SPAIN IN 1821, A SERIES OF REVOLUTIONARY GOVERNMENTS TOOK LAND AWAY FROM THE CHURCH AND LANDED ARISTOCRACY FOR REDISTRIBUTION AMONG THE NATIONAL ELITE. THE PRIVATE OWNERSHIP OF THESE LARGE TRACTS OF LAND PROVIDED THE BASIS FOR MODERN COMMERCIAL EXPORT AGRICULTURE. DURING THIS PERIOD THERE WERE ALSO EFFORTS TO ENCOURAGE HOMESTEADING IN AGRICULTURAL FRONTIER AREAS AND LEGALIZE LAND TENURE PATTERNS IN THE INDIAN HIGHLAND COMMUNITIES.

3. UNDER THE LIBERAL CONSTITUTION OF 1945 THE GOVERNMENT WAS GIVEN THE RIGHT TO EXPROPRIATE PRIVATE PROPERTY IN THE PUBLIC INTEREST PROVIDED COMPENSATION WAS PAID. WITHIN THIS FRAMEWORK THE FIRST MAJOR AGRARIAN REFORM LAW (DECRETO 900) WAS APPROVED IN 1952. THIS LAW SPECIFICALLY PROHIBITED THE FORMATION OF LATIFUNDIOS AND PROVIDED FOR EXPROPRIATION OF IDLE LANDS FOR REDISTRIBUTION TO LANDLESS CAMPESINOS. IN THE TWO YEARS FOLLOWING PASSAGE OF THIS LAW 1.5 MILLION ACRES OR 16 PERCENT OF TOTAL FARMLAND WAS DISTRIBUTED TO SOME 100,000 RURAL CAMPESINOS.

4. WITH THE ADVENT OF THE CASTILLO ARMAS GOVERNMENT IN 1954 THE EMPHASIS OF AGRARAIN REFORM SHIFTED AWAY FROM EXPROPRIATION OF PRIVATE PROPERTY TOWARDS SETTLEMENT OF PUBLICALLY OWNED LANDS. THE AGRARIAN LAW OF 1956 ESTABLISHED DEVELOPMENT ZONES AND FAMILY-SIZE FARMS WERE SOLD WITH A TEN YEAR MORTGAGE. ADDITIONAL LEGISLATION PASSED IN 1962 FURTHER REINFORCED THE COLONIZATION FOCUS. FINALLY, THE AGRARIAN TRANSFORMATION LAW (DECRETO 1551) OF 1962, AS AMENDED, PROVIDES THE LEGAL BASIS FOR THE CURRENT AGRARIAN REFORM PROGRAM IN GUATEMALA. THIS LAW ALSO ESTABLISHED THE INSTITUTE FOR AGRARIAN TRANSFORMATION (INTA) WHICH IS RESPONSIBLE FOR THE SURVEYING, TITLING AND DISTRIBUTION OF PUBLICALLY OWNED LANDS AS WELL AS THE PROVISION OF BASIC INFRASTRUCTURE.

B. CURRENT STATUS:

1. IN FULFILLMENT OF HIS CAMPAIGN PLEDGE, PRESIDENT ROMEO LUCAS ATTACHED HIGH PRIORITY TO "AGRARIAN TRANSFORMATION" AND CONSIDERABLE EMPHASIS WAS PLACED ON THE COLONIZATION OF THE NORTHERN TRANSVERSAL STRIP (NTS). INTA WAS TOTALLY REORGANIZED FOR THE TASK AND GIVEN A CLEAR MANDATE TO DISTRIBUTE LAND AND ISSUE TITLES. APPROXIMATELY ONE-FOURTH OF THE GOG AGRICULTURAL SECTOR BUDGET WAS ASSIGNED TO INTA IN ORDER TO CARRY-OUT THIS MANDATE. INTA EXPENDITURES AVERAGED $20 MILLION ANNUALLY OVER THE 1979-81 PERIOD AND CONSIDERABLE PROGRESS WAS ACHIEVED. DURING THIS PERIOD, APPROXIMATELY 60,000 TITLES WERE ISSUED WHICH INCLUDED SOME 3,000 FAMILIES ASSISTED IN MIGRATING TO GUATEMALA'S NORTHERN AGRICULTURAL FRONTIER KNOWN AS THE NTS. FURTHERMORE, INTA COLLABORATED WITH THE COOPERATIVE FEDERATIONS AND IN SOME CASES TITLED LAND DIRECTLY TO THE COOPERATIVES FOR REDISTRIBUTION AMONG THEIR MEMBERS. HOWEVER, THE PREDOMINATE OWNERSHIP PATTERN PROMOTED BY INTA IS TO ISSUE TITLES CALLED

"PATRIMONIO FAMILIAR MIXTO" WHICH PROVIDE ALL THE BENEFITS OF INDIVIDUAL FAMILY OWNERSHIP OF THE LAND BUT LIMIT THE TRANSFERABILITY OF LAND TITLES. THIS WAS FELT TO BE NECESSARY IN ORDER TO AVOID RECONSOLIDATION OF LANDHOLDINGS.

2. AS PART OF THE AGRARIAN TRANSFORMATION PROGRAM, THE GOG DECIDED TO TURN OVER THE OWNERSHIP AND MANAGEMTN OF THE NATIONAL FARMS TO THE CAMPESINOS WHO CURRENTLY WORK AND LIVE ON THESE FARMS. THERE ARE 24 NATIONAL FARMS MOST OF WHICH WERE CONFISCATED FROM GERMAN OWNERS DURING WWII. MOST OF THE FARMS ARE DEDICATED TO COFFEE PRODUCTION AND ARE WIDELY DISPERSED THROUGHOUT THE COUNTRY. UNDER PUBLIC ADMINISTRATION, THESE FARMS WERE POORLY MANAGED AND FARM PRODUCTIVITY SIGNIFICANTLY DECLINED OVER THE PAST THIRTY-FIVE YEARS. THE POLITICAL DECISION OF THE LUCAS ADMINISTRATION TO TURN THE FARMS OVER TO THE WORKERS REPRESENTS A MAJOR BREAK WITH THE PAST. IN 1981 TWENTY FARMS WERE TITLED TO THE WORKERS AND PLACED UNDER COOPERATIVE MANAGEMENT. IT IS ESTIMATED THAT SOME 18,000 FAMILIES HAVE BENEFITED UNDER THIS PARTICULAR PROGRAM. THE GOG CONTINUES TO SUPPORT THE COOPERATIVE FARMS BY SUPPLYING AGRICULTURAL CREDIT THROUGH THE NATIONAL AGRICULTURAL BANK. MOREOVER, INTA TOOK STEPS TO ENSURE THAT COFFEE EXPORT QUOTAS WERE GRANTED TO THE NEW OWNERS. CURRENTLY, THE OFFICIAL GOAL IS TO DISTRIBUTE 100,000 TITLES BENEFITING SOME 500,000 CAMPESINOS DURING THE LUCAS ADMINISTRATION (1978-82). HOWEVER, MORE REALISTIC PROJECTIONS INDICATE ACTUAL ACHIEVEMENTS WILL BE CLOSER TO 70,000 TITLES BENEFITING 350,000 RURAL CAMPESINOS. OF THIS TOTAL, ROUGH ESTIMATES ARE THAT ABOUT 10,000 OF THESE TITLES (CORRESPONDING TO 250,000 ACRES OF NEW LANDS) WERE DISTRIBUTED UNDER DIRECTED SETTLEMENT ACTIVITIES AND GIVEN TO SPONTANEOUS SETTLERS OF NEW LANDS IN THE NTS. THE BALANCE OF 60,000 TITLES, WOULD CORRESPOND TO THE TURNING OVER OF THE NATIONAL FARMS AND LEGALIZING CLAIMS BY CURRENT LAND OCCUPANTS. TO ACCOMPLISH THE LATTER, INTA HAS BEEN ACTIVE IN PERFORMING CADASTRAL STUDIES AND MEDIATING LAND DISPUTES. THE SERIOUS LAND DISPUTES IN PANZOS AND XALAPAN HAVE BEEN RESOLVED AND LONG-TERM OCCUPANTS HAVE RECEIVED LAND TITLES.

3. IN ORDER TO APPRECIATE THE IMPORTANCE OF LAND REFORM WITHIN THE GUATEMALAN CONTEXT, THE EFFECTS OF POPULATION GROWTH ON LAND TENURE HAVE TO BE CONSIDERED. IT HAS LONG BEEN EVIDENT THAT POPULATION PRESSURES, ESPECIALLY IN THE INDIAN AREAS OF GUATEMALA, ARE REDUCING FARM SIZE AS SHOWN IN COMPARATIVE AGRICULTURAL CENSUS DATA FOR 1950 AND 1979.

| | 1950 | | 1979 | |
|---|---|---|---|---|
| FARM SIZE (ACRES) | NUMBER OF FARMS | PERCENTAGE OF FARMS | NUMBER OF FARMS | PERCENTAGE OF FARMS |
| LESS THAN 3.5 | 165,850 | 47.6 | 369,291 | 60.5 |
| 3.5 TO 17.2 | 142,223 | 40.8 | 178,283 | 29.2 |
| 17.2 TO 111.4 | 33,041 | 9.5 | 49,137 | 8.1 |
| LARGER THAN 111.4 | 7,573 | 2.1 | 13,635 | 2.2 |
| TOTALS | 348,687 | 100.0 | 610,346 | 100.0 |

THE ABOVE DATA SHOWS THAT THE RELATIVE PROPORTION OF SMALL FARMS IS INCREASING OVER TIME RELATIVE TO THE TOTAL NUMBER OF FARMS.

THIS PROCESS OF SUBDIVIDING FARMS DUE TO RAPIDLY EXPANDING POPULATION IS UNDOUBTEDLY REDUCING FARMER INCOMES CAUSING WIDESPREAD RURAL DISCONTENT. HENCE THE NEED TO OPEN UP NEW LANDS IS EVIDENT. CURRENTLY, IT IS ESTIMATED THAT 125,000 ACRES OF ARABLE LAND IN PUBLIC DOMAIN ARE IMMEDIATELY AVAILABLE FOR COLONIZATION IN THE NTS. THE MAJOR CONSTRAINT IS THE ABSENCE OF BASIC INFRASTRUCTURE AND ADEQUATE SOCIAL SERVICES IN THIS REMOTE AREA OF GUATEMALA. CLEARLY, SUCCESSFUL COLONIZATION OF THESE AREAS WOULD FURTHER DIVERSIFY AGRICULTURAL PROUDCTION AND LEAD TO MORE BALANCED GROWTH AND DISTRIBUTION OF POPULATION. AID EXPERIENCE GAINED FROM A PILOT COLONIZATION PROJECT SHOWS THE AVERAGE COST TO BE ROUGHLY $2,000 PER FAMILY SETTLED WHEN BASIC INFRASTRUCTURE AND OTHER SUPPORT SERVICES ARE PROVIDED. THIS AVERAGE COST APPEARS REASONABLE WHEN COMPARED TO THE COST OF EXPROPRIATION (WITH FAIR COMPENSATION) OF PRIVATELY OWNED FARMS WHICH MAY ALREADY BE FULLY PRODUCTIVE. IN CONCLUSION, THE MAIN THRUST OF THE GOG AGRARIAN REFORM PROGRAM IS DIRECTED TOWARDS COLONIZATION. ONLY AFTER EXHAUSTING ALL SUITABLE PUBLIC LANDS WOULD INTA SEEK TO ACQUIRE IDLE LAND FROM PRIVATELY OWNED FARMS. TO DATE INTA HAS BEEN OFFERED SOME 60 PRIVATE FARMS MOST OF WHICH ARE UNDERDEVELOPED AND LOCATED IN CONFLICTIVE AREAS. IT IS BELIEVED THAT THESE FARMS COULD BE ACQUIRED AT REASONABLE PUBLIC COST FOR DISTRIBUTION AND COOPERATIVE DEVELOPMENT.

C. POSSIBLE AREAS OF CORRUPTION:

1. IN GUATEMALA, AS IN MOST OTHER COUNTRIES, CORRUPTION IS ILLEGAL. HENCE, IT IS DIFFICULT TO DOCUMENT AND QUANTITATIVELY EVALUATE ITS SIGNIFICANCE. HOWEVER, MOST OBSERVERS WOULD AGREE THAT CORRUPTION IS A PROBLEM AND THAT ANTI-CORRUPTION LAWS SHOULD BE BETTER ENFORCED. PRIOR TO THE LUCAS ADMINISTRATION THERE WERE FREQUENT ALLEGATIONS, NONE OF WHICH HAVE BEEN BROUGHT TO COURT, THAT INTA OFFICIALS MISAPPROPRIATED FUNDS, GAVE LANDS TO MILITARY OFFICIALS, SIPHONED OFF REVENUES FROM THE NATIONAL FARMS AND ACCEPTED KICKBACKS FROM CONTRACTORS. THE GENERAL CONSENSUS, HOWEVER, IS THAT THE LUCAS ADMINISTRATION HAS IMPROVED PUBLIC ADMINISTRATION AT LEAST IN THE CASE OF INTA. IN SUPPORT OF THIS, IS THE OPEN PUBLICATION OF INTA BUDGET DATA FOR THE PERIOD 1978-82 WHICH IS UNAVAILABLE FOR THE PREVIOUS ADMINISTRATIVE PERIOD 1975-77. MOREOVER, THE LUCAS ADMINISTRATION HAS TAKEN LAND BACK FROM SOME OF THE MILITARY AND OTHER GOG OFFICIALS WHO HAD RECEIVED TITLES DURING THE PREVIOUS ADMINISTRATION. SOME OF THIS LAND WAS ASSIGNED TO THE AID FINANCED COLONIZATION PROJECT FOR SMALL FARMERS. THE LIQUIDATING OF THE NATIONAL FARMS IN 1981 HAS REMOVED YET ANOTHER SOURCE OF POLITICAL PATRONAGE AND RELATED CORRUPTION IN SO FAR AS NO MORE PUBLIC MANAGERS WILL BE NAMED TO ADMINISTER THESE FARMS. IN THE CASE OF KICKBACKS DERIVED FROM GOVERNMENT CONTRACTS ADMINISTERED BY INTA, THE EMERGENCY PROCUREMENT LEGISLATION DOES PERMIT INTA TO WAIVE SOME CONTRACTING PROCEDURES. HOWEVER, THERE

IS NO EVIDENCE KNOWN TO THE MISSION OF ACTUAL KICKBACKS MUCH LESS THEIR RELATIVE MAGNITUDE IN RELATION TO THE SIZE OF THE CONTRACT. A COMMONLY USED RULE-OF-THUMB FOR THE GOVERNMENT AS A WHOLE IS TEN PERCENT BUT THERE IS NO WAY TO VERIFY THIS. THE NEED FOR INTERNATIONAL INSPECTION OF AN EXPANDED LAND REFORM PROGRAM WILL BE ADDRESSED DURING THE IN-DEPTH EVALUATION.

D. IN-DEPTH EVALUATION

THE FOLLOW-UP EVALUATION WILL FOCUS ON THE INSTITUTIONAL CAPACITY OF INTA WORKING WITH GOG MINISTRIES OF AGRICULTURE, HEALTH AND EDUCATION TO REPLICATE, ON A MORE AMBITIOUS SCALE, VIABLE COLONIZATION PROJECTS. THE EVALUATION WILL ALSO INCLUDE ANALYSIS OF THE NEWLY INSTITUTED COOPERATIVE FARMS AND AGRARIAN COMMUNITIES AS WELL AS INTA LEGALIZATION OF "DE FACTO" LAND TENURE AND RESOLUTION OF LAND DISPUTES. THE EVALUATION WILL INDICATE WHAT IMPACT THE LUCAS ADMINISTRATION REFORMS HAVE HAD ON OVERALL LAND TENENCY AND FARM PRODUCTIVITY. FURTHERMORE, AN ESTIMATION WILL BE MADE OF THE LEVEL OF REFORM EFFORT NECESSARY TO SIGNIFICANTLY AMELIORATE SOCIAL TENSIONS IN THE RURAL AREAS GIVEN SECULAR TRENDS IN POPULATION GROWTH AND ADVANCES IN CROP YIELDS RELATIVE TO LAND AVAILABILITY. FINALLY, THE COSTS OF AGRARIAN REFORM PROGRAMS WILL BE TENTATIVELY ESTIMATED BASED ON RECENT LAND REFORM EXPERIENCE AND THE AID PILOT COLONIZATION PROJECT. MISSION WILL SEND SCOPE OF WORK FOR TDY ASSISTANCE FOR THE IN-DEPTH EVALUATION IN SEPTEL.

CHAPIN

## LETTER FROM MICHELLE D. LAXALT

MAY 24 1982

The Honorable Patrick J. Leahy
United States Senate
Washington, D.C. 20510

Dear Senator Leahy:

In testimony before the Senate Appropriations Subcommittee on Foreign Operations hearing of March 17, 1982, Mr. Otto Reich, Assistant Administrator for Latin America and the Caribbean, promised to keep you informed of the results of our assessment of land reform activities in Guatemala. The enclosed cable is the initial response of our A.I.D. Mission in Guatemala. The new government in Guatemala has indicated their interest in continuing this assessment. We are now proceeding to put together a team to carry out a more in-depth evaluation.

I will provide you with as complete a report as possible when that analysis is available.

Sincerely yours,,

/s/ Michelle D. Laxalt

Michelle D. Laxalt
Director
Office of Legislative Affairs

Enclosure: a/s

### CAPITAL FLIGHT FROM EL SALVADOR

Senator **LEAHY**. Last week, when Secretary Haig was before the committee, we raised a question about AID funds having gone to El Salvador in the past possibly ending up in Miami in banks, or in condominium purchases, or in any other way of the money going in and coming back out, some type of capital flight either through corruption or neglect, or whatever.

Obviously, we are concerned about that here. We don't want to set up some kind of a Central American "New Federalism," nor would you. Is that practically a problem, or has it been a problem practically in the past?

Mr. **REICH**. Not to our knowledge, sir. We have looked into this as we have heard the same allegations. The AID mission in El Salvador is very careful to monitor all the expenditures of United States money, and they are sure that our money can be accounted for.

Senator **LEAHY**. You have heard the same stories as I have?

Mr. **REICH**. Yes, we have. Of course, as you know, we are talking about relatively large amounts of money, and money is fungible. However, we do keep pretty close tabs on what we are doing, and we are confident that AID funds are being used for the intended purposes.

Mr. **ENDERS**. That is not the issue, Otto.

Maybe it would be helpful to explain, for example, how the ESF funds that we propose, the additional ones, will be expended, to give you some idea.

Mr. **REICH**. This is not something new. We have been making cash transfers, as you know, for many years. There have been much larger amounts as, for example, in the case of Israel.

Senator **LEAHY**. The allegations or the stories that keep percolating up here, of course, refer to past times, and that is why I asked you about it in the past, only to the extent that it might be a guidance for the future.

Mr. **ENDERS**. I think maybe you should explain some of the controls.

### CONTROL OF CAPITAL FLIGHT

Mr. **REICH**. If you are interested in the mechanisms, Senator, our mission Director from El Salvador, who is much more familiar with the mechanisms, is here and I would like to have him answer this question.

Senator **LEAHY**. Go ahead.

Senator **KASTEN**. I think it would be helpful if you could identify yourself for the record. Please take a seat next to Mr. Reich.

Mr. **ASKIN**. My name is Peter Askin, and I am currently the AID Director in El Salvador.

Senator **LEAHY**. It is good to see you again.

Mr. **ASKIN**. I think we really have two questions here. One is the general concern about capital flight, and the other is the more specific, probably more important concern about the expenditure control and monitoring of U.S. dollars.

We have set up within the past years a series of mechanisms of dollars that include preselection of the imports and submission of documentation to AID. We have rejected those that were not complete, and documents that showed any particular mismanagement or misuse. If they were not complete, we rejected them in accordance with our agreement with the Government of El Salvador.

At the same time, we have encouraged, helped, and stimulated the Central Bank, for example, to establish, within its capability, a price checking system. The Government particularly the Central Bank, has been increasingly more effective in controlling its own foreign exchange.

All foreign exchange transactions are approved by the Central Bank in El Salvador. The commodities to be financed composed a narrow eligible list. Luxuries are not financible with U.S. dollars. We have also done post-audit monitoring of these transactions and have found nothing irregular or anything that would lead us to believe that U.S. AID dollars are going to Miami as you say.

The El Salvadoran economy still suffers from some capital flight. Capital flight, as you all know, is almost impossible to plug.

Senator LEAHY. I am aware of capital flight, obviously, and capital flight has been almost co-terminus with the individual who had the capital leaving at the same time. It has been sort of a race to Miami, sometime, between the two. I think that in a country, undergoing the kind of strife that El Salvador is, it is not unexpected. Perhaps you could provide this for the record, so that I can fully understand.

[The information follows:]

### EL SALVADOR CAPITAL FLIGHT

The following actions have been taken by the Government of El Salvador to address the country's capital flight problem:

First, there is the recently enacted Law for Control of International Exchange Transactions, which declares black marketing, over-invoicing, and other methods of taking hard currencies out of the country other than through the Central Bank to be illegal.

Second, the Central Bank maintains a strict review of all applications to purchase foreign exchange.

Third, all importers must certify that they are using foreign exchange obtained from the Central Bank to purchase imports at normal market prices.

Finally, the Central Bank has established a price-checking unit to compare invoices of goods against prices normally charged for such items.

For import transactions attributable to U.S. Government supplied Economic Support Funds, AID has additional control requirements. All such transactions must fit eligibility criteria, which include raw materials and intermediate goods vital to the economy, and the imports must be from the United States. The Salvadoran Government provides regular reports to AID on the status of all import transactions designated for attribution to the program and certifies when transactions are completed.

### AID FUNDS NOT LEAVING COUNTRY

Senator LEAHY. This is a question I wanted to ask you when I was down in Salvador and I never got around to it, is it your feeling that in the past, at least, the AID funds that we have put into the country have not been among the capital leaving the country?

Mr. ASKIN. I feel quite comfortable that that is correct.

Senator LEAHY. Thank you.

Thank you, Mr. Chairman.

## RECIPIENTS OF U.S. ASSISTANCE

Senator **Kasten**. Mr. Enders, the $340 million of the $350 million of foreign assistance that you are requesting goes to only 7 of the 28 Caribbean nations listed as beneficiaries at the present time under the CBI. Don't you think that this policy could be criticized as being uneven?

Mr. **Enders**. We have chosen that list of countries that are hardest hit, Mr. Chairman, and we think the analysis will indicate very clearly that they are countries that are suffering most.

Notice also that we have chosen on that list, of course, the countries that either are or wish to become democracies. Very generally, two-thirds of the countries in the area are democracies, practicing democracies, and one of the purposes of our policy is to encourage that.

## EXCLUDED COUNTRIES

Senator **Kasten**. Under section 102 of the legislation, the beneficiary countries are listed, and this relates to the answer you just gave me. Such list right now contains Nicaragua and Grenada; both countries would undoubtedly be excluded, under the definitions of paragraph (b) of the same legislation, as Communist countries. Is that correct?

Mr. **Enders**. You see afterward an indication of the limitations on the designation powers of the President. I think there would not be any question at all that Cuba would be regarded as a Communist country.

Whether other countries would be so designated at this moment in the area, I cannot say, Mr. Chairman. Although there are very negative trends in both of the countries you mentioned, Nicaragua and Grenada, I do not regard Nicaragua now as a full-fledged Communist country, whether it would be excluded under this provision, I think not at this moment

Senator **Kasten**. There are other conditions besides being a Communist country that would preclude a country from receiving assistance.

Mr. **Enders**. There are many other conditions which are worth looking at. There are conditions for basic self-help, but they include such things as: Is the country willing to encourage and support a free trade union movement? Has the country expropriated American property without due compensation? There are a very large number of conditions, let me say, which are classical in American foreign assistance legislation, and they are drawn from earlier legislation, and we take all of these very seriously.

We have included in this list self-help type criteria, which we think are really the heart of what we are going to ask from the area, and we mean that quite seriously.

Senator **Kasten**. You have discussed briefly Cuba, Grenada, and Nicaragua. What about just going through the list, what about Guyana?

Mr. **Enders**. Guyana, I hesitate a little bit to make a judgment here. I think what we propose to do is to negotiate with each country that wants to negotiate with us, that might conceivably come under any of these criteria. Then we would ask, what are you prepared to do in the way of self-help; do you have a free trade union movement, et cetera. Then we are going to make a judgment on the basis of that.

I don't want to start out making firm judgments on that kind of thing, Senator.

### 25-PERCENT RULE REGARDING IMPORTS

Senator KASTEN. I would like to examine the 25-percent rule a bit further. Do I understand correctly that the foreign content of a product imported from the Caribbean can be as high as 75 percent, and still enjoy duty-free status?

Mr. DEKIEFFER. That is accurate, but the 25-percent local content rule ties to real local content, and not imported content. There is a two-step process in determining what local content is, and it has to be real local content.

### WORLDWIDE CARIBBEAN INVESTMENT

Senator KASTEN. It seems to me that this might be a substantial loophole which could benefit others far more than the people you are seeking to benefit in the Caribbean Basin.

For example, couldn't the Japanese or the Germans, or anyone else, come into those Caribbean countries with partially manufactured products, add 25 percent which they could argue was fabricated or put together, and sell those products to the United States under these special terms?

Mr. DEKIEFFER. Senator, you have touched on two different points. In the first place, I said that local content had to be real local content, and not just some sort of a fictitious value added.

Second, and perhaps most importantly, the entire program that we have is designed to accomplish just what you suggest, it is to encourage not only American investors from all over the world to look at the Caribbean Basin as an area where they can make a substantial profit because there are certain advantages that are accorded to the Caribbean Basin that are not necessarily accorded to our trading partners.

So, certainly, we are attempting to encourage our trading partners, both in Europe and in the Far East, to invest in the Caribbean Basin. We think that would be an objective that should be accomplished.

Mr. ENDERS. Practically, Senator, I think it would be unlikely that a great many of the countries of this area could achieve substantially more than a quarter of the total value of a product, given their size. They are very small countries. So it may be a good deal more restrictive than one thinks.

### ECONOMIC AND MILITARY ASSISTANCE TO CARIBBEAN

Senator KASTEN. For the current fiscal year, you might not have these figures with you, what is the total amount of U.S. bilateral assistance going to the beneficiaries of the Caribbean Basin, assuming passage of the CBI supplemental?

In other words, how much economic and how much military assistance, bilateral assistance is going to the beneficiary countries?

Mr. **Reich**. I have the economic assistance levels but not the military assistance levels. Would you like to have the amounts by country?

Senator **Kasten**. No, the total.

Mr. **Reich**. Assuming passage by the Congress of the $350 million supplemental request, the total for this year would be $824 million in economic assistance for the Caribbean Basin countries.

Senator **Kasten**. The $824 million is for economic assistance. Do you have a figure for the military assistance?

Mr. **Reich**. No, sir, I don't have the military assistance.

Mr. **Enders**. The military assistance, I will be able to give you in just a moment.

The military supplemental contains $52 million worth of additional military assistance for the area, and we would be operating on $164 million.

Senator **Kasten**. Is that the total?

Mr. **Enders**. Yes, for the area.

Senator **Kasten**. We are at $112 million right now?

Mr. **Enders**. Yes.

Senator **Kasten**. So we are talking about almost $1 billion?

Mr. **Enders**. The figure sticks in my mind, 17.4 percent is military assistance.

Senator **Kasten**. For the eight countries, let us examine the type of assistance that each country will receive.

For example, El Salvador will get $128 million. Is that going to be for projects, the commodity import program, balance of payments support, or what?

Mr. **Reich**. You are talking about $128 million of the $350 million supplemental request?

Senator **Kasten**. Yes.

Mr. **Reich**. The supplemental funds will be used primarily for balance-of-payments support and will make possible imports of needed goods, commodities and raw materials to keep their factories running.

Mr. **Enders**. In other words, these are the inputs to the economic process there. The moneys would be substantially devoted to the private sector. They will come to the Central Bank.

Mr. **Reich**. The funds will permit allocation of credit for the private sector to import the raw materials they need to keep their factories running.

## FUNDING BREAKDOWN BY COUNTRY

Senator **Kasten**. We will submit several questions for the record, and we want to get a breakdown, country by country, of how these different amounts are going to be used. If you could provide that, we would appreciate it.

[The information follows:]

### Supplemental Appropriations Request for Caribbean Basin Countries

The $350 million of Economic Support Funds requested in the President's legislative package submitted to the Congress on March 17 will be allocated to seven countries and two regional programs in the Caribbean Basin. These countries have been hit the hardest and are suffering the most from the current economic crises resulting from high petroleum imports, lower prices for export commodities, high unemployment, and sizable balance-of-payments deficits.

The Economic Support Funds will be used primarily to encourage the allocation of resources by these countries toward private sector imports of raw materials and intermediate goods, thus facilitating domestic production and employment without a further deterioration in their balance of payments. Specifically, the funds will used in each country as follows:

El Salvador.—$128 million. These funds will be used in a manner which assures adequate resources for essential imports for the private sector. Some funds may be used for repair of damage to essential infrastructure, such as the road network and the electric power distribution system.

Costa Rica.—$70 million. These funds will be added to the $20 million already appropriated to provide resources which will permit Costa Rica to import goods, machinery and raw materials needed to maintain production. The funds will be directed to specific institutions, such as private banking institutions and industries which play a critical role in Costa Rica's economy.

Jamaica.—$50 million. These funds will be provided to Jamaica in the form of a cash transfer to the Central Bank and will help meet balance-of-payment requirements arising from the need for essential imports for the private sector.

Dominican Republic.—$40 million. A cash transfer will be provided the government in support of measures to encourage increased private sector investment and credit.

Honduras.—$35 million. These funds will also be used to assure the continuation of imports of spare parts and raw materials needed to maintain agricultural and industrial production.

Caribbean Regional.—$10 million. The specific use of these funds is still being developed by our Regional Development Office for the Caribbean in Bridgetown, Barbados. These resources will be used to address key constraints on private sector expansion, including infrastructure deficiency.

Belize.—$10 million. We anticipate part of these funds will be used to support a rediscount mechanism to provide private sector credit for both foreign exchange and local currency costs. Other options for stimulating private sector expansion in Belize are currently being weighed.

Haiti.—$5 million. These funds will provide credit for new private sector investments in agroindustry, industry and housing sectors through private financing institutions.

Latin America and Caribbean Regional.—$2 million. We propose to increase by $2 million our foreign assistance spending for the development of free labor movements through the regional program with the American Institute for Free Labor Development.

## CURRENT ACCOUNT DEFICITS

Senator KASTEN. Senator Leahy.

Senator LEAHY. Thank you, Mr. Chairman.

What is the current account deficit for the area included in the CBI?

Mr. ENDERS. The current account deficit for the area as a whole, I don't think we have ever added up. We can add up the separate estimates, and we will be glad to.

Senator LEAHY. I am interested in hearing that as compared to what we are trying to put this year, and what we are planning to put in next year. If you could do that, you could give us at least what your present balances are of the gross national product growth rate for those countries.

Mr. ENDERS. We will be glad to do all that. It is a little artificial when you aggregate them, but we will be glad to do that.

Senator LEAHY. I understand that. You understand the reason for the question, obviously. We are concerned on this committee that if there is a slow growth rate projected, or even a negative growth rate in those countries, and there is already a large deficit account, are we going to be simply ending up being part of the deficit, or are we going to be barely keeping some of these countries afloat, or are we actually going to be helping them?

Do we have enough money in here to help them? Is it too little, too late? These are some of the things I am getting at, and it would be very helpful to me just to know where we stand, really how we fit in. Is it only a drop in the bucket, or is it really an important role?

I suspect that this is going to be a major part of the debate when we go on the floor.

Mr. ENDERS. We will be glad to provide those statistics.

Mr. ENDERS. Let me say that one of the purposes of the New York Five, now, is precisely to see that the overall effort is sufficient and not to put the United States in a position where it should assume sole or major responsibility. It should be a collective responsibility for those countries that are on the borders of the Caribbean Basin. It has worked quite effectively that way.

We will be meeting again in August, hopefully with the passage of the new American authorities behind us, precisely in order to assess the sufficiency of the whole effort, and see whether more is needed, or whether a different kind of assistance is then needed.

Senator LEAHY. Thank you.

Thank you, Mr. Chairman.

### SERVICING THE FOREIGN DEBT

Senator KASTEN. Mr. Secretary, if the CBI is to effectively respond to the economic crisis in the Caribbean that we have been talking about, we have all agreed that we have to revive the existing economic structures in these countries.

I understand that in several countries the shortage of foreign exchange is critical, and we have talked about this briefly. Basically, factories cannot import essential raw materials, farmers cannot obtain fertilizer and insecticide, and spare parts and fuel, I guess, also are critically short.

How can we make sure that any assistance in the form of cash transfers will be used to revive the economies of these nations? I am particularly concerned that priority be given to financing of imports which are needed to revive industrial and agricultural production.

Is there any way of reserving these funds for essential imports, to somehow earmark them, in order to preclude their use to repay long-term commercial debt, for example?

Recently, the Wall Street Journal suggested that some of these emergency aid funds may end up by being invested in Miami. We talked about that earlier, also. But is there any way that we can see that they are going for the purposes which we intend?

Mr. REICH. Yes, Senator.

The transfer would not necessarily be tied to specific import transactions, but we do expect that as a condition of the assistance the recipient countries will allocate substantial resources to the private sector for imports in the areas and the sectors you have mentioned, particularly the industrial and agricultural sectors.

Senator KASTEN. You can't target the money?

Mr. REICH. Repayment of debt is not an expected use of these funds.

Senator KASTEN. Funds are obviously fungible.

Mr. ENDERS. It will certainly improve their capacity to repay previous debt.

Mr. REICH. That is right. For example, we have a self-imposed policy in AID to assure that U.S. imports are purchased with U.S. money. We can set a condition that the funds are used for essential imports, and not, for example, for certain luxury goods.

Mr. ENDERS. This may seem as a paradox and it truly is not; one of the purposes of emergency funds of this kind is to help a country like Costa Rica to put itself in the position where it can service its debt.

We want a stabilization agreement which includes a rescheduling of the private debts, which makes some of the short- and medium-term credits into long-term credits, it implies that they begin service on them again. At the same time, that they undertake a variety of self-help and self-limitation measures.

We want to get these countries back into normal functioning, but that is only within the context of an IMF agreement, in which everybody takes on their share of the burden.

### BROAD ASSISTANCE EFFORT IN CARIBBEAN

Mr. REICH. Senator, I would like to add a comment. As the three of us mentioned in our statements, this is an integrated program. It is mutually reinforcing. The U.S. component of the program is really only part of the broader effort.

Ambassador Enders has mentioned the New York Five, formerly the Nassau Four, and their contributions. We mentioned the International Monetary Fund and the World Bank. There are a number of donors, bilateral and multilateral, who want to help and who are concerned with the deteriorating circumstances in the region.

They are waiting almost for the United States to take the lead because we are the largest donor, and we do have a very important role to play in this effort. We believe that once we move with this package, additional resources will be forthcoming.

Senator **Kasten**. In that regard, we are the largest donor. They are waiting for us to take the lead, or wanting us to take the lead.

Mr. Secretary, do you want this CBI proposal to be considered as a separate, urgent supplemental appropriations bill, or is it your plan to submit it as part of a general supplemental appropriations which will be considered.

Mr. **Enders**. There has not been a final decision, Mr. Chairman, on our side. We do hope for early action. I think that the next appropriate time for action may be in the budget resolution of May 15. We would hope very much that the authorization be acted on quickly, so that budget authorities could, in fact, look at the appropriation in the context of a general agreement on what should be done.

This, of course, implies a relatively high level of urgency, since that is only 2 months away. We would hope that something in that timeframe would be possible.

Senator **Kasten**. Mr. Secretary, I would like to thank you and all of you for your testimony here today. It is clear that there are important dangers in the Caribbean Basin, and it is also clear to me that this is a first and important step toward working to start to solve those problems.

### SUBMITTED QUESTIONS

The subcommittee will submit questions in writing. The record will be open for roughly 10 days. We would hope that you could be back to us with answers within a relatively short period of time, and not more than 2 weeks.

[The following questions were not asked at the hearing but were submitted for response subsequent to the hearing:]

# QUESTIONS SUBMITTED BY SENATOR KASTEN

## THE MEXICAN VENEZUELAN OIL FACILITY

Senator Kasten: The CBI is described as a joint effort with Canada, Mexico and Venezuela. It is my understanding that the Canadians plan to double their assistance as their response, and that the Mexican and Venezuelan response is the operation of an oil facility for the Caribbean Basin.

Hasn't that oil facility existed for some time? If so, how is this considered to be part of a new initiative?

Mr. Enders: From 1975 to 1980 Venezuela operated an oil facility under which financing was provided for the difference between $6 and the per barrel oil sales price for the quanity of each participant's imports in 1974. The amount of imports covered was reduced 1/6 each year so that the program terminated automatically by year end 1980.

The Oil Facility established under the San Jose Accord of August 1980 is a cooperative effort undertaken by Mexico and Venezuela to meet the urgent need for oil in the Caribbean Basin. The facility covers both financing and supply. On the supply side, Mexico and Venezuela each provide half of the beneficiaries' crude oil needs up to a total 160,000 barrels per day for the region. The two donors finance up to 30 percent of the value of the recipient counries' oil imports at a rate of 4 percent repayable in 5 years. If the loan proceeds are employed for mutually agreed upon economic development projects, particularly energy projects, they can be converted to 20 year terms at 2 percent.

The Facility was renewed for a period of one year in August 1981.

The Facility has assisted the Caribbean Basin countries in relieving their immediate oil financing burden and in providing incentives to develop energy projects to reduce their dependence on oil imports. It is a critical part of our efforts to address the economic problems of the region.

The following countries are eligible to participate in the Facility.

1) Barbados
2) Belize
3) Costa Rica
4) Dominican Republic
5) El Salvador
6) Grenada
7) Guatemala
8) Haiti
9) Honduras
10) Jamaica
11) Nicaragua
12) Panama

## BANK EXPOSURE AND DEBT SERVICE

Senator Kasten: What is the commercial bank exposure in the CBI beneficiary countries?

Mr. Enders: Our information of commercial bank lending to the region is inherently imprecise. According to the World Bank, however, total exposure is in the range of $4.6 billion.

Senator Kasten: What is the total yearly debt service cost to these countries?

Mr. Enders: In 1981, public debt service paid by all Basin countries totalled $2.2 billion.

## REVIVING EXISTING ECONOMIC STRUCTURES

Senator Kasten: If the CBI is to effectively respond to the economic crisis in the Caribbean, we have to revive the existing economic structures in these countries. I understand that in several countries the shortage of foreign exchange is critical. Factories cannot import essential raw materials, farmers cannot obtain fertilizers or insecticides, spare parts and fuel are critically short.

How can we make sure that any assistance in the form of cash transfers will be used to revive the economies of these nations? I am particularly concerned that priority be given to financing of imports needed to revive industrial and agricultural production. Is there any way of reserving these funds for essential imports and precluding their use to repay long-term commercial debt? For example, the Wall Street Journal has suggested that some of these emergency aid funds may end up being invested in Miami.

Mr. Enders: We have been convinced from the beginning that funds available from the Supplemental must be used to support the revival of production and employment in Basin agriculture and industry. To accomplish that, we must ensure that our funds support the importation of spare parts, intermediate goods, and raw materials, not capital flight or payments on old debt. Because conditions and institutions are different in each country, the mechanisms we use will differ. Basically, however, we will require guarantees that our dollars will be used in support of the agreed purpose and we will monitor these agreements very carefully.

With our existing cash transfer programs, we require documentation showing goods imported and the prices paid for them. We and the Central Bank of each recipient country closely monitor these transactions to avoid over-invoicing or other known techniques of capital flight. I believe this process will allow us to preclude misuse of U.S. funds. Even tighter controls are possible and might be used if they appear to be necessary. Since we believe that a substantial liberalization is necessary to make the economies of these countries work, we hope to accomplish our purposes more by opening new opportunity than by instituting new controls.

## DOMESTIC ECONOMIC POLICIES

Senator Kasten: The effectiveness of our CBI emergency economic assistance may depend less on the amounts of foreign aid than on the domestic economic policies of the recipient countries. Take the case of Costa Rica. Three times in the past three years Costa Rica has failed or rejected adjustment programs worked out with the International Money Fund. On February 26, the outgoing president rejected a $69 million loan from the IMF because, "The IMF has asked us to spend less on everything...no matter what it means for our population, instead of procuring to pay fair prices on the international market for our products." In Costa Rica the Supreme Court and the Legislative Assembly set the exchange rate and, as a consequence, in recent months tourists from other Central American countries flock to Costa Rica to snap up consumer goods at the lowest prices in Central America.

What conditions regarding domestic economic policy will be placed on our emergency loans to countries in the Caribbean region?

Mr. Enders: Although we treat the Caribbean Basin as a unit in our planning process and in discussions with other donor countries, we recognize that vast differences exist between the Island Caribbean and Central America and between individual countries in those sub-regions. We also understand that each country within the region has a unique history and an individual set of opportunities and problems. Our assistance programs and the self-help measures undertaken by participating countries will similarly reflect conditions in each country.

In our consultations with governments and private sectors in the region, we have encountered widespread agreement that Basin economies must be opened up, private investment stimulated and exports increased. Where investment procedures are unnecessarily difficult or complex, an appropriate self-help measure might be streamlining of the relevant laws, or creation of an "investment ombudsman" to smooth the path for local and foreign investors. If internal price controls result in inefficiencies, or inhibit production and investment, our discussions might lead to self-help measures reducing or eliminating the controls. Targets might be established for Central Bank credit to the private sector where appropriate. Many other examples are possible. In each case, the package of self-help measures will be arrived at in consultation with the local government and private sector and will treat specific problems adversely affecting that country's economy.

Senator Kasten: Will disbursement of the U.S. aid dollars be tied to IMF adjustment programs?

Mr. Enders: In every case, disbursement of U.S. funds will be directly tied to comprehensive economic adjustment programs. In most cases, those adjustment programs will be designed by the countries in consultation with the IMF.

Senator Kasten: At a time when we are trying to limit growth in our own entitlement programs and reduce Federal spending, how do we avoid subsidizing out-of-control entitlement programs in Central America?

Mr. Enders: We have absolutely no intention of subsidizing entitlement programs of any sort. On the contrary, our assistance will be directed at increasing private sector investment, production, and employment. Each program will be carefully designed to that end and will spell out the goals, mechanisms and controls of the program. We will, of course, carefully monitor each program.

## US ECONOMIC AND MILITARY ASSISTANCE TO COSTA RICA, EL SALVADOR AND HONDURAS

Senator Kasten: For Fiscal Year 1982, assuming passage of the supplemental, how much bilateral assistance, including also PL 480 and 506 draw-downs, is going to El Salvador?

Of this, how much is military? What are the figures for Fiscal Year 1983?

How much for Costa Rica and Honduras?

Mr. Enders: We will provide a detailed table for this.

The following sets out the bilateral assistance, both economic and military, we expect to provide to Costa Rica, El Salvador and Honduras in FY 1982 and FY 1983.

## US ECONOMIC AND MILITARY ASSISTANCE TO COSTA RICA, EL SALVADOR AND HONDURAS

*An FY 1982 supplemental in additional military assistance will be submitted to Congress shortly, some of which will likely be allocated to El Salvador and Honduras.

Senator Kasten:
The main element of the CBI with which your office has responsibility is the proposal to grant duty free treatment to imports from the Caribbean. It is my further understanding that such imports from the Caribbean already enjoy free duty status to a substantial extent.

What percentage of imports from the Caribbean presently enjoy duty free status?

Mr. deKieffer:
The following table reveals that 81 percent (100 - 19%) of 1980 Caribbean Basin imports received duty free treatment, either as a result of benefits under the Generalized System of Preferences, or because the MFN rate was duty free:

Attachment to Question 1 Table 1 U.S. $1000

## Short-run Effect of FTA on U.S. Imports from CB countries
(of dollars)

| | 1980 dutiable imports that would be duty-free under FTA* | Ttl. 1980 non-petroleum imports | % of ttl. non-petro imports affected by FTA |
|---|---|---|---|
| Antigua | 472 | 2,995 | 16% |
| Barbados | 24,250 | 95,954 | 25% |
| Belize | 1,131 | 57,953 | 2% |
| British V. I. | 2 | 2,687 | .07% |
| Cayman Islands | 7 | 2,575 | .27% |

---

*Exclude textiles, petroleum products, and GSP items rejected for "administrative reasons"

Senator Kasten:
Exactly what kind of imports then are we talking about giving this duty free status to?

Mr. deKieffer:
Beneficiary Caribbean Basin countries would receive duty free access on all products now excluded from GSP by reason of import sensitivity or "competitive need". The attached statistical tabulations list products that would be duty free under the CBI but which now are dutiable from the beneficiaries.

Senator Kasten:
You have indicated that certain textiles and apparel and sugar would be excepted from the granting of duty free access.

Would you please be more specific as to which textiles and why, and more specific on how this affects sugar?

Mr. deKieffer:
Textile trade is a special case, being regulated by the provisions of the GATT Multifiber Arrangement. As such, it was judged inappropriate for inclusion in the Free Trade Area.

For the purposes of the CBI Free Trade Area (FTA), textile and apparel articles, which are subject to textile agreements, will be excluded. This means for FTA implementation purposes only that all cotton, wool, and man-made fiber textile products in the Correlation: Textiles and Apparel Categories with Tariff Schedules of the United States Annotated including its annex will not be eligible for duty-free treatment.

Duty free access for sugar will be granted to the beneficiaries annually, up to a country-specific limit which, for countries now eligible for GSP duty free treatment on sugar, will be the so-called "competitive need" ceiling. The Dominican Republic, Panama, and Guatemala will have an absolute ceiling, as specified in the legislation.

Senator Kasten:
With respect to sugar, I know there was a great deal of concern expressed when the CBI was first announced from U.S. producers.

(A) Since then you have, I understand, ameliorated some of their concerns. Please explain.

(B) Is there not still a real concern that even though sugar producers will be protected, but that because such protection is in the form of activitization of the price support system in the sugar act, that fact may generate increased criticism of the sugar act itself?

Mr. deKieffer:
(A) Initially U.S. sugar producers were concerned that CBI would result in a flood of duty free imports of sugar that would seriously jeopardize the domestic sugar program. The CBI proposal sets absolute limits on the amount of duty free sugar that can enter the United States from major suppliers. In addition the CBI proposes stringent safeguard provisions which give the Administration broad authority to curtail benefits if it appears that the domestic program may be jeopardized.

(B) Yes, this is a valid concern. Many felt that the additional duty free sugar coming into the United States as a result of CBI will force USDA to raise the fee component and that this could generate renewed criticism of the sugar provision of the Farm Bill by consumers, refiners, and industrial users. The continued fall in sugar prices has made it necessary to impose import quotas. These quotas would take precedence over any quotas imposed by the CBI.

Senator Kasten:
Have you anticipated what affect, if any, the granting of this duty free access will have on other U.S. trading partners?

If so, what is that affect, and have other U.S. trading partners complained or asked for the same treatment?

Mr. deKieffer:
The FTA will affect third countries to the extent that (1) expanded CB exports to the United States replace third country exports or (2) third country suppliers fill part of any increased demand by the CB countries for imports for consumption or as inputs for production. The major third country suppliers of the largest categories of dutiable imports from the CB are:

Beef: Australia, New Zealand, Canada
Electronic tubes: Malaysia, Singapore, Japan
Baseball Equipment: No other major third country suppliers
Capacitors: Japan, Mexico, Taiwan
Cigars: Mexico, Philippines, Netherlands
Resistors: Japan, Mexico, Canada
Benzenoid drugs: Ireland, Italy, Japan
Analgesics: Canada, Ireland
Leather handbags: Hong Kong, Korea, Colombia
Tobacco: Cameroon, Mexico (TSUS 17010)
Brazil, Korea, Canada (TSUS 17060)
Mexico, Brazil (TSUS 17045)
Korea, Brazil (TSUS 17080)

Pineapple: No other major third country supplier

Welded steel pipe: Canada, Japan

Luggage, handbags: Taiwan, Korea, Hong Kong

Leather footwear: Korea, Italy, Taiwan

Rum: No other major third country suppliers

Gloves, rubber or plastic: Hong Kong, Philippines

Expanded CB exports of these and other products will affect third country suppliers differentially. Also, CB exports may displace exports from some of the minor suppliers not listed above. In the short-run, the overall displacement effect should not be large, due to the small volume of CB imports that would be affected and the limited amount of idle capacity. In the long-run, the displacement effect will be limited by the fact that overall potential industrial capacity of the CB countries is not large relative to total world production.

With respect to the reaction of our trading partners, concern has arisen from certain sugar suppliers such as Australia, Brazil, and the Philippines, who are suffering from the continuing slide in the world sugar price.

Senator Kasten:

Let us compare the foreign content we allow in exports financed by the export import bank.

In that case, I believe that foreign content allowed is less than 5 percent. Doesn't this seem, therefore, unfair to us?

Mr. deKieffer:

The purpose of the Export Import Bank's limitation on foreign content in products it finances or insures is to ensure that the Bank's activities are consistent with its mandate to promote U.S. exports. The Bank's current guidelines require 100% U.S. content for direct credits/financing guarantees but permit up to 10% content foreign content in the case of medium term financing (30% if there is no U.S. equivalent), and up to 50% foreign content in the case of short term insurance programs.

In contrast, the 25% direct cost of processing and value of materials requirements in order for goods to qualify for duty-free treatment under the CBI is intended to ensure that only products to which some value has been added in the beneficiary countries receive duty-free treatment.

Senator Kasten:
Would you provide more details on the special proposals concerning Puerto Rico and the Virgin Islands and the need for these proposals?

(See attachment)

## MEASURES FOR PUERTO RICO AND THE U.S. VIRGIN ISLANDS

### I. RUM.

To ensure that duty-free treatment of rum from the Caribbean Basin does not reduce U.S. excise tax revenues received by Puerto Rico and the U.S. Virgin Islands, the U.S. will transfer to them the same rate of excise taxes per unit collected on imported rum as on their rum. The formula ensures that imported rum will be treated as rum produced in Puerto Rico and the Virgin Islands for purposes of excise tax payments to them. The legislation will also require the President, in the event the formula is altered to the detriment of Puerto Rico and the Virgin Islands, to take measures to compensate them for any detrimental effect, including the possibility of a snapback in the MFN rate.

USTR negotiators will seek commitments from Caribbean countries that they will continue to supply molasses to Puerto Rico and the Virgin Islands on commercial terms.

### II. TAX INCENTIVES.

a. Investment Incentive - The President's Message to Congress forwarding CBI implementating legislation will recognize the Administration's intent to propose the extension of the Accelerated Cost Recovery System (ACRS) and Investment Tax Credit (ITC) to all "Section 936" companies located in Puerto Rico. These firms can pass through the benefits of ACRS and ITC to their mainland parent corporation. Similar benefits will also be proposed for the Virgin Islands.

The benefits of Section 44 of the Internal Revenue Code for research and development will be discussed with Puerto Rico to explore the possibility of extending these benefits to Puerto Rico.

b. Withholding Taxes - Further consultations will take place between Treasury and Virgin Islands' officials on the issue of Virgin Islands' withholding taxes.

### III. SAFEGUARDS.

In preparing FTA legislation, we will assure that Puerto Rico and the Virgin Islands have standing to petition under the CBI safeguard mechanism. Injury to a particular region is to be taken into account under the provisions of the 1974 Trade Act.

### IV. CUSTOMS.

a. Rules-of-Origin - For purposes of rules-of-origin in the FTA, Puerto Rico and the Virgin Islands inputs will be treated as products of the Caribbean Basin for calculating Caribbean Basin value-added.

b. Duty-free Access for the Virgin Islands - As part of the CBI legislation, the Administration will support amendment of Headnote 3(a) of the Tariff Schedule of the United States to provide duty-free treatment of Virgin Islands exports whose foreign content does not exceed 70 percent of the declared customs value. Currently the maximum foreign content permitted is 50 percent.

c. Duty-free Import of Liquor - As part of CBI legislation, the Administration will propose amendment of the tariff schedule to permit visitors returning from U.S. territories to import duty-free and free of excise tax, an additional liter of locally produced alcoholic beverages.

V. LOCAL TRADE PROBLEMS.

If requested by Puerto Rico, we will consider proposals for assisting industry in Puerto Rico threatened by loss of local market from additional Caribbean imports.

VI. AGRICULTURE.

a. Crop Insurance - The Department of Agriculture will extend to Puerto Rico, through the Federal Crop Insurance Corporation, its reinsurance program no later than mid-1983 provided certain technical problems can be overcome.

b. Price Supports - The Department of Agriculture will extend to Puerto Rico price supports for rice and will consider the possibility of extending to Puerto Rico price supports for all commodities produced in Puerto Rico for which there is a U.S. price support program.

c. Puerto Rican Agricultural Development - The Federal Government, through the Department of Agriculture or other agencies, will provide technical assistance to Puerto Rico upon request for the purpose of improving the productivity of the Island's agriculture.

Technical Assistance will also be given to Puerto Rico upon request in an effort to integrate the Island's agricultural development with that of the Caribbean Basin as a whole.

The Federal Government will also make greater use of the Tropical Agriculture Research Center, located in Puerto Rico, for the purposes of developing and implementing an integrated Caribbean Basin agricultural strategy.

VII. TRANSPORTATION.

a. Air negotiations - The U.S. Government will seek to expand air routes between and through San Juan and foreign countries for American and foreign flag carriers.

In future bilateral air negotiations account will be taken of the vital importance of increasing foreign carrier entry into Puerto Rico. Informal prior consultation between Puerto Rican officials and U.S. negotiators will continue to be undertaken regularly.

U.S. flag carriers should be able to take advantage of San Juan's status as the transportation hub of the Caribbean. From Caribbean nations, the U.S. should seek a liberal entry regime for U.S. carriers between Puerto Rico and Caribbean nations.

These policies should be negotiated with a view to achieving Puerto Rico's objectives, including the establishment of a Canada-Puerto Rico air route and new or additional air routes between Puerto Rico and Mexico; Venezuela; Brazil; and the United Kingdom.

b. Cruise Ships - In the development of its comprehensive maritime policy, the Administration will attempt to develop measures which will reduce restrictions on the carriage of passengers by foreign flag cruise ships between San Juan and other U.S. ports as long as there exist no U.S. flag carriers providing adequate services. Among other possible measures this will include specifically the lifting of current restrictions that limit to 24 hours the amount of time a cruise ship or cruise ship passengers may remain in San Juan.

c. Shipping to Puerto Rico - The Department of Transportation is studying carefully regulations affecting cost of shipping for Puerto Rico, with a view to modifying those regulations where Puerto Rican economic development is being retarded. The DOT is considering legislation to eliminate federal regulation of ocean shipping rates between the mainland and Puerto Rico. Consideration will be given to specific requests from Puerto Rico for the financing of vessels.

d. St. Thomas Airport - The Department of Transportation will continue to work with relevant agencies to provide support for the completion of the airport and will hold discussions on this matter with Virgin Islands' officials.

VIII. AID.

a. Aid Procurement - Aid will make a strong effort to secure material inputs, technical assistance contracting and institutional support from Puerto Rico and the Virgin Islands.

b. Eastern Caribbean Center - As part of the CBI, the Administration will support in FY 1982 the appropriation of $150,000 for an Eastern Caribbean Center for Educational, Cultural, Technical and Scientific Interchange at the College of the Virgin Islands. (Authorization of these funds has already passed the House.)

IX. ENVIRONMENTAL REGULATIONS.

EPA will review, at Puerto Rico's and the Virgin Islands' request, the application of its regulations to the Islands. EPA will endeavor to be more flexible in future application of regulations having a substantial impact on these areas.

X. CRUDE REFINERY FACILITY.

If justified by feasibility studies, the Departments of State and Energy will promote Puerto Rico as a center for refining of heavy crude. These agencies will bring to the attention of the region the possibility of using Puerto Rican facilities for heavy crude refining and the export of lighter crudes or products.

XI. COPPER AND OIL EXPLORATIONS.

The Federal Government will continue to provide to Puerto Rico, where appropriate, technical assistance for the purpose of assisting the exploration and development of copper, oil or other natural resources.

XII. CBI IMPLEMENTATION.

Puerto Rican and Virgin Islands' officials are deeply interested in participating in the design and implementation of the CBI. The U.S. Government has in fact, consulted very closely with these officials on all aspects of the CBI and intends to continue to do so Puerto Rico and the Virgin Islands' officials will be invited to participate in many of the bilateral discussions involving CBI implementation.

Mr. deKieffer:
The Administration believes that through these measures, Puerto Rico and the Virgin Islands will be able to share fully in the revitalization of the economies of the Caribbean Basin which is the objective of the CBI.

Senator Kasten:
Can you answer questions with respect to the various tax proposals which are part of this package?

If so, please detail each of them.

Mr. deKieffer:
The attached testimony by Deputy Assistant Secretary Ballentine of the Department of Treasury provides a very thorough explanation of our tax proposals.

(Attachment follows:)

EMBARGOED FOR RELEASE UPON DELIVERY EXPECTED AT 2:00 P.M.
Wednesday, March 17, 1982

STATEMENT OF
J. GREGORY BALLENTINE
DEPUTY ASSISTANT SECRETARY (TAX ANALYSIS)
DEPARTMENT OF THE TREASURY
BEFORE THE SUBCOMMITTEE ON TRADE OF THE
HOUSE WAYS AND MEANS COMMITTEE

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before your Subcommittee in support of the Caribbean Basin Economic Recovery Act. As the President noted in his transmittal message, this Act is an integrated program designed to improve the lives of the peoples of the Caribbean Basin. The tax provisions of the Act are a vital element of this integrated program.

The tax incentives in this legislation may be divided into two parts: the investment tax credit designed to promote investment in Caribbean Basin countries and the investment tax credit and other tax incentives designed to restore the favored tax status of Puerto Rico and the U.S. Virgin Islands, the two U.S. possessions in the region, as well as the other U.S. possessions. I will first address the Caribbean Basin aspects of the legislation. Before discussing the specifics of the legislation, it will be useful to describe the economic characteristics of the region and the current levels of U.S. investment in the region. My discussion of the parts of the legislation pertaining to Puerto Rico and other U.S. possessions will also include a review of the relevant economic context of these proposals.

## I. The Caribbean Basin

### Economic Characteristics of the Caribbean Basin

The term "Caribbean Basin" as used in this discussion describes those Caribbean countries which are designated by the President as qualifying for the benefits of the Act. These may include Guyana, Suriname, and countries in Central America and the Caribbean islands. My remarks will be with reference to all the countries in the region with the exception of Cuba. Although by any reasonable standard all of the qualifying jurisdictions would be classified as developing countries, they are not a homogeneous group. They share certain features, such as low per capita income, high unemployment, lack of skilled labor, dependence on one or a few primary products, very little manufacturing activity, and small markets. But they vary widely in resources, institutions, and facilities for foreign investment.

A few countries have profitable mineral resources (oil in Trinidad and Tobago and bauxite in Jamaica, Suriname, and Guyana). Some have a reasonably sound agricultural base (the Dominican Republic and Guatemala). Some have developed trade or services sectors (Panama and Costa Rica). Some (the British Virgin Islands, the Cayman Islands, the Bahamas, and the Netherlands Antilles) are able to generate income from marketing tax savings to nonresidents. Others have practically no cash economy (Barbuda, St. Lucia, and St. Vincent). Although tourism is a major industry in the region, it cannot be relied on to support the economies of all the Caribbean countries. Some are not independent countries, but dependencies of the United Kingdom (e.g., the British Virgin Islands) or part of the Netherlands (Netherlands Antilles).

The languages spoken include Dutch, English, French, Spanish, and various dialects. The currency units differ. Communications and transportation facilities range from extremely poor to excellent. Political and economic stability vary, but are generally fragile. The total population of the area, 41 million, is governed by over 20 separate governments. The most populous country is Guatemala, with about 7 million inhabitants; the smallest are the Turks and Caicos Islands, with less than 10,000 persons. Per capita income varies from less than $300 per year in Haiti and St. Vincent to more than $3000 annually in the Bahamas and Trinidad and Tobago. A discouraging demographic factor is the high percentage of the population under 15 years old which is dependent for support upon a relatively unskilled work force.

### U.S. Investment in the Caribbean Basin

At the end of 1980, U.S. direct investment (equity investment in foreign affiliates plus net outstanding loans to foreign affiliates) in the Caribbean Basin jurisdictions had a value of $10.2 billion, ignoring the Netherlands Antilles where a negative investment was recorded due to the borrowings of U.S. parent corporations through Netherlands Antilles affiliates. Of that amount, $5.9 billion, or 60 percent, was in the Bahamas and Panama. Of the remaining $4.3 billion in investment, about $1.0 billion was in Trinidad and Tobago, $2.3 billion in Jamaica, the other Caribbean islands, Guyana, and Suriname, and the remaining $1.0 billion in Central American countries. A significant portion of the investment in Jamaica, Suriname, and Trinidad and Tobago is in mining (bauxite) or petroleum. U.S. direct investment in manufacturing in the region at the end of 1980 was about $1.0 billion, or approximately 10 percent of the total U.S. investment. Over 70 percent of the investment classified as manufacturing was in Panama and the Bahamas. Majority owned Caribbean basin affiliates of U.S. companies planned about $680 million in capital expenditures during 1980, of which $480 million was in mining and petroleum and $65 million in manufacturing.

## II. Outlines of the Proposal

### Requirements of an Effective Tax Incentive

To be effective, a U.S. tax incentive must cause more U.S. investment to take place in the Caribbean Basin than would otherwise occur. An incentive does this by raising the rate of return on investments, making some profitable which were previously unacceptable. An effective incentive should also attract projects which will continue to benefit the recipient economy after the expiration of the incentive period. The incentive should promote an increase in local production and employment in the Caribbean Basin, rather than simply encouraging transfers of financial or intangible assets. This can best be achieved by encouraging investment in real physical capital. An increased transfer of financial assets to the Caribbean Basin will contribute to economic growth in the Caribbean only if it increases the amount of physical investment or reduces its cost. This growth objective will be frustrated if the increased inflow of funds into the Caribbean is offset by an increased outflow of funds for investment outside the Caribbean.

### Description of the Proposed Legislation

The Act includes an unprecedented extension for five years of the investment tax credit to property which is used predominantly in certain Caribbean Basin countries and which would otherwise qualify for the domestic investment tax credit. A Caribbean Basin country will qualify for this benefit if, first, it has been designated by the President as a country entitled to the benefits of the Act, and second, it enters into a bilateral executive agreement with the United States for exchange of information for tax administration purposes.

The rules and limitations which apply to the allowance of the investment tax credit for property used predominantly in the United States will generally apply to Caribbean Basin property. The regular investment credit is generally available for up to ten percent (10%) of the cost of tangible personal property and other tangible property (generally not including buildings or structural components) used in connection with manufacturing, production, agriculture or certain other activities. A few narrow categories of property, such as qualified rehabilitated buildings and qualified timber property, will not be eligible for the credit if located in a Caribbean Basin country because of the specific statutory provisions governing their eligibility for the credit. In our judgment, it is not advisable to extend the credit for these specialized categories of property.

The sunset provision reiterates that this is a special measure intended to provide economic assistance in an extraordinary situation. At the end of five years consideration may be given to an extension of the credit on a bilateral basis through a tax treaty.

## Relative Advantages of the Investment Tax Credit

A wage subsidy and tax sparing, along with the investment tax credit, were considered as possible incentives for the Caribbean Basin. Since the Caribbean Basin needs to develop the skills of its indigenous labor force, a labor oriented subsidy has considerable intuitive appeal. This type of incentive, however, does not increase the capital-labor ratio and therefore it does not improve the long run productivity of the labor force. It is a temporary incentive that ceases to have effect as soon as wages are no longer subsidized. A country merely tends to become dependent on the wage subsidy, with little prospect for the type of growth and development that will lead toward economic self-sufficiency. The recipient countries themselves may resent a wage subsidy. They may view it as a "colonialistic" attempt by the United States to restrict the Caribbean Basin to the role of a supplier of low wage goods. For these reasons, it is preferable to rely on a capital incentive which indirectly encourages the employment of more labor and which will improve the overall productivity of labor.

Tax sparing is often proposed as an investment incentive for regions like the Caribbean. Tax sparing allows a credit against domestic taxes for taxes an investor is spared from paying when a foreign country reduces or waives tax liabilities as an investment incentive. There are two major economic objections to tax sparing as an investment incentive. The first is that tax sparing is a reward to profits earned during the incentive period, regardless of whether such profits come from prior or new investments. That is, no new investment is needed to obtain the benefits. Thus, there is no assurance that tax sparing will contribute to economic growth by increasing real physical capital investment in the recipient country. Secondly, tax sparing invites non-productive investments, such as the transfer of financial or other intangible assets and the assignment of artificially high profits to such assets, in order to generate tax spared income.

In contrast, the investment tax credit which we are proposing will encourage the placement of machinery and equipment in the Caribbean Basin. The credit depends directly on an investor making a productive investment in the Caribbean Basin. By providing workers with additional capital, it will increase labor productivity and economic growth and development in the region.

Finally, the investment tax credit is independent of the foreign tax credit, requires no revenue sacrifice by the developing countries, and is relatively simple. Potential U.S. investors in the Caribbean Basin region are familiar with the credit as it applies to domestic investments. Its effectiveness will not be undercut by the uncertainty which would accompany any totally new incentive.

## III. Details of the Proposal

### Qualifying Caribbean Basin Countries

A Caribbean Basin country which is designated by the President as eligible for the benefits of the Act will qualify for the extension of the credit only if the country enters into a bilateral executive agreement with the United States to exchange such information as is necessary and appropriate to carry out and enforce the tax laws of the two countries.

Exchange of tax information assists the administration of the tax laws of both the United States and the qualifying country. The tax administrators of the Caribbean Basin countries will have access to information from the IRS regarding their taxpayers who engage in economic activities in the United States and thereby should strengthen their own tax administration. This self-help aspect of the measure is consistent with the overall concept of the Caribbean Basin Initiative. Moreover, the United States will itself require access to such information to adequately administer the tax credit, particularly where a "pass-through" credit is claimed by a five percent (5%) or greater U.S. shareholder in a foreign corporation. (The "pass-through" aspect of the proposal is discussed below.)

In addition, several countries in the Caribbean Basin region are tax havens which have been used both for avoidance and evasion of U.S. tax laws. We do not believe that it is appropriate for countries to benefit from U.S. tax incentives unless they are willing to cooperate with the United States in matters of tax administration.

### Exchange of Information Agreements

The legislation authorizes the Secretary of the Treasury to negotiate and conclude the exchange of information agreements. While the Secretary is accorded discretion regarding what kinds of information will be included within the scope of the exchange of information provisions, the Act imposes certain minimum standards for such agreements.

The exchange of information provisions in the agreements must include within their scope tax information pertaining to "third-country persons," that is, nationals or residents of countries other than the United States or the Caribbean Basin country that is a party to the agreement. This approach is consistent with our present tax treaty policy, embodied in Article 26 of the U.S. Model Income Tax Treaty. In accordance with that policy, a jurisdiction with restrictions on disclosure of information regarding such third country persons would be required to modify such restrictions. The same principle applies with respect to disclosure of information regarding ownership of bank accounts or share ownership. Most countries do not place restrictions on disclosure of such information; such limitations are characteristic primarily of jurisdictions which have organized themselves as tax havens.

The exchange of information agreements will be terminable on reasonable notice by either party. This will permit the credit to be terminated with respect to future investment in the event that the President revokes his designation of the country as a country eligible for the benefits of the Act.

The Secretary may incorporate by reference in an exchange of information agreement the exchange of information provisions of an existing income tax treaty with a Caribbean Basin country, provided such treaty provisions otherwise satisfy the requirements of the statute. Our more recent tax treaties, such as the recently ratified treaty with Jamaica, will satisfy such standards and we would be desirous of extending this tax incentive to these treaty partners as expeditiously as possible. It should be clearly understood that exchange of information agreements may be entered into with a country whether or not the country has a tax treaty with the United States.

It is expected that the exchange of information agreements will generally become effective on signature. The text of the agreements will, of course, be transmitted to Congress not later than sixty days after the agreement has been signed, in accordance with the prescriptions of the Case Act (1 U.S.C. section 112b).

## Predominant Use

Property used predominantly outside the United States generally is not eligible for the investment tax credit. The Act establishes an additional exception to this rule for Caribbean Basin property; that is, property used predominantly in one or more qualifying Caribbean Basin countries is made eligible for the credit.

Under existing Treasury regulations the test for determining predominant use is the physical location test. Thus, if property or equipment is located in one or more qualifying Caribbean Basin countries during more than 50 percent of the taxable year, the predominant use test will be satisfied. The same regulations also provide that the determination of whether a credit is allowable with respect to any property is made only with respect to the year the property is placed in service. If property is thereafter used predominantly outside the United States the credit taken with respect to such property will be subject to recapture. A credit taken with respect to qualifying Caribbean Basin property will be subject to recapture if the property is used predominantly outside one or more qualifying Caribbean Basin countries and the United States.

The Act provides an exception to this recapture rule in the case where a qualifying Caribbean Basin country no longer constitutes a qualifying country because the President's designation of the country as eligible for the benefits of the Act is terminated or the exchange of information agreement is terminated. In such a circumstance, property which continues to be used predominantly in the country in succeeding taxable years without interruption will not be subject to the recapture rules. It would not be equitable to subject the credit for such property to recapture because of an event which is not within the taxpayer's control.

## Pass-through of Credit to Five Percent U.S. Shareholder of Foreign Corporation

To summarize my discussion to this point, the credit will be allowed to a U.S. citizen, resident, or corporation that invests in property that is used predominantly in one or more qualifying Caribbean Basin countries after the enactment of the Act. Under present law, however, the credit would not be available to a U.S.

shareholder that makes an equity investment in a foreign corporation that invests in qualifying property. Where, for reasons of local law or accepted business practice, it is necessary that the business activity be carried on through a "host country" corporation, allowance of the credit solely with respect to property owned directly by a U.S. person would not constitute an effective investment incentive.

To surmount this problem and ensure the effectiveness of the credit as an investment incentive, we have designed a pass-through mechanism which would allow the credit on a current basis to a U.S. shareholder that owns five percent or more in value of a foreign corporation's stock, subject to certain limitations.

The pass-through credit is computed with respect to the shareholder's pro rata share of the foreign corporation's investment in Caribbean Basin property. The shareholder's pro rata share of such investment is limited for this purpose, however, to the amount of the shareholder's actual additional equity investment in the corporation after the date of enactment of the Act. The purpose of this limitation is to key the incentive in these circumstances to new equity investment which is permanent in nature and subordinate to debt claims or trade payables. In our view, new equity investment is the kind of investment which is likely to be responsive to the credit and which will form the base for continued future growth in the Caribbean Basin economies.

The limitations on the pass-through credit also take into account the concern that the credit is allowed currently while income earned by a foreign corporation is generally not subject to U.S. taxation until it is repatriated as a dividend to the U.S. shareholder. It is for this reason that the pass-through credit is not allowed with respect to investment of retained earnings of the foreign corporation in Caribbean Basin property. The foreign corporation's investment must be attributable, directly or indirectly, to new equity investment by the U.S. shareholder. This protects against the possibility of an initial profitable investment generating a continuous series of credits for a shareholder while U.S. tax on the income generated by such investment is deferred.

### Summary View of Investment Tax Credit

The five year extension of the credit I have described is an innovative, carefully targeted incentive for new physical investment in Caribbean Basin countries. This proposal represents as powerful a tax incentive for investment as is feasible without disturbing the integrity of our tax system. Its revenue cost will be about $50 million in 1983.

### Relation of Extension of Credit to U.S. Tax Treaties

The United States has a number of tax treaties with countries in the Caribbean Basin region, including extensions of certain of our older treaties with the United Kingdom and the Netherlands. It is our longstanding tax treaty policy to provide U.S. source basis tax benefits to the residents of the treaty partner and to obtain tax benefits for U.S. residents. We do not, as a general rule, limit our residence basis taxation of our citizens and residents. The decision to provide a tax credit incentive for investment in qualifying Caribbean Basin countries is generally at variance with our treaty policy of not limiting (or reducing) U.S. taxation of our citizens and residents. This decision highlights the special nature of our relationship to the Caribbean Basin region and the importance we attach to this Initiative.

Countries outside the Caribbean Basin region will, no doubt, seek similar benefits through tax treaties. The United States has exchanged notes with a number of developing country tax treaty partners in which we acknowledge the partner's desire to include investment incentives in the treaty, but state that the United States is not in a position to agree to such incentives. The letters go on to state that if policies change in this regard in the future, the United States will reopen discussions with a view to amending the treaty to include an investment incentive. These countries may view the extension of the tax credit as such a change in our policy. A decision regarding further extensions of the investment tax credit, both to existing and new treaty partners, would not be made without full consultation with interested Congressional committees.

The extension of the investment tax credit for Caribbean Basin property is not inconsistent with this Administration's strong policy against use of our tax treaties for conduit investments in the United States by residents from countries other than our treaty partner. Our opposition to such tax treaty abuse is sound international tax policy and consistent with the objectives of our Caribbean Basin Initiative. The purpose of the Initiative is served by encouraging increases in productive economic activity and self-sustaining growth in the Caribbean Basin countries. This purpose is not served by creating or sustaining tax haven activity which is contrary to U.S. tax treaty policy, undermines the operation and administration of the Internal Revenue Code, and fosters an increased dependence by the tax haven country on the United States.

## IV. Puerto Rico and Other U.S. Possessions

As an essential counterpart to the proposals to assist Caribbean Basin countries, the Act includes important tax incentive and revenue measures for Puerto Rico and the U.S. Virgin Islands. Some of these measures will also benefit other U.S. possessions.

### Background of the Legislative Measures Affecting the Possessions

Puerto Rico and the U.S. Virgin Islands have a special and historic relationship with the United States which this Administration recognizes and values. U.S. tax policy has long extended favored tax treatment to investment in Puerto Rico, the U.S. Virgin Islands and other U.S. possessions. The passage of the Economic Recovery Act of 1981 (ERTA), however, substantially, but unintentionally, reduced the effectiveness of these incentives. Further, making the investment tax credit available to investment in qualifying Caribbean Basin countries will encourage investment in the Caribbean Basin, possibly to the detriment of Puerto Rico and the U.S. Virgin Islands. It is essential that Puerto Rico and the U.S. Virgin Islands share in the expected economic progress, growth, and stability in this region. Special investment incentives must be provided for these possessions so that the development in the Caribbean Basin induced by the Initiative does not occur at the expense of Puerto Rico or the Virgin Islands.

The importance of the measures contained in this legislation is underscored by the adverse economic situation facing Puerto Rico. The Puerto Rican unemployment rate is approximately 22 percent, with no immediate prospect of decreasing. Investment in plant and equipment in 1980, after adjusting for inflation, was only one-half the value of investment in 1970. Between 1980 and 1981, the number of contractual agreements between the Puerto Rican Economic Development Administration and potential non-local investors dropped sharply. This drop in new contractual agreements indicates that the number of manufacturing plants beginning operation in Puerto Rico in the immediate future is likely to fall.

To adjust for the impact of ERTA and the Caribbean Basin Initiative, the Administration is proposing to extend certain tax incentives for investment to the U.S. possessions and to modify the rum excise tax payment arrangements with Puerto Rico and the U.S. Virgin Islands. Although the tax incentives will be available to the U.S. Virgin Islands and all other possessions, their principal impact will be with regard to business operations in Puerto Rico.

## Existing U.S. Tax Policy Toward Puerto Rico

The encouragement of manufacturing investment in Puerto Rico is a longstanding tenet of Federal tax policy. This principle is rooted in the belief that increased capital investment is the most effective way of encouraging real economic growth in Puerto Rico. Generally speaking, the Federal tax laws have encouraged Puerto Rican investment by exempting income from such investment from U.S. taxation. Puerto Rico has, in turn, granted tax holidays for most manufacturing operations. Thus, U.S. manufacturing corporations operating in Puerto Rico generally pay little or no U.S. or Puerto Rican tax.

Under section 936 of the Code, a U.S. corporation (the 936 corporation) deriving income from Puerto Rico is subject to Federal tax on its worldwide income, but a special credit available under section 936 fully offsets the Federal tax on income from a trade or business in Puerto Rico or from "qualified possessions source investment income." A U.S. corporation which owns at least 80 percent of a section 936 corporation is also exempt from Federal tax on the dividend income from the 936 corporation. Since 1948, Puerto Rico has had a complementary program of tax exemption, called Operation Bootstrap, under which exemptions from Puerto Rican tax have been offered as incentives to U.S. companies to invest in manufacturing plants in Puerto Rico.

Prior to the passage of the Economic Recovery Tax Act of 1981, section 936 provided a significant incentive to invest in Puerto Rico compared to the United States. By reducing the effective corporate tax burden on U.S. investment through the Accelerated Cost Recovery System (ACRS) and liberalizing the investment tax credit, ERTA erodes the relative value of the Puerto Rican tax incentive. Once the provisions of ERTA are fully effective, a substantial amount of U.S. investment will be taxed nearly as favorably as Puerto Rican investments, thus eliminating any tax incentive for investing in Puerto Rico. The Administration proposes to restore the incentive to invest in Puerto Rico by extending the benefits of ACRS and the investment tax credit to U.S. corporations operating in Puerto Rico and the other possessions. Restoration of the incentive will require that the full investment tax credit plus one-half of the ACRS deductions be made available to a U.S. corporation owning a section 936 corporation.

## Description of Tax Incentives

Under present law, property used predominantly outside the United States generally is not eligible for the investment tax credit. However, property owned by a domestic corporation and used predominantly in a U.S. possession qualifies for the credit unless the domestic corporation has in effect an election to claim a Puerto Rico or possession tax credit under section 936 (a section 936 corporation) or is entitled to the benefits of section 934(b), relating to reduction in tax liability incurred to the Virgin Islands (a section 934(b) corporation). Also, property owned by a U.S. citizen and used predominantly in a U.S. possession qualifies for the credit unless the U.S. citizen is entitled to the benefits of Code sections which limit U.S. taxation of income derived in a U.S. possession. The Caribbean Basin Economic Recovery Act would allow the investment tax credit for any property owned by a section 936 or 934(b) corporation or by a U.S. citizen entitled to the benefits of such Code sections and which is used predominantly in a possession of the United States. The Act also provides that property used in a possession would be eligible for the recovery lives generally available for property not used predominantly outside the U.S. Thus, it will extend ACRS to property used in a possession.

Because section 936 and 934(b) corporations would be unable to use these tax benefits, the Act provides for a pass-through of the investment tax credit and fifty percent of the cost recovery deductions attributable to property owned by a section 936 or a domestic section 934(b) corporation to certain U.S. corporations that together own 80 percent or more of the stock of the section 936 or 934(b) corporations. Thus, a U.S. corporation that would be a member of an affiliated group that includes the section 936 or domestic 934(b) corporation (but for special rules excluding section 936 and 934(b) corporations from an affiliated group), would be allowed the investment tax credit and fifty percent of the cost recovery deductions otherwise allowable to the section 936 or domestic 934(b) corporation.

## Effect of Proposal

These investment incentive provisions will reduce the cost of capital and promote real economic growth in Puerto Rico, the U.S. Virgin Islands, and other U.S. possessions. This proposal will restore the relative preference for investment in Puerto Rico that existed prior to the passage of ERTA. It reaffirms the Congressional policy of encouraging investment in Puerto Rico and provides a significant incentive to invest in the plant and equipment which is vital to economic growth of the possessions. Its revenue cost will be about $55 million in 1983, rising to $100 million annually by 1985.

## Disposition of Excise Taxes on Rum

Under present law, the Internal Revenue Code imposes an excise tax on rum. All taxes collected under the Internal Revenue Code on rum produced in Puerto Rico or the U.S. Virgin Islands and transported to the United States (less the estimated amount necessary for payment of refund and drawbacks), are paid to Puerto Rico or the U.S. Virgin Islands, respectively.

At present, Puerto Rico and the U.S. Virgin Islands supply about 90 percent of the U.S. rum market. Rum produced in Puerto Rico and the U.S. Virgin Islands enters the United States duty free. The reduction in import duties on rum produced in other Caribbean Basin countries, provided for in the trade title of the Act, will reduce the Puerto Rican and U.S. Virgin Islands' share of the U.S. rum market. This will adversely affect the rum industry in Puerto Rico and the U.S. Virgin Islands and reduce the amount of U.S. excise tax collections which they receive.

In order to maintain this revenue source for the islands, the legislation provides that all excise taxes collected at the current tax rates on rum imported into the United States from any country (less the estimated amount necessary for payment of refunds and drawbacks) will be paid over to the treasuries of Puerto Rico and the U.S. Virgin Islands. The amount per proof gallon paid over will not exceed the amount per proof gallon which would have been paid over if the rum had been produced in Puerto Rico or the U.S. Virgin Islands. The Secretary of the Treasury will prescribe by regulations a formula for the division of these tax collections between Puerto Rico and the U.S. Virgin Islands. The estimated revenue cost of this provision is about $18 million in 1983.

## Questions Submitted by Senator Inouye

### EXTERNAL ECONOMIC DISEQUILIBRIA

Senator Inouye: It has been said that, "The major objective of the aid components of the CBI (Caribbean Basin Initiative) will be to assist the countries of the Basin in overcoming their external economic disequilibria over the next few years through sound stabilization and recovery programs."

What was the combined current account deficit for all countries in the Caribbean Basin in 1981?

Mr. Enders: The combined current account deficit was slightly over $3.2 billion in 1981.

Senator Inouye: In addition to the $350 million supplemental funding proposal, the United States has programmed $140 million in fiscal year 1982 assistance. In terms of balance of payments support, how much of a funding short-fall will this leave?

Mr. Enders: For more complete information, I would like to provide you our estimates of the overall balance of payments gaps faced by each of the seven countries, plus the Eastern Caribbean region, we wish to help through supplemental finance. In each case, the tables show the projected current account deficit, total capital inflows, including those budgeted from the U.S., and exceptional finance from the IMF, IBRD and our proposed supplemental finance. The "Unfinanced Gap" shown on each table is the amount still needed, after all assistance sources are taken into account, to fund the country's balance of payments gap.

## ASSISTANCE BY OTHER DONORS

Senator Inouye: The United States program is, according to Mr. Reich, "To be viewed as part of a larger package of assistance which includes resources made available by other donors..."

What, specifically, are the components of this larger package?

What resources are being made available by Canada, Mexico and Venezuela?

Mr. Enders: Canada has embarked on a five-year expanded program of economic development cooperation with the English-speaking Caribbean and also with Haiti, the Dominican Republic and the countries of Central America, at a value of over one-half billion dollars. Canadian tariff treatment currently provides duty-free or preferential access to the Canadian market for some 98 percent by value of all exports from the Caribbean Basin area to Canada. In the context of the Canada/CARICOM Joint Trade and Economic Agreement of January 1979, Canada is engaged with the Commonwealth Caribbean in a wide range of programs to promote regional integration, industrial development, and cooperation between Canadian and Caribbean private sector organizations. Canada has recently established Petro-Canada International to assist oil-importing developing countries, including those in the Caribbean Basin area, to reduce or eliminate their dependence on imported oil.

Mexico's principal contribution to the region is through the joint Mexican-Venezuelan oil facility. This program currently finances 30 percent of Mexico's and Venezuela's oil shipments to Barbados, Costa Rica, the Dominican Republic, El Salvador, Grenada, Guatemala, Haiti, Honduras, Jamaica, Nicaragua and Panama. For the second year of the facility, Mexico will provide an estimated $198 million in assistance - which runs from August 1981 to July 1980. In addition to this agreement, Mexico grants trade preferences to El Salvador, Guatemala, Costa Rica, Panama and the Caribbean Common Market (CARICOM). The preferences, which take the form of 50 to 75 percent export rebates on about 25 products from each country, are generally for the principal exports of these countries. Mexico also finances over 200 industrial technical assistance grants in the Basin.

In addition to the assistance provided jointly with Mexico under the oil facility (valued at $194 million for the second year of the facility), Venezuela has provided balance-of-payments assistance totaling $90 million to Jamaica, the Dominican Republic, Costa Rica and El Salvador. Venezuela has announced that $69 million in project related loans will be granted in Central America in 1982. The beneficiaries will be El Salvador, Nicaragua and Costa Rica. Venezuela is also a generous donor to multilateral institutions such as the IDB and the OPEC Special Fund.

Senator Inouye: What resources are being made available by the International Monetary Fund?

Mr. Enders: Drawings made by Caribbean Basin countries from the IMF in 1981 under stabilization programs and the compensatory financing facility amounted to over $400 million.

Senator Inouye: Are IMF stabilization programs presently in place? In which countries?

Mr. Enders: Jamaica and Dominica have operative EFF (extended financing facility) agreements. Guatemala and Grenada have operative stand-by arrangements. Panama recently completed a successful two-year (1980-81) standby and has renegotiated a new one-year standby (pending IMF board approval). El Salvador also recently negotiated a standby which is awaiting board approval. Costa Rica, Honduras, Haiti, and Guyana are attempting to renegotiate inoperative stabilization programs.

## PRIVATE BANK CREDITS

Senator Inouye: A recent Bank for International Settlements Report indicates an acceleration in the withdrawal of commercial bank lending programs in the Caribbean region. This is even more pronounced in short-term credits.

Can this be regarded as a private sector vote of confidence in the Administration's program?

Mr. Enders: I can't speak for the banks, but certainly no banker I know would base his lending policy on a complex package of legislation which has not yet been passed into law by the Congress. I believe the drop in commercial bank lending simply reflects the fact that we and the banks share a common understanding of economic conditions in the Caribbean Basin. Many countries in the region are undergoing severe economic and balance of payments problems. Without a restructuring of those economies, better trading opportunities, increased investment and a higher level of outside assistance, the Caribbean Basin faces continuing economic decline and the social/political strains resulting from low standards of living and hopelessness. The banks are rightfully concerned with today's conditions, but they have not yet had an opportunity to vote on tomorrow's solutions.

Senator Inouye: How does the Administration propose to address this problem?

Mr. Enders: We can address the credit shortage only by addressing the underlying problems which created it. The first step must be a commitment by this government and the others with which we have been working to help Basin countries help themselves. That commitment alone will help ease the crisis of confidence among local and foreign investors, as well as with commercial lenders. More fundamentally, the positive effects of the kind of balanced development program embodied in the Caribbean Basin Initiative will result in growth, a better balance of payments position, and improved creditworthiness. Bank lending programs will respond to those new realities.

Senator Inouye: Does the Administration propose to offset the withdrawal of private credits through increased assistance?

Mr. Enders: We cannot and should not see our assistance as a substitute for private credits. Our aim must be to encourage a return to normal credit relationships by improving productivity and creditworthiness in the Basin. The ESF financing we propose will help bridge the gap while other elements of the CBI package and self-help measures take effect. As they do, bank financing should return and the need for ESF financing shuld decline.

Senator Inouye: What is your estimate of total short-term debt in the Caribbean Basin countries?

Mr. Enders: We believe that total short-term debt is approximately $2.2 billion. That estimate certainly understates this debt, in large part because these debts are often owed by individuals to private companies and are never reported to local governments.

## COSTA RICA -- PRIVATE AND OFFICIAL FLOWS

Senator Inouye: The flow of private bank credits to Costa Rica dropped precipitously from $315 million in 1980 to a negative $38 million in the first half of 1981.

How does the Administration propose to stop this hemorrhage of bank credits?

Mr. Enders: The reversal of private capital flows to Costa Rica in 1981 was a result of doubts about the country's credit-worthiness. The country's mounting debt, rising current account and public sector deficits, and falling coffee prices led many banks to seek to limit their exposure there. We believe that this capital outflow can be reversed only after the Costa Rican government implements a comprehensive, internationally accepted program of economic stabilization, including an IMF agreement, rescheduling of external debt payments, and reduction of the public sector deficit. Such measures, when combined with increased international assistance and with the kind of trade and investment opportunities which the President's proposals seek to create, can restore the confidence of the international financial community in Costa Rica.

Senator Inouye: What is the total amount of assistance proposed or programmed for Costa Rica in Fiscal year 1982?

Amb. Enders: $13.0 million in AID development assistance, $20.0 in ESF earmarked by the Congress, $18.3 in PL-480, plus $70 million of the supplemental ESF request, for a total of $121.3 million.

## PATERNALISM

Senator Inouye: When the President addressed the Organization of American States on February 24, he said, in reference to past relationships with the nations of the Caribbean and Central and South America, "No matter how good our intentions were, our very size may have made it seem that we were exercising a kind of paternalism." He also said, "Aid is an important part of this program because many of our neighbors need it to put themselves in a starting position from which they can begin to earn their own way." Now, this might be regarded by some as "a kind of paternalism."

Can you explain what the President meant by the words "begin to earn their own way"? Is it not true that many of the nations in the Caribbean Basin were earning their own way before they were hit with extraordinary oil price increases?

Mr. Enders: By "earn their own way" I think the President meant that countries can finance their growth and investment out of their own savings and export earnings, and through international credit on a commercial basis. When oil prices were low and commodity prices relatively high, most of the Caribbean Basin economies were able to finance growth largely from these sources, with only modest amounts of concessional assistance.

Of course, these conditions have changed dramatically. Most Basin countries now have enormous balance of payments deficits. They need to adjust to the new set of economic circumstances they face in the international economy -- which means that their production must become more energy-efficient and export-oriented. They must thus (1) reduce consumption to adjust to their falling export earnings and increased fuel import costs, and (2) simultaneously cut consumption still further to finance the producer-goods imports needed for the new output pattern.

This adjustment is particularly difficult because, as very small economies, they manufacture very few if any of their own producer goods. It is, so to speak, a double whammy that affects economies inversely to their size. Moreover, to avoid these wrenching adjustments in the future, small economies must eventually move to more open and flexible systems that are able to respond more smoothly and quickly to the major forces in the larger world economy. The belt-tightening which they must undergo to effect all these adjustments is extraordinarily severe. They need our assistance to ease the pain of adjustment and to speed the recovery process; the people of the Basin will be able to see that their sacrifices are bringing forth a better future.

Senator Inouye: Why does the President believe "our neighbors need our help to develop representative and responsive institutions"? Are they not capable of developing their own institutions? Is the suggestion that we must help not evidence of a kind of paternalism?

Mr. Enders: The Basin countries are coping with severe problems of unemployment, inflation, capital flight -- conditions which undermine the hope of citizens in a decent future, much less a prosperous future. The Basin countries need time and help to reverse this economic crisis and thereby to restore the confidence of their citizens in the ability of their institutions to function effectively.

Our package of assistance to the region is merely that -- assistance. In the last analysis it is the responsibility of the countries themselves to take the measures necessary to restore themselves to vigorous health. We can help in that process, and in some cases our help -- and that of other interested countries and institutions -- can be crucial. But our help must be given in such a way that it respects the experience of the countries involved and elicits the maximum of their courage and intelligence in resolving their own problems. We have therefore devised this program in close consultation with the countries involved and with other interested countries and institutions. Our program will be implemented in a flexible way, reflecting the individual problems of each country in the region within a multilateral and consultative context.

## PRIVATE SECTOR CONFIDENCE

Senator Inouye: One of the arguments made in support of the Caribbean Basin program is that it will strengthen private sector confidence, both domestic and foreign.

Can it not also be said that increased military assistance to the Caribbean Region intensifies the private-sector's preception of risk and that the program, as proposed has an inherent contradiction?

Mr. Enders: The legislation we have already submitted to Congress contains only economic measures designed to stimulate private sector production. A proposal for increased military assistance we plan to submit in separate supplemental legislation this fiscal year will be primarily for two countries -El Salvador and Honduras. We believe that this commitment to assist friendly governments will have a positive, rather than a negative impact on private sector confidence in these two countries, and in the Basin as a whole.

Senator Inouye: What, specifically, does the Administration propose to do to strengthen private-sector confidence?

Mr. Enders: Private-sector confidence will be bolstered through improved production opportunities provided by the CBI legislation. But the CBI will also strengthen confidence by demonstrating our strong, long-term political commitment. The Free Trade Area, for example, represents a twelve-year commitment on our part.

Domestic policy adjustments by Caribbean and Central American governments can also have a key confidence-building effect. Under the CBI, we intend to encourage these countries to develop economic frameworks which will allow the private sector, both foreign and domestic, to operate more effectively.

Senator Inouye: Does the Administration propose to provide increased amounts of government guarantees or risk insurance to the private sector?

Mr. Enders: We have established an inter-agency working group to examine alternatives for a wider risk-insurance umbrella. These options include, inter alia, a multilateral insurance scheme, greater private insurer participation, and more flexible OPIC coverage in the Caribbean Basin.

## HAITI

Senator Inouye: Mr. Reich, you have stated that A.I.D. is increasingly "emphasizing administrative and managerial training to improve the efficiency of both the public and private sectors." As an example you cite a project in Haiti which "will assist the government in implementing policy and administrative reforms."

I would like you to discuss this project, but first I would like to read a quote from a recent GAO report:

> "Since 1973, the United States has provided Haiti about $218 million in food aid and economic assistance. After 8 years of operating in Haiti, A.I.D. is still having difficulty implementing its projects. Past projects, designed to improve Haitian Government institutions, have had only limited impact, and many projects have suffered serious delays."

How will A.I.D.'s proposed project address the problems found by the GAO?

Mr. Reich: We appreciate the GAO's interest in the A.I.D. program in Haiti. The recent GAO report came out of a GAO field review conducted in September 1981 -- barely one month after a new A.I.D. Director arrived in Haiti. He went down with instructions, based on our own prior study of the Haiti program, to make a number of changes and to reorient the program. Since then, acting under that guidance, he has refined the objectives of the program and redirected the focus of the projects towards many of the concerns expressed in the report.

Senator Inouye: The GAO has recommended that the Agency refocus emphasis from long-term institution-building to one that will provide shorter-term direct impact on the poor. Will A.I.D. follow this suggestion?

How? Through greater use of private and voluntary organizations?

Mr. Reich: Most of A.I.D.'s program in Haiti, 50 percent of which is implemented through private and voluntary organizations (PVOs), addresses the most serious aspects of poverty and disease which require urgent response for humanitarian and development reasons. These A.I.D. projects also support long-term institution building in order to establish a framework within which future development actions could be continued by the Haitians themselves.

In those cases where the Government of Haiti's commitment or where the ability to benefit from specific projects has been found wanting, A.I.D. has not hesitated to terminate projects and deobligate funds. Several projects are presently under similar close scrutiny. Where development efforts clearly show progress, A.I.D. is proposing expansion of efforts and commensurately increased funding levels. In those sectors and activities where priority development needs funded by A.I.D. cannot be addressed adequately through projects implemented directly by and through the government, the projects are implemented instead by U.S. and local PVOs.

Whether implemented by U.S. or local PVOs, or more directly by A.I.D., most A.I.D.-funded projects include training as one of the project components. In addition, the Government of Haiti, in conjunction with A.I.D. and the International Monetary Fund, is embarked on a set of internal policy and administrative reforms of their development institutions. Results of some of these reforms are already visible in better project supervision and management. Another major and highly significant component of the reform effort calls for decentralization of government planning and administration and the strengthening of Haiti's local-level community action councils. Emphasis on community action councils signals a radically new and potentially significant change in attitude on the part of the Government of Haiti, which heretofore had kept control of all development activities highly centralized exclusively within the various ministries in the capital.

Senator Inouye: What amount of funding is Haiti to receive under the Caribbean Basin Initiative?

Mr. Reich: Haiti is slated to receive about $37 million--which includes $12 million of Development Assistance, $20 million of P.L. 480 resources, and $5 million of Economic Support Funds--in support of the Caribbean Basin Initiative in FY 1982. The ESF assistance in the supplemental request will emphasize private sector, job-creating enterprises. This may include provision of credit to a private sector agroindustry and industrial financial institutions as well as some assistance to the important housing construction industry.

Senator Inouye: It has been suggested that the Caribbean Basin Initiative is, in part, designed to meet the problems associated with Caribbean migration.

Do you believe A.I.D.'s proposals will slow the flow of Haitian refugees?

How?

Mr. Reich: The Caribbean Basin Initiative, which includes trade and investment provisions in addition to financial aid, is not directed at illegal migration per se. If this initiative and other assistance to Haiti over the long term is successful and has a positive impact on economic development of the country, resulting improved economic conditions will help alleviate some of the root causes of migration from that country.

## CAPITAL FLIGHT PROBLEMS

Senator Inouye: Mr. Reich, you have said, "An improved climate of confidence will also slow and ultimately reverse the flight of domestic capital abroad."

Just how serious has the problem of capital flight been in recent years?

Mr. Reich: Capital flight is a common problem of countries experiencing social and political unrest. It has been widely acknowledged that it became a serious problem in El Salvador in 1979 and 1980 when the reforms were initiated and violence escalated, though capital flight from that country has now dropped below its peak as the private sector has made its accommodation to the reforms. Capital flight has also been a factor in a number of other Caribbean Basin countries in the last few years, but its relative importance is difficult to judge. Apart from measurement problems, discussed in the answer to the next question, there are serious conceptual problems in identifying capital flight. What is reported as capital flight often includes two other short-term capital outflows that are motivated by common business sense. These flows, which are temporary, would occur regardless of the social and political situation. For example, short-term capital will move overseas to take advantage of significantly higher interest rates abroad. Likewise, short-term capital will move abroad in anticipa- of a devaluation at home. Once appropriate corrective economic policy measures are taken, these income-motivated and speculative flows will be reversed. Unfortunately, there is no good way to separate these capital movements from true capital flight, the magnitude of which is often exaggerated.

Senator Inouye: How have you measured the amount of capital flight?

Mr. Reich: There is no reliable way to measure capital flight. The various indicators that can be used as evidence of capital flight can give conflicting information not only about the magnitude of capital flight but also about the direction of these flows. A widely-used indicator of capital flight -- which we do look at -- is the short-term private capital account in the balance of payments. Unfortunately, this account also includes not only the income-motivated and speculative capital flows mentioned in the answer to the previous question, but also flows associated with the financing of commercial transactions. Furthermore, in some countries this account includes errors and omissions-- the item that brings the debit transactions into balance with the credit transactions. The International Monetary Fund has cautioned that a negative errors and omissions figure should not automatically be equated with capital flight. There are many other kinds of international transactions that fail to get recorded or that are not measured accurately.

Another indicator that has been used to measure capital flight is changes in the free-market or black-market exchange rate. Again, though, factors other than capital flight influence exchange-rate movements. There are also problems in looking at data on a country's deposits in U.S. banks. These data can be misleading because they fail to take into account, for example, shifts out of bank accounts into real estate, about which we do not have good data. They also fail to take into account inter-country shifts in flight capital deposits. For example, increased bank deposits in the United States by residents of country X do not necessarily mean that capital flight from that country has increased. What may instead have happened is that relative interest rates have risen in the United States and that residents of country X have simply transferred their funds from, say, Europe to the United States.

While we do look at various quantitative indicators such as those just described, and obtain qualitative judgments from experienced observers in the countries where we have programs, it is not possible to have more than a rough idea of the order of magnitude of capital flight.

Senator Inouye: How will the Agency assure that the proposed assistance does not join the flow of domestic capital from these countries?

Mr. Reich: Import transactions made possible by our assistance will be monitored to check for evidence of overinvoicing as a means of transferring capital abroad. Our concern, however, is not just with true capital flight but with short-term capital outflows generally. That is why our assistance will be linked with sound stabilization and recovery programs, generally supported with International Monetary Fund assistance, that remove the distortions giving rise to income-motivated and speculative outflows of short-term capital, and that create incentives for productive investment in the Caribbean Basin countries themselves.

Senator Inouye: Of the $350 million in additional Economic Support Fund assistance requested for Fiscal Year 1982, how much will be provided in the form of unrestricted transfer payments?

Mr. Reich: None of our assistance will be provided as an unrestricted transfer payment. All of it will be conditioned on sound economic stabilization and recovery programs.

Senator Inouye: Is it, in fact, true that assistance tied to specific projects is easier to control than assistance in the form of unrestricted transfer payments?

Mr. Reich: Yes. That is why our program assistance is not unrestricted but is subject to conditions.

Senator Inouye: Have you made any assumptions regarding "leakages"? That is, do you expect that a certain amount of this assistance will be diverted or otherwise be sent out of the recipient countries?

Mr. Reich: There are always some risks that leakages will occur. We seek to minimize these risks by monitoring import transactions and by linking our assistance with sound stabilization and recovery programs. Sound programs and policies are more effective in restricting short-term capital outflows than direct controls. If there are economic incentives to send money out of the country, entrepreneurial initiative can always find new, ingenious ways to get around the controls.

Senator Inouye: How much do you assume will be lost through leakages?

Mr. Reich: By monitoring import transactions and linking our assistance to sound economic policies and programs, we assume that relatively little will be lost through leakages.

## QUESTIONS SUBMITTED BY SENATOR JOHNSTON

### INFRASTRUCTURE

Senator Johnston: Most of the small Caribbean islands have serious infrastructural deficiencies such as unreliable power systems, lack of water, lack of adequate transportation facilities, etc. All these deficiencies present severe obstacles to economic development.

Yet, my general impression is that the funding for the Caribbean Basin in FY 1983 requested by the Administration is about 2/3 for short-term needs (food aid under PL 480 and Economic Support Fund dollars to help alleviate severe balance of payments crises -- must of which, I might add, is attributable to cost of imported oil) and only about 1/3 is for Development Assistance to fund projects to try to deal with the underlying infrastructure problems such as improving agricultural production to promote food self-sufficiency, developing alternate energy supplies and reliable power systems, improving transportation facilities, improving water systems, etc. Why?

Mr. Enders: In most of the Caribbean and Central America, the infrastructure is adequate to support the early growth of labor-intensive industries. By their nature, these industries do not require extensive infrastructure. For most Basin countries, the key constraint is short-term liquidity, which we are addressing through our CBI supplemental.

The situation in the small islands of the Eastern Caribbean is somewhat different. There, foreign exchange scarcity _per se_ is not a serious constraint. While infrastructure is not as well developed as in some other Basin countries, we believe it is generally sufficient to support a number of labor-intensive industries. Nearly all islands have airport and harbor facilities which can be utilized by small aircraft and vessels for cargo shipments. While electricity rates tend to be higher than in the U.S., power generation is generally adequate, or capable of being expanded as demand warrants. We and other donors are, however, prepared to explore with these Eastern Caribbean governments which are willing to look at their own policies with regard to the private sector areas where economically-sound infra-structure improvements are necessary to promote private sector investment and expansion.

In this manner, we will continue to provide development assistance to address long-term needs, with increased emphasis on constraints to private sector investment and expansion. At the same time, we believe government policies (e.g., price controls, exchange rate valuation, land tenure and credit policies) should also be carefully examined for their effects in stimulating the private sector, particularly in agriculture.

Senator Johnston: Why do you believe that private companies will significantly increase long-term investment in areas with such infrastructure deficiencies?

Mr. Enders: We believe that infrastructure in the small islands is, in general, adequate to support labor-intensive industries. In cases where economically sound infrastructure improvements could directly affect private sector inventment and expansion, we and other donors are prepared to examine these improvements with the governments of the islands.

Senator Johnston: What are the known infrastructure needs in each area? Please submit a list for the record and compare each with projects for which funds are budgeted under Development Assistance in our bilateral aid programs and projects underway through International Financial Institutions such as the Inter-American Development Bank.

Mr. Enders: As I indicated previously, infrastructure in most Caribbean and Central American countries is adequate to support new private investment in the labor-intensive industries for which they currently enjoy comparative advantage. The infrastructure of small islands of the Eastern Caribbean, does warrant further evaluation. In the Eastern Caribbean, we have already provided some selected infrastructure improvements directly linked to private sector production in such areas as road rehabilitation, development of industrial states, alternative energy, and the more effective use of water resources.

As part of the CBI, we will consider further assistance in this area. But even in the Eastern Caribbean, the existing infrastructure has supported the establishment of a number of new labor-intensive industries in the last few years.

## ADVANTAGES OF FREE TRADE AREA

Senator Johnston: Since about 87% of products from the Caribbean already enter duty-free, what are the real advantages of so-called Free Trade Area concept? How much will this really stimulate private investment? And how many new jobs will be created over the next five years?

Mr. Enders: The 87 percent figure on existing trade is misleading. The duties which remain in place are in sectors of special interest to Basin countries. We can expect significant growth in these sectors once duties are removed, and the establishment of new industries.

In addition to the duty-free treatment, we intend to provide technical assistance to help countries overcome non-tariff trade problems, such as meeting our health and sanitary regulations, and improving marketing. These barriers have often been as significant as tariffs for some products.

I cannot provide you with a specific figure on the number of jobs we expect will be generated. Since the total population of the Caribbean countries is some 17 million, and of Central America, 22 million, the number of jobs that will need to be created to affect their economies significantly is not that large.

## PUERTO RICO AND US VIRGIN ISLANDS

Senator Johnston: There are two showplaces of democracy in the Caribbean which I believe may have been given the "short shrift" -- our two insular areas, the United States Virgin Islands and the Commonwealth of Puerto Rico.

While several minor concessions were made, unlike the $350 million supplemental now pending for the Economic Support Fund for nations in the Caribbean, no additional funds have been requested in FY 1982, no revised budget estimates have been submitted for FY 1983 and indeed no legislation has been submitted to authorize projects the Administration announced as part of the CBI for Puerto Rico and Virgin Islands for those projects requiring new authority. This is perceived by some in those areas as symbolic of the inattention of the Administration to their needs.

When will legislation be submitted to authorize the Tropical Agricultural Research Center in Mayaguez? When will funds be requested for this project?

Mr. Enders: Due to budgetary constraints funding will not be requested to establish a separate Tropical Agricultural Research Center. However, to further the integrated agricultural development of the Caribbean Basin, we will make greater use of the agricultural and forestry research extension and training facilities of the Federal Government and those of Puerto Rico and the United States Virgin Islands, especially the Tropical Agricultural Research Facility at Mayaguez, Puerto Rico.

Senator Johnston: When will funds be requested for the Caribbean Cultural Center at the College of the Virgin Islands?

Mr. Enders: It has not yet been decided whether the Department of the Interior will make a special supplemental request in FY 82 for the $150,000 that would be needed for this project.

Senator Johnston: When will funds be requested for airport expansion at St. Thomas and St. Croix? (ADAP funds for FY

1983 total $450 million, and will likely be targeted to making safety improvements only; the St. Thomas expansion is not all safety-related work. In addition, DOT has yet to devise a plan for FY 1982 funds already appropriated. Therefore, simple reliance on $15 million from 1983 ADAP funds will likely not result in these two projects being undertaken as promised in the CBI, without significant Administration pressure to do so or additional funding requests from the Administration. Neither has occurred to date.)

Mr. Enders: The Administration understands the need for expansion of these airports and we are committed to completion of the airport expansion at St. Thomas. Timing and source of funds are yet to be determined, pending outcome of ADAP legislation.

## PROPOSALS BY PUERTO RICO AND THE U.S. VIRGIN ISLANDS

Senator Johnston: A number of items were suggested by the Governments of Puerto Rico and the U.S. Virgin Islands to help offset the impact of new trade and tax proposals for the Caribbean. Most of these were NOT included in the CBI package. Why?

Please give a reason for the exclusion of each of the following, indicate whether or not it is now being given serious consideration, and when a determination will be made where appropriate:

First, modification of the Jones Act to exempt Puerto Rico from limits now in effect on foreign passenger ships originating from the Mainland whenever they stop over in Puerto Rican ports, providing no comparable service is provided by U.S. flag carriers.

Mr. Enders: Baltazar Carrado, Resident Commissioner of Puerto Rico, has introduced legislation in Congress which would allow non-U.S. flag passenger service between Puerto Rico and the mainland where there is no competing U.S. service. OMB has distributed the bill for comments by the executive agencies. The Administration has made no recommendation to date on the bill.

A second proposal relates to extending cruise vessel stopover time in Puerto Rican ports beyond the current 24-hour limit imposed by the Treasury. The Maritime Administration has elicited comments from numerous interested parties and will incorporate these in its recommendation to the Customs Service in the near future.

Senator Johnston: A second point is modification of DOT regulations with respect to the cost of shipping for Puerto Rico where Puerto Rican economic development is being retarded thereby (and particularly exempting NAVIERAS from FMC rate setting).

Mr. Enders: The Department of Transportation is engaged in a general review of shipping regulations with a view to eliminating those regulations which are not cost-effective or which add increases in freight rates without corresponding public benefit. With regard to rate regulation of NAVIERAS, the FMC recently invited comment, in a public proceeding, on proposals to reduce or eliminate rate regulation of domestic offshore trades.

Senator Johnston: The third point is allowing insurance of Puerto Rican agricultural crops by the Federal Crop Insurance Corporation and extending to Puerto Rice rice supports.

Mr. Enders: The Puerto Rican Department of Agriculture requested reinsurance from the Federal Crop Insurance Corporation to begin May 1, 1982. The request was reluctantly denied because of the unavailability of funds and the requirements of mainland programs. Discussions are underway to prepare for a reinsurance program which would begin in May 1983. Discussions on specific aspects of crop support programs are also anticipated.

Senator Johnston: The fourth point is grant assistance to develop CORCO facilities for use as a Caribbean refining site of Mexican and Venezuelan petroleum.

Mr. Enders: We support the optimum development and utilization of petroleum refinery capacity in the Caribbean Basin. The recent removal of export quota restrictions on petroleum products allows the CORCO refinery to compete for processing of Mexican and Venezuelan crudes for regional oil product needs. After careful consideration, however, the Administration decided it could not support the provision of grant assistnce or loan guarantees for capital investment in heavy oil cracking facilities at the CORCO refinery. Private sector financing is available for refinery investment; for example, we understand that Sun's Puerto Rican refinery is investing in conversion facilities on its own. Such complicated investment decisions are best left to private sector to make, and currently there is considerable redundant refinery capacity in the Caribbean Basin.

Senator Johnston: The fifth point is grant assistance to the Virgin Islands to improve power and water facilities, pursuant to the plan submitted by the Government of the Virgin Islands to the Department of the Interior last year.

Mr. Enders: I understand that is being discussed in the Department of the Interior. I suggest you contact them directly for a status report.

Senator Johnston: The sixth point is funding for alternate energy projects in Puerto Rico and the Virgin Islands, and particularly funding for an OTEC project, ranked as one of the top two received by DOE in response to a solicitation offered last year from a technology standpoint.

Mr. Enders: The DOE is currently evaluating bids received for an OTEC demonstration project. The Puerto Rican proposal is indeed one of those under consideration.

Senator Johnston: The final point is modification of bilateral air treaties to increase foreign carrier entry into San Juan.

Mr. Enders: During the February round of U.S.-Canada aviation negotiations, the U.S. side proposed the creation of scheduled air links between San Juan and the Canadian cities of Montreal and Toronto. Further discussion of this and other U.S. and Canadian route proposals is scheduled to resume in Washington on May 3.

## EXIM BANK

Senator Johnston: The fact sheet on the CBI put out by the White House indicates that Eximbank financing will be used to encourage private investment in the Caribbean.

Do you intend to request additional funds in FY 1983, beyond the budget request submitted in February, to support these activities? If not, from which areas will the funds for the Caribbean come from?

Mr. Enders: We are not seeking any increase in Eximbank authorities for FY 1983 to accommodate the CBI. We do expect, however, given present estimates of worldwide demand, to be able to meet an increase in Eximbank support activities in the Caribbean Basin region in FY 1983 without sacrificing programs in other areas.

## CONTRIBUTIONS TO THE INTER-AMERICAN DEVELOPMENT BANK

Senator Johnston: Is the funding increase budgeted for FY 1983 for the Inter-American Development Bank (IDB), which is about $45 million, related to the CBI?

Mr. Enders: Our funding request for the IDB in FY 1983 is not aimed at the CBI. Our FY 1982 appropriation of $173.2 million for the Fund for Special Operations (FSO) will provide the third installment to the Fifth Replenishment of the IDB. We have requested in FY 1983 a total of $284.1 million for the IDB to meet our past and current obligations to the IDB. Of this, $62.4 million will complete our subscription to the paid-in capital portion of the Fifth Replenishment, and $221 million is for the FSO. Of the latter, $175 million is for our fourth installment to the Fifth Replenishment of the FSO and $46 million is in partial payment of our arrearages to the Fourth Replenishment of the FSO which accounts for the increase you mention.

Negotiations are currently underway for the Sixth Replenishment to the IDB for the period 1982-1986. US subscriptions to this Replenishment would be requested in our FY 1984 budget. We hope to see a greater concentration of IDB concessional resources during the period of the Sixth Replenishment to the countries greatest in need, most of which lie within the Caribbean Basin.

## SUBCOMMITTEE RECESS

Senator **KASTEN**. I will now recess the subcommittee subject to call of the Chair.

[Whereupon, at 3:25 p.m., Wednesday, March 17, the subcommittee was recessed, to reconvene at the call of the Chair.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

THURSDAY, APRIL 22, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met, at 2 p.m., in room 1318, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senator Kasten.

## GENERAL ACCOUNTING OFFICE

### INTERNATIONAL DIVISION

### STATEMENT OF FRANK C. CONAHAN, DIRECTOR, INTERNATIONAL DIVISION, GENERAL ACCOUNTING OFFICE

**ACCOMPANIED BY:**

**HARRY FINLEY, ASSOCIATE DIRECTOR, INTERNATIONAL DIVISION,**

**SAMUEL W. BOWLIN, ASSOCIATE DIRECTOR, INTERNATIONAL DIVISION**

### INTRODUCTION OF WITNESSES

Senator KASTEN. The subcommittee will come to order.

This afternoon the subcommittee will receive testimony from the International Division of the General Accounting Office and from the Inspector General of the Agency for International Development. These two offices have the responsibility of auditing, reviewing and inspecting the U.S. foreign assistance programs and other matters related to foreign policy.

Our first witness will be Mr. Frank C. Conahan, Director of the International Division of the General Accounting Office.

Mr. Conahan, you may proceed. I understand you have a prepared statement. That will be made a part of the record. If you can summarize your statement in whatever form you think is most convenient, then there will be more time to respond to questions.

Mr. CONAHAN. Thank you, Mr. Chairman.

I would like to do precisely that. With me to answer questions after I do make a few points are Samuel Bowlin on my right and Harry Finley on my left who are in charge respectively of our economic and military assistance work in the agency.

### AID PROJECT MANAGEMENT

I would like to start by saying, over time, we have made quite a few recommendations on ways AID could improve its program planning, project implementation, monitoring and evaluation. We have seen recent progress toward improved project planning and implementation, but quite frankly we believe much remains to be done.

Since 1973 there has been a rather significant slowdown in the number of AID projects that have been completed, and we believe there are many factors for this, and we have reported in terms of those AID needs to address to correct it.

We believe that one thing AID has failed to do over time is to take advantage of lessons learned from the projects that it has carried out over the past 30 years. It does not have a very good system for collecting those lessons, and there does not seem to be an incentive within the agency for those lessons to be gathered and applied to project design on a current basis.

### HOST COUNTRY CONTRACTING

Another aspect of program implementation has to do with the matter of host country contracting. I believe that the AID Inspector General, who is here today, is going to go into that in some detail. I would like to point out that we support his findings in that regard.

We are also nearing completion of a review involving the increasing use of private voluntary organizations in the AID program. We believe that there are two sets of problems associated with that involvement.

One is that we believe that the agency needs to define the purpose for which these agencies are to be used in the program, and for the PVO's part, we believe there are substantial opportunities to improve their program.

There is another matter which we think needs close watching, and that has to do with the increasing PVO financial dependency on AID funding.

In addition to the AID program, our reviews have also been directed to the Inter-American Foundation, the Peace Corps and U.S. involvement in refugee programs. In that regard we have a report which will be out very shortly concerning projects carried out by the Inter-American Foundation, and I think it will show some of the same design and implementation problems that AID has experienced over the years.

### MILITARY ASSISTANCE

Just a word or two, if I may, about our security assistance work. With the decline in grant-aid military assistance, U.S. security assistance has taken the form of loans and guarantees, but climbing interest rates are making the FMS loans a burden and drain on limited resources of many recipient countries. This is particularly true in the case of such countries as Turkey and the Sudan.

The administration sees a need to provide concessional terms for Turkey and the budget proposal before the Congress specifically calls for funding of loans for military sales at various interest rates geared to the recipient countries' ability to pay. We believe pressure for this type of concessional funding will continue to build in the future, and we need seriously to consider its implications.

Another matter of concern is the method used by the Departments of State and Defense to assist arms recipients in need of financial assistance. In the case of both Egypt and Israel a so-called cash flow method of financing is being used which permits the countries to order military equipment in excess of the authorization granted for those countries by the Congress.

We believe that this method of financing places considerable pressure upon the Congress for future authority, and that it may bind us to some commitments that have not been given the proper consideration in Congress.

### PREPARED STATEMENT

Our prepared statement mentions a number of other reports we have issued concerning both economic and military assistance, but I think, sir, these are the points that need to be made in order to take any questions you might have at this time.

Thank you.

[The statement follows:]

# PREPARED STATEMENT OF FRANK C. CONAHAN
## DIRECTOR, INTERNATIONAL DIVISION
## GENERAL ACCOUNTING OFFICE

Mr. Chairman and Members of the Subcommittee:

We appreciate the opportunity to provide an overview of our recently completed and on-going work on U.S. foreign assistance programs and projects.

We will discuss our work on bilateral and multilateral developmental assistance and military assistance. We believe that implementation of our recommendations will bring about program improvements; reduce costs; and provide better opportunities for congressional oversight.

## BILATERAL ASSISTANCE

Our bilateral economic assistance reviews continue to emphasize programs which are managed and disbursed by the Agency for International Development (AID). Much of our work focuses on the efficiency and economy of AID assistance regarding food, health, natural resource conservation, and human resource development. We also continue to report on the effectiveness of AID functional assistance in meeting developing nations' unique needs. We have made observations on ways AID could improve its program planning, project implementation, monitoring, and evaluation. We have seen recent progress at AID toward improved project planning and implementation, but much remains to be done.

### AID project management

Since AID's inception, over 8,745 projects have been completed costing about $15.5 billion. As of September 30, 1981 another 1,973 projects were underway with estimated costs to AID of over $11.4 billion. Since 1973 there has been a significant slowdown in the number of AID projects completed and a dramatic increase in the agency's committed, but unspent funds (about $5.2 billion as of September 1981). While there are many factors that have contributed to AID's slow project completion record, we have reported on some which we believe AID can influence in a positive manner. We have emphasized the need for AID to better use lessons learned during the past 3 decades of designing, programming, and implementing projects in developing countries. We have suggested that AID should increase recipient-government involvement in program design and management for U.S.-supported projects. In this context, we have suggested that AID emphasize the ability of host countries to carry projects through the implementation phase and to sustain the recurring costs of generated activities when external financing ends.

For example, we reported in 1981 that the management and effectiveness of AID projects in health-care, water development, agriculture assistance, and disaster assistance, as well as projects to strengthen governmental institutions, ultimately depend upon the ability of host countries to absorb U.S. aid and implement the projects. Without this ability, and/or host government willingness to support projects, the results are either large obligations of unspent assistance funds or expenditure of funds for projects with limited life after U.S. assistance is terminated.

Our February 22, 1982 report on Haiti is our most recent view of AID's difficulty in implementing projects. We recommended that AID should avoid further delays in project implementation by working directly with the Haitian people until the Government of Haiti could effectively meet project responsibilities.

Another aspect of the problem of program implementation is under review in a current study on how efficiently AID funds are spent and how effectively AID program objectives are met through contract arrangements for supplies and services between contractors and host countries. Our study's preliminary results confirm our concern and that of the AID Inspector General that (1) AID has not accumulated complete data on the extent of its host-country contract activities and that (2) accountability processes and procurement procedures could be improved.

Private-sector emphasis

AID has recently placed increased emphasis on mobilizing greater participation of the U.S.-private sector in overseas development and in promoting and encouraging the expansion of local, private-sector activities in developing countries. The administration believes that increased private-sector participation in development will help developing countries generate capital and decrease the need for traditional forms of U.S. assistance. In addition to the new initiatives, the United States has been funding a number of programs to encourage more active private-sector participation in development. These programs include the Trade and Development Program and the OPIC program on which we issued reports in 1981.

In August 1981, we issued a report that was intended to help the U.S.-development community consider different ways to use trade as a development mechanism. We examined how four developing countries have used trade in their economic development process and what assistance is provided in this area by bilateral and multilateral donors. We examined obstacles for developing countries to implement, maintain a successful trade strategy and how these obstacles are being addressed. Obstacles we reviewed included lack of trained personnel, marketing experience, quality control, available credit, and tariff and non-tariff measures in potential or actual markets.

We are presently reviewing the extent to which AID promotes and works with U.S. and host-country private sectors. This assignment includes the identification of (1) programs which are directed toward, and implemented through, the private sector and (2) funds spent on procurement of goods and services both here and in developing countries.

We are also nearing completion of another review involving the relationship of private and voluntary organizations (PVOs) in the U.S.-development assistance program. Our tentative findings are that AID and the PVO's have yet to forge an effective partnership - AID still needs to define its purposes for, and the scope of, the partnership. We believe the PVO's have opportunities to improve their program impact and, along with AID, should reassess the present direction of increasing PVO financial dependency on AID funding.

Economic Support Fund

The United States also provides assistance through the Economic Support Fund (ESF). ESF resources may be allocated to countries in amounts which may not be justified solely on the basis of development need when U.S. security interests would be served. Although ESF resources may be spent for such needs as financing commodity imports or to support balance-of-payments, the funds intended for development projects must be spent, to the extent possible, according to the accountability criteria used for functional development assistance.

We note that the administration plans to increase ESF as part of an emphasis on international security assistance to stabilize countries which are threatened by external intervention and to provide resources to allow for base rights negotiations. As mentioned previously, we have expressed concern about the adequacy of planning and monitoring for AID's established programs for development assistance; thus we are concerned that the nature of ESF programs (administered through AID and subject to similar congressional mandates and agency regulations) are even more difficult to monitor. We are beginning a study that will specifically review the adequacy of AID financial and programmatic controls of commodity import and other balance-of-payment support. We are planning to report the results of our study prior to hearings on the 1984 budget.

Other bilateral programs

Our recent reviews of bilateral assistance are not limited to the programs of AID but also cover the Inter-American Foundation (IAF), Peace Corps, and the U.S. involvement in refugee programs. The objective of these reviews is to note the need for program efficiency and to identify needed improvements for management attention.

In this regard, we are completing a review of the Inter-American Foundation which was created by the Congress in 1969 as an experimental program designed to provide new direction and emphasis for U.S.-assistance programs in Latin America. From our review of selected IAF projects in Latin America, we found that the majority have a good chance of meeting some or all of their objectives. A number of problems, both in project design and implementation, limit achievement of project objectives. We also observed that opportunities exist for IAF to provide more effective monitoring and supportive activities for projects; to improve coordination with other development assistance efforts in the region; and to systematically disseminate its experience with experimental and innovative projects. We expect the final report to be issued in June 1982.

Our May 1981 report on the adequacy of the preparation of volunteers for Peace Corps service contained recommendations which were generally accepted by the Peace Corps. We recommended that the Peace Corps establish centralized and uniform policies and procedures for selecting and training volunteers, and for evaluating reasons for volunteer attrition. Recently, as called for in legislation signed on December 29, 1981, we monitored and reported on what we believed to be an equitable separation of Peace Corps from ACTION.

In addition to reviewing the U.S.-direct assistance to refugee programs, we also take into account the Department of State's and AID's management responsibilities to coordinate the U.S. contributions to the various international organizations involved. Since April 1975, we have reported on the problems encountered in the protection, care, and processing of Indochinese refugees and are currently reviewing the implementation of new U.S. screening policies for Indochinese refugees. We are also now undertaking a study of the status of U.S. and international assistance to African refugees.

## MULTILATERAL ECONOMIC ASSISTANCE

Our work concerning the U.S. participation in the provision of multilateral economic assistance concentrates on identifying opportunities to reduce costs and to improve management effectiveness. For example, we reported in September 1981 that the United Nations member countries wanted to shift resources from completed, obsolete, marginally useful, and ineffective activities to new activities, but that limited identification of such activities had taken place. We recommended to the Secretary of State that U.S. efforts be intensified to overcome the slow progress of the United Nations to control costs by identifying and reducing marginal activities. As slow as these efforts have been, they are only directed at the U.N. assessed budget. There is no specific program to identify marginal activities in organizations supported through voluntary contributions. We do note, however, that the Department of State has included the elimination of marginal programs and activities as an objective for U.S. membership in the United Nations.

In April 1981, we reported that the multilateral banks, of which the U.S. is a member--the Inter-American Bank, the World Bank, and the Asian Development Bank--have made progress in implementing independent evaluation systems. We made recommendations to the Secretary of the Treasury to encourage more improvements in this area.

We are planning to start a review of the changes the administration is proposing in U.S. participation in international organizations and financial institutions. These changes include cutbacks and deferrals in U.S. contributions and subscriptions along with continued U.S. emphasis on controlling costs on the part of these international organizations.

## MILITARY ASSISTANCE

Turning now to our work on U.S. security assistance programs overseas, we would like to discuss our recent reports and on-going or planned reviews on Foreign Military Sales (FMS) and program management.

## Questionable ability to repay FMS loans

Providing military aid to countries suffering severe economic problems is a major concern for the administration and the Congress. With the decline in grant-aid Military Assistance Program, U.S. security assistance has taken the form of loans and guarantees, but climbing interest rates are making the FMS loans a burden and a drain on the limited resources of many recipient countries.

For example, our recent report on the implementation of the Defense and Economic Cooperation Agreement with Turkey pointed out that Turkey's foreign debts were rescheduled in 1980 to keep it from defaulting. We noted that by 1984, Turkey will owe over $200 million per year for interest and premium payments on U.S. FMS loans and if the U.S provides large amounts of additional loans at market interest rates in the next few years, that debt service burden will increase even more. The administration sees a need to provide concessional terms for Turkey. The budget proposal for International Security Assistance before the Congress specifically calls for the funding of loans for military sales at variable interest rates geared to the recipient countries ability to pay.

We believe that pressure for this type of concessional financing will continue and build in future years. We are beginning work now to look at the options available to the United States in dealing with strategic allies determined to be in need of military equipment and unable to afford the high costs and high interest rates.

## Cash flow financing

Another matter of concern is a method used by the Departments of State and Defense to assist arms recipients who are in need of financial assistance. For example, Egypt received $1.5 billion in loan guarantees and credits after the Egypt-Israel Peace Treaty, plus another $500 million in 1981. Using this $2-billion credit authorized through fiscal 1981, Egypt placed orders for U.S.

equipment valued at over $3.5 billion. This was possible because of the so-called "cash flow" authorization given to Egypt by the administration. Israel is also authorized to finance its program in this way.

Under normal FMS financing procedures the United States requires most buyer countries to reserve, or obligate, the full cost of the item when the order is placed. This means that if an item costs $100 million, FMS credits of $100 million must be set aside when the letter-of-offer is signed. Under the cash flow system, however, Egypt sets aside only the amount of money needed to meet the current fiscal year's cash requirement and has been able to place orders valued at 70 percent more than the available credit guarantees. Egypt has already incurred debts of about $900 million in 1982 and over $600 million in 1983 for equipment now on order. Egypt has no likely source of cash to make these payments--other than future U.S. credit authorizations.

This method of financing again places considerable pressure on the Congress to continue providing substantial levels of credit and we believe it represents a serious long-term commitment by the United States in which there is no statutory requirement to inform the Congress or seek congressional approval. As we reported to the Senate Foreign Relations Committee in January 1982, the full ramifications and implications of this authorization for Egypt were not presented to the appropriate committees and thus may not have been subject to close congressional scrutiny.

## Appropriateness of delivered equipment

Some foreign policy decisions regarding the types and amounts of weapons financed by FMS, have budget and appropriations impacts. For example, in our January 1982 report, we reported that while Egypt's needs are so great that any new equipment is welcomed, some of the security assistance financing provided by the United States was used for items that met more of a political need than a military one. F-4s, for example, were provided in 1979 because they were available quickly from U.S. inventory and were desirable to Egypt because of Israel's successful use of F-4s in the 1973 war. However, F-4s are difficult to maintain and require sophisticated supply and maintenance capabilities, and Egypt has had difficulty in maintaining acceptable operational rates. Our report on the security assistance program in Korea, to be issued shortly, highlights similar questions concerning the sale of F-16 aircraft and points out some possible alternatives for the U.S.

## Technology transfers

Another aspect of arms sales is the transfer of sophisticated technology to countries that could some day be potential competitors. We focused on this issue in our March 1982 report on military aircraft coproduction programs with Japan. Japan is doing major manufacturing work on the F-15 aircraft it is now buying and, in the process, is receiving considerable new technology for its aircraft industry. Japan has selected its commercial aircraft industry for major expansion and competition in the international market. Thus, we believe that over time military aircraft coproduction programs will provide the industry valuable technology and experience to help its development. We believe that it is important to note that these considerations apparently were not a factor in the decisions to release various technologies in the coproduction program. Most importantly, some U.S agencies concerned with trade implications were not directly involved in the decision-making process.

## Administration of security assistance

Finally, I would like to mention briefly our work on the administration of the security assistance program by U.S. managers. We reported last year on the need for the Foreign Assistance Act to cover the leasing of military equipment to foreign countries, and the need to clarify the functions permitted to be performed by the overseas security assistance branch offices. Our concerns were addressed by the International Security and Development Act of 1981.

This concludes my prepared remarks, Mr. Chairman. We will be pleased to answer any questions you may have.

### PROBLEMS IN AID PROJECTS

Senator **Kasten**. Thank you. Thank you also for summarizing your statement as quickly as you did.

I wonder if you could give us a specific example or two on your first point that we continually find that AID is not making use of lessons that have been learned.

Are you suggesting that something we learn to do right or mistakes we have made in Egypt are not being carried over in Africa, or are you saying in Egypt we are doing the same thing wrong time after time?

Mr. **Conahan**. I think some of each of those things. In the first instance there is no systematic collection of the problems that AID projects encounter. There has not been over the years. There is no central repository where an individual who is now designing a project can go and look for the problems that were encountered in a similar kind of project last year or the year before or a dozen years ago.

Second, people rotate frequently, as we all know, within the Agency. A project officer simply is not in a country long enough to correct the second kind of problem you are talking about. This cuts across all kinds of projects at which we have looked recently.

We have looked at health care projects. We have looked at conservation projects and at university contracting projects. We found the same kind of management problems in those projects.

I think I would like a moment, if I may, to discuss the university relationship with AID. I think it was the 1975 legislation which urged AID to use universities to an increasing extent in the AID program. That involvement has increased somewhat.

In addition to the involvement of the individual universities in individual projects, a relationship has been built up in terms of a strengthening grant program between AID and the universities. I think since 1975 we have spent about $25 for these strengthening grants. Quite frankly we have not seen much in the way of benefit coming out of that expenditure of funds.

AID has been using universities for 30 years, and its missions don't see any significant difference in the way they can effectively use those universities today from what they were able to do before the 1975 legislation.

### AGENCY ADHERENCE TO GAO RECOMMENDATIONS

Senator **Kasten**. Is the problem, you believe, that some of your findings and recommendations are simply not being taken seriously? Or do you think that the recommendations are being taken seriously, but we need to set up a formal mechanism in one way or the other, even through legislation, whereby agencies and departments will be required to act, or this particular agency would be required to act on certain specific recommendations?

Mr. **Conahan**. I think that there should be some mechanism in place which would require agencies to act not only on GAO recommendations, but the recommendations of the various Inspectors General. There is a provision of law, section 236 of the Legislative Reorganization Act of 1970, which requires agencies to report to the House Government Operations Committee and Senate Governmental Affairs Committee, as well as the Appropriations Committees on actions taken on GAO recommendations.

That system throughout the Government is somewhat mixed. The responses are indeed being made. The responses frequently are not very good. So I think that system can be improved upon, and our office is doing some things in that regard.

Also we have not found much evidence in the way of seeing incentives within the Agency for complying with our recommendations or for trying to correct the problems that we have identified. There has been some progress, but it is not what it needs to be.

### INDIVIDUAL PERFORMANCE RECORDS

Senator KASTEN. In that regard, do you think that one method of alleviating this problem might be emphasizing individual performance vis-a-vis implementation as part of performance records?

In other words, rather than grading a person, it seems to me we are doing a lot of evaluation based on his or her ability to dream up new projects and present new proposals, that somehow more emphasis should be placed on the ability to implement projects once they are in place?

Mr. CONAHAN. I suppose we have to take a step back a moment and talk a bit about what AID people do overseas. For the most part, AID people are not involved in implementing projects. They are designing projects, and they are required to monitor and evaluate projects.

Private organizations, including contractors, universities and so on, for the most part these days, are carrying out projects.

Senator KASTEN. It seems that the emphasis is on the first part. You said first of all they design, and then they monitor the implementation. It seems to me in the second part there is less effort and a whole lot less interest.

Mr. CONAHAN. I think also, without deviating from your question, but stepping back a moment, improvements need to be made in the design of the project. In direct response to your question I would agree, if a system could be devised it would be extremely helpful.

Conceptually I would agree with you. Conceptually they are the sorts of things that a performance appraisal system needs to take into account, yes, sir.

### RESULTS OF GOVERNMENT REPORT

Senator KASTEN. A number of months ago you issued a report entitled "Disappointing Progress in Improving Systems Resulting in Billions Lost in Audit Findings."

Has this report generated any improvement?

Mr. CONAHAN. That was a Government-wide report. I think it is a little too early to tell. I am not aware of any new legislative proposals following that report.

Mr. BOWLIN. May I add, our office has, working with congressional committees, established a task force to follow up on that report, which was a Government-wide effort to give impetus to the need for action on recommendations, not only our own, but also Inspectors General recommendations.

Mr. CONAHAN. Mr. Chairman, let me also add that in our work we have close liaison with the Inspectors General throughout the Government and in particular with AID. We are aware that the followup system devised by the present AID Inspector General is working quite well, and we are fairly happy with the one in AID, but it is relatively new, and I think we are going to have to look at it over a longer period of time to see precisely its impact.

### HOST COUNTRY CONTRACTS

Senator KASTEN. Your statement spends some time discussing host country contracts used by the Agency for International Development. Do you believe that we, in fact, lose money in the process of these host country contracts or is it simply less efficient?

I would like you to develop your concerns with host country contracts.

Mr. CONAHAN. I think that we need to recognize up front that the officials AID are dealing with in many of these countries do not have the necessary technical or managerial expertise to do a first-rate job. In a number of these countries, graft and corruption is at a higher rate than we would like to see. In the absence of monitoring, effective monitoring, on the part of AID, I think that there are inefficiencies in that system.

Clearly we have found indications of waste and misuse. In fact, the report that we will issue in the next few weeks concerning the Inter-American Foundation, since that is fresh in my mind, will show cases of waste, misuse and diversion of funds, and I think that is not unlike what we have seen over time in aspects of the AID program.

This adds up to less for the dollars we are putting in.

### MANAGEMENT CAPABILITY OF HOST GOVERNMENT

Senator KASTEN. One of the goals, though, is that we need to develop this management capability on behalf of the host country and part of what we are doing is trying to help them not only develop an infrastructure, but also trying to help develop managerial talents, accounting skills, different kinds of leadership and managerial abilities.

That is hard to measure in dollars I guess, but do you agree this is one of the goals?

Mr. CONAHAN. Not only do I agree it is one of the goals, I think it is an extremely important goal. I think all these efforts will not amount to very much unless we do help develop those skills so that they can carry on the projects that AID and other donors are devising.

One of the changes we have noted in our work over time, and perhaps this is a result, a direct result of the new directions mandate as well as some thinking immediately prior to that time, is the decrease in training from the early years in the public administration area. We had a lot of people from U.S. Government agencies overseas involved in such matters as tax administration, but we don't have much of this any more.

We have found that generally in the financial management area people in a lot of the developing countries are not receiving training. As a matter of fact, our own organization, together with the national audit authorities of other countries, sponsor and support a training program in auditing and financial management, generally for participants from the less developed countries. There is a great need for that training.

### REVIEW OF PRIVATE VOLUNTARY ORGANIZATIONS

Senator KASTEN. Can you give us some of your preliminary findings on your review of the private voluntary organizations? Also I would be interested in knowing if the PVO's have been cooperative in providing you with the necessary information so that you can conduct your review in the way you would like and receive the information you would need?

Mr. CONAHAN. To take the last part first, yes, they have been very cooperative with us, not only during the course of the development of the work, but also in responding to our tentative conclusions. The results of our work show that the projects these organizations have carried out, those included in our test, had mixed results.

We looked in some detail at about 15 or 16 projects. About half were judged by us to be successful. Perhaps as many as nine were judged to be truly successful—they met the goals set out—but the others were deficient in meeting their goals.

The reasons for this were fairly clear throughout the projects we looked at. Experience in the country and skill of the individuals working in the PVO organization were factors. Headquarters support and indeed the relationships, both the personal and institutional relationships, that were built up between the PVO and the host government entity responsible for carrying out the project were also factors.

So, I suppose the best I can say at this point is that the results have been mixed. As I mentioned a little earlier, a different kind of concern comes from the fact that AID itself has not yet clearly defined what it expects from these organizations, what sort of assistance effort should go to a PVO as contrasted to a university.

Finally, I think we have to watch very, very carefully the extent to which these PVO's are relying on AID financing for their continuation. We have noted some cases where an organization in a country delayed getting into something awaiting AID financing. It just wasn't in a position otherwise to act until the AID financing came. I think that is a problem.

### DEPENDENCY ON AID FUNDING

Senator KASTEN. That is a significant problem. I don't know about the ones you studied, but some of the private voluntary organizations receive close to 100 percent of their funding from AID. We can argue how do we qualify a private voluntary organization if they are getting 90 percent or 80 percent of their money from AID.

First of all, I don't know whether any of the ones you studied fall in this category. What effect do you believe this dependency on AID funding has on these organizations, especially the ones above

75 percent? I suppose these people who are awaiting the funds to begin the activity might fall in that class.

Second, what would you think of the requirement that in order to qualify as a PVO, 50 percent of their funding had to be from private sources?

Mr. CONAHAN. I would think rationale and justification for using a PVO in the first instance has to do with the fact that the PVO has something special or something unique to contribute to a particular developmental effort. If that is so, I would have to think that increased dependency of a PVO on AID would move the PVO away from its individual unique contribution.

That is to say it would be more pliant to the suggestions and even the whims of AID. I am not sure that is what we are looking for. These organizations have done good work over a long period of time. I think what we are looking for here is some kind of partnership down the road because we believe that was consonant with the AID objective.

Insofar as the financial requirement is concerned, yes, we support it without qualification. I think right now there is a requirement that these organizations show funding on the order of 20 percent of the total project cost from themselves. But of course they can use the contribution by the host government and others in order to make up their contribution.

Just in number, we support a 50-50 arrangement without qualification.

### NONGOVERNMENT RESOURCES FOR PVO'S

Senator KASTEN. How does the GAO interpret the 20 percent requirement for non-U.S. Government resources for PVO's? Does it apply it to matching grants?

Mr. CONAHAN. Sam, can you answer that.

Mr. BOWLIN. Could you repeat that?

Senator KASTEN. How do you interpret the 20 percent requirement for non-Government resources for PVO's? Do you apply it to matching grants?

Mr. BOWLIN. I don't think I can answer that specific question. I know that we had supported an increase in the percentage with our recommendations. But I am not sure we have looked at matching grants from that standpoint.

Senator KASTEN. I think it is fair to say, if I can summarize this general area, that you are in general agreement that keeping these private voluntary organizations private and voluntary and setting up some kind of financial structure that would make them private and voluntary would be, you believe, in the best interest of the program?

Mr. BOWLIN. Yes, sir, absolutely.

### CASH FLOW FINANCING PROBLEMS WITH EGYPT

Senator KASTEN. As you may know, I returned from the Mid-East last week.

Could you discuss the cash flow financing problems, especially as they relate to Egypt mentioned briefly in your statement?

Mr. CONAHAN. Yes, sir.

Senator KASTEN. I guess that is probably the best example of a clogged pipeline. Maybe you have a better one, but I would like you to discuss in general what is going on there.

Mr. CONAHAN. You are talking about the economic AID pipeline?

Senator KASTEN. Yes.

Mr. CONAHAN. I am afraid that we don't have much current information on that at the moment. We do know that it makes up about half of the total AID pipeline at the moment.

Mr. BOWLIN. It is close to half of a $5 billion pipeline, in terms of committed but unspent funds. This was a question in our report last year on the agricultural assistance to Egypt.

Our basic concern was that over a 5-year period there was very little progress in moving those projects from a design stage to implementation, and thus spending the money for the purposes for which it was intended and the pipeline continues to grow.

### ECONOMIC ASSISTANCE TO EGYPT AND ISRAEL

Senator KASTEN. One of the things that I discussed with a number of Egyptian officials, including President Mubarak, was the difference in the way we handle the economic assistance to Egypt and Israel. One, for all practical purposes, is a blank check and the other is very specific—project by project.

I would be interested in your opinion, particularly in the case of Egypt, but it may be true in other countries. We are in the process of trying to analyze that on the staff level here.

The first step would be to broaden aid by category, so much for water projects, so much for rural projects, electrification projects. Work it out by sectors.

Do you believe that would be more or less efficient? The Egyptians have bureaucracies that they are working with, and we have an AID bureaucracy working there. When you have a project on which both of these groups must decide, it takes years. To make minor changes you have to go through the whole grinding bureaucracies of both countries.

If we gained flexibility, would it help the situation or would we end up having serious management problems and wasting taxpayers funds?

Mr. CONAHAN. I think the problems we see in some of the smaller projects in other countries are the same sorts of problems that you will find in the AID program in Egypt. As it presently exists, and whether or not we were to somehow further split the program up, I think I would have to defer a little bit to a greater study of the program in Egypt before answering that question.

I would like to make an observation which I think is pertinent. We are talking primarily about economic support funding. Wherever you have that involved you have to weigh the mix of justification. Certainly we want to get an economic development payoff from those funds in the same manner that we want to get a payoff from development assistance funds. But I don't think that we can expect, quite frankly, that the implementing organization, whichever organization that is, can move as quickly on those massive projects as they should on some of the smaller projects.

I think what we need to have here is much better up-front planning for some of these programs. When we have these massive infusions of aid we need better up-front planning on the part of AID. I think what happens sometimes is those sorts of programs are thrust upon AID, and they have to scramble around a good bit to find out what they are going to do with it.

Perhaps in Egypt we are in that sort of a posture right now.

Senator **Kasten**. Are you suggesting then that rather than going sector by sector, that we try to establish certain thresholds of a project within a sector so that the smaller one would be more flexible, but on larger more complicated ones they would have less flexibility?

Mr. **Conahan**. No, I don't think I am saying that. I think I am trying to defer a comment on Egypt specifically.

Mr. **Bowlin**. I would agree with that. I think even with a sector loan you would still have to couple that with reforms. It is not necessarily as quick disbursing as one might imagine if you are going to exact some degree of reform or some degree of improvement in the structure you are trying to deal with for longtime development purposes.

I think you would have to look more closely at the purpose of the assistance, and I think AID does sometimes find it is dealt a set of cards that it has difficulty playing.

Senator **Kasten**. There are conflicting goals in certain cases. I understand that.

### EGYPTIAN AGRICULTURE

Mr. **Conahan**. May I add to that a bit. If you take a look at the Egyptian agricultural sector which we are supporting specifically and heavily, the disincentives to production are there, and they have been there a long time. They need to be taken care of because the assistance——

Senator **Kasten**. You mean the pricing problem?

Mr. **Conahan**. Yes. They have to be taken care of.

Senator **Kasten**. This is a subject that the subcommittee is interested in, and something we are going to be discussing. We have been discussing it with Peter McPherson and others. I have explored this with the Egyptians, and it may be something we will ask you for your specific help and guidance on. I hope you can help us on it.

You mentioned your work on the Inter-American Foundation. I do not know if it is possible, but we would appreciate it very much if you could furnish us a draft to assist our staff as we develop questions for the IAF hearing. There might be some information you have that we could start to work on almost immediately. I would be pleased if you could help us.

Mr. **Conahan** We will be pleased to do so.

### SUBMITTED QUESTIONS

Senator **Kasten**. There are some additional questions that I have, and there are possibly some questions from other members who have not been able to attend the hearing. So if you could make yourselves available, we will get those questions to you and hopefully you can get them back to the committee in a reasonable length of time.

I want to thank you for your testimony today and say that we look forward to working with you.

Mr. CONAHAN. Thank you.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

SENATOR KASTEN: Do you have any dollar estimate of outstanding funds possibly owed the United States as a result of your audit findings in the international area?

MR. CONAHAN : No, Senator, we do not. The General Accounting Office cannot compel the agencies, the Congress, or international organizations to accept our recommendations. Also, many of our recommendations towards improving government operations simply cannot be measured in dollars and cents savings. However, when the agencies or the Congress take actions which can lead to savings, we do attempt to identify and record them. For example, in response to one of our recommendations, AID began contract negotiations to obtain blanket workers' compensation coverage between host governments and third parties. Due to considerable contract competition, officials estimate total savings of nearly $40 million or about $8 million per year over the 5-year contract life.

SENATOR KASTEN: Why is there no program to identify marginal activities in U.N. organizations supported through voluntary contributions as there is in those supported through the assessed budget?

MR. CONAHAN : Emphasis has been placed upon identifying marginal activities contained in organizations supported through assessed budgets because the member countries have no choice in paying their share of the budgets. In the case of voluntary contributions the member countries do have a choice in the amount they will pay.

SENATOR KASTEN: You mention your role in monitoring the separation of the Peace Corps from ACTION, was it a good compromise between the Peace Corps and ACTION interests?

MR. CONAHAN : Our discussions and meetings with officials of ACTION, the Peace Corps and the Office of Management and Budget during the course of the separation process and our examination of OMB's determination order led us to conclude that the separation appeared equitable. The mutual concurrence expressed by the agencies and OMB in coming up with the lists of fund balances, personnel, property, records, and contracts involved in the transfer, was a further indication to us that the separation was fair.

SENATOR KASTEN: Would you discuss in more detail the cash flow financing problems, especially as it relates to Egypt, mentioned in your statement?

MR. CONAHAN : Under the so-called "cash flow" method of financing Egypt's Foreign Military Sales (FMS) program, the United States has allowed Egypt to order $3.5 billion of military equipment since 1979, even though only $2.05 billion in credits has been allocated for Egypt. This financing method stretches Egypt's buying power and allows it to place more orders sooner to expedite delivery and minimize cost. However, it appears to us to commit the Congress to large financing programs in future years to ensure that signed contracts are honored.

Here is how this cash flow system works compared to the normal full funding FMS program. When a weapon system is purchased, a Letter of Offer and Acceptance (LOA) is signed by the buyer spelling out the equipment deliveries and the payment schedule. While the total cost of an item may be hundreds of millions of dollars, not all the money will be paid in the first year after the contract is signed. Major systems have a long lead time before delivery, usually several years, and payments will be spread out over this time period. Under normal FMS financing procedures with most countries, the United States requires that the buyer reserve, or set aside, the full cost of the item when the order is placed. This means that if an item costs $100 million, FMS credits of $100 million must be set aside when the LOA is signed. Under the cash flow system authorized for Egypt, however, Egypt sets aside only the amount of money needed to meet the current fiscal year's cash requirements. That same $100 million item, for example, may only require $50 million the first year. So Egypt can set aside only $50 million and the other $50 million is available to place additional orders up to the limit of its cash requirement during that year.

State and Defense Department officials have explained that the Egyptians clearly understand that this system does not represent a commitment by the United States to provide specified sums of money in future years, but we believe it would be difficult for Egypt to interpret it any other way. The State Department has allowed Egypt to obligate funds in future years up to the level of $1.5 billion above current funding. Realistically, the United States would not be likely to reduce funding to Egypt in the foreseeable future anyway, but by authorizing this cash flow system the United States has permitted Egypt to buy much more equipment in the first 3 years of the program and it has made a deeper commitment for future support than would ordinarily be possible through the normal FMS program.

SENATOR KASTEN: Your statement questions the ability of many recipient countries to repay FMS loans. Are you, therefore, supportive of the administration's policy of providing more forgiven FMS loans or grants?

MR. CONAHAN : Generally, we support the Administration's policy that a more flexible FMS financing program, i.e., a program designed to be more in line with the recipients' ability to repay, if necessary, and, in some cases, forgiven credits or grants may be needed. However, forgiven credits and grants would not be appropriate for recipient countries with generally stronger economies. In these cases, a mix of direct credits at rates that vary from as low as 3 percent to Federal Financing Bank (FFB) rates and grants may be more appropriate.

Although we recognize that the recent preference to use the higher FFB-rate, off-budget, guaranteed credits has driven the design of the FMS program, we support the unified budget concept which would place all FMS financing on-budget. If FMS financing was up front for all to see, we believe an FMS financing program would emerge from the budgetary process that would better reflect the ability of recipient countries to pay for their FMS imports.

SENATOR KASTEN: This subcommittee has long viewed the Inspector General of the Agency for International Development as an important tool for that agency.

Your final report on his activity is not yet out, but I wonder if you could briefly give us your findings?

MR. CONAHAN : Our report will be issued soon. GAO found that the IG's staff and travel resources and ability to locate overseas has been insufficient to cover all AID programs and activities. We are recommending that, in order to improve the efficiency and effectiveness of the IG audit function, AID needs to reemphasize and communicate its audit function's role and appoint a qualified and experienced professional as Assistant Inspector General for Audit. Also, the Investigative and Inspection function is in need of better staff resources management.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

SENATOR INOUYE: You have stated that GAO has "seen recent progress at AID toward improved project planning and implementation, but much remains to be done."

What evidence can you cite to substantiate this "recent progress?"

What specific improvements in project planning and implementation has GAO recommended?

How has AID responded to these recommendations?

MR. CONAHAN : In our July 1980 report "AID Slow in Dealing with Project Planning and Implementation Problems," (ID-80-33) we recommended that AID

--reemphasize the need for adequate project implementation planning in clear and explicit guidance to AID personnel;

--increase the training of AID project personnel in project design and implementation processes;

--increase efforts for finding solutions to problems in the implementation for projects; and

--issue adequate project monitoring guidance.

AID generally agreed with these recommendations and there is some evidence of efforts to reduce the time it takes to implement projects and correct other longstanding weaknesses.

For example, in recent statements, the AID Administrator has said that agency needs to devote more attention to project implementation.

In February 1982, the AID Administrator allowed more flexibility in choosing the contracting mode for implementing development assistance projects, giving more freedom to the missions to contract directly with U.S. universities. More recently, AID has undertaken a review of its contracting procedures and processes. In April 1982, the Administrator authorized the solicitation of comments from architects and engineers concerning the use of cost, in addition to technical competence, as a factor in selecting host country contractors for professional and technical services. This also could reduce procurement lead times and speed up the implementation process. This summer, a guidebook for project officers handling host country contracts is to be added to the existing guidance manuals. Also, increased training of project officers is taking place.

SENATOR INOUYE: Your statement notes that AID has completed over 8,745 projects having a total cost of about $15.5 billion.

Is your reference to actual economic development or does the term "projects" include studies and evaluation, etc.?

Of these completed projects, how many have been sustained by recipient governments? Can you provide the committee an estimate of how many projects have withered away after U.S. funding was "completed?"

MR. CONAHAN : The AID annual report from which we drew that data does include "studies and evaluations" under the term projects. Furthermore, development project efforts include feasibility studies and project evaluations. AID records do not readily disclose which completed projects were integrated into another AID project or were continued by the recipient government, by an entity within the country or by another external donor. In past reports, we have expressed concern about host governments maintaining roads, health and educational facilities, water supply and irrigation systems and other infrastructure projects after AID funding has been completed. During our audits we have run across instances of questionable sustainability. For example, information received during work at an AID mission in Asia suggested that the economic life of AID-supported water supply projects was in the neighborhood of only 7 years--compared to the expected life of 20-30 years as projected in AID project papers.

Some host governments may not be as committed to the continued operation and maintenance of existing facilities as they may be to new project development. A recent AID impact evaluation report on small scale-irrigation projects concluded that the long-run cost efficient operation and sustainability of the project was contingent on a number of factors, including adequate user fees for the water provided and the cost of operation and maintenance. We are in the initial stages of a review in which we will look at one or more of such situations.

SENATOR INOUYE: GAO has suggested that AID "should increase recipient government involvement in program design and management for U.S.-sponsored projects."

MR. CONAHAN : We believe the suggestion is very realistic. It is true that certain implementation problems often arise from lack of trained personnel and AID must give increased attention to allocating part of project funds for training of planners, designers, and managers. But the lack of host country front-end involvement in the project design stage increases the risk that the project becomes perceived as an "AID project" rather than a "host-government" project. Unless the host government is actively involved in determining the development constraint needing to be attacked and has the opportunity to determine whether the technology to be applied against the constraint is acceptable by the people, the host governments usually place low priority to the AID-funded project. Without positive involvement from the very beginning the chances for the host government to successfully implement and complete the project diminish greatly. This has been borne out in certain developing countries where government officials distinguish between "AID projects" and "our projects." If the host government is not willing and anxious to help plan and design a project, it probably will not be willing to commit its scarce resources to support the project in the implementation stage.

SENATOR INOUYE: You have noted that, "the administration believes that increased private-sector participation in development will help developing countries generate capital and decrease the need for traditional forms of U.S. assistance." Does GAO share this belief?

MR. CONAHAN : Increased private sector participation should help developing countries generate capital. Private-sector investment though appears to respond to economic growth and the market test of profitability in developing countries. Official development assistance generally is to address basic development needs which should lead to economic conditions more attractive to private investment.

Therefore, depending on a country's basic development needs, private-sector investment could complement rather than supplant official development assistance.

SENATOR INOUYE: I have the impression that AID is using the term "private sector" in a loosely constructed manner and is including many organizations which could be regarded as semi-public in its definition of the private sector. Is this an accurate perception?

MR. CONAHAN : AID's use of the term "private sector" is somewhat different from that of the Congress, but not significantly. In the Foreign Assistance Act of 1961, as Amended, Part I, Chapter 1, Section 102, the Congress states "United States cooperation in development should be carried out to the maximum extent possible through the private sector. . .such as educational institutions, cooperatives, credit unions, free labor unions, and private and voluntary agency." AID defines the private sector as consisting principally of "private business enterprise, non-profit private and voluntary organizations, and universities, because of their largely autonomous nature even when affiliated with state or other governments." It is true that state universities and some private and voluntary agencies could be considered as semi-public entities.

SENATOR INOUYE: Has the GAO detected any trend of increased involvement on the part of U.S. business in development assistance?

MR. CONAHAN : The Committee for Economic Development reported in 1981 that U.S. private investment in developing countries has increased more rapidly over the last 20 years than has official development assistance. Private resources flows now exceed total official development assistance flows because of the increased expansion of private bank lending to developing countries.

Half of the existing foreign investment in developing countries is U.S.-owned. U.S. affiliates in developing countries accounted for over one-third of income earned in 1978-79 from all U.S. foreign direct investment in the form of interest, dividends and reinvested earnings. Income was also received in the form of fees and royalties for technology and management services.

It is still too early to assess the impact that the new initiatives undertaken by the Administration will have on further increasing U.S. business involvement in developing countries.

SENATOR INOUYE: You have suggested that U.S. private and voluntary organizations should "reassess the present direction of increasing PVO financial dependency on AID funding."

What effect has the requirement of 20 percent financial support from non-U.S. government sources had on PVO financial dependency on AID funding?

MR. CONAHAN : AID has identified over 30 PVOs (out of a total of 156 registered) that, as of February 1982, might be affected by the 20 percent requirement. PVOs are attempting to increase private contributions but whether this is due to PVOs wanting to be less dependent on AID, or to constraints on government spending, or to the legislative requirement, is difficult to say. In an effort to encourage even less PVO dependency on AID, GAO has recommended that AID give priority to PVO grant-funded projects in which the PVO matches AID contributions.

SENATOR INOUYE: How does GAO interpret this requirement? (Please respond with reference to the various grant relationships AID has with the PVO community.)

MR. CONAHAN : Beginning in 1985, only those organizations which meet the 20 percent requirement will be eligible for grants specifically designated for PVOs. Assistance potentially affected include some: operational program grants; co-financing grants; matching grants; consortium grants; institutional development grants; institutional support grants; and assistance provided under cooperative agreements.

SENATOR INOUYE: GAO has known for some time that the Administration plans to increase assistance through the Economic Support Fund, which, as you note, is even more difficult to monitor than regular development programs. Why, then, must the Congress wait until next year for a GAO report on the ESF? Is there no way for GAO to have a report, even of an interim nature, ready for our fiscal year 1983 hearings?

MR. CONAHAN : We issued a report in May 1979 about our concerns on the effectiveness of ESF in the Middle East and Southern Africa. In addition to the review I mentioned in my testimony, we are currently monitoring the ESF programs proposed and/or appropriated for the Caribbean Basin, Pakistan and the Philippines. We would be most happy to provide briefings to Congressional committees on the status of this survey work.

SENATOR INOUYE: I wish to commend you for raising the question of "cash flow" financing in your statement. Please provide a detailed review of how this authorization was provided to Egypt. In addition, please provide and discuss any suggestions GAO may have regarding congressional approval of cash flow financing.

MR. CONAHAN : The decision to provide cash flow authorization to Egypt was made in 1979 at the time U.S. and Egypt were considering the types and amounts of military equipment Egypt would buy with the $1.5 billion credit authorization from the peace treaty. While the peace treaty credits were originally seen as a one-time payment, U.S. officials quickly realized that Egypt's needs would require much more financing over a longer period of time. Cash flow financing was seen as a way to allow Egypt to order larger quantities of equipment in the early years of its relationship with the United States. Without cash flow, Egypt could only order equipment with a total price of $1.5 billion. Under cash flow authorization, Egypt placed orders totaling $3.5 billion over the same time period.

The cash flow financing for Egypt was authorized by President Carter after recommendation from the Departments of Defense and State and the National Security Council. Congressional approval was not required. The Congress approved credit allocations for Egypt of $550 million in 1981 and $900 million in 1982; much of these amounts were used to pay obligations on equipment purchased in earlier years.

As we noted earlier in our reply to Senator Kasten, we believe the authorization for Egypt to use this cash flow financing deserves closer congressional scrutiny. While there may be some sound political and economic reasons for the administration's desire to allow Egypt to make long-term purchases and financial commitments, this approach presents a significant departure from the normal FMS financing procedures, and allows Egypt to purchase greater amounts of military hardware. By implying a much stronger commitment of continued U.S. financing in future years than the normal FMS credit program does, such an approach could limit the Congress' prerogatives in reviewing and authorizing credit levels. We believe more information must be provided to the Congress on this issue—involving both Egypt and Israel—for it to carefully weigh the implications of this system. We recommended in our report that the Congress amend the Arms Export Control Act to require advance notification by the executive branch when cash flow financing is to be authorized for selected countries. This would help ensure full disclosure of this significant foreign policy decision.

SENATOR INOUYE: For many years, the Foreign Operations Subcommittee sought to instill a consciousness of costs in the managers and directors of agencies under its jursidiction. For example, we took the World Bank to task for use of the concorde when less costly means of transportation was available.

How successful do you think the Subcommittee was in its endeavors?

MR. CONAHAN : There has been some impact. Although the GAO does not have audit rights in the U.N. system and thus cannot examine directly into its operations, GAO has observed that there does appear to be an increased awareness within the U.N. on the need to control costs. The Joint Inspection Unit has been actively pursuing this theme. It recommended in 1981, for example, that U.N. Organizations analyze the costs increased for translation and typing of documents and select the solution that is cost effective.

SENATOR INOUYE: Has there been an increase in the use of first-class travel in the current administratin, either in AID or the Treasury Department?

MR. CONAHAN : We have not done any recent work addressed specifically to this question. We are aware of AID's general procedures which require specific administrative approval for any first-class travel before payment can be certified. AID personnel report that first-class travel is very rare. Some cases have involved emergency travel or travel with White House personnel.

SENATOR INOUYE: Have any administration officials made use of the Anglo-French concorde?

MR. CONAHAN : We have no knowledge of whether any travel by Concorde has taken place.

SENATOR INOUYE: Is GAO satisfied with appropriateness of U.S. government travel regulations? Do you have any suggestions for improvements?

MR. CONAHAN : While our division has no current audits in this area, our Federal Personnel and Compensation Division staff are participating in the Interagency Travel Management Improvement Group. The General Services Administration, the Office of Personnel Management, the Departments of State and Defense, and the Office of Management and Budget have task forces considering ways to: (1) improve travel services; (2) expand use of discounts; (3) expand use of teleconferincing; (4) simplify travel regulations; (5) streamline reimbursement policies; (6) develop control system models for travel management; (7) tighten travel authorization policies; (8) improve policy coordination; and (9) improve travel budgeting and cost control.

The Group's suggestion for improvements that could affect international travel by U.S. government employees would be those that would deal with possible modifications of the "Fly America Act"; the availability to civilian employees of discounts similar to those available to military personnel;

and simplification of per diem calculations for overseas locations.

SENATOR INOUYE: It has been suggested that necessary operational travel by professionals in AID has been curtailed because of the increased cost of travel by high officials in the agency. Does GAO have any evidence to support this contention?

MR. CONAHAN : We are not aware of any instances of this nature and have not conducted any reviews of such activities.

# AGENCY FOR INTERNATIONAL DEVELOPMENT

## STATEMENT OF HERBERT L. BECKINGTON, INSPECTOR GENERAL, AGENCY FOR INTERNATIONAL DEVELOPMENT

### BILATERAL FOREIGN AID PROGRAM

Senator KASTEN. We will now turn to the Inspector General for the Agency for International Development, General Beckington.

Mr. BECKINGTON. Mr. Chairman, I am pleased to be here today.

I have been asked to testify today on a number of distinct points involving the management and administration of the bilateral foreign aid program conducted by my Agency. I have construed the committee's request to involve a report by me of common or repetitive problems in each area that appear in AID IG reports of audit and investigative oversight of our overseas programs and the Agency's internal systems, and I have tried to make my statement a summary.

Senator KASTEN. My understanding is that you have in fact done that, and I would like you to go ahead.

I would also like to say we are aware of your fine reputation. I know you have worked closely with the majority and minority staff on our committee, as well as a number of others. A number of people have pointed out to me, and possibly to you as well that you have become in a way a model for Government Inspectors General.

I also know Mr. McPherson appreciates your help in his efforts to provide better management and administration of various programs that are under the jurisdiction of this Agency.

So, we are also supportive. I would like to say that we look forward to working with you. I know that this committee has benefited from your work and will continue to benefit from your work and from your analyses.

So, please proceed with your statement.

Mr. BECKINGTON. Thank you, Mr. Chairman.

Before proceeding directly to the subjects specified in the committee's invitation to me, I would like to offer one prefatory comment.

### MANAGEMENT AND ADMINISTRATION OF FOREIGN AID PROGRAM

Viewed from my perspective as the Inspector General of the Agency, I believe the management and administration of the foreign aid program pose severe challenges to managers and administrators at all levels in the AID organization. There are a number of reasons why this is so, but I will mention only two or three that I consider most significant.

The Agency's programs are carried out in what are, by definition, the lesser developed countries and regions of the world. These countries are characterized generally by:

A serious shortage of indigenous management and technical skills including those of public administration and financial management.

A frequent tolerance of public and private sector corruption and inefficiencies.

An economic frailty and often political instability.

A general lack of physical infrastructure supportive of development such as roads, transportation, and communications systems, agricultural capacity.

Finally, AID programs are by design almost always carried out by third parties, contractors, grantees, host countries, thus insuring heavy demands upon the Agency's planning, coordinating, and monitoring systems.

My responses this morning to the specific questions posed by the committee are critical in tenor. For this reason I would note here that over the past 6 to 12 months I have observed from my perspective as the Inspector General a vigorous effort to raise and improve the Agency's administrative and managerial standards and performance. This is occurring both within the Agency and with respect to what is being required of our contractors and grantees.

It is most apparent to me in the attention being paid to IG audit reports. The pressures for action on critical findings and recommendations being brought to bear upon and within the Agency's management structure are being pursued at a level of intensity and attention to detail I had not previously observed.

Let me move directly now to the subjects on which the committee has solicited my views.

## INTERNAL CONTROLS OF THE AGENCY

My reports generally find AID's internal control systems to be adequate, but identify with some frequency a failure to adhere to or apply them. We have reported serious flaws, for example, in the Agency's control of and accountability for Government transportation requests, in adherence to AID's systems for paying for goods and services and to some extent in the efficacy of the systems themselves.

In a recent report, for example, in reviewing some $41 million of paid vouchers we found that $6,500,000 of the total were of questionable validity.

We have reported abuses of the use of the Federal Reserve Letters of Credit system and cash advances to finance AID activities.

In the case of cash advances, we have reported instances of the advances being used for purposes other than those intended, cases where the advances have been banked for varying periods of time in interest-bearing accounts, cases where the advance or advances as far as we could determine had simply lain unused for varying periods of time with no followup by responsible AID officials.

For example, in one representative instance about a year or so ago we reported advances of about $7 million made over a period of 3 years to a regional development bank. At the end of that 3-year period we could find no indication in AID project records that almost $6 million had ever been used for the purposes intended or for any purpose. AID's control systems that should have routinely followed up on the status of these funds had simply failed to function.

## IMPLEMENTATION OF AID PROJECTS AND THE HOST COUNTRY CONTRACTING SYSTEM OF AID

I have chosen to address these two subjects together because they are so closely related in day-to-day Agency operations.

A majority of AID projects and programs overseas are implemented under a system called host country contracting—a system long in use and designated as the preferred method by an AID policy document dating from October 1976.

The committee has asked for my views on the efficacy of this contracting policy—are there practical problems in its application, do we lose money in applying the policy, is this type of foreign aid contracting less efficient than another method?

The short answer to the specific questions the committee has raised is "Yes." Yes, there are practical problems in the day-to-day application of the policy, they frequently result in inefficiencies in the delivery of foreign aid, these inefficiencies can and do cost.

The policy in question requires, with provisions for exceptions, that the procurement of foreign aid-financed goods and services required to execute both loan and grant aid projects will be undertaken by the borrower or grantee rather than by AID.

The theory supporting this policy is first, that the ultimate responsibility for all development projects rests with the countries whose projects they are.

Second, the process of implementation itself is a development tool or method teaching technical, institutional, and administrative skills.

Finally, AID itself is not primarily a procurement agency and must conserve its staff resources for its primary functions of planning, financing, and monitoring. (An integral requirement in the policy document itself calls for appropriate training programs to strengthen and assist host country governments in their implementation of the policy. I believe more can be done in the vital area of training.)

In practice, then, this policy results in a process in which AID lends or grants the money. But, the executing instrument, contract or grant, is between the host government and the contractor or grantee.

As Inspector General, my reviews of the practical application of this policy have not led me to question the theory supporting it. My reports have, however, been critical of a number of common problems we encounter in reviewing the widespread use of the policy.

In summary, my reviews have shown delayed projects, increased costs flowing from these delays, frequent poor logistical support by host governments, a general lack of audits of contract and grant costs by the host governments, procurement inefficiencies in the acquisition of both goods and services, and administrative difficulties on the part of host governments in executing bid procedures, preparing contracts, and administering contracts.

I have found, too, a tendency by AID to apply less oversight to these borrower/grantee-controlled projects, I believe, because AID itself is not a party to the instrument. Thus, implementation problems can occur and develop to a project-threatening degree in some instances before AID field offices and the Washington bureaus become sufficiently aware of them.

In part as a result of the IG reviews of the policy, the Agency has taken a number of corrective steps. The policy document itself has been modified to permit greater discretion in AID field missions' use of the host country contracting method.

The handbook governing AID's administration of the policy is being revised and clarified; these are positive actions being taken by the Agency—nevertheless, the underlying conditions in many of the less-developed countries in which AID operates continue to pose high risks and the same types of practical difficulties I have noted.

We find in our reviews continuing implementation problems arising often, in my judgment, from some of the practical weaknesses of the host country implementation capacity. A late 1980 report, for example, on an agricultural project in a Latin American country found substantial delays in implementation flowing directly from the host country's apparent inability to provide its agreed upon share of both funding and qualified personnel.

At the time of my review, the project was 2 years behind plan, and we estimated that excess costs attributable to the delay would reach about $2 million.

## OVERVIEW OF AID PROGRAMS

Last spring in an overview report of AID programs in a group of West African countries, we found project after project undergoing serious delays and shortfalls in reaching planned objectives. Host countries were experiencing grave difficulties in executing many of the projects.

Lack of host country funds, trained personnel, delayed procurements, overoptimistic assessments of host country capabilities were contributing conditions.

Additionally, we were forced to question the viability of some of the projects once U.S. foreign aid support ended.

In Egypt, a major construction project, one of the few being supported by AID in recent years, experienced what could have been seriously faulty quality control problems. Extensive testing eventually removed these concerns.

As a host country project, however, we found that AID oversight of the project had not been fully aware of, and followed up closely, on the progress and quality of the construction. The AID investment of many millions of dollars could have been placed at serious risk.

## OPERATING EXPENSE FUNDS OF OVERSEAS MISSIONS

We maintain a continuing oversight of this facet of AID's operating expense budget primarily because it has historically proven to be a sensitive area of AID expenditures and one prone to difficulties.

In spite of a considerable amount of time and attention being devoted to this general subject over the years, we have found and continue to find deficiencies in such areas as inventory control and accountability for nonexpendable property items, motor pool operations and maintenance, local procurement of goods and services, management and maintenance of leased property, and control over utility and telephone usage and costs.

Dollar amounts associated with these types of discrepancies are frequently relatively small by Federal Government standards—a few hundred or thousands of dollars. Cumulatively over a period of time they can add up to a noticeable drain on a tight budget.

I will within the next few weeks be issuing a report which highlights the repetitive types of discrepancies we find as an aid to the Agency's continuing effort to eliminate them or sharply reduce their historic frequency.

## THE PUBLIC LAW 480 TITLE II PROGRAM

The committee has posed a number of specific questions with respect to the conduct of this program. What problems do we encounter and report? How well are the PVO's that run these programs doing their jobs?

The AID IG looks at the delivery end of these programs. The Public Law 480 Title II program is primarily carried out by three or four of the larger private voluntary organizations. It is a difficult program to administer, and IG reports repetitively identify common problems.

These may be categorized as inadequate program planning, poor program implementation, and inadequate monitoring, control and reporting by both AID and PVO organizations. Accountability over commodities and funds is frequently flawed, diversion, spoilage, and infestation occur and are not corrected early on, intended beneficiary groups are not reached fully or effectively, loss claims are overlooked or disregarded.

In some instances the problems are remarkably persistent and long-standing. In one African country six audits in 6 years reported essentially the same serious problems. Three of these were conducted by the AID IG, one by the GAO, two by the responsible PVO's own audit unit.

In another small African country we identified losses of commodities valued at about $700,000 in one 18-month period. No effort to follow up on these losses had been initiated by either AID or the PVO.

In a Latin American country half of 27 distribution centers checked did not know how to prepare meals with the food they received through the program because the relatively simple training involved had not been given.

A program in India was found to be regularly distributing food to groups of ineligible recipients.

A very recent review of a large food-for-work program in a South Asia country identified $5,000,000 in commodity losses and diversions over a 2-year period attributable to planning errors, inadequate controls and outright corruption.

I noted earlier that these programs are conducted under very difficult conditions in many if not most of the countries in which they are maintained. We must recognize, I believe, that it is hard for one of these programs to come through a review as a near model of effectiveness and efficiency.

I believe, however, that we, both AID and the PVO's concerned, after years of experience, know the common problems and pitfalls well and can be more effective in our joint efforts to guard against them to the benefit of the intended recipients of this form of aid.

## PUBLICITY FOR U.S. AID PROGRAMS

I have been asked if the Agency is ensuring that the citizens of recipient countries know that our AID projects are what they are—American-financed aid to them and their countries. Project agreements normally provide adequately for this. Appropriate signs and markings are usually called for.

My auditors do find with some frequency a failure on the part of host countries and AID country missions to be alert to this requirement. Local citizens are thus not aware of, or confused over the U.S. source of the support and funding for a particular program or project. These are stubborn problems and corrective action can be slow and difficult to carry out.

## PVO PERFORMANCE AND ACCOUNTABILITY

The committee has noted an "increased emphasis on using private and voluntary organizations" by the Agency. You have asked what my reviews disclose vis-a-vis performance and accountability, especially accountability of funds.

Over the past 2-plus years we have reviewed more than two dozen PVO-directed operations of varying types funded in whole or significant part by foreign aid appropriations. On the basis of this documented record, I must report that AID-funded PVO projects frequently encounter serious performance problems. These problems have varying causes, and when present tend to have predictable program impact.

In summary, we find over optimistic and faulty planning assumptions, PVO difficulties in fielding and keeping on site qualified project teams, difficulties in host country/PVO coordination or support, lack of sufficiently close, continuing project oversight by both PVO's and AID and erroneous funding estimates.

Finally, we do find problems of poor financial accountability for AID-provided funds and a persistent weakness in the ability of AID's normal administrative processes to discern and deal with these accountability problems at an early point.

Predictably, these conditions when they are present to any degree in a given situation, lead to programs that are delayed beyond plan by months or even years; to shortfalls in meeting planned goals or objectives, to midcourse changes that pose difficult options of reduced objectives, cancellations or more funds, time and people, to expenditures that are questionable or disallowable and, in extreme cases, to accountability problems so severe that auditing is accomplished with great difficulty and even then is incomplete.

I should note that the PVO audit reviews which comprise the record of the past 2 to 3 years are slanted in the direction of those enterprises with problems. We have surveyed during that same period a smaller number of PVO-directed programs that the survey established were on plan, on time, on budget.

We dropped a full audit of these simply because like everyone else the Inspector General, too, must focus resources where the problems appear to be.

From my perspective as the Inspector General, I believe the types of problems I have summarized above are sufficiently present in the total AID/PVO relationship so as to warrant special management attention by each of us, AID and the PVO, to correct or remove. I know that special efforts to this end are underway now within AID and the PVO community.

## RELATIONS OF AUDIT FINDINGS TO PERFORMANCE OF INDIVIDUALS AND THE DISTRIBUTION WITHIN AID OF AUDIT FINDINGS

The Agency has not in the past made any specific point of relating audit findings to the individual personnel performance system. This has changed and just changed, Mr. Chairman.

About a year ago a GAO report entitled, "Disappointing Progress in Improving Systems for Resolving Billions in Audit Findings" recommended such a direct link between the timeliness and quality of audit resolution and written performance standards and as a factor in bonus and merit pay determinations.

Senator **Kasten**. That, in our view, is a very significant move.

I want to congratulate you and Mr. McPherson and others for that step in this direction. I know it is going to create some questions, and there might be some problems. Clearly it is a step in the right direction. I congratulate you and through you Mr. McPherson. I will convey my congratulations to him as well, but you might do so on my behalf.

Mr. **Beckington**. Thank you, Mr. Chairman. I will.

I think quite honestly the Administrator is the person for you to direct your commendatory comments to in this case. He has pushed it very firmly.

The Agency has acted on this GAO recommendation by instructing AID bureaus to include this performance area as a written critical element in performance appraisal plans of appropriate officers of the Agency.

On the dissemination of common problems turned up by the audit process, I must report that we do not now have an adequate system in place. Individual reports receive, I believe, very adequate distribution. We have on a few occasions distributed a report very widely throughout the Agency in Washington and overseas, and on an ad hoc basis on two or three occasions in recent years compiled a review of repetitive problems in a program such as Public Law 480 title II programs, for example, in an effort to do just that, give greater distribution and greater visibility to those problems within the Agency. We do not have now a regular system for this, and the GAO review of the IG operation in the Agency, which has not yet been published, did identify the lack of such a system as a weakness. It is a valid criticism in my judgment, and it has caught my full attention.

That completes my statement, sir.

Senator KASTEN. General, thank you.

You suggested that pressures for action on critical findings and recommendations being brought to bear upon and within the Agency's management structure are being pursued with a new level of intensity and attention to detail.

I was interested that the previous witness, Mr. Conahan, did not seem to have that same sense of participation. It seems to me it could be one of two or three different things. Your part of the Agency is closer to them. He is on the outside. Maybe they are paying more attention to you.

It could also be they are paying equal attention, and he was being a little unfair, or it could be that you are overstating the case a bit.

It struck me there was a significant difference in the tone of the response from your point of view and his. I wonder if you can clarify that for me.

Mr. BECKINGTON. Mr. Chairman, in fact, in my judgment there is a new focus in the Agency on IG recommendations, on audit findings, on recommendations, following those findings. I think we can take sound credit for it within the Agency. The focus of the Administrator and his senior associates in the last year or so on this type of thing, as I testified, has been very marked and very persistent.

In all fairness, however, I must also say that we, along with the rest of the Federal Government, have been spurred and prodded in this direction in part by the formation and the activities of the President's Council on Effectiveness and Efficiency which I am sure you know of, but you may not have had an opportunity to be particularly aware of its operations.

It is chaired by the Deputy Director of OMB. It is made up principally of 14 or 15 statutory Inspectors General in the executive branch. It has made a very special effort on a continuing basis, to include imposing certain very specific requirements on each of us, to do exactly what we are doing.

I now have, along with other Inspectors General, quite a rigid reporting system in which I, in fact, have to report on a 6-month basis the status of open audit recommendations. Today, as a matter of fact, I forwarded that report for the period ending March 31, just 3 weeks ago.

This kind of attention and focus has helped me as Inspector General of the Agency and has helped the Administrator, I think, in bringing more and more attention across all levels, throughout all levels of the Agency, to the significance of this effort.

### AUDIT RECOMMENDATIONS REPORT

Senator KASTEN. I wonder if it might be possible for you to provide us with a copy of that interim report, as well, to get a sense that we are all working toward the same goal; that is to say, that the people who are receiving this aid, people at the very bottom level, get the largest amount of benefit for the dollars being spent.

We want to work with you. If you can provide us with that information it might be helpful to all of us.

Mr. BECKINGTON. I will do so.

# SEMIANNUAL REPORT ON AUDIT RECOMMENDATIONS

## As of March 31, 1982

Office of the Inspector General
Agency for International Development
U.S. International Development Cooperation Agency

### INTRODUCTION

This is the third semiannual report to the Administrator on the status of audit recommendations issued by the Agency's Inspector General (IG). It is mandated by Office of Management and Budget (OMB) Circular A-73, "Audit of Federal Operations and Programs." Section 8 b (6) of that Circular requires that the semiannual report show (i) the status of all IG audit reports over six months old, (ii) the number of reports or findings resolved, (iii) demands for payment made, and (iv) collections or offsets made.

The report, which covers the period from October 1, 1981 through March 31,1982, also provides the status of audit recommendations made to the Agency by the General Accounting Office which had been open for more than six months as of March 31, 1982.

### OVERVIEW OF AGENCY PERFORMANCE

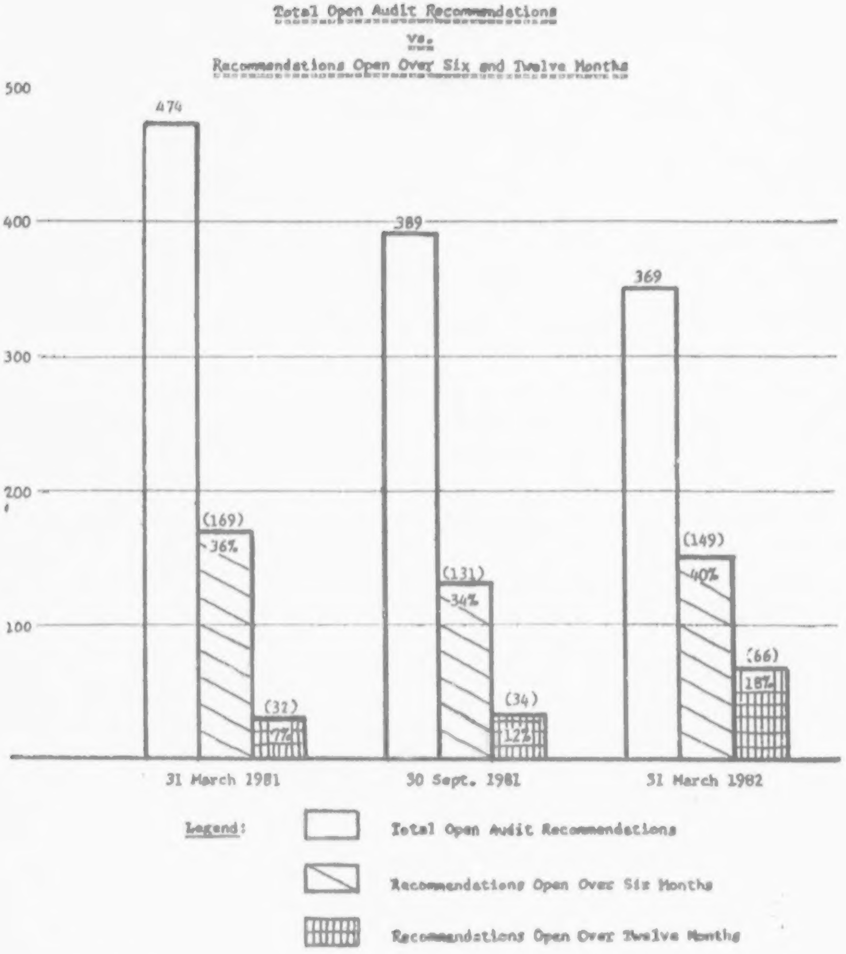
I am pleased to report that the total number of open IG audit recommendations continued to decrease during this semiannual reporting period.

| Total Recommendations Open as of: | |
|---|---|
| 31 March 1981 | 474 |
| 30 September 1981 | 389 |
| 31 March 1982 | 369 |

However, despite the overall decrease in the number of open audit recommendatons, there has been a resurgence of recommendations open over six months.

| Recommendations Open in Excess of Six Months as of: | |
|---|---|
| 31 March 1981 | 169 |
| 30 September 1981 | 131 |
| 31 March 1982 | 149 |

These statistics reflect marked changes over the past year in the composition of the Agency's open recommendation inventory. The chart on the following page shows that recommendations open in excess of six months now represent 40% of the inventory (vs. 36% as of 31 March 1981); and recommendations open in excess of 12 months now represent 18% of the inventory (vs. 7% as of 31 March 1981). Thus, while two out of five audit recommendations were more than six months old as of 31 March 1982, almost two in five of those recommendations had been outstanding for over one year.



Total Open Audit Recommendations vs. Recommendations Open Over Six and Twelve Months

AGENCY COMPLIANCE WITH OMB CIRCULAR A-73

The fundamental requirement of OMB Circular A-73 is that audit recommendations be resolved within six months of issuance. (In this context, "resolution" and "closure" are not synonymous terms: audit recommendations are resolved when Agency management and the IG's Office have reached agreement on firm plans of action to correct the audit deficiencies; but audit recommendations are generally not closed until the deficiencies have actually been corrected.) While the universe of IG recommendations open over six months increased by [illegible] between 30 September 1981 and 31 March 1982, violations of this A-73 requirement remained at almost exactly the same level.

Status of Recommendations Open Over Six Months as of:

| | Total | Unresolved, in Violation of Circular A-73 | Resolved |
|---|---|---|---|
| 30 September 1981 | 131 | 77 | 54 |
| 31 March 1982 | 149 | 76 | 73 |

Of the 76 recommendations that were unresolved for more than six months as of 31 March 1982, nine had been reopened as the result of IG follow-up reviews of closed recommendations (see below).

## AGENCY COMPLIANCE WITH PUBLIC LAW 96-304 (ENACTED 8 JULY 1980)

The Supplementary Budget and Rescission Act of 1980 required that (i) all audit recommendations open as of the date of its passage be resolved by 30 September 1981, and (ii) all subsequent monetary recommendations be resolved within six months of issuance. As is detailed below, the Agency's inventory of audit recommendations in violation of this statute has increased by 24% over the past six months.

Recommendations Unresolved in Violation of P.L. 96-304 as of:

| | Total | Issued Prior to 8 July 1980 | Monetary |
|---|---|---|---|
| 30 September 1981 | 25 | 11 | 14 |
| 31 March 1982 | 31 | 14 | 17 |

Again, nine of these violations have resulted from the reopening of recommendations, based on IG reviews of closed recommendations.

## FOLLOW-UP ON CLOSED RECOMMENDATIONS

OMB Circular A-73 mandates that each Agency regularly evaluate its performance in complying with the scope and intent of audit recommendations. Consequently, follow up on closed audit recommendations has been integrated into the work of each Regional Inspector General for Audit (RIG/A), as a means of evaluating Agency compliance with audit recommendations. During the past six months, three RIG/A offices conducted such follow-up reviews; and, of the 23 recommendations reviewed, 44% were reopened.

| | No. of Closed Recs. Reviewed | No. of Recs. Reopened |
|---|---|---|
| Cairo | 3 | 1 |
| Nairobi | 9 | 6 |
| Washington | 11 | 3 |
| Total | 23 | 10* |

## REFERRALS TO THE DEPUTY ADMINISTRATOR

OMB Circular A-73 also requires that the head of each agency or his designee arbitrate any disagreements between the audit and management functions on the timeliness and/or the nature of the Agency's responses to audit recommendations. Five such cases (involving 40 recommendations) were referred to the Deputy Administrator for resolution during the past six months. As of 31 March 1982, only one of the 40 recommendations remained unresolved.

| Reason for Referral | No. of Audits | No. of Recs. | Status as of 31 March 1981 | | |
|---|---|---|---|---|---|
| | | | Open | | |
| | | | Resolved | Unresolved | Closed |
| Action office failed to make written determination within six months | 3 | 37 | 22 | 1 | 14 |
| Disagreement as to proposed resolution | 1 | 2 | 1 | - | 1 |
| Lack of progress in resolving issues | 1 | 1 | - | - | 1 |
| Total | 5 | 40 | 23 | 1 | 16 |

## ACTIONS ON MONETARY RECOMMENDATIONS

Appendix D details Agency actions on monetary audit findings during this semiannual reporting period. To summarize:

- Agency management reached determinations on $9,206,868 in recoveries recommended by IG audit reports. Of this total, recommended recoveries of $7,848,937 were sustained and recommended recoveries of $1,357,931 were not sustained.

---

*A total of 13 recommendations were reopened during this period, but only 10 of those actions resulted from formal IG follow-up reviews. One of these 10 recommendations had been closed again as of 31 March 1982.

- A total of $2,195,252 in recoveries were actually made as the result of IG audit work.
- Agency management sustained $11,149,804 in deobligations and returns/reductions of advances that were recommended by IG auditors. Deobligations and returns of advances totalling $6,692,013 were actually accomplished.

STATUS OF OPEN GAO RECOMMENDATIONS

As of March 31, 1982, there were only seven GAO recommendations on which the Agency had promised corrective actions, but had not completed those actions within six months of recommendation issuance. As is detailed in Appendix C, substantial progress has been made on these recommendations, and I fully expect to be able to close all seven of them during the third quarter of FY 82.

INSPECTOR GENERAL
RECOMMENDATIONS OPEN MORE THAN SIX MONTHS
AS OF MARCH 31, 1982

BUREAU/OFFICE: Africa

| Report No. (Issue Date) | Rec. No.(s) | Action Office | Type of Rec.* | Recommended Action | Status | | Comment |
|---|---|---|---|---|---|---|---|
| | | | | | Resolved | Unres. | |
| RIG/A/WASHINGTON | | | | | | | |
| 0-000-80-67 (06/06/80) | 9 a/ | USAID/ Mali | P | Fund the Language Training Center from sources other than the Mali Livestock project. | X | | On 1/8/82 the AA advised that by 2/1/82 funding for the Center would be provided by sources other than the Mali Livestock Project. No further information had been received by the IG as of 3/31/82. |
| " | 12 a/ | " | M | Cease additional funding for the Revolving Credit Fund until the host country implementing agency establishes an adequate accounting system and provides trained staff to implement it. | | X | This recommendation was reopened on 2/17/82, based on an IG follow-up review of closed recommendations. Despite earlier reports of corrective action, auditors found no evidence that the fund was being correctly managed. Further, the Mission acknowledged that there were serious questions about the effectiveness of the accounting system. |

---

* P - Procedural; M - Monetary.

a/ Section 305 of P.L. 96-304 (7/8/80) required these recommendations to be resolved not later than Sept. 30, 1981.

b/ According to S.305 of P.L. 96-304, these recommendations (which involve questioned costs and were issued after 7/8/80) should have been resolved within six months of report issuance.

As of 3/31/81, the IG's Office had not been notified that the host government has responded to the Mission's December request. |
| " | 9 | " | P | Follow up with AID/W officials to assure that $123,000 in host country trust funds are charged for equipment obtained at least 4 years ago through AID's excess property program. | X | | Both USAID/Guatemala and the IG's Office have followed up with FM/CAD on this matter. However, as of 3/31/82, FM/CAD had still not reported that the recommended action had been implemented. |
| 1-518-81-19 (06/30/81) | 2 | USAID/ Ecuador | P | Assure that commodities provided through a grant to the Working Boys' Center are controlled by means of periodic physical counts that are reconciled with inventory records. | X | | In January 1982, USAID/ Ecuador reported that funds had been provided to the Working Boys' Center to have an accounting firm study the Center's financial and property accounting systems. The Mission anticipates that the work under this contract will be completed by 4/30/82. |

INSPECTOR GENERAL
RECOMMENDATIONS OPEN MORE THAN SIX MONTHS
AS OF MARCH 31, 1982

BUREAU/OFFICE: Management

| Report No. (Issue Date) | Rec. No.(s) | Action Office | Type of Rec.* | Recommended Action | Status Resolved | Status Unres. | Comment |
|---|---|---|---|---|---|---|---|
| RIG/A/WASHINGTON | | | | | | | |
| 0-000-80-30 (02/29/80) | 7 a/ | AA/SER | P | Modify Labor Institute grants and contracts to incorporate newly developed evaluation criteria and reporting requirements. | | X | SER cannot take action on these recommendations until the evaluation criteria and reporting requirements are developed (see Recommendation Nos. 6 and 8 of this same report, which are addressed to PPC and which remain unresolved). |
| " | 9 a/ | AA/SER | P | Consolidate Labor Institute contractual agreements/grants and standardize planning, evaluation and reporting requirements. | | X | |
| 0-000-80-110 (09/30/80) | 2 | AA/SER | P | Establish procedures to account for and control AID-owned property in the custody of contractors. | X | | On 3/26/82, AA/SER reported that his bureau was in the process of mailing letters to contractors in the U.S., requesting listings of AID-owned property in their possession. The contractors' replies, which are expected by June 1982, will then be entered into the AID/W property system. |
| 0-000-81-25 (12/18/80) | 1 | SER/CM | P | Assure that the contractor allocates costs to all AID contracts on a consistent basis. | X | | On 3/11/82, the AA advised that the contractor was reviewing changes recommended |

| 0-000-81-26 (Cont'd) | | | | | | | task was scheduled for completion in March. |
| " | 14 | SER/DM | P | Develop procedures for (i) identifying and ranking critical data and applications; (ii) reconstructing damaged or destroyed data files; (iii) detailing action to be taken and fixing responsibilities, should back-up operations become necessary. | | X | In its December 1981 status report, SER/DM reported that procedures for identifying and ranking critical data and applications would be developed by the end of FY 82. The other issues in this recommendation are being addressed in conjunction with action on Recommendation No. 15. |
| " | 15 | SER | P | Develop a back-up plan for data processing in the event of shutdown of AID's processing facility. | X | | During December/February 1982, SER/DM conducted an off-site processing test of two applications. A report on the results of the test was scheduled to be available in March. This report will help management address the manpower and budget required to establish a back-up processing capability for critical systems. This task is expected to be completed in the next FY quarter. |

| RIG/A/KARACHI |  |  |  |  |  |  |  |
| 5-386-80-7 (07/02/80) | 1 a/ | USAID India | M | Obtain documentation for or recovery of $36,851 in questioned costs incurred by a PVO under P.L. 480 Title II Transfer Agreements. |  | X | The PVO continues to dispute the final Bill amount (negotiated down to $23,415 in local currency). As of March 1982, negotiations by FVA, GC and the PVO were underway in order to achieve an out-of-court settlement of the matter. |
| 5-386-81-6 (02/12/81) | 4 | USAID/ India | P | Determine that all local currency fund generations under a P.L. 480 Title II Transfer Agreement are accounted for; and insure that the equivalent of over $3 million in such generations are deposited in a special account. |  | X | The Mission completed the recommended review of counterpart fund generations in April 1981. The Indian implementing agency transferred the equivalent of $2.9 million to a special account on 2/27/81. However, both the U.S. project sponsor and the Indian implementing agency have contested their obligation to deposit the remaining $120,000.*** |

---

***Action on these recommendations continues to await resolution of several major project management issues relating to IG audit rights over the project and the treatment of all sales proceeds as U.S. contributions. AA/ASIA and USAID/ India have made extensive efforts, over the past six months, to resolve these issues. As of 3/31/82, their efforts had only limited effect on the position of the Indian implementing agency.

| 3-615-80-19<br>(06/27/80) | 1 a/ | PRE &<br>AFR | P | Require that the local government: | | X | |
| | | | | A. Have homeowner accounts brought up to date and audited; and provide an analysis of the delinquencies. | | | A. To date the homeowner accounts have not been brought up to date, the accounts have not been audited and an analysis of delinquencies has not been made.**** |
| | | | | B. Establish a decentralized collection facility at the Umoja project site. | | | B. A decentralized facility was established at Umoja, but the cashier can accept only the current month's payment and does not have data on hand that reflects the current status of homeowner accounts. Thus all arrearages and questions must be taken up at City Hall.**** |

---

****These 6 recommendations were reopened on March 25, 1982, as a result of a follow-up review by the Regional Inspector General for Audit in Nairobi. The follow-up review revealed that (i) in some cases, agreed-upon actions had not been completed; and (ii) in other cases, the actions taken were not in accord with the commitments previously made. The recommendations were originally closed between May and October of 1981.

## HOST COUNTRY CONTRACTING POLICY

Senator **Kasten**. I know that you are not a policymaker, but I want to ask you at least one policy-oriented question simply because you have had an opportunity for a rather unique look at the operation of this Agency and also a look at the host country contracting.

From the standpoint of your responsibility to watch over the expenditure of public funds, would you advise a withdrawal from the present application of the host country contracting policy? And if not, what do you consider its vulnerabilities, and what actions are open to the Agency, in your judgment, to correct these vulnerabilities or deficiencies?

You mentioned this briefly in your prepared remarks. I would like you to be a little more specific. First of all, would you advise that we withdraw from the present application of the host country contracting policy and, if not, what steps can we take that will be somewhere in between that and a rather drastic alternative?

Mr. **Beckington**. Mr. Chairman, I am a little uncomfortable with this question because I am not a policymaking officer of the Agency, but if it were my judgment to make, no, I would not recommend discontinuance of the host country contracting policy approach simply because I don't think that we in the Agency would be able to take up the slack. We simply are not a large enough organization, and we do not have enough people in place to do that.

Moving to the second part of that question, what can we do or should we do to tighten up this process, it is my belief that we have to be much more rigorous in our use of this policy, in our assessment of a host country's ability to do its part of the process.

You must remember, I think, that in reality we are always dealing, for example, with a ministry of agriculture or public works or health or something. The policy document as it is written requires us to make an assessment of their skill levels, the ability of that ministry or a portion of that ministry to perform, to design, to monitor, to control, to account for the funding, to do the auditing and so on.

I think too frequently we make those judgments too easily. We are sometimes overoptimistic at the mission level, and the bureau level in Washington when they get involved, over the ability of the host country's elements to perform those tasks. I would say that we must be more rigorous and more disciplined in making those judgments.

If there is doubt, I think the benefit of the doubt probably should come in our direction rather than in the direction of the host country.

Now that kind of approach would probably cut the number of these host country contracts on a worldwide basis at least for a period of time. We must be prepared, I think, in the process to lend additional help to a host country, a government ministry, by way of training, by way of support, by way of handholding, if you will, in those cases where we have any real reason, as we so frequently do to doubt their ability to carry their part of this process forward.

Senator **Kasten**. I do not know the political problems involved. I do not know how difficult it is for the Agency to make those kinds of assessments, but a common threat it seems to me, if I understand what you are saying and what you said in your statement, is basically overoptimism, and you found this with reference to host country capabilities.

Is this really overoptimism, or do you think that there is obligation of these funds despite misgivings?

In other words, is there sufficient pressure to obligate funds, that this overrides considerations of the actual capacity? Is the pressure on us to get the contracts out?

Mr. BECKINGTON. I think in all candor, Mr. Chairman, there is an element of that present from time to time, yes, sir.

Senator KASTEN. It is hard to judge, and I am also certain it will be difficult. We might get more involved in it. It is hard to judge in terms of what political considerations are involved in saying this ministry of agriculture is not capable of such and such. That obviously has to be done very carefully.

Mr. BECKINGTON. I think so, and I think that is a very real part of the problem; we are dealing with sovereign nations.

### FLEXIBILITY IN LOANS TO EGYPT

Senator KASTEN. You heard the questions addressed to the previous witness about the possibilities in Egypt and in other countries in terms of giving them more flexibility, not necessarily going project by project, maybe area by area, or sector by sector.

Mr. BECKINGTON. Mr. Chairman, I do not feel competent to address that question.

### PUBLIC LAW 480 PROGRAM

Senator KASTEN. Your statement reflects continuing Agency problems in the administration and also the conduct of a Public Law 480 title II program.

Can you identify any underlying cause or causes which explain this continuing situation?

There are basic flaws that we simply have to address.

Mr. BECKINGTON. Again, Mr. Chairman, I think it is our day-to-day oversight and that of the PVO's who act as our Government's agents in the conduct of the great majority of these programs. I don't have any illusions about the difficulty of these programs and the circumstances under which many of them go forward.

But I am also convinced that we are probably as expert as any other organization in the world in handling these programs. We have experienced these pitfalls and problems again and again. I think we can both, we as the Agency and the PVO's who work with us, be more forehanded and more careful and reduce the incidence of problems that we continually find in these programs.

Senator KASTEN. There is not one basic underlying cause?

Mr. BECKINGTON. No, sir, I don't think there is one basic underlying cause. I think first of all everyone believes that the food commodities will continue to move, no matter how difficult the problem. At least many people feel that way.

I think that on the part of AID missions we sometimes tend to back away from these programs on the theory they are being handled for us by somebody else; namely, the executing PVO in the country, and a hard-pressed AID mission will tend to back away from this and focus on other, for them, more immediate problems.

I think that we frequently find understaffing situations in the executing PVO's. I sometimes think that the sheer magnitude of the problems of distribution, of selection of recipients, tends to overcome the people who are responsible for the day-to-day conduct of these programs.

### AUDITS IN TANZANIA

Senator KASTEN. In your statement you talked about various reports that you have issued in the field. What are the details of the case you cite where the African country had six audits in 6 years by different auditing groups for the same problems?

What country is that, and can you give me more information on it? Who should have been responsible for correcting these problems? Are these problems with the host country, with the PVOs, or with our own Agency?

Mr. BECKINGTON. The country involved, sir, is Tanzania. The PVO, as I recall, is the Catholic Relief Services. The audits were conducted between 1975 and 1980. They found a constant repetition of a lack of accountability and control for the food commodities moving through the system from the port of arrival point on through to the distribution points.

They found in general that the intended recipients of the program were not, in fact, being adequately served and there was diversion, waste and loss of the food stuffs in the movement from the port of arrival to the many distribution centers throughout various parts of the country.

There was as I recall, little or no effort on the part of the PVO concerned or the AID mission to present claims for and attempt to recover the value of the losses, which might not have been possible in that case, in which case AID ordinarily would have had a claim against the sponsoring PVO.

In my judgment in response to the latter part of your question I think the responsibility must rest primarily with AID. We are the ones who are basically responsible for that program once the food commodities leave the United States. We execute them through our own chosen PVO agents, and I think we are and should be responsible when problems begin to develop to work very closely with the PVO concerned and do what we can do to remove those problems and conditions as much as possible.

If more support is needed from us, for example, in a case of that kind, for the PVO I think we should be ready to give it. I did not find in that case and do not today find in that case an adequate degree of AID oversight on the scene.

Senator KASTEN. Were there ever any discussions of switching private voluntary organizations or of dealing with other people, or are there indications of letters or conversations stating that if this continues under these circumstances we are going to make a change, or if this continues under these circumstances the quantity of Public Law 480 food stuffs will be lower?

Mr. BECKINGTON. I am not aware of any such effort as I sit here this afternoon, Mr. Chairman. But in the interest of being absolutely accurate I would like to take that question and respond further for the record if I may.

Senator **Kasten**. Certainly.

[The information follows:]

### Oversight of Public Law 480 Title II to Tanzania

Mr. **Beckington**. In further answer to your question, Mr. Chairman, the responsible AID Bureau has provided me with the following additional information:

"Serious deficiencies in the Catholic Relief Services Tanzania program were noted in a series of audits conducted by the IG, GAO and CRS during the period from 1975 to 1980. Efforts to correct these deficiencies were made over the years, however, with only minimal success until this year. While these efforts were ongoing the program was reduced over the years from a high of 10,912 MT in fiscal year 1976 to its present level of 4,373 MT. Efforts to switch the program to another cooperating sponsor were unsuccessful. Continuation of the current program is based on CRS's stated commitment to correction of past deficiences. It appears progress is being made. However, A.I.D. will continue to monitor the program closely and if the management improvements are not lasting will again consider further reduction or termination of the program."

### COMMODITY LOSSES IN BURUNDI

Senator **Kasten**. You also talked about an African country where you identified losses of commodities valued at several hundred thousand dollars.

Who is following that? What country is that?

Mr. **Beckington**. That was a very small African country, Burundi. Let me refer to my notes, if I may, Mr. Chairman, to refresh my memory.

That was Burundi. The report was issued about a year and a half ago. The implementing PVO, again by chance, sir, was Catholic Relief Services, and we ran into a very difficult situation involving claims for port and inland transportation losses that simply have been ignored and not pursued over a period of time throughout 1978 and 1979.

We have recovered some of that loss at this point in time, and the Agency is still negotiating with CRS and a number of shipping companies with respect to additional collections of those losses.

Again, it was a situation which neither the Agency nor the PVO in this case had followed up smartly and closely on known losses.

Senator **Kasten**. In these cases, these two countries, was the AID mission director held responsible in any way?

Mr. **Beckington**. Not to my knowledge, Mr. Chairman. Again, I think in the interest of accuracy I would want to pursue that question further.

[The information follows:]

### Responsibility of AID Mission Directors

Further inquiry on this point has failed to reveal any additional information.

### PERFORMANCE PROBLEMS IN AID-SUPPORTED PVO PROJECTS

Senator **Kasten**. In these last couple questions and also in your statement you talk about performance problems associated with a number of AID-supported, PVO-directed projects.

Are there basic problems that we should be paying attention to? Can you give the committee some kind of assessment of the reasons why these kinds of problems occur with the PVO's?

Mr. BECKINGTON. Are you still speaking, sir, of the Public Law 480?

Senator KASTEN. PVO's in general.

Mr. BECKINGTON. Once again, Mr. Chairman, I think there are a number of pressures that operate on the Agency as best I can tell.

First, I am aware and you are aware, of course, of the policy statement of the Congress which tells the Agency—it is imbedded in the Foreign Assistance Act—which tells the Agency to make full use of the varied skills and talents of the PVO community. I think the Agency is keenly conscious of that, and I am sure the PVO's are keenly aware of that. This I think acts to some extent as a pressure on the part of the Agency to utilize PVO's, and in the process once again I have the clear impression that we are not as disciplined and as rigorous in our assessment at the planning stage, the design stage, of the ability, capability, or talents of some of the PVO's that we are looking at and considering supporting in one or more of any number of types of projects across the range of disciplines in which the foreign aid program operates.

I think we have to be more careful in assessing the management skills of PVO's, their financial stability, their accounting systems, their expertise in the particular area in which they and we are thinking of using them, and again in case of doubt I think the doubt ought to be resolved in favor of AID or the Government until such time as that PVO has brought itself up to speed, if you will, in any specific area or areas where there is a logical and rational reason for concern.

Senator KASTEN. That response is very similar to the question I asked 20 minutes ago in terms of evaluating host country capability. What you are suggesting is that in both of these cases we are quite sure, and we are not being quite specific enough. Then we may be overoptimistic in terms of the ability of the host country, on the one hand, or the PVO, on the other, to carry out and deliver in a businesslike and accurate way.

Is that a fair assessment?

Mr. BECKINGTON. Yes, sir, that is.

Senator KASTEN. One of the problems that was cited in the GAO report of the activity of bureaus was the finding that you were understaffed. First of all, do you agree with that assessement?

As I understand it, your needs are roughly double what you have right now, at least according to that one analysis.

Mr. BECKINGTON. You are quoting accurately, sir, from the draft GAO report on that particular point. I do not know, but I would assume that probably that will remain in the report as published which I have been told will happen in the next 2 or 3 weeks probably.

I do not disagree with that finding. I think we are understaffed in the way in which the GAO has reported and described.

I have to make it very clear to you, though, Mr. Chairman, that having said that I am not in a position to ask, urge, or solicit any additional staff.

Senator KASTEN. OMB is looking over all of our shoulders.

Mr. BECKINGTON. If I were to do so or if my comment were to be so construed, I would be departing from the President's program, of course.

I should like to say, however, and I can say this in all truthfulness, the Administrator of the Agency and his senior associates do rely, I think very heavily, on the IG function, not only the audit, but the investigative responsibilities which we have. I think within the constraints imposed upon them they have made a very special effort to keep the IG function as adequately staffed as they possibly can. For that I am thankful, from my standpoint.

Senator KASTEN. From our point of view there may be the need for additional cuts overall in some of these programs.

Also we might need some shifting within different categories. So, I appreciate your agreement with that assessment. The previous witness talked about U.S. research facilities, specifically universities.

Drawing upon your experience, do you believe that funds going to U.S. research institutions and universities have been an effective tool for implementing the foreign assistance program?

Mr. BECKINGTON. Mr. Chairman, I don't consider myself qualified to answer that question. We have done very little work in that area in recent years, on my watch, as a matter of fact. I am not sure from my own records and my own reviews that I can go back and provide you with an answer for the record.

### AMERICAN AID PROGRAMS

Senator KASTEN. I was interested that in your prepared statement you mentioned a concern that the committee has some comments about whether or not these programs were in fact American aid programs, that they were being identified as such, and that they were being known as such within the communities.

Was that a question that we were able to interest you in or is that a specific part of your mandate?

Mr. BECKINGTON. This is something you have not just interested me in, in the sense you have raised it, Mr. Chairman. We have been following this for a long time. As I said in my statement, it is a problem that crops up with some frequency, and it seems to be a very difficult and stubborn problem to deal with in many cases.

In some countries our aid missions encounter conditions in which in their judgement it is perhaps best not to publicize certain aspects of the American aid program. The political circumstances are such that in their judgment it would be counterproductive. I am not in the business of second-guessing those judgments when they arise.

In other instances it is simply a failure or lack of our normal insistence that a degree of visibility be present. I know that the Congress traditionally and routinely has expected that that kind of credit, quiet but nevertheless clearcut be available. We just sometimes don't do it very well.

Usually, Mr. Chairman, when we point it out it is corrected. Occasionally it is not. In those cases the mission may feel that they have a valid reason for not pursuing it further.

Senator **Kasten**. I am sure you would agree with me that under the political circumstances in which we are making severe cutbacks in domestic programs, in which we are under a big budget crunch, that the political support for foreign assistance, particularly economic assistance, is very, very tenuous. The degree to which the American taxpayers or my constituents in Milwaukee, or Green Bay, or Waukesha, Wis., understand there is a relationship, we have a better chance of continuing to fund these programs.

If these people look at it as simply money or grain, or whatever being dumped out with a lack of accountability, lack of responsibility, and sometimes lack of thanks, it will be more difficult to pass a foreign aid bill as we did last year.

Mr. **Beckington**. Based upon my observations, Mr. Chairman, I would agree completely.

### AID PROCUREMENT PRACTICES

Senator **Kasten**. One of your reports detailed the rather astounding practices of AID procurement whereby purchasing agents simply obtain their fee through a percentage add-on over the cost of the commodities. This clearly is not an incentive to obtain the lowest bid. In fact, this could have the effect of costing the program tens of millions of dollars.

What has been done to correct this?

Mr. **Beckington**. It has been too soon, Mr. Chairman, for positive and definite action to have actually occurred. In fact, that report has elicited a great deal of attention within the Agency, and I think an organized effort is definitely underway to correct the situation wherever it is possible to do so.

That situation in part arises out of the host country contracting system where countries that are not able or equipped to do some of their own purchasing under a host country contract or grant engage others to do it for them.

Senator **Kasten**. You are aware, I think, of the recommendations that our subcommittee made concerning your activities in last year's committee report. I am interested to know if those recommendations have been in general carried out, and specifically if there are any that we should be emphasizing even more strongly?

Mr. **Beckington**. I think, Mr. Chairman, that in general those comments in the committee report have been very carefully read. I think that they have made an impression. I think they certainly have highlighted this committee's interest in the work of the Inspector General in the Agency.

### TRAVEL FUNDING

Very specifically one point I can make is that this year, for example, we have adequate operational travel funding to carry out my ongoing annual audit program, and I don't anticipate any of the difficulties that I had last year in that regard. That is a function in part of the fact that you give us a foreign aid appropriation this year and in part I think it reflects the general concern of the Administrator that the AID IG function be as adequately and as fully supported as possible.

Senator **Kasten**. One specific point. Back in the late fall a food-for-work program in Bangladesh was the subject of a couple of Jack Anderson's columns which I would assume, at least in part, used your audit report which was issued in November for background.

Could you give us a brief explanation of the problems associated with that project, and then what has been done to correct it?

Mr. **Beckington**. Yes, sir. On the first point so far as I know, Mr. Chairman, Jack Anderson did not have access to my report or my work or my auditors. Evidently whatever he published he published as a result of his own separate inquiry. That was a very large program, and basically it was a food-for-work program which I am sure you are generally familiar with as a type of Public Law 480 title II aid, Mr. Chairman.

In Bangladesh there are long periods of time, about 6 months every year, in which there is really no productive work available for the largely rural farm population of much of the country. This program was devised in major part to give valid productive work to a great many of these people and to reimburse them for it in food. The food stuffs in part came from our Public Law 480 title II program.

We found a great many problems with respect to the administration of that program in Bangladesh which was a very large program and under the aegis of CARE, a private voluntary organization, we found diversion, we found outright corruption. We found useless work being repeated year after year. We found work washed out by the monsoons and built all over again the following year.

We found work being done in such a way that it was redounding to the benefit of private individuals rather than the state or county or whatever political subdivision we might be talking about.

The report was issued in final form in late November, as I recall, of last year. It has had a major impact upon the conduct of the program. We are in the process through an arrangement that has been worked out with the Bangladesh government of recovering the value in kind of about $5 million worth of waste and lost and diverted food commodities that we have identified in our audit report.

I think the report has had a very salutary effect, and I think it is an excellent example of the management of the Agency responding quickly and promptly in this instance to what I believe was a quite clearcut good audit report, a professional piece of work.

## FOREIGN AID PROGRAM TO PAKISTAN

Senator **Kasten**. General, we are about to reenter in a substantial way a foreign assistance program to Pakistan. I believe that your office in Karachi was evacuated along with other U. S. offices after the burning of the U. S. Embassy.

Has your office been now restored to full strength so that you will be in a position to cover this new program, as well as the regional responsibilities that that office had, or are you still going to be limited in terms of people, and thereby possibly limited in terms of carrying out your responsibilities and duties?

Mr. **BECKINGTON**. Specifically, Mr. Chairman, as of now we have not yet restored that office to its authorized staffing. In discussing several months ago the probable resolution of a significant aid program in Pakistan the question of bringing this office up to its authorized staffing did in fact come up, and I have been assured that as we move into this program every possible effort will be made to find the resources in people, space, and so on to permit the Agency to do that.

I would anticipate sometime during the months just ahead that we will have to be discussing that in a very specific fashion within the Agency.

Senator **KASTEN**. I think this is a very important point because, as you know, not only are we talking about responsibility for aid for Pakistan, but also regional responsibility will be covered there. It looks as though we are going to significantly increase our AID activities, and others in these areas. I think it is very important that we work with you and make sure that you are up to full strength as this new program begins.

General, I would like to thank you on behalf of the subcommittee for your testimony here today.

### SUBMITTED QUESTIONS

There are additional questions that we have, and I believe other Senators may have. We will submit those questions to you in writing, and hopefully you can get back to us in ten days or two weeks.

[The following questions were not asked at the hearing, but were submitted for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### IMPLEMENTATION PROBLEM

Senator Kasten: Let me ask you the same question I asked the G.A.O. with reference to implementation of projects. Why is this such a continuous problem, and do you agree with my suggestion that this implementation must be made a part of one's personnel performance records before this problem will be relieved?

Mr. Beckington: In my opening statement, Mr. Chairman, I expressed my belief that the bilateral foreign aid programs administered by A.I.D. pose extremely tough and demanding challenges across all levels of the Agency both here in Washington and overseas. Nowhere does this seem to be more true than in the actual implementation of our approved programs and projects. Based upon my own reviews I would summarize the more systemic causes of implementation problems to be these:

- A tendency to use the host country contracting system in instances where there has been an inadequate assessment of host country capabilities.
- The Agency's difficulties in carrying out its own systems of regular oversight, monitoring, evaluating and reporting on projects and programs in progress under contract or grant auspices.
- An institutional reluctance to cancel, curtail or otherwise sharply alter an ongoing project that is failing or seriously faltering. This is generally a difficult management decision, and when made must face up to competing pressures emanating variously from a host government, contractor or grantee, agency bureau, field mission or other involved interests. In recent months there is clear evidence that the Administrator of the Agency is assigning a new priority to the identification of this type of situation and termination action when warranted.
- There is a lack of continuity in the oversight and monitoring of the implementation process flowing from the Agency's necessity to rotate its foreign service staff. Obviously this condition cannot be eliminated; ways to ameliorate its impact should be pursued.

My answer to the second part of your question is yes. This, of course, is fully provided for now in our current personnel rating systems.

### EARLY REPORTS OF CONSISTENT PROBLEMS

Senator Kasten: Is there any mechanism whereby consistent problems which you find, and which may have wide applicability, are distributed Agency-wide?

Mr. Beckington: We do not now have such a system directed by the IG. Presently, this responsibility rests with the Washington based regional and central bureaus. This is not proving to be an adequate system for dissemination of common or recurrent type problems. By the early part of the new fiscal year we will have in place a mechanism for one time or "flash" reports of these kinds of findings from audit and investigative reporting as well as a method for timely compilations of repetitive types of problems and difficulties in discrete program areas.

## STATUS OF REGIONAL IG OFFICE, KARACHI

Senator Kasten: The United States is about to re-enter, in a substantial way, with foreign assistance programs to Pakistan. I believe your office in Karachi was evacuated, along with other U.S. offices after the burning of the U.S. Embassy.

Has your office been restored to full strength so that you can cover this new program, as well as the regional responsibilities that that office had?

Mr. Beckington: As I noted earlier, Mr. Chairman, there are presently no provisions made for restoring the regional office in Karachi to authorized strength. As the Pakistan A.I.D. program resumes I believe this question will be reviewed in light of the Karachi office's inability at present staffing levels to be responsive to current requirements plus a major new A.I.D. program (Pakistan) in the region. Preliminary discussions of this need were held earlier this year.

## A.I.D. IG STAFFING

Senator Kasten: Would you provide the Committee with a staffing pattern for your office, including both on-board strength and authorized positions, in Washington and overseas, for the last three fiscal years?

Mr. Beckington: The following chart provides the information requested. The figures reflect worldwide totals.

| 1980 | AUTHORIZED | ON-BOARD |
|---|---|---|
| U.S. Professional | 147 | 128 |
| F.N. Professional | 17 | 17 |
| U.S. Support | 41 | 37 |
| F.N. Support | 9 | 9 |
| Intern'tl. Dev. Interns | 4 | 4 |
| Total | 218 | 195 |
| 1981 | | |
| U.S. Professional | 122 | 120 |
| F.N. Professional | 17 | 12 |
| U.S. Support | 31.8 | 34.2 |
| F.N. Support | 9 | 6 |
| Intern'tl. Dev. Interns | 1 | 1 |
| Total | 180.8 | 173.2 |
| 1982 (As of April 30, 1982) | | |
| U.S. Professional | 122 | 119 |
| F.N. Professional | 15 | 13 |
| U.S. Support | 22 | 22 |
| F.N. Support | 7 | 6 |
| Intern'tl. Dev. Interns | 1 | 1 |
| Total | 168 | 161 |

## INTERNAL CONTROLS

Senator Kasten: Drawing from your reviews of A.I.D.'s administration of its various internal systems of control, have you identified any general conditions or causes of the kinds of problems you have been reporting?

Mr. Beckington: It is not particularly easy to do so, Mr. Chairman. We have found with disturbing frequency a failure, or partial failure, in the implementation process to comply with A.I.D's internal control systems. We have found these conditions in our participant training programs, voucher certifications, procurement, adherence to and follow up in the evaluation processes, to note some examples. The systems we are talking about are usually quite detailed, generally clearly described in our administrative regulations; they require time, attentiveness and training to administer. From my reviews it is possible for me to conclude that these internal control systems simply do not routinely receive the time and attentiveness they require to be consistently effective. The task of meeting planning, design and programing objectives may be receiving priority in many instances over the painstaking detail of various internal control systems. Field missions, as well as Washington bureaus, will sometimes cite lack of staff - inadequacies in either number or training or both. I believe also, on the basis of some of my reviews, that there is at times a failure to appreciate the very significant role these internal control systems can play in making our A.I.D. programs and projects more efficient and effective.

There is a good prospect, I believe, that we are on the threshold of an improvement of the Agency's overall performance in this area of internal controls. I have cited elsewhere the significant attention this subject is now receiving within the Agency; additionally OMB through its recently issued Circular A-123 is prompting a series of specific actions which hold promise of improvement.

## COOPERATION OF PVO's

Senator Kasten: Have the PVOs you have inspected and audited been cooperative in providing all of the information necessary for you to conduct your review?

Mr. Beckington: Generally speaking, yes. Now and then a glitch will appear, but in all cases to date when this has occurred we have been able to work them out within the framework of the IG's statutory duties and responsibilities.

## QUESTIONABLE VOUCHER PAYMENTS

Senator Kasten: One of your recent reports, as you mentioned in your statement, found that $6.5 million of some $41 million of paid vouchers reviewed were of questionable validity. I have two questions regarding this report.

First, what, if anything, has the Agency done to try to correct this problem; and

Second, is it possible that while your report found problems with approximately one-seventh of the vouchers reviewed, that, in fact, this percentage could be higher?

Mr. Beckington: The Agency is moving with considerable vigor to address the questions raised by this report, Mr. Chairman. A very senior level task force has been established, and has begun its work to find ways to deal with our voucher problems. Given the global reach of the Agency's operations and the contractor, grantee, host country structuring of implementation methods I believe the solution to these problems will be difficult and take some time to achieve.

On the second part of your question, yes, it is quite possible.

## PROCUREMENT PRACTICES

Senator Kasten: Did this report on procurement practices look at procurement done under contracts rather than direct A.I.D. procurement?

If not, is that another area where substantial funds possibly are being wasted?

Mr. Beckington: This report did look at procurement done under contracts, specifically, host country contracts, and did identify actual and potential waste.

## COST OF IG OPERATION

Senator Kasten: How much of the operating expense account is allocated to your function for fiscal year 1983?

If Congress should choose to provide you with the resources necessary to adequately audit and cover the A.I.D. program, how much would that be for fiscal year 1983?

Mr. Beckington: In the FY 1983 request for Agency operating expenses (about $376 million) a total of about $17.8 million can be identified for all facets of the IG function. This figure includes all salaries and allowances. This figure will maintain the IG function at current levels, a specific goal of the Agency. As you know, Mr. Chairman, the GAO has made the judgment that the A.I.D. IG organization is too small by about half to adequately carry out its various tasks. Using this finding as a general guide the IG function would have to be funded at a level substantially above the current request for 1983. Neither I, as the IG, Mr. Chairman, nor the Agency are authorized or able to seek or support such a course of action at this time.

## INTEREST ON CASH ADVANCES

Senator Kasten: One of the problems you highlighted in your statement were instances of cash advances being put in interest bearing accounts - the benefit of that interest, I presume, not accruing to the United States Government.

Are there any instances where this practice is allowable or permitted by A.I.D. rules and regulations?

If so, under what circumstances?

Mr. Beckington: I have encountered some uncertainty in the

Agency's interpretations of existing regulations on this point. There may be two situations in which interest on cash advances does not accrue to the U.S. Government. One of these would involve advances under loans to host countries. The other could be in the case of cash advances to intermediate credit institutions. An IG review scheduled for this calendar year will have as an objective clarification of both Agency policy and practice in this regard.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### INVOLVEMENT OF RECIPIENT COUNTRIES

Senator Inouye: Mr. Beckington, the General Accounting Office has suggested that A.I.D. "should increase recipient-government involvement in program design and management for U.S.-supported projects."

How can this goal be reconciled with your finding that developing countries are characterized by "a serious shortage of indigenous management and technical skills including those of public administration and financial management"?

Mr. Beckington: In my judgment it can only be done successfully by combining two approaches. The first of these I have referred to elsewhere in my testimony, that is, a more rigorous and careful assessment on a case by case basis by A.I.D. of a host country's capability to perform under A.I.D.'s host country contracting policy. Secondly, we must be more attentive to that part of the A.I.D. policy statement on this system which recognizes the need for training as a part of the process. For example, in a borderline case I believe a prudent judgment in favor of proceeding through the host country method could be made by an A.I.D. mission if accompanied by carefully targeted training in certain skills and disciplines clearly necessary to the successful host country implementation of the project.

### RECOVERY OF QUESTIONED PAYMENTS

Senator Inouye: In that section of your statement which deals with internal controls of the Agency, you note that your review of some $41 million of paid vouchers revealed that $6.5 million of the total were of questionable validity.

What actions has the Agency taken to recover the $6.5 million in questionable payments?

Mr. Beckington: The Agency has moved promptly to recover these monies, Mr. Chairman. Close to half of the total amount has, as of now, been recovered either through repayment or off set. This actually constitutes the total recovery action open to the Agency at this time; a portion of the remainder of the $6.5 million total identified in the report must await resolution of an associated criminal investigation currently under the purview of the Dept. of Justice.

## IMPROVEMENT OF STANDARDS

Senator Inouye: You are quite complimentary of efforts to raise and improve the Agency's administrative and managerial standards.

Has the $6.5 million been pursued "at a level of intensity and attention to detail (you) had not previously observed"?

Mr. Beckington: Very much so in this instance. In fact, the quick and very high level reaction in the case of this critical report is one of the examples I had in mind when I referred to the Agency's current efforts to upgrade administrative and management performance.

## CONTROL OF ADVANCES

Senator Inouye: Your statement notes your finding that almost $6 million of $7 million advanced to a regional development bank over a three-year period could not be documented as having ever been used for the purposes intended or for any purpose.

What is the name of this regional development bank?

Does A.I.D. intend to advance any funds to it in fiscal year 1982 or fiscal year 1983?

Mr. Beckington: The bank in question is the Caribbean Development Bank. I am advised that A.I.D. has continued to make advances to the bank during the current fiscal year and plans additional advances in FY 1983. I should note that from information available to me the control over these advances has greatly improved, and the amounts being advanced and the time periods involved over which advances are made have been sharply reduced. It has turned out to be another example of a firm management reaction to a critical audit finding.

## PRESSURES TO OBLIGATE FUNDS

Senatory Inouye: A common theme among many of the problems you have identified is over-optimism. You have found this with reference to host country capabilities and in PVO projects.

Is this really over-optimism about capabilities or the obligation of funds despite misgivings? In other words, do the pressures to obligate funds override considerations of absorptive capacity?

Mr. Beckington: This is a difficult question to answer. I am fairly confident, based upon my reviews, that my testimony on the role of over-optimism in some of these situations is sound. I think we all, A.I.D., host countries, grantees share in this. I am aware, of course, that time pressures to obligate funds do arise from time to time. I am not able, however, on the basis of my reviews to assess the actual impact of these pressures. A planned review of year end spending to begin late this calendar year may provide me with information on this point.

### CONCLUDING REMARKS

Senator **Kasten**. Once more I would like to thank you for the work you are doing and for the fine cooperation that we have received working with you, and we congratulate you on what we look to as a job that is being done in a very deliberate and businesslike way. I think if we are getting accountability within the Agency, that it is in part due to Mr. McPherson, but also in large part due to the quality of the work you are doing, and for that we thank you.

Thank you for your testimony today.

Mr. **Beckington**. Thank you, Mr. Chairman.

Senator **Kasten**. The record of today's hearing will remain open for 2 weeks during which time members may submit questions in writing.

### SUBCOMMITTEE RECESS

The subcommittee now stands in recess until April 27 at 2 p.m. at which time we will receive testimony on the fiscal year 1983 budget request for the Peace Corps and Inter-American Foundation.

Thank you very much.

[Whereupon, at 3:30 p.m., Thursday, April 22, the subcommittee was recessed, to reconvene at 2 p.m., Tuesday, April 27, 1982.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

TUESDAY, APRIL 27, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 2 p.m., in room 1223, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senator Kasten.

## INTER-AMERICAN FOUNDATION

### STATEMENT OF PETER D. BELL, PRESIDENT, INTER-AMERICAN FOUNDATION

### INTRODUCTION OF AGENCIES

Senator KASTEN. The subcommittee will come to order.

This afternoon we continue our fiscal year 1983 hearings with testimony in support of the budget request for the Inter-American Foundation and the Peace Corps.

The hearing on the Peace Corps marks the first time in over a decade that we will be hearing from that institution as a separate and independent one. I note the supporters of the Peace Corps hope this new separation will reinstate the widespread identification the Peace Corps held in the American society in the years past.

Our first witness is Peter Bell, President of the Inter-American Foundation.

Mr. Bell, you may begin your testimony, and I welcome you.

### LIVING CONDITIONS OF CARIBBEAN POOR

Mr. BELL. Mr. Chairman, the lives of poor people in Latin America and the Caribbean are never easy. Even in the best of times, poor people in the region lead lives of uncertainty, scarcity, and back-breaking work. During this past year, however, the economic growth rate for the region was the lowest in 35 years. As a result, unemployment was unusually high in most countries. The effects were especially hard on the poor, who must always struggle to improve their lives, but had to devise new ways simply to survive.

The Inter-American Foundation was created by Congress to support the self-help efforts of poor people. By most quantitative measures, the role of the Foundation in alleviating poverty in Latin

America and the Caribbean is small. The Foundation's budget appears insignificant in relation to the needs of 100 million poor people, and we are minuscule compared with the resources of the World Bank, the Inter-American Development Bank, and AID.

### BUDGET REQUEST

The Foundation's congressional appropriation of $15.8 million in fiscal year 1981 was 1.5 percent of all U.S. Government development assistance to Latin America and the Caribbean. Our appropriation for fiscal year 1982 is $12 million, and today we are seeking an appropriation of $10.6 for fiscal year 1983.

Although small, the Inter-American Foundation fulfills a special role. Unlike any other U.S. Government or multilateral development institution, the Foundation works primarily through private, locally controlled, and community-based organizations. Our grants, usually less than $50,000, support directly the self-help initiatives of the poor. Most grants are for agricultural and rural development, education and training, small urban enterprises, and community services.

The people we assist design their own projects, manage them, and assume the responsibility for their success or failure. We favor projects that will serve as examples for development efforts elsewhere, and we expect the groups to demonstrate their commitment by contributing their own resources, by raising local counterpart funds, and by accounting responsibly for our funds.

### IDEAS ON GRASSROOTS DEVELOPMENT

At the same time, we are committed not simply to the support of specific projects, but also to the testing and promotion of a set of six basic ideas about grassroots development. These six ideas have been formed over the past 11 years, in which we have made 1,200 grants for $134 million.

First, we respect the capabilities of the people whose efforts we support, and believe that they know best how to identify their own problems and priorities. The small farmers, sharecroppers, migrant laborers, itinerant vendors, market women, and artisans with whom we work are resourceful, energetic, and committed.

Second, we believe that organization and cooperation among the poor are essential for the success of self-help effort. By combining their resources and working together, poor people can realize economies of scale, gain bargaining power, and pave the way for pursuing more ambitious goals.

Third, we have seen that governmental and commercial institutions pass up opportunities for investment in the poor which, if given a chance, can pay off. We seek to change such views that underestimate what groups with low income can accomplish. By providing seed capital for projects, we assist groups to obtain support from other sources and to demonstrate that they can devise and manage their own development projects. Our grants show that poor people will make sacrifices for long-term objectives, that they can put aside savings, and that they can become worthy credit risks.

Fourth, in accord with our congressional charter, we also invest in the social aspects of development. Grants for community-based activities in education, nutrition, health, and housing directly improve the quality of life. We believe that these social investments contribute as well to economic development.

Fifth, we believe that strong grassroots organizations are democratic institutions in their own right, and that they are vital to functioning democracies at the national level. Rural cooperatives and neighborhood associations increase members' stakes in their own societies. They also serve as training grounds for participation, leadership, and group decisionmaking.

Finally, we believe that if a development organization like the Foundation is to work effectively with poor people, it must develop internal procedures that provide rapid and flexible responses to proposals. We consider seven proposals for each approved grant, and we take an average of less than 4 months to accept or reject a proposal. A quick "No" may be preferred to a drawn out "Yes." We keep redtape to the minimum—in each of the past 5 years, administrative costs have been less than 15 percent of our budget.

## CONCLUDING REMARKS

My written testimony and the Foundation's annual report for 1981 have been distributed to members of this subcommittee. Neither document, however, can adequately convey the commitment that the groups we assist feel toward their projects, or the excitement that we feel about the groups themselves. During the coming months, I hope that members of the subcommittee will have the opportunity to visit Foundation-supported projects.

Amidst the poverty of Latin America and the Caribbean, you will see poor people struggling to survive, and you will see them advancing against great odds. You will see that their efforts are worthy of our support, and their accomplishments deserving of our respect.

Thank you, Mr. Chairman. I would be happy to answer any questions.

[The prepared statement follows:]

# PREPARED STATEMENT OF PETER D. BELL
## PRESIDENT
## INTER-AMERICAN FOUNDATION

Even in the best of times, poor people in Latin America and the Caribbean lead lives of uncertainty, scarcity, and back-breaking work. During this past year, however, the economic growth rate for the region was its lowest in 35 years. Unemployment was unusually high; and the poor, who must always struggle to improve their situations, had to devise new ways simply to survive.

People who confront poverty have limited choices. Some of the most desperate--and some of the most dynamic--leave their countries to seek employment elsewhere. They include Mexicans crossing the Rio Grande into the southwestern United States, Haitians crowding into boats for Florida, Salvadorans and Guatemalans trekking to Mexico, Colombians into Venezuela, and Bolivians and Paraguayans into Argentina. And for all the tens of thousands who cross international borders, there are hundreds of thousands who move from the countryside to expanding towns and cities of their own countries. Over recent decades, these internal migrants have transformed much of Latin America from rural to urban societies.

Although most Latin Americans now live in towns and cities, the majority of poor people continue to live in rural areas. Approximately half the rural population live in severe poverty, compared with a quarter of the urban population. These rural poor are small farmers, sharecroppers, and wage laborers. For Latin America as a whole, two-thirds of the rural poor are landless. By virtue of ownership of land, small farmers are usually not the poorest of the poor; but even they must increasingly supplement their meager incomes by wage labor. If they remain in the countryside, they contend not only with the vicissitudes of the weather but also with the increasing cost of agricultural inputs, fluctuating prices and uncertain markets for their products, and the economic policies of governments susceptible to growing urban pressures.

The urban poor are located in small towns as well as in the overcrowded tenement houses and burgeoning squatter settlements of metropolitan areas. A large and growing proportion of the urban poor earn their livelihood in the myriad of very small businesses that make up the informal sector. They do not receive the minimum wage, nor are they covered by a social security system. Nevertheless, they survive by providing goods and services to each other and to firms in the formal industrial sector. Often, they "save" on housing costs by squatting and building their own dwellings on vacant land. Their chances of eventually obtaining electricity and potable water are much better than in the countryside. So, too, are their chances of sending their children to school and of gaining access to health care.

## Inter-American Foundation

The Inter-American Foundation is a small, experimental agency that seeks innovative approaches to support the self-help efforts of these poor people in Latin America and the Caribbean. It was created by Congress in 1969 out of concern that conventional government-to-government foreign assistance was not reaching poor people.

In the Foundation's enabling legislation, Congress stated that:

> [It] shall be the purpose of the Foundation . . . to:
>
> 1. strengthen the bonds of friendship and understanding among the peoples of this hemisphere;
> 2. support self-help efforts designed to enlarge the opportunities for individual development;
> 3. stimulate and assist effective and ever wider participation of the people in the development process;

4. encourage the establishment and growth of democratic institutions, private and governmental, appropriate to the requirements of the individual sovereign nations of this hemisphere.

To carry out these purposes, Congress established the Foundation as an autonomous, semiprivate corporation so that its program would not be affected by short-term U.S. foreign policy. Congress freed the Foundation from such considerations and instructed it to relate to Latin Americans and Caribbeans on a people-to-people basis. The committee report that accompanied the original legislation emphasized the relationship between the Foundation's independent, semiprivate nature and its capacity to operate effectively:

> The [Foundation's] effectiveness in this sensitive area of long-term social and civic development will be determined, in this committee's opinion, as much by the caliber of its Directors and staff as by this new institution's insulation from the ebb and flow of political currents which are ever present in direct government-to-government relations. If the [Foundation] is to make a significant contribution to [its] social development goals . . . , it has to be independent of the political factors which affect the day-to-day course of government policy.

To preserve its independence, Congress vested management of the Foundation in a seven-member, Presidentially-appointed board of directors, a majority of whom must come from the private sector. The current board members are:

Peter T. Jones, Chairman
Senior Vice President and General Counsel
Levi Strauss & Co.

Thomas O. Enders
Assistant Secretary for Inter-American Affairs
Department of State

Doris B. Holleb
Director, Metropolitan Institute
University of Chicago

Alberto Ibargüen
Vice President & Deputy General Counsel
Hartford National Bank and Trust Co.

Marc E. Leland*
Assistant Secretary for International Affairs
Department of the Treasury

Peter McPherson
Administrator
Agency for International Development

Luis G. Nogales
  President
  Nogales, Bermúdez, Chase & Tamayo, Inc.
  Beverly Hills, California

*Nominated by the President, but not yet confirmed by the Senate.

The Foundation also has a nine-member Advisory Council, chaired by Augustin S. Hart, Jr., former vice chairman of the Quaker Oats Company. The Council includes former assistant secretaries of State for inter-American affairs from three previous Administrations.

The Foundation has 62 staff members, all based in Rosslyn, Virginia. Our budget in FY 1982 includes $12 million in Congressional appropriations as well as funds from the Social Progress Trust Fund, administered by the Inter-American Development Bank. Under a three-year agreement between the U.S. Government and the Inter-American Development Bank, an average of $16 million per year is made available to the Foundation from the Trust Fund.

Although the Foundation is independent and semiprivate, when a new grant is made, we send a description of the project to the U.S. ambassador, and we simultaneously notify the Latin American or Caribbean ambassador. In addition, Foundation staff meet regularly with State Department officials in Washington and U.S. ambassadors in the region.

## Role of the Foundation

By any quantifiable measure, the role of the Inter-American Foundation in alleviating poverty in Latin America and the Caribbean is small. The Foundation's budget appears insignificant in relation to the needs of 100 million poor people, and it is minuscule compared with the resources of the World Bank, the United Nations Development Program, the Inter-American Development Bank, and the U.S. Agency for International Development. The Foundation's Congressional appropriation in FY 1981 of $15.8 million was just 1.5 percent of all U.S. government development assistance to Latin America and the Caribbean, and 0.2 percent of all U.S. assistance to developing countries, including contributions to the multilateral lending institutions. Nevertheless, the Foundation fulfills a special role, one for which its small size may be a peculiar asset.

Unlike any other U.S. government or multilateral development institution, the Inter-American Foundation works primarily through private, nongovernmental organizations. We make small grants, usually less than $90,000, to support directly the self-help initiatives of the poor. The grantees design their own projects, manage them, and assume the responsibility for their success or failure. We favor projects that will serve as examples for development efforts elsewhere, and we expect the groups to demonstrate their commitment by contributing their own resources, by raising local counterpart funds, and by accounting responsibly for our funds. We also hope that they will learn from the project experiences and share that learning with the Foundation and with other interested organizations. We follow each Foundation-supported group, suffer through their disappointments, and celebrate their accomplishments. (Several recent grants are described in Appendix A.)

## Guiding Assumptions

At the same time, we are committed not simply to the support of specific projects but to the testing and promotion of a set of ideas about grassroots development. First, we remain impressed by the human quality and economic promise of the people whose efforts we support. The small farmers, sharecroppers, migrant laborers, itinerant vendors, market women, and artisans with whom we work are resourceful, energetic, and committed. Remote rural communities and urban squatter settlements are filled with people who struggle for survival against great odds--symbolized perhaps by the Indian women of the Andean highlands who ceaselessly spin their yarn while they nurse their infants, tend sheep, and walk to market. We are moved by the dignity and resilience of such people, and by their capacity for hard work.

Second, we believe that organization and cooperation among the poor are essential for the success of self-help efforts. By combining their resources and working together, poor people can realize economies of scale, gain bargaining power, and pave the way for pursuing more ambitious goals. The significance of such organization and cooperation is underscored by the consequences of its absence. Isolation reinforces poverty and despair; and it turns people against one another in their competition for scarce resources. By joining together in marketing their crops, small farmers can expect a better return for their labor. By pooling resources for bulk purchases through cooperative stores, remote communities can obtain staples at lower prices. Neighborhood associations in urban settlements have shown that they can resolve disputes, construct schools, collect rubbish, install electricity and water, and improve housing.

Third, we have seen that governmental and commercial institutions in the region pass up opportunities for investment in the poor which, if given a chance, can pay off economically and socially. Stereotypical views that underestimate what groups of people with low incomes can accomplish are themselves obstacles to investment. We seek to change such views. By providing seed capital for projects, we assist groups to obtain support from other sources and to demonstrate that the poor can devise and manage their own development projects. Our grants show that poor people will make sacrifices for long-term objectives, that they can put aside savings from woefully small incomes, and that they can become worthy credit risks for financial institutions which have not previously dealt with them.

Fourth, our charter does not confine our grant-making to economically productive enterprises. The Foundation was created by Congress also to support the social aspects of development. Grants for community-based activities in education, nutrition, health, and housing directly improve the quality of life. We strongly believe that these social investments also contribute importantly to economic development. We are repeatedly impressed by the ingenuity with which low-income groups devise strategies for providing their communities with social services. The private initiatives of the poor will not supersede government responsibilities; but government programs, to be effective, must complement and support self-help efforts.

Fifth, we believe that strong grassroots organizations are democratic institutions in their own right, and that they are vital to functioning democracies at the national level. Rural cooperatives, neighborhood associations, and trade unions increase members' stakes in their own societies. They also serve as training grounds for participation, leadership, and collective decision-making. The prospects for democracy in the region depend not only on whether citizens vote for their representatives, but whether people of varying means and needs can register their legitimate demands with their governments. Grassroots organizations express and mediate people's aspirations, and increase the likelihood that governments will contend with local problems. And when governments are authoritarian, such organizations can still accomplish some of their goals by sheltering a modicum of freedom, participation, and autonomy within local communities.

Finally, if a development organization like the Foundation is to work effectively with poor people, we believe that it must develop internal procedures that provide for rapid and flexible responses to proposals while maintaining high and consistent standards in making grants. We consider approximately seven proposals for each approved grant, and we take an average of less than four months to accept or reject a proposal. We keep red tape to the minimum--in each of the past five years, administrative costs have been less than 15 percent of our budget. Before making a grant, our staff, who are fluent in the languages and understand the cultures of their assigned countries, visit the proponents--travelling to some of the least accessible parts of Latin America and the Caribbean. They listen to the ideas of a group, and encourage the development of the ideas into a proposal; they then review the proposal with colleagues at the Foundation, take their questions back into the field, and finally recommend approval or rejection. Our grants bypass layers of bureaucracy and go directly to local, nongovernmental organizations in the region, many of whom previously had no access to development assistance.

## Setbacks and Accomplishments

In FY 1981, the Foundation worked in 30 countries. We made 220 new and 105 supplemental grants for $21.9 million. During the course of the year, we experienced our share of disappointments. In Central America those disappointments related most often to the disruptions that widespread violence inflicts on the poor. Most of the groups with which we once worked in El Salvador have suffered directly from the conflict there. In most cases, the groups have disbanded or been forced to curtail their activities. There were setbacks elsewhere, too. In the 1970's, the Foundation had supported experiments in Peru and Chile to develop worker self-managed enterprises. Despite sacrifices by worker-owners, many of these firms, like countless other small companies, failed to survive the combination of foreign competition and world recession. In Jamaica lower sugar prices, higher costs, and the government's reorganization of the sugar sector led to the dissolution of the national sugar workers' cooperative, whose education program we had assisted.

Despite such disappointments, we were encouraged by the continuing accomplishments of most Foundation-supported groups and by the redoubled efforts of others who have fallen short of their aspirations. More than 800 of the 900 organizations which the Foundation has funded over the past ten years still exist as vital forces for participation and development in their communities. In Colombia, for example, a self-help housing organization leveraged seven times its initial grant from the Foundation last year; 435 houses were financed through commercial and governmental credit and personal savings. In the Dominican Republic the national cooperative confederation mobilized local resources to build a credit fund that grew to four and a half times the amount of its Foundation grant. Over the past four years, the confederation has made loans to its members totaling more than ten times the grant. In Colombia, Mexico, and Ecuador, the ideas and methods of Foundation-supported programs were adopted by ministries of education seeking to reach Indian communities.

In Uruguay a national federation of wool producers inaugurated a new processing center which is serving more than 3,000 farmers. The federation ranks among the top five wool exporters in Uruguay, assuring small producers a price competitive with that of large landowners. In the Dominican Republic a community development foundation established two centers for organic farming and appropriate technology. The centers now serve as "schools" in which hundreds of Dominican small farmers can learn new production techniques while lowering costs and protecting the environment. In Peru a cooperative of artisans from 13 communities near Huancayo has improved the home-made looms of its weavers, organized a common marketing outlet, and enhanced basic incomes from farming by approximately 50 percent. A revolving loan fund in Paraguay freed a network of 1,000 small cotton farmers from the local creditors to whom they had been obligated to sell their crops. By cooperatively marketing the cotton, the farmers added 30 percent to the price they obtained. SISTREN, a group of Jamaican women street cleaners who formed a theater group, stole the show at the Caribbean festival of the arts in Barbados last summer. They continue to inspire Jamaican audiences with their dramatization of the situations of poor women, motivating other ghetto women to learn to read and write, look for meaningful work, and build self-confidence.

In 1981 the Foundation celebrated its tenth anniversary. During our first decade, we made 1,200 grants for $134 million to 900 private organizations throughout Latin America and the Caribbean. (Additional statistical information about the Foundation is in Appendix B.) Most grants were for agriculture and rural development, education and training, and community services. Grants also supported a small number of projects in legal assistance, cultural expression, and research on grassroots development. Over the last year, we devoted increased attention to evaluating those experiences, sorting out what has and has not worked, and sharing the lessons with our grantees and with other development organizations. The products of these efforts come slowly; but they have already resulted in reports on the Foundation's work in rural credit, on our experience in community health, and on our graduate fellowship and internship programs. Last year we also published a summary of the lessons from our experience with grassroots organizations and a statistical profile of our first ten years of grant-making. Other evaluative studies are well advanced on poor women in development, worker self-managed enterprises in Peru and Chile, and small businesses in the Caribbean. In addition, we are intensifying our efforts at evaluating individual projects.

## The Coming Year

For FY 1983, the Foundation seeks $10.634 million in appropriations (11 percent less than our FY 1982 appropriation of $12.0 million). Our current three-year Social Progress Trust Fund agreement ends in December, 1982. Although our use of monies from the Fund is restricted--the monies are available only in certain countries and for specific program areas--we have relied on them for approximately half of our obligations since the first agreement eight years ago, and we will soon begin negotiations for a new three-year agreement to start in January, 1983. (The Foundation's use of Social Progress Trust Fund monies was authorized by Congress in the Foreign Assistance Act of 1973.)

In the coming year, we will continue our support for self-help development among the poor in Latin America and the Caribbean. We plan to build on the successful pattern of grant-making that we have established in the past and reach out to test what is new and untried in grassroots organizations. Within the framework of our responsive approach, we expect an increase in our support of urban-based organizations and some decline in our work with agricultural groups. In addition, we will be evaluating our programs, promoting relevant research on problems of poverty and grassroots development, and making our findings known to a widening audience.

As in prior years, the Foundation will coordinate activities with organizations such as the U.S. Agency for International Development, the World Bank, and the Inter-American Development Bank. We will also work with U.S. private foundations, voluntary agencies, and Latin American and Caribbean development institutions.

## Conclusion

Although small, the Inter-American Foundation is a significant actor in the United States' overall foreign assistance program. The reduction of poverty and its related social problems in the developing world has long been a goal of bipartisan U.S. foreign policy. The Foundation's support for economic and social development, based on a direct people-to-people basis, has received steady bipartisan support from Congress.

The Foundation's work was commended by the House Appropriations Committee's minority report to the Foreign Assistance Appropriations Bill for FY 1981. While generally critical of foreign aid, the report singled out the Foundation and wholeheartedly endorsed our approach, urging the "expansion of the IAF concept to other regions of the world and to other foreign aid programs which the U.S. supports financially." Congress, in fact, looked to the Inter-American Foundation as a model when it enacted legislation creating the African Development Foundation in 1980.

Last year, the Senate Appropriations Committee commended the Foundation in its report accompanying the Foreign Assistance Appropriations Bill for FY 1982. The report included the following:

> The [Inter-American Foundation's] approach to development has won widespread support for the Foundation in the Congress, in Latin America and in the Caribbean, and among the local organizations whose initiatives it assists.
>
> Unlike larger, government-to-government assistance programs, the Foundation engages the poor and the disadvantaged in the process of development. Rather than being the objects of development schemes concocted by outsiders, the recipients of Foundation grants are, themselves, the initiators of projects. Moreover, before providing assistance, the Foundation assures itself that the project to be funded is supported by the local population and that these people have committed themselves and their limited resources to making projects succeed.
>
> The Committee strongly supports and encourages the Inter-American Foundation in its approach to development. Not only have we been impressed by the Foundation's policies and projects, we have also been impressed by the character and capability of its management and staff. . . .
>
> Because the staff works with indigenous groups, which are typically non-English speakers and inexperienced, its members must be both extremely capable and highly motivated. They are. And, in large part, the Foundation's success is due to its ability to attract qualified staff.

The Inter-American Foundation is contributing to this country's efforts to improve the effectiveness of foreign assistance. It has generated ideas and innovative programs for other development organizations; and it has encouraged self-help groups in Latin America and the Caribbean to devise new approaches to local development. Our work was even more important last year, a trying year for poor people in the hemisphere. They struggled just to survive; and when they advanced, it was against long odds. Their efforts were all the more worthy of our support; and their accomplishments, the more deserving of our respect.

## APPENDIX A

The Association of Rural Aluminum Pan Vendors (Asociación de Vendedores Ambulantes Rurales de Ollas de Aluminio; grant award, $18,400)

In Bolivia, the Foundation has made a grant to an association of men and women who sell aluminum pots and pans. It has 16 members, all from peasant backgrounds in the altiplano. Faced with the dim prospects of subsistence agriculture, they have become itinerant vendors, selling aluminum pans at rural fairs. They purchase in bulk from La Paz suppliers, assign routes to members, and set out individually by bus or on the back of trucks to sell pots on rural market days. Dependent on high-priced suppliers, they earn only about 20 cents per pot.

With a Foundation grant, the members will open a small factory to manufacture their own aluminum pots. On a site purchased with their savings, they will build a plant in which aluminum sheets will be fashioned into pots using simple technology. The grant of $18,400 will provide an operating fund. The group will purchase a second-hand truck to transport pots to rural fairs, and will sell the pots from the back of the truck. The vehicle should enable them to carry large quantities of pots and find new markets.

Throughout Latin America, thousands of subsistence farmers have been thrown into the labor market and must seek other means of survival. Many migrate to cities; but others, such as these pots and pan sellers, remain in rural areas and engage in petty commerce. Can subsistence farmers turned into itinerant salesmen also turn into manufacturers? The Foundation made this grant to see if small-scale industrial production--in this one case, at least--can become a viable alternative for displaced subsistence farmers.

The Mata de Limon and Gandoca Community Development Association (Asociacion Integral de Desarrollo Comunal de Mata de Limon y Gandoca; grant award, $34,000)

Mata de Limon and Gandoca are small villages on the southern Caribbean coast of Costa Rica. Concerned about their lack of access by land to economic centers of the country and the absence of government services, residents formed an association in 1973. The association represents the sixty-three families in the two communities, with an eight-member Board of Directors and a General Assembly made up of one member from each family. The group administers local public works projects, organizes curative and preventive health programs, maintains access trails, and takes local problems before government agencies.

The group has built a horse and ox cart trail between the two villages and the Panamanian border; it has constructed a community center which doubles as a health post; and it has drilled wells for the center and the primary school. The Foundation's grant of $34,000 will enable the association to address two major problems which affect all the residents: intestinal parasites caused by impure water, and a shortage of protein. First, the residents will drill wells for each household, which will tap pure water five to ten meters underground. Second, with assistance of technicians, the residents will construct ponds and drainage systems for the cultivation of fish on each farm. Food for the fish will be generated from root crops and the small animal wastes. The fish will be harvested on a regular basis to provide a needed source of protein.

Foundation funds will be used to purchase those materials and equipment which are not available locally and to pay for technical assistance. The association will contribute labor, some materials, and transportation costs.

Dominican Development Foundation, (Fundación Dominicana de Desarrollo; grant award, $365,000)

The Dominican Development Foundation (FDD) is a community service organization created by Dominican business and professional leaders in 1962. It provides credit and technical assistance to small farmers. Between 1966 and 1980, it loaned $17 million to some 2,700 farmer associations, representing about 60,000 families. Other FDD activities include support for vocational education for urban youth, distribution of medical supplies and equipment, improvement of cattle breeds, low-cost housing rehabilitation, and arts and crafts production among the rural poor. The FDD is funded through grants and loans from private individuals and companies, Dominican or international development institutions, and banks; income is also generated by some of its own activities. It is a member of SOLIDARIOS, the association of national development foundations in Latin America and the Caribbean.

In 1980, the FDD commissioned Accion International (AITEC) to study the feasibility of a program to provide credit and technical assistance to urban micro-enterprises. Based on that study, the FDD is now establishing a program for small enterprises, first in Santo Domingo and eventually in other cities of the Dominican Republic. The program will serve two types of small businesses:

- Bakers, tailors, shoemakers, carpenters, repairmen, and foundrymen--micro-enterprises with no more than six employees and $10,000 in assets. Loans between $300 and $3,000 will help the firms grow, thereby creating new jobs.

- Vendors who sell fruits and vegetables on tricycle pushcarts throughout the city. Loans, for as little as $300, will enable the vendors to purchase their own pedal pushcarts, which for years they have been renting for $1.50 per day.

The FDD plans to lend more than $1.0 million to some 2,100 small-scale businesses in the next three years. The U.S. Agency for International Development (AID) will cover most overhead and technical assistance costs. The Inter-American Foundation grant of $365,000, one of its largest in FY 1981, will complement AID and local resources by providing money for the revolving credit fund.

Jamaica Society for the Blind (grant award, $15,000)

The Jamaica Society for the Blind (JSB) is a private, voluntary organization that provides rehabilitation, education, and social services to the blind. It currently has 5,000 members. Created 25 years ago, it had been managed as a welfare program, but never included the blind themselves in the management of the organization. The members, more interested in programs that would allow self-reliance, formed the Progressive Blind Association several years ago to change the public's perception of the blind. In 1978, they succeeded in amending the charter of the JSB to require at least one-third of the Council's 14 members to be from the blind membership.

Since then, the JSB has been aggressive in seeking new ways in which blind people can lead more productive and independent lives. The Inter-American Foundation grant of $15,000 will establish a revolving loan fund to finance small enterprises run by members, with JSB providing technical, financial, and marketing assistance. The Foundation's grant provides for the loan fund itself; the JSB is providing its own resources to cover the administrative costs of the program.

In Jamaica, as elsewhere, societies have traditionally organized programs to support the disabled, but rarely go beyond the patron-client relationship of "welfare" programs. The Foundation made this grant to the Jamaica Society for the Blind because the small businesses established by members will address not only their economic needs, but also allow them to actively shape their own futures.

*The Corporation for Support of Scientific Investigation in Nutrition* (Corporación para Investigación Científica en Nutrición; grant award, $321,000)

CINUT, a private food and nutrition research center in Santiago, Chile, has a staff of public health physicians, educators, psychologists, communication specialists, nutritionists, nurses, and statisticians. It works in collaboration with governmental agencies and is a recognized authority in Chilean public health and nutrition programs.

In 1979, CINUT formed a unit to be specifically concerned with problems of maternal and child health and nutrition. The unit has since been involved in several community programs.

With Foundation funds, CINUT will train leaders from a poor community of 150,000 people in Santiago to manage programs in nutrition and health education, infant care, and mother-child food supplementation. The grant of $321,000 will partially cover the cost of staff salaries, educational materials, and administrative expenses. The municipal government in Santiago will contribute the field staff, compensation for community volunteers, and some administrative and support facilities. CINUT will provide the rest.

This project encourages community organizations to become involved in health and nutrition. By providing basic training, leaders will be better prepared to work with community members and local public health officials.

The project seeks to create a model of community participation in the design and implementation of municipal health and nutrition programs. Chile's current policy is to transfer to local governments, in block-grant fashion, health and nutrition programs that are now handled by the central government. This project could provide guidelines for similar community involvement in the design and implementation of other social service programs, such as education, which also will be transferred from the central government of Chile to the municipalities.

## Appendix B

## Inter-American Foundation Funding History

### A. Congressional Appropriations

1. In the 1969 enabling legislation, Congress authorized the transfer of $50 million in appropriated funds to remain available until expended.

2. Each year Congress established annual obligation limits (e.g. in FY 1978 the limit was $7,062,000) on the $50 million authorization.

3. At the end of FY 1978, all but $4,654,000 of the $50 million had been obligated.

4. In FY 1979, Congress appropriated an additional $10 million.

5. For FY 1980, a continuing resolution limited appropriations at $12,582,000.

6. For FY 1981, the level was $15,964,000. In early March, the Office of Management and Budget reduced that by $138,000 to $15,826,000.

7. For FY 1982, the Foundation's appropriation is $12,000,000.

8. For FY 1983, the President's budget requests $10,634,000.

### B. Social Progress Trust Fund

1. SPTF monies are allocated by country and restricted for use in the following areas: land use, housing, sanitation, education, health, and financial institutions. There have been 3 three-year agreements with the Inter-American Development Bank:

| | |
|---|---|
| 1974 - 1976 | $31 million over 3 years |
| 1977 - 1979 | $48 million over 3 years |
| 1980 - 1982 | $48 million over 3 years |

# INTER-AMERICAN FOUNDATION

# ANNUAL REPORT 1981

October 1, 1980 to September 30, 1981

The Inter-American Foundation was created by Congress in 1969 as a public corporation to support the self-help efforts of poor people in Latin America and the Caribbean. The Foundation was established because Congress was concerned that traditional programs of development assistance were not reaching poor people. Instead of working with governments, the Foundation responds directly to the initiatives of the poor by supporting local, private organizations. Approximately one-half of the Foundation's funds come from Congressional appropriations and the remainder from the Social Progress Trust Fund of the Inter-American Development Bank.

Congress created the Foundation as an independent agency so that its operations would not be affected by short-term U.S. foreign policy considerations. It is governed by a seven-member Board of Directors appointed by the President and confirmed by the Senate. By law, four members of the Board are from the private sector and three are from the U.S. Government.

The Foundation has made 1,200 grants for $134 million in more than 25 countries. Most grants go to private, grassroots organizations such as agricultural cooperatives, community associations, and small urban enterprises or to larger organizations that work with local groups and provide them with credit, technical assistance, training, and marketing services. A small number of grants each year are made to centers in Latin America and the Caribbean for research on the problems of poor people and grassroots development.

The Foundation has 60 staff members, all based at its offices in Rosslyn, Virginia. Its budget for Fiscal Year 1981 was approximately $26 million.

# A LETTER FROM THE CHAIRMAN

I recently returned from the Dominican Republic—my sixth trip to Latin America and the Caribbean as Chairman of the Inter-American Foundation's Board of Directors. On these trips, which have included visits to Argentina, Chile, Brazil, Colombia, Mexico, Peru, Venezuela, and Barbados, I have seen the accomplishments of the Foundation's low-income grantees, and met with local business and community leaders and others engaged in private, self-help development efforts.

What struck me most on this visit was the contrast—not between rich and poor—but between the hope and accomplishments of poor people who have effectively organized themselves, and the fatalism and difficulties of those struggling alone. I talked to small landowners producing coffee and rice; to small entrepreneurs who make inexpensive clothing and shoes; and to fruit and vegetable vendors who, with Foundation help, have acquired their own tricycle pushcarts which they formerly rented at exorbitant rates. By any standards, these are poor people. But they are successfully managing their own farms and businesses, and they have formed cooperative organizations to achieve what they are unable to do alone. Through their organizations, they have gained access to credit; jointly purchased tractors and facilities for drying their produce; reduced the costs of raw materials; and expanded their markets.

In 1979, farmers in the Dominican Republic saw their homes, land, and equipment devastated by Hurricanes David and Frederick. They were able to rebuild quickly and efficiently because their cooperative organizations were in place. These small landowners show pride and self-confidence in managing their own affairs, and they are determined in their joint efforts to create better lives for their families and their community. They know they are doing it themselves, but they also acknowledge the importance of the credit that was made available to them through their federation's loan fund.

The IAF's contribution to that loan fund helped the federation to mobilize local resources four times the amount of our grant. The essential ingredients for success, private ownership combined with joint action, also characterized the small furniture and clothing producers as well as the street vendors who were organizing to become owners of their pushcarts.

The contrast with another farming community we visited was stark. This community, which had also suffered severe hurricane damage in 1979, lacked any strong local organization that could stimulate and reinforce individual efforts. The existing farmers' association was loosely structured and required little financial commitment or other involvement from its members. According to the farmers themselves, hundreds of thousands of dollars had been made available in the aftermath of the hurricanes, but local participation and initiative was not encouraged in rehabilitation activities. Loans were not paid back, nor was there much expectation by donor agencies that they would be. The money provided, whether in loans or gifts, was largely squandered.

The contrast was also marked between those fruit and vegetable vendors who owned their pushcarts and those who paid much of their earnings in rent. By joining together into groups of four or more, the vendors are able to produce enough collateral to secure loans to purchase their carts from the Dominican Development Foundation, a private development institution organized by local business leaders. The pride and satisfaction of the new owners were evident, as were the excitement and determination of vendors who had recently formed their four-person associations and were pressing for credit to purchase carts. Their story illustrates how cooperative efforts can help poor people secure a better place in the market economy and how, by jointly doing what cannot be done alone, individual initiative is stimulated and economic advancement achieved.

## Congressional Mandate

My sixth field trip to Latin America and the Caribbean confirmed once again my conviction that, in establishing the Inter-American Foundation in 1969, Congress created a very special institution—an autonomous foundation with public funds that would develop a unique partnership with private, nongovernmental organizations throughout Latin America and the Caribbean. This partnership has demonstrated how U.S. development assistance can creatively help mobilize local private resources in response to self-help initiatives of poor people.

To facilitate relations with private groups, Congress gave the Foundation many of the characteristics of a private institution. By law the Foundation is to be a small agency with low overhead; its staff cannot exceed 100 persons. Its management is vested in an independent board of seven directors, four of whom are drawn from the private sector. It must remain apart from short-term foreign policy considerations, and instead of channeling its assistance to governments, the Foundation was instructed to work with Latin Americans and Caribbeans on a people-to-people basis. Through its collaboration with private indigenous groups, the Foundation has managed to maintain greater continuity in its programs than is often possible with government-to-government operations.

IAF grants are supporting the initiatives of poor people trying innovative approaches to increase their incomes, create employment, improve health, and develop new skills. Throughout its program of grants, the Foundation has consistently pursued two purposes: to support and encourage local private organizations in their struggle against poverty, and to help poor people assume a major role in the resolution of their own problems, including the opportunity to participate more fully in the market economy.

Approximately $100 million out of the total of $134 million in IAF grants made during our ten-year history has assisted privately owned farms and businesses. Most of the remainder has supported community-organized services and research on issues of poverty and grassroots development. IAF funding in Latin America and the Caribbean has been more than matched by the contributions of others, including commitments from local business communities and from the low-income beneficiaries themselves. The amount of locally-generated resources often increases over time as organizations become stronger.

In urban areas, IAF grants assist small entrepreneurs who, for example, manufacture furniture, produce consumer goods, or sell food on their pushcarts. Some IAF-funded projects in rural areas also help small enterprises engaged in such activities as processing food and making crafts.

The bulk of the Foundation's assistance in rural areas is directed to small farmers. Many grants have been made to cooperative associations organized by these small private producers to buy raw materials at lower cost, to expand the markets for their products, or to obtain access to commercial credit. Other projects, largely in Indian communities, are assisting peasant groups engaged in traditional forms of cooperative farming.

The Foundation assists many cooperatives that are either private businesses themselves, or provide services to other small enterprises. They compete in the market and are subject to market forces; they are privately owned; their membership is voluntary; and they engage in economically-productive activities. Cooperatives provide an opportunity for small landowners to take their limited earnings and invest them productively with other low-income farmers. They can thus become joint owners of farm machinery and facilities that alone they could not afford, and expand their participation in the market economy. Local business leaders are frequently important contributors to these cooperative efforts.

### Partnership with Local Business

Members of business communities throughout Latin America and the Caribbean make private sector funds and management expertise available to IAF-supported organizations. In many countries, these business leaders have promoted the establishment of national development foundations (NDFs) to direct local resources to the self-help initiatives of poor people.

The Mexican Rural Development Foundation, for example, was established 12 years ago by highly successful and enlightened Mexican business leaders, and now offers credit and technical assistance to 15,000 small farmers in 18 states of Mexico. The Dominican Development Foundation, again with strong business backing, has provided more than $17 million in credit to farmers, street vendors, and other small entrepreneurs in the Dominican Republic. Similar foundations in Ecuador, Colombia, Bolivia, Argentina, Uruguay, Trinidad and Tobago, Honduras, Nicaragua, and elsewhere are showing the special contribution the private sector can make to development efforts.

These private development foundations are assisting groups that government bureaucracies have been unable to reach effectively. Over the past ten years, the Foundation has made more than 40 grants, totaling $13 million, to 13 NDFs. The largest portion of these grants has been for loan funds for rural cooperatives, small enterprises, and self-help housing projects. The Foundation has seen its grant funds used over and over again as they help mobilize local resources.

### IAF Accomplishments

These and other Foundation activities are demonstrating one effective way that U.S. public funds can be combined with private development resources to support the initiatives of poor people to help themselves. Foundation grants bypass layers of bureaucracy and go directly to local, nongovernmental groups in Latin America and the Caribbean that are working with the poor. Funds are contributing to many organizations and people that previously had no access to development assistance or affordable credit. The Foundation has demonstrated how a governmental development agency can cooperate with community and business groups in support of grassroots, self-help projects that enhance the productive potential and independence of poor people.

Foundation grants have dispelled many misconceptions about the poor. They have, for example, shown that some community services can be provided on a self-sustaining basis because the poor are prepared to pay for services that meet their needs. The Foundation's projects have also shown that the poor can be responsible borrowers. When they combine their borrowing capacities through cooperative organizations, they can become attractive clients to credit institutions. In our ten-year history we have seen that the poor work hard, make substantial sacrifices, and contribute more to the economy when they can see the prospects of benefitting from their own efforts.

The Foundation works in almost every country in Latin America and the Caribbean, and it has gained the confidence and respect of a wide variety of people. The Foundation maintains that trust by responding to the local initiatives of private groups, by respecting their capacity to make decisions for themselves, and by keeping its activities nonpartisan. The trust, access, and legitimacy that it has built reaffirms the soundness of Congress' decision to establish the Foundation as an autonomous, semiprivate corporation to work with private organizations.

### Recognition of IAF's Work

As Chairman of the Foundation's Board of Directors, it has been particularly gratifying to get to know the people with whom we work in Latin America and the Caribbean. Each visit makes me more impressed with the creative ways in which private resources can be mobilized to help the poor solve their own problems and improve their social and economic conditions.

The results of the Foundation's activities are increasingly recognized by people who are concerned with development. Several months ago, the Senate Appropriations Committee commended the Foundation in its report on the 1982 Foreign Aid Bill. The report, prepared by the Foreign Operations Subcommittee, chaired by Senator Robert Kasten (R-Wis.), stated the following:

> [The Inter-American Foundation's] approach to development has won widespread support for the Foundation in the Congress, in Latin America and in the Caribbean, and among the local organizations whose development initiatives it assists.
>
> Unlike larger, government-to-government assistance programs, the Foundation engages the poor and the disadvantaged in the process of development. Rather than being the objects of development schemes concocted by outsiders, the recipients of Foundation grants are, themselves, the initiators of projects. Moreover, before providing assistance, the Foundation assures itself that the project to be funded is supported by the local population and that these people have committed themselves and their limited resources to making projects succeed.
>
> The Committee strongly supports and encourages the Inter-American Foundation in its approach to development.

Within the House of Representatives, the Foundation was paid a special tribute by Congressman Robert Garcia (D-N.Y.), Chairman of the Hispanic Caucus, who has been a close observer of development in the region and is also working to improve the economic opportunities for poor people in our own cities. Last year, Congressman Garcia stated in the *Congressional Record:*

> What makes the work of the Foundation so special is that the beneficiaries of its grants put in their own time, labor, and money to guarantee the success of a project. More often than not, each dollar given by the Foundation is matched by funds from local groups. Bureaucracies and red tape are bypassed because the Foundation goes directly to local, non-government organizations.
>
> A typical Foundation grant was recently made to the Holy Cross Fathers in Haiti. The grant, although small, will nonetheless enable IDEA, a church-supported organization, to expand its adult education program and community development activities in Cap Haitien, Haiti. Considering the difficulties the United States is having in handling the Haitian refugee question, a grant that helps Haitians help themselves should not only be encouraged but applauded.
>
> The Foundation fosters creativity. It helps the poor to better themselves without making them permanently dependent on public funds. The IAF has a small staff, well versed in the cultures, languages, and problems of Latin America and the Caribbean. All of our Government's foreign aid programs would be well advised to follow the example set by the Foundation.

The successful partnership that has evolved between the Foundation and local private groups has been recognized within Latin America and the Caribbean. In Argentina last year, the Foundation made a grant to a community group in Lujan, an isolated and economically depressed town of 1,500 people in northwest Argentina. The group, Amigos de Lujan, is an association of private and public organizations that has obtained telephone, water, electrical, medical, and banking services for the town. With a Foundation grant of $40,000, the association will open a factory to make fruit and vegetable preserves, using the produce of small farmers in the region. This is the group's first business venture and will be the town's only locally-owned enterprise. The project depends not so much on the Foundation's grant, but on the efforts and commitment of private groups in Lujan.

The local initiative of the people of Lujan was commended in an editorial in the internationally renowned Argentine newspaper *La Prensa*:

> The Amigos de Lujan, the Association of Vegetable Producers, the Institute of Social Development of Cuyo, and the Inter-American Foundation all deserve special commendation for their enterprising spirit. These non-profit organizations combined forces to revive a dying industry. Many places in Argentina, following the example of Lujan, could overcome their problems by taking advantage of local resources and depending on private initiative rather than expecting all solutions to come from government.

My work with the Foundation, and especially the people associated with it here and abroad, has been one of the most rewarding and gratifying experiences I have ever had. For this I am eternally grateful.

# THE PRESIDENT'S REPORT

The lives of poor people in Latin America and the Caribbean are never easy. Even in the best of times, they are characterized by uncertainty, scarcity, and back-breaking work. During the past year, however, the U.N. Economic Commission for Latin America calculates that the economic growth rate for the region was the lowest in 35 years. As a result, unemployment was unusually high in most countries. The effects were particularly hard on the poor, who must always struggle to improve their situations but had to devise new ways simply to survive the past year.

The people who confront poverty have limited choices. Some of the most desperate—and some of the most dynamic—among the poor leave their countries to seek opportunities for employment elsewhere. They include the Mexicans crossing the Rio Grande into the southwestern United States; the Haitians crowding into boats for Florida; and the Salvadorans and Guatemalans trekking into Mexico, the Colombians into Venezuela, and the Bolivians and Paraguayans into Argentina. And for the tens of thousands who migrate across international borders, there are hundreds of thousands who seek to improve their lives, or their children's lives, by moving from the countryside to the expanding towns and cities of their own countries. Over recent decades, these internal migrants have transformed most of Latin America from rural to urban societies.

Although the majority of Latin Americans now live in towns and cities, the poorest people in the region continue to work and live mainly in rural areas. Approximately half of the rural people live in severe poverty, as compared with a quarter of the urban population. These rural poor are small farmers, sharecroppers, and wage laborers. For Latin America as a whole, two-thirds of the rural poor are landless. Small farmers, by virtue of their ownership of land, are usually not the poorest of the poor; but even they are increasingly forced to seek wage labor on larger farms to supplement their meager incomes. If they remain in the countryside, they must contend not only with the vicissitudes of the weather but also with the increasing costs of agricultural inputs, the fluctuating prices and uncertain markets for their products, and the economic policies of governments susceptible to growing urban pressures.

The urban poor are most likely to be located in small towns, but they are also in overcrowded tenement houses and burgeoning squatter settlements in metropolitan areas. A large and growing proportion of the urban poor—whether salaried employees, self-employed, or family members of the self-employed—participate in the small businesses which make up the informal sector. They do not receive the minimum wage; nor are they covered by the social security system. Nevertheless, they are able to make a living by providing goods and services at competitive prices to their neighbors or to firms in the more formal industrial sector. They often "save" on housing costs by squatting on vacant land and building their own dwellings. Their chances of eventually obtaining electricity and potable water are much better than in the countryside. So, too, are their chances of sending their children to school and of gaining access to health care.

### Role of the Foundation

By any quantifiable measure, the role of the Inter-American Foundation in alleviating poverty in Latin America and the Caribbean is small. The Foundation's budget of $26 million last year is insignificant in relation to the needs of 100 million poor people in the region. Our funds are minuscule when compared with the resources of the World Bank, the United Nations Development Program, the Inter-American Development Bank, and the U.S. Agency for International Development. The Foundation's Congressional appropriation was just 1.5 percent of all U.S. government assistance to Latin America and the Caribbean, and 0.2 percent of all U.S. assistance to developing countries, including contributions to the multilateral lending institutions. Nevertheless, the Foundation fulfills a special role, one for which its small size may be a peculiar asset.

Unlike any other U.S. government or multilateral development institution, the Inter-American Foundation works primarily through private, nongovernmental organizations on a people-to-people basis. We provide direct support for self-help initiatives of poor people in Latin America and the Caribbean, preferring groups whose projects will serve as examples for development efforts elsewhere in the region. We expect the groups to demonstrate their commitment to the projects by contributing their own resources, by raising local counterpart funds, and by accounting responsibly for our funds. We also hope that they will learn from the project experiences and share that learning with the Foundation and with other interested organizations. We follow each Foundation-supported group, suffer through their disappointments, and celebrate their accomplishments. At the same time, we are committed not simply to the support of specific projects but to the testing and promotion of a set of ideas about grassroots development.

### Guiding Assumptions

Several assumptions have guided the Foundation's approach to development and have been tested during our first decade of experience. First, we remain impressed by the human quality and economic promise of the people whose efforts we support in Latin America and the Caribbean. The small farmers, sharecroppers, migrant laborers, itinerant vendors, market women, and artisans with whom we work are resourceful, energetic, and committed. Remote rural communities and urban squatter settlements are filled with people who are struggling for survival and advancement against great odds—like the wind-chafed Indian women in the Andean highlands who never cease spinning their yarn while tending sheep, walking to the market, or nursing their infants. We are moved by the dignity and resilience of such people, and by their capacity for hard work.

Second, we believe that organization and cooperation among the poor are essential for the success of their self-help efforts. By combining their meager resources and working together toward commmon ends, poor people can realize economies of scale, gain increased bargaining power, and pave the way for pursuing more ambitious goals. The significance of such organization and cooperation is underscored by the consequences of its absence. Isolation reinforces poverty, ignorance, and despair, and turns poor people against one another in their competition for scarce resources. By joining together in marketing their crops, small farmers can expect a better return for their labors. By pooling resources for bulk purchases through cooperative stores, remote communities can obtain staples at lower prices. Neighborhood associations in urban settlements can resolve local disputes and mobilize energies to collect rubbish, to construct schools, to install electricity and water, and to improve housing.

Third, we have seen that governmental and commercial institutions in the region pass up opportunities for investment in projects of the poor which could pay off economically and socially if given a chance. Among the obstacles to such investment are stereotypical views that underestimate what groups of people with low incomes can accomplish. A further impediment is the fact that poverty is nearly always coupled with little formal education, limited management experience, and few physical assets to serve as equity. By providing seed capital for projects, we seek to assist groups in leveraging support from other sources and to demonstrate that the poor can devise and manage their own development projects. Our grants show that groups of poor people will make sacrifices for long-term objectives; that they can put aside savings from woefully small incomes for developmental purposes; and that they can become worthy credit risks for financial institutions which had not previously dealt with them.

Fourth, our charter does not confine our grantmaking to economically productive enterprises. The Foundation was created by Congress also to support the social aspects of development. Grants for community-based activities in education, nutrition, health, and housing are meant directly to improve the quality of life of poor people. We have learned, however, that these social investments can contribute importantly to economic development. In fact, we have seen that economic and social development must go together if either is to prosper for long. We are impressed by the extent to which low-income groups themselves are devising strategies for providing their communities with social services. The private initiatives of the poor will not completely supersede government responsibilities in these areas; but government programs, to be effective, must complement and support self-help efforts.

Finally, we believe that strong, active grassroots organizations of poor people are important democratic institutions in their own right, and that they are vital to functioning democracies at the national level. Rural cooperatives, neighborhood associations, trade unions, and other such organizations increase members' stakes in their societies. They also serve as training grounds for participation, leadership, and collective decision-making about economic and social matters. The prospects for democracy in the region depend not only on whether citizens vote for their representatives. They also depend on whether people of varying means and needs can voluntarily work together to solve their own problems and effectively register their legitimate demands with the government. Grassroots organizations can express and mediate people's aspirations, and increase the likelihood that governments will respond to local problems. And when governments are authoritarian, such organizations can still accomplish some of their goals, and shelter a modicum of freedom, participation, and autonomy for people within their communities.

### Setbacks and Accomplishments

Over the past year, the Foundation and its grantees experienced our share of disappointments. In Central America those disappointments related most often to the disruptions that widespread violence inevitably inflicts on the poor. Many of the groups with which we once worked in El Salvador have suffered directly from the conflict there. In some cases, the groups have disbanded; in others, they have been forced to curtail their developmental activities. There were setbacks elsewhere, too. In the 1970's, the Foundation had supported experiments in Peru and Chile to develop worker self-managed enterprises. Despite sacrifices by their worker-owners, many of these firms, like numerous other small companies, have failed to survive the combination of foreign competition and world recession. In Jamaica lower sugar prices, higher costs, and the government's reorganization of the sugar sector led to the dissolution of the national sugar workers' cooperative, whose education program we had assisted.

Despite these disappointments, we were encouraged by the continuing accomplishments of most Foundation-supported groups and by the redoubled efforts of others who have fallen short of their aspirations. More than 800 of the 900 organizations which the Foundation has funded over the past ten years still exist as vital forces for participation and development in their communities. In Colombia a self-help housing organization leveraged seven times its initial grant from the Foundation last year, and financed the construction of 435 houses with commercial and governmental credit and personal savings. In the Dominican Republic the national cooperative confederation mobilized local resources for its credit fund that were three and a half times the amount of its Foundation grant. Over the past four years, it has made loans to its members totaling more than ten times the grant. In Colombia, Mexico, and Ecuador, the ideas and methods of Foundation-supported programs were adopted by ministries of education seeking to reach Indian communities.

In Uruguay a national federation of wool producers inaugurated a new processing center which is serving more than 3,000 farmers. The federation ranks among the top five wool exporters in Uruguay, assuring small producers a price competitive with that of large landowners. In the Dominican Republic a community development foundation inaugurated two centers for tropical organic farming and appropriate technology. The centers now serve as "schools" for training hundreds of Dominican small farmers in new techniques for increasing productivity while lowering costs and protecting the environment. In Peru a cooperative of artisans from 13 communities near Huancayo has introduced improvements in the home-made looms of its weavers, organized a common outlet for their products, and added approximately 50 percent to their basic incomes from farming. A revolving loan fund in Paraguay freed a network of 1,000 small cotton farmers from the local creditors to whom they had been obligated to sell their crops. By cooperatively marketing the cotton, the farmers added 30 percent to the price they obtained. SISTREN, a group of Jamaican women street cleaners who had formed a theater, stole the show at the Caribbean festival of the arts in Barbados last summer. They continue to inspire Jamaican audiences with their dramatization of the situations of poor women.

In 1981 the Foundation observed its tenth anniversary. In our first decade, we gave priority to supporting a variety of approaches to grassroots development throughout the region. Over the last year, we have given increased attention to evaluating those experiences, sorting out what has and has not worked, and sharing the lessons with our grantees and with other development organizations. The products of these efforts will come slowly; but they have already resulted in reports on the Foundation's work in rural credit, on our experience in community health, and on our graduate fellowship and internship programs. Last year we also published a summary of the lessons from our experience with grassroots organizations and a statistical profile of our first ten years of grant-making. Other evaluative studies are well advanced on poor women in development, worker self-managed enterprises in Peru and Chile, small businesses in the Caribbean, and cultural expression and its importance for grassroots development in Bolivia. In addition, we are intensifying our efforts at evaluating individual projects.

At times the lessons from our experience will be spread through publication of evaluations. More often we expect our grantees to speak for themselves. For example, we have commissioned a series of six oral histories on Foundation-assisted groups throughout the region. In Colombia last year, we helped to finance a meeting of some 28 community-based groups, including 20 grantees, to discuss their differing approaches to common problems. We also helped a Colombian from an innovative program for the rehabilitation of street children to advise juvenile justice officials in the United States and educators at the Organization of American States. Similarly, the former manager of a successful self-help housing program in El Salvador is serving as a resident consultant to a private foundation in the Dominican Republic. Such exchanges are an important part of spreading the word about what has worked in grassroots organization and development.

The following pages briefly discuss each of the grants which the Foundation made over the last year, but they can only begin to evoke the excitement which we feel about the groups and the commitment which the groups feel toward their projects. Last year was a difficult year for poor people in the hemisphere. By and large, they had to struggle hard just to survive; and when they advanced, it was often against long odds. For that reason, their efforts at grassroots development were all the more worthy of our support; and their accomplishments, the more deserving of our respect.

# PROGRAM REVIEW

In fiscal year 1981, as in past years, the Inter-American Foundation allocated the largest share of its funding to projects for rural and agricultural development. The principal beneficiaries were small, low-income farmers working to increase their production and expand their markets. Some projects supported off-farm enterprises to generate new sources of income and employment in depressed rural areas. The Foundation gave increasing attention to the urban poor through grants for the development of small businesses, the strengthening of community and neighborhood organizations, and the expansion of opportunities for vocational education and training. Other areas of Foundation grant-making included research and analysis of development issues affecting the poor and disadvantaged, legal assistance to peasants and workers, and cultural expression reinforcing social and economic development.

Overall in fiscal year 1981, the Foundation approved 220 new grants and 105 supplements to previous grants. These funding actions resulted in project support totaling $21.9 million, compared to $23.2 million in FY 1980, $17.1 million in FY 1979, and $11.9 million in FY 1978. Grants totaling more than $2 million were made in two countries, Colombia and Chile; grants for more than $1 million were made in seven other countries—Peru, Mexico, Bolivia, Paraguay, Argentina, the Dominican Republic, and Guatemala. The Foundation's funding in the Caribbean increased from $2.6 million in FY 1980 to $4.7 million in FY 1981.

**Agricultural and Rural Development**

A majority of the rural population of Latin America and the Caribbean live in conditions of extreme poverty. The incomes, wages, and productivity of small farmers and rural workers are low, while rates of unemployment and under-employment are high. The rural poor have limited access to most government services whether for credit and technical assistance or for health and education. The situation is not improving in most countries. Small farmers are being displaced from their land, either to join the ranks of rural laborers working at substandard wages or to move to towns and cities where employment prospects are uncertain for unskilled and often illiterate migrants.

There is, nonetheless, a vitality and resilience among the rural poor in Latin America and the Caribbean that sustain their continuing struggle to improve their lives and those of their families and children. The Foundation's work builds on that vitality and resilience as it assists small farmers, peasants, and agricultural laborers in their efforts to devise technologies appropriate to their needs, to experiment with new forms of social and economic organization, and to create new sources of income and employment. Last year the Foundation committed $8.3 million to projects for rural development, representing nearly 40 percent of its funding.

Many Foundation grants were made directly to local organizations of small farmers. Projects in Belize, for example, are financing the efforts of two cooperative groups to expand their production, one in rice and the other in honey. Grants in Dominica and St. Kitts are assisting fishing cooperatives to organize and to initiate educational programs for their members. Two peasant communities in Paraguay received Foundation support: one to expand production of charcoal, the other to establish a nursery for orange trees.

The Foundation also supported regional associations of community groups and cooperatives. A cooperative federation in Guatemala, for example, received Foundation funds to organize a fertilizer importing service for its members. Grants to small farmer federations in Colombia, Panama, Bolivia, and Peru helped to establish loan funds and educational programs for affiliated cooperatives. A federation in Honduras received a grant which financed the expansion of its programs of technical assistance and education to 26 cooperatives.

Other grants went to organizations providing services to small rural groups. A private development organization in Haiti is using Foundation funds to work with low-income farmers in coffee production and marketing, to maintain a demonstration farm and animal husbandry center, and to extend its community health activities. Service organizations in Uruguay and Colombia received grants to assist small farmers to improve the marketing of their produce. A grant in Chile helped establish an experimental program of crop insurance, while projects in Paraguay, Colombia, and Argentina contributed resources to revolving loan funds for small farmers. Grants in Mexico and Guatemala are assisting the development, testing, and dissemination of new, low-cost farming techniques.

Foundation grants are also supporting the development of rural enterprises, mostly in the area of food processing, that provide employment for displaced agricultural labor and markets for small farmer produce. An Indian community in the Peruvian highlands received funding to start a dairy and cheese-making operation. A grant in the Dominican Republic financed the establishment of several bakeries. With Foundation support, a rural cooperative in Bolivia started a brick-making enterprise; a furniture-making cooperative in Colombia began the milling of raw lumber.

**Education and Training**

The Foundation gives special emphasis to developing the skills of the poor and increasing their opportunities for productive employment. Education and training were the principal purposes of grants totaling some $3.5 million in fiscal year 1981. In addition, more than half of the Foundation's other projects contained a significant educational component including, for example, courses in leadership and management, community and cooperative development, and health and nutrition.

Most grants for education and training went to programs of vocational training to increase the productivity and incomes of urban and rural workers and open up new job opportunities to them. Projects in Haiti, Bolivia, Nicaragua, and Chile are preparing small farmers to use new agricultural production methods. In Colombia, a grant is supporting an educational program for rural artisans and craftworkers. A project in Paraguay is assisting 66 Guarani families to acquire skills in farming, animal husbandry, and carpentry. Small grants in Jamaica and Peru are supporting programs to train unemployed youth in metal-working and carpentry. In a few countries, including Paraguay and Dominica, Foundation grants are assisting vocational programs that contain basic literacy training. And in Jamaica, a Foundation-supported project is providing retarded persons with basic skills to earn a living.

A significant number of grants contributed to education and training activities for women. In the Caribbean, the Foundation is assisting a program of administrative and vocational training for women trade unionists. Grants in Colombia, Bolivia, and Mexico are helping women's groups to organize educational programs to provide their members with marketable skills. Foundation support to a federation of agricultural cooperatives in Guatemala is being used to train Indian women in home economics, child care, nutrition, and health.

**Community Services**

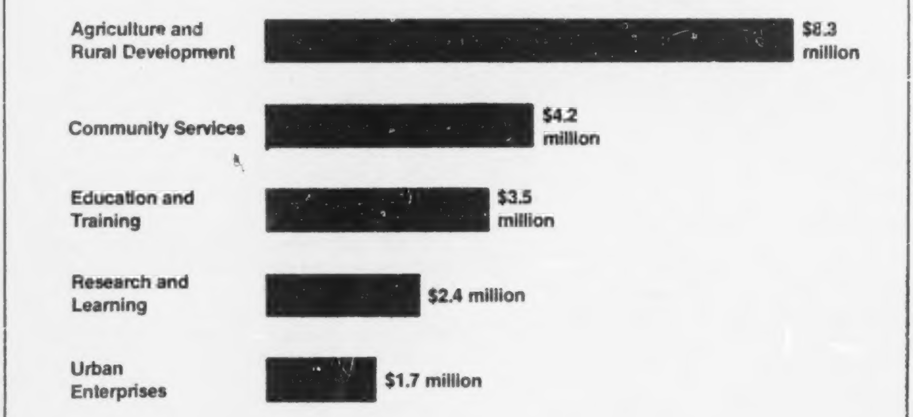
In countries throughout Latin America and the Caribbean, poor people have formed organizations to secure services for their communities and neighborhoods. Foundation grants of $4.2 million in fiscal year 1981 assisted such local organizations in efforts to improve health care, housing, and food distribution. Besides helping to provide services, the grants are also intended to strengthen the communities and organizations themselves and increase their ability to take on other tasks.

Foundation grants in support of health and nutrition projects last year assisted communities to develop programs of preventive health. Projects in Paraguay and Chile are training local health workers selected by the participating communities. A group working with several highland communities in Bolivia will provide health and education services based on traditional medicine. In Guatemala, the Foundation is assisting efforts to provide health services and training to Indian communities, and in Costa Rica, a community project to improve water and sanitation received support. A project in Haiti is training health workers to deliver eye care services to the poor.

Self-help housing programs supported by the Foundation are assisting poor families obtain decent housing at low cost. Grants in Paraguay, the Dominican Republic, and Argentina are helping residents of poor communities acquire materials and technical assistance to construct their own homes. Another grant is enabling a private foundation in the Dominican Republic to draw on the experience of a self-help housing organization in El Salvador in developing its own program.

Basic consumer items are overpriced and often

Distribution of Grants by Program Area in FY 1981



difficult to obtain in remote areas of Latin America and the Caribbean. In Colombia, St. Vincent, and Suriname, grants are enabling isolated communities to establish cooperative stores to assure the availablity of food staples and other necessities at reasonable prices.

**Urban Enterprises**

Small enterprises are a major source of employment and income for the urban poor in Latin America and the Caribbean. In fiscal year 1981, the Foundation granted $1.7 million for technical assistance, credit, and raw materials required by small urban-based businesses to expand or improve their operations.

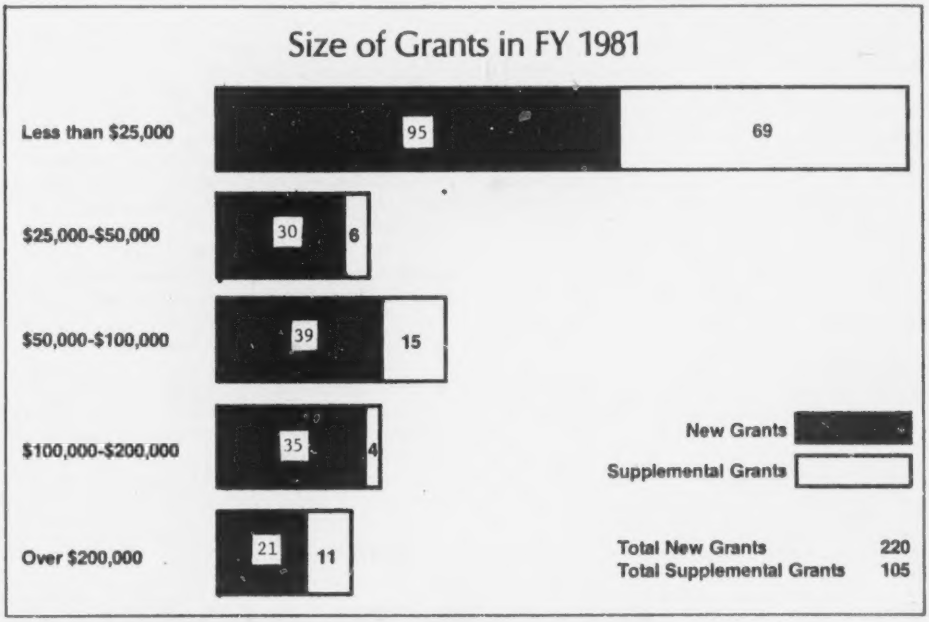
Some of the grants went directly to small enterprises or cooperatives to strengthen them financially and permit their expansion. Projects in the Dominican Republic and Mexico assisted cooperative enterprises engaged in woodworking and furniture production. In Argentina, the Foundation supported the establishment of a factory for fruit and vegetable preserves that will provide a market for the produce of farmers in the region. Grants in Peru are assisting a small business that recycles paper bags and a workshop that makes school uniforms. In Bolivia, Foundation funds enabled an association of itinerant vendors to produce their own aluminum pots; another grant helped a highland community establish a bakery.

Most of the Foundation's support for urban enterprises went to organizations that serve small businesses in Latin America and the Caribbean with credit, technical assistance, and marketing facilities. A private development foundation in the Dominican Republic has initiated a program to assist street vendors and other small entrepreneurs. Other grants are supporting private groups in Dominica and Guyana that provide diverse services to small businesses. A federation of industrial cooperatives in Honduras is using Foundation funds to offer programs of credit, marketing, and education to their affiliated cooperatives. In Jamaica, an organization of blind people has received a grant to create a loan fund to assist the business ventures of its members.

**Research and Learning**

The Foundation approved $2.4 million in grants last year for research and analysis on issues related to poverty, grassroots development, and popular participation. These grants are helping to generate new information and understanding about the problems of poor people in Latin America and the Caribbean, how the poor are affected by different policies and programs, and how they can, and do, work to improve their situations. The Foundation is also seeking to test its own ideas and approaches, and identify new ways of thinking and acting on development problems.

Most of the grants went to research centers in Latin America and the Caribbean. Researchers in Ecuador and Argentina received assistance to study the employment and living conditions of rural migrants and other urban poor. An economic research center in Chile is using Foundation funds to analyze the effects of public policies on health, housing, and social security. Grants in Uruguay and Bolivia are supporting research on survival strategies for small farmers. In Peru, one Foundation project is helping to train young social scientists in field research, and another is supporting studies of highland populations. A grant in Mexico is financing a study of food consumption among



low income groups. The Foundation also supported the participation of academics, development workers, and graduate students from Mexico in the research and training activities of a new center for U.S.-Mexican relations at the University of California at San Diego. A grant to the Woodrow Wilson International Center for Scholars helped to fund a conference on democracy and authoritarianism in Latin America and a series of seminars on the Caribbean.

Some research grants were made to groups directly engaged in development projects. In Bolivia, for example, a social action agency received Foundation funding to examine marketing problems in three highland regions. A grant to a rural training institute in Haiti supported three roundtable discussions on community development issues. The Foundation also contributed to a meeting in Peru of organizations of the physically handicapped.

### Legal Assistance

In their continuing struggle for survival and advancement, poor people in Latin America regularly face legal problems that threaten their income, livelihood, and person. Small farmers confront challenges to their land titles; workers are denied minimum wages or other labor code protections; women and minorities suffer illegal discrimination; and bureaucratic obstacles prevent the poor from taking advantage of their rights to health care and other social benefits. What they seek is the just application of existing laws.

The Foundation made grants totaling nearly $900,000 to assist private groups that are working with peasants and workers to protect their legal rights. In Colombia, a grant is supporting a group of young lawyers working on the legal problems of Indian communities. A Foundation grant in Jamaica helped establish a mobile program of legal services to reach remote areas. Other projects supported a legal aid center for migrant laborers in Ecuador and a program of legal services for urban workers in Peru. The Foundation also contributed to the formation of the Andean Commission of Jurists to help safeguard the legal rights of the rural poor.

### Cultural Expression

The Foundation makes a small number of grants each year to encourage cultural expression in poor communities, to preserve and develop traditional arts and handicrafts, and to strengthen cultural identity among Indians and other ethnic minorities in the region. In fiscal year 1981, 16 such projects were approved for $850,000. Some of these activities, including support for artisan groups, had commercial purposes as well; others were related to community organization efforts or to educational programs.

A Foundation grant in Jamaica is allowing community development groups to experiment with drama presentations in their educational projects and assisting public schools to organize theater programs. Another grant, to an art school in Jamaica, helped pay for the preparation of *Maddah Goose*, a book of children's nursery rhymes written in local dialect. In Ecuador, the Foundation is assisting efforts to preserve Indian and Black folklore traditions. An artisan organization in Bolivia is using Foundation support to introduce new techniques of knitting and sewing, and a women's theater group in Jamaica received assistance to establish a textile design and silk screen workshop.

# REPORTS FROM THE REGIONS

## ANDEAN REGION

The Foundation approved projects totaling $6 million in the Andean region. Most funding went to peasant production and marketing associations, consumer groups, small urban-based businesses, and service organizations offering training, education, and legal assistance. Women manage many of these projects.

Colombia, with its tradition of local development efforts, received grants for $2.7 million, accounting for 45 percent of all funding in the region. Projects supported small farmer groups, such as the women of the Kamsa Indian community of Putumayo, who received a grant to increase vegetable and milk production. On the north coast, a grant provided working capital to a rice production cooperative to operate its own mill. A cooperative marketing project in the Cauca Valley, the result of a four-year organizational effort by local leaders, will help some 30 communities to sell their agricultural products directly to urban consumers.

Grants totaling $280,000 were made in Ecuador. A grant in the Amazon region is assisting 500 Indian families to organize an agricultural production cooperative. Another grant is helping a program in Quito that provides shelter, training, and legal assistance for migrant laborers. A project in Esmeraldas supports an effort to collect and catalogue Black history and folklore in the region.

Organizations in Peru received grants totaling $1.6 million. The Foundation supported rural production cooperatives, consumer stores, and worker self-managed enterprises. Several grants are funding projects in Quechua-speaking peasant communities that have been bypassed by most development efforts. In the *pueblos jovenes*, Lima's impoverished slums, the Foundation is assisting a group of unemployed workers to develop a scrap paper recycling business. A group of women lawyers in Lima received support for a program of legal assistance to urban workers.

The Foundation approved grants for $1.4 million in Bolivia. Most projects are assisting the income producing activities of poor people. A small grant has enabled a group of itinerant vendors to produce their own pots and pans for sale. Several grants are supporting educational initiatives. The Foundation funded an adult training program in which teachers travel to market towns and provide courses to Aymara Indians without interrupting their agricultural work. Rural women's organizations were supported in five different regions of Bolivia. In southwestern Bolivia, a Foundation grant is assisting a cooperative to improve the production and marketing of quinoa, a nutritious native grain which was widely grown in pre-colonial times.

The Foundation approved only one grant in Venezuela last year. It was for $85,000 to support a regional association of peasant farmers in the destitute eastern region of the country.

## BOLIVIA

*New Grants*

Artesanias La Khochalita
$98,115 Two years
La Khochalita, a self-managed artisan association, is expanding and improving its handicraft production. The grant includes funds for training in technical and administrative skills and for purchasing new equipment and buying wool in bulk. (BO-082)

Instituto Nacional Khechwa Aymara (INKA)
$118,222 Three years
The Instituto Nacional Khechwa Aymara is conducting an experimental health care and education project based on the traditional knowledge of the Andean people. Funds are paying for the establishment of health education centers in two communities and the training of local health workers. (BO-097)

Central Regional de Cooperativas Agropecuarias "El Ceibo", Ltda.
$198,000 Two Years
This regional cooperative association of peasant farmers is improving the processing and marketing of cacao beans. Funds have been used to build drying and fermenting facilities, to conduct technical and social development courses, and to purchase vehicles. (BO-098)

Cooperativa Industrial Santa Rosa, Ltda.
$6,238 One year
The cooperative will construct, equip, and operate a small bakery in La Paz that will provide employment and increased incomes for the cooperative's 22 members. (BO-102)

Cooperativa Agricola Artesanal "Exaltación", Ltda.
$17,500 Two years
The Cooperativa Exaltación will establish a small brick-making factory owned and managed by its workers. Clay from the cooperative members' jointly held lands will be the primary raw material. The project will create a new source of employment for impoverished day laborers and enable the cooperative to expand its educational program. (BO-103)

Agrocentral
$159,065 Two years
Agrocentral, a federation of 12 cooperatives in Chuquisaca, is organizing mobile teams to conduct education programs for member groups. The grant will also provide support for technical assistance and a loan fund for community projects. (BO-106)

Centro Femenino del Club de Madres
$42,086 Two years
The Centro Femenino is strengthening and expanding its network of mothers' clubs through an educational program and construction of new central facilities. Training will be offered in literacy, health, nutrition, handicrafts, accounting, and cooperative administration. (BO-108)

Centro de Educación Técnica-Humanistica-Agropecuaria (CETHA)
$80,250 Two years

The Centro is expanding its mobile adult education program in primary and secondary studies, vocational training, and agriculture. The training programs will reach the Aymara population without interfering with the agricultural cycle. (BO-109)

Cooperativa Porvenir
$13,342 One year
The group has opened a workshop on the outskirts of La Paz to produce clothing for sale in low-income neighborhoods, providing employment for 19 men and women who are recent migrants from rural areas. (BO-113)

Centro de Estudios de la Realidad Económica y Social (CERES)
$130,680 Two years
This research group is analyzing subsistence strategies of small farmer households in the Cochabamba region. The group will determine the importance to the small farmer economy of agricultural and non-agricultural activities. (BO-114)

Cooperativa S[illegible]
$13,500 Two years
The cooperative is organizing a community store that will offer basic consumer items and agricultural inputs at reasonable prices. The project also includes funds for courses in cooperative management. (BO-115)

Centro de Audiovisuales Educativos
$58,000 Two years
The Centro de Audiovisuales Educativos is expanding its production of educational slide programs. Presentations will be prepared on health, sex education, agriculture, leadership skills, and Bolivian history for development programs serving poor and often illiterate people. (BO-116)

Central de Cooperativas Agropecuarias "Operación Tierra"
$105,726 Three years
The project is introducing new processing technology and improving the marketing of quinoa, a grain native to the Andean highlands. The Central will conduct an educational program for members and organize regional meetings with other quinoa producers to discuss common problems. (BO-117)

Centro de Promoción y Formación de la Mujer
$69,934 Three years
The project encourages cooperation among groups from two regions of Bolivia. The Centro will develop exchanges of food products and medicinal plants, and will conduct training programs in health, nutrition, crafts, and cultural expression. (BO-119)

Pedro Ovio Martinez
Juan de Dios Yapita Moya
$5,000
Foundation funds enabled a Quechua and an Aymara scholar to attend courses and workshops at Cornell University. (BO-121)

Asociación Departamental de la Mujer Campesina de Oruro (ADEMCO)
$6,947 One year
ADEMCO will organize and equip a training center and offer courses in crafts and rural administration to members in three altiplano provinces. (BO-122)

Asociación de Vendedores Ambulantes Rurales de Ollas de Aluminio (AVAROA)
$18,400 Three years
Itinerant vendors of pots and pans will manufacture their own wares for sale. Control over production will allow the vendors to increase their profits from the sale of pots in rural fairs. (BO-125)

*Supplemental Grants over $10,000*

Cooperativa Agrícola Integral Mineros (CAIM)
$69,271
The Cooperativa is expanding its services to reach more rural communities. CAIM will use profits from a consumer store to set up an agricultural loan fund for member communities. (BO-051)

Radio San Gabriel
$89,300
Radio San Gabriel will continue to offer health education and services to more than 100 communities in the Bolivian highlands. (BO-072)

Acción Cultural Loyola (ACLO)
$30,300
Acción Cultural Loyola (ACLO) is studying agricultural markets in Chuquisaca, Potosí, and Tarija. Results of the research will be used to help the Cooperativa Integral Campesina (COINCA) improve the marketing of its products. (BO-074)

Centro de Promoción Campesina Ayni
$15,300
The Centro is consolidating its training center in La Paz and organizing training facilities in three rural communities. Courses are being offered in accounting, health, literacy, rural unions, economics, and history. (BO-086)

## COLOMBIA

*New Grants*

Asociación Colombiana para el Estudio de la Población (ACEP)
$164,000 Two years
Under the sponsorship of ACEP, Magdalena Leon de Leal, a Colombian sociologist, is organizing a two-year educational program on problems of poor women in the Colombian labor force. Activities include publication of articles, organization of training seminars for personnel of Colombia's major development agencies, and an education and legal assistance program for domestic servants in Bogota. (CO-189)

Fundación Orientación Servicio Juvenil
$5,000 One Year
Irenarco Ardila shared with U.S. educators and juvenile justice authorities his nine years' experience working with the *gamines*, or street youth, of Bogota. (CO-196)

Cooperativa de Producción Agrícola de Bayunca, Ltda.
$12,600 Three years
The Cooperativa is expanding its education program in a small rural community near Cartagena and will continue efforts to establish an agricultural production and marketing program. Funds also paid legal fees for the cooperative to defend its land title. (CO-197)

Federación de Cooperativas del Cauca
$304,448 Three years
The Federación will provide technical assistance to member and non-member cooperatives throughout Cauca to strengthen their administrative capabilities. A rotating credit fund will provide low interest loans to member cooperatives and generate revenue for the federation. (CO-198)

Cooperativa de Productores y Trabajadores de Bolivar, Ltda (COOPROTRABOL)
$110,180 Two years
COOPROTRABOL, a rice milling and marketing cooperative, will operate its mill on a year-round basis. Funds will be utilized for production credit to producers and for the purchase of harvested rice from cooperative members for milling. (CO-200)

Fundación Educadora San Nicolás, Comunidad por los Niños
$147,440 Two years
The Fundación is supporting activities in rural and urban communities to address problems of children from poor families. (C0-204)

Estudios Rurales Latinoamericanos
$10,000 Two years
The grant supports efforts to increase the circulation of this Colombian journal of rural studies. *Estudios Rurales Latinoamericanos* is the only Latin American journal concerned with rural problems. (CO-206)

Cooperativa de Trabajadores Industrias y Artesanias Varias Lid del LLano, Ltda. (COOTRALID)
$9,480 One year
COOTRALID, a woodworkers' cooperative in Villavicencio, has enlarged its workshop and begun to process raw lumber for sale to local woodcraftsmen. (CO-208)

Organización de Mercadeo del Valle del Cauca
$472,798 Three years
This regional peasant organization is initiating a marketing program to distribute agricultural goods directly from peasant producers to urban consumers. The profits will strengthen the organization's ability to provide services to several thousand families in member peasant organizations throughout Valle. (CO-210)

Empresa Comunitaria Jabotiyama
$18,150 Three years
The grant will help increase the agricultural production and organizational capacities of this community enterprise of Kamsa Indian women in the Sibundoy Valley. (CO-212)

Empresa Comunitaria Bengbe Botamanine
$13,800 Three years
This grant is also directed to increasing the agricultural production

and organizational capacities of a community enterprise of Kamsa Indian women in the Sibundoy Valley. (CO-213)

Instituto Femenino de Promoción Social Rural Diversificado Maria Auxiliadora
$60,000
One year
The Instituto, a women's training center, will improve its educational facilities and strengthen its economic base. The Instituto teaches rural women leadership and vocational skills, and encourages community development efforts. (CO-214)

Coordinación Colombiana de Trabajo Voluntario (CCTV)
$80,760
Three years
The CCTV and the Agencia del Voluntariados de Bogotá y Cundinamarca is initiating a training program for women in the *barrio* of Patio Bonito in southwest Bogota. The program will help strengthen a women's association to conduct economic and social activities in the *barrio*. (CO-215)

*Supplemental Grants over $10,000*

Fundación para las Comunidades Colombianas (FUNCOL)
$424,456
The Fundación is continuing its legal aid services to Indian communities in Colombia. FUNCOL also produced a documentary film on the first conference of Colombian Indians. (CO-083)

Centro de Estudios Comunales Aplicados (CECA)
$306,450
The Centro de Estudios Comunales Aplicados (CECA) provides technical assistance to community-based housing projects organized and carried out by neighborhood groups in Pereira and Bogota. (CO-119)

Grupo de Producción y Consumo Paloblanco
$19,380
The Grupo will expand its workshop and purchase six new sewing machines. Profits will be used to establish a community store and clinic. (CO-120)

Asociación Colombiana de Promoción Artesanal
$211,119
The Asociación is organizing an educational program for rural artisans and helping the artisans to develop their own organization. (CO-121)

Corporación Integral para el Desarrollo Cultural y Social (CODECAL)
$11,329
The grant helped pay for CODECAL's production of educational materials for use in rural areas. (CO-133)

Fundación para el Desarrollo (FUNDER)
$93,186
The Fundación is increasing supplies for its consumer stores and will sponsor a regional meeting of peasant leaders. (CO-169)

Centro San Pedro Claver
$72,615
This small farmer group is securing land titles and establishing a community agricultural enterprise near the town of Arroyo Piedra on Colombia's north coast. (CO-171)

## ECUADOR

*New Grants*

Programa de Antropologia para el Ecuador
$53,330
Two years
The Programa de Antropologia is helping folklorist Juan Garcia to collect and catalogue traditional Black folklore in two areas of Ecuador. (EC-074)

Programa de Antropologia para el Ecuador
$12,400
One year
The Programa de Antropologia will publish three studies on Ecuadorian society. (EC-075)

Vicariato Apostólico de Esmeraldas
$14,400
Two years
The Vicariato is developing a collection of books and documents on the social and economic problems of Blacks and Indians in Esmeraldas. (EC-076)

Centro de Investigaciones y Estudios Socio-Económicos
$101,700
Two years
The Centro will conduct a study of temporary migrant laborers in Ecuador. (EC-080)

Instituto Cooperativo Ecuatoriano de Educación y Desarrollo
$7,745
One year
The Instituto is providing training and technical assistance to the Cooperativa Te Oriente. (EC-081)

Cooperativa de Producción Agropecuaria "San Pedro," Ltda.
$40,050
Three years
The grant supports cultural preservation activities in this agriculture production cooperative of 500 Quechua-speaking Indian families in the Amazon region. (EC-082)

Hospederia Campesina "La Tola"
$50,100
Two years
The Hospederia is establishing a pilot legal aid program for temporary Indian migrants in Quito. (EC-083)

## PERU

*New Grants*

Central de Cooperativas Agrarias del Valle de Chancay Huaral-Aucallama, Ltda. 107
$167,660
Three years
This regional federation of agricultural cooperatives is expanding its supply of raw materials for 22 member cooperatives. It will also establish a consumer store, improve marketing operations, and secure technical assistance and training. (PU-123)

Comunidad Campesina de Huasta
$143,190
Three years
The Comunidad Campesina de Huasta, an indigenous highland community, is establishing a dairy on communal lands. (PU-126)

Confección San Agustin
$34,400
One year
Confección San Agustin, a worker self-managed factory in northern Peru, is expanding its production of low-cost clothing. This group is also providing educational programs to its members. (PU-134)

Comunidad Campesina San Pedro de Morrope
$09,535
18 months
The Comunidad Campesina will mine, process, and market the gypsum deposits on its communal lands. The revenues will be used for social and economic development projects. (PU-135)

Asamblea Nacional de Propiedad Social
$53,400
One year
The Asamblea is providing technical assistance and training to worker-managed enterprises. (PU-136)

Central de Cooperativas Agrarias de Producción del Valle del Chira Ltda., No. 003
$62,470
Two years
The Central is conducting training programs in cooperative management for its 22 members and 10 non-affiliated cooperatives in the Chira and Hermoso valleys. (PU-138)

Ondores
$23,220
One year
This worker-managed enterprise in a Lima slum purchased machinery and a truck to expand its scrap paper recycling business. (PU-141)

Misión Juridica y Social de Paz
$43,000
Two years
Misión Juridica y Social de Paz is providing legal training to community leaders in Lima's poor neighborhoods. (PU-142)

Pontificia Universidad Católica del Peru
$104,000
Three years
The University is providing grants to master's degree candidates for field research on issues of poverty and grassroots development. (PU-143)

Consejo Integrado para el Desarrollo Campesino (CIDESCA)
$98,730
Two years
CIDESCA, which provides development assistance to impoverished peasant groups in Chiclayo, is expanding its training program for local health workers, members of community health committees, and

cooperative store managers. CIDESCA will also assist three communities to expand land under cultivation and increase agricultural production. (PU-144)

Centro de Promoción Social Spartacus (CENPROS)
$56,140 18 months
The Centro is providing organizational and technical assistance to development programs of peasant communities. (PU-145)

Liga Agraria José Carlos Mariátegui, Base Pilcuyo
$45,200 Two years
The Liga, which is managed by an association of Aymara peasant communities, will expand its consumer store network in southern Peru from 12 to 21 communities. (PU-149)

Comunidad Reconocida de Chipiani-Casani
$700 One year
The grant paid for the purchase of tools for a carpentry workshop of the Comunidad Reconocida de Chipiani-Casani. (PU-150)

Consejo Peruano para la Autogestión
$20,080
Representatives of worker self-managed firms held a three-day seminar to exchange experiences and identify areas of possible collaboration. (PU-151)

Central de Cooperativas Agrarias Norte Chico, Ltda.
$84,800 Two years
The Central will establish an agricultural and technical assistance department to serve member cooperatives and other low-income farmers in a region severely affected by crop diseases. (PU-160)

Asociación de Promoción y Desarrollo Social (APDES)
$53,207 One year
APDES is studying city management, health services delivery, and employment generation in the low-income district of Comas, near Lima. (PU-168)

Centro de Estudios de Derecho y Sociedad (CEDYS)
$5,000 One year
The Centro will complete a research project on peasants and the legal system that will suggest new approaches to legal assistance in rural areas. (PU-169)

Cesar Pastor Ortega
$10,000 One year
This grant supports a study on the effects of the agrarian reform on small coffee producers in central Peru. (PU-173)

*Supplemental grants over $10,000*

Central Nacional de Servicios Contables de las Empresas Campesinas (CENASCONTEC)
$315,000
CENASCONTEC is continuing its training and accounting services for affiliated cooperatives throughout Peru. (PU-057)

Instituto de Estudios Peruanos (IEP)
$80,000
The Institute is completing a series of studies on the social and economic problems of the rural poor in Bolivia, Ecuador, and Peru. (PU-071)

Comité de Turismo de Taquile
$14,000
The Comité is helping four cooperative groups in Taquile to promote tourism to the island. (PU-093)

Fraternidad Cristiana de Enfermos
$28,835
The Fraternidad Cristiana de Enfermos assisted a group of disabled persons produce a film on the situation of the handicapped in Peru. (PU-112)

Asociación de Defensa y Capacitación Legal (ADEC)
$94,000
The Asociación is continuing its legal assistance for organized workers and slum dwellers. (PU-121)

## VENEZUELA

*New Grants*

Centro al Servicio de la Acción Popular (CESAP)
$84,553 Two years
CESAP, a private development organization in Caracas, is providing technical assistance and training to several hundred peasant families on the Paria Peninsula. The project will help these families improve and diversify their crops and strengthen their local organizations. (VZ-033)

# CARIBBEAN AND BRAZIL

Grants in the Caribbean totaled $4.7 million in fiscal year 1981, up from $2.6 million in fiscal year 1980. The largest amounts went to organizations in the Dominican Republic, Haiti, and Jamaica, but grant funding also increased significantly in the smaller nations of the region. Many grants provided credit and technical assistance to small farms and businesses. Other projects supported programs of community health, legal services, and vocational training.

Foundation grants in the Dominican Republic for $1.7 million, the most in any year to date, accounted for more than a third of total funding in the region. As in the past, many projects were directed to organizations of small farmers. Grants are helping them to improve the marketing and processing of crops, to reduce costs by allowing bulk purchase, and to test new farming methods. Funds also went to two new programs assisting the development of small businesses in Santo Domingo. Hurricane destruction over the past two years has focused attention on the problem of shelter in the Dominican Republic. The Foundation made grants to two self-help housing programs that are experimenting with low-cost construction technologies—one in an urban neighborhood and the other in a rural settlement.

Funding also increased in Haiti, where $900,000 in grants were made. Support went primarily to programs which peasant beneficiaries designed and managed. Three grants assisted the rural development programs of local service institutions. Through leadership training, adult education, and technical assistance, these programs are helping peasant communities in crop production, reforestation, health and nutrition, and marketing.

The Foundation approved 14 projects for a total of $500,000 in Jamaica. Grants supported the provision of legal services and training to the rural poor, the creation of a fund to provide loans to the disabled to start their own businesses, an experimental program using drama as an educational aid in schools, and the development of diversified, small-scale agriculture.

The Foundation's grant-making also extended to the smaller countries of the Caribbean. In Suriname, grants enabled a credit union to establish cooperative stores and a group of hog farmers to begin processing meat products. In the Netherlands Antilles, the Foundation assisted a program to develop truck farming. Civic associations in Belize received funds to train youth in vocational skills and to strengthen community development programs. In both Belize and Dominica, support went to improve the productivity of low-income farmers, fishermen, and small entrepreneurs.

Grants are supporting region-wide programs for research on the economic and social effects of tourism and for leadership training for women trade unionists.

The Foundation was again unable to resume its program in Brazil in 1981. At the urging of private Brazilian development organizations, the Board and staff continue to explore, with Brazilian government officials, ways to renew Foundation activities in that country.

## CARIBBEAN REGIONAL

*New Grants*

Theatre Information Exchange
$15,000
The Theatre Information Exchange (TIE) is a regional organization of Caribbean drama groups which promotes theater development. This grant provided funds for TIE to hold the Third Annual Conference of Caribbean Dramatists in 1981. (CAR-053)

Caribbean Tourism Research and Development Centre (CTRC)
$229,000 Three years
CTRC is conducting research on the economic, social, and environmental impact of tourism and providing assistance to its member states in the development of the tourist industry. (CAR-056)

Ezra Dalrymple, Dominica Social Security
$575
Ezra Dalrymple of Dominica Social Security attended a four-month course on "The Principles and Practices of Social Work" at the Social Welfare Training Center at the University of the West Indies in Kingston, Jamaica. (CAR-057)

Caribbean Conference of Churches (CCC)
$6,750
The Caribbean Conference of Churches (CCC) invited representatives of grassroots development organizations to attend the CCC Annual Assembly in Curaçao. (CAR-058)

Women and Development (WAND)
$17,270
Women and Development paid for the travel expenses of 16 women from the SISTREN theater group in Jamaica to participate in the CARIFESTA Women's Symposium in Barbados. Funds were also provided for the preparation of a videotape of the symposium to be used in WAND's regional training program. (CAR-059)

Trade Union Education Institute (TUEI)
$279,000 Three years
TUEI, a branch of the University of the West Indies, is sponsoring a series of regional seminars to train 40 women trade union leaders. The participants will conduct national and local seminars for some 3,000 women trade union members. (CAR-061)

*Supplemental Grants over $10,000*

Institute of Social and Economic Research (ISER)
$10,000
The Institute is providing technical assistance and information to local groups, service organizations, and public officials in the Commonwealth Caribbean. (CAR-014)

## BAHAMAS

*New Grants*

Institute of the Arts
$6,000
The Institute conducted workshops on Bahamian art and culture. (BAH-005)

## BARBADOS

*New Grants*

Barbados Union of Teachers (BUT)
$3,770 One year
The Barbados Union of Teachers coordinated a three-week workshop on drama techniques for 60 teachers and community development leaders from six Eastern Caribbean countries. Staff members from the Jamaican School of Drama offered instruction on how drama can be used to enrich primary and secondary school curricula and community development training programs. (BA-012)

## BELIZE

*New Grants*

Council of Voluntary Social Services
$44,000 One year
The Council is training leaders from 19 private voluntary organizations and assisting them in developing programs. The Council also provides small grants to support new projects, evaluates and disseminates information about community programs and their effectiveness, and helps mobilize resources for voluntary organizations. (PE-025)

Southern Fishermen Cooperative Society, Ltd.
$19,000 One year
The cooperative is constructing processing and cold storage facilities for its commercial fishing operation. (BE-026)

St. Vincent Block Group
$31,000 18 months
The St. Vincent Block Group is working to establish a cooperative farming community to produce rice on a commercial basis. Funds were used to purchase a tractor and other tools to clear land and plant rice. (BE-027)

Belmopan Agricultural Cooperative Society Ltd.
$42,000 Two years
This cooperative of 43 farmers is conducting an experimental project in cattle raising and conservation. By using hybrid grass seeds, the farmers expect to control the native jungle grass and brush that make it difficult to cultivate the land. (BE-028)

Belize Honey Producers Federation of Cooperative Societies Ltd.
$45,000 One year
The Belize Honey Producers Federation is working to increase cooperation among the country's many honey producers. The Federation established a carpentry shop to make hive boxes and boards. (BE-030)

The Scout Association
$62,000 Three years
The association is expanding its activities, particularly skills training, in poor urban neighborhoods and rural villages. (BE-031)

Keith Wright, Department of Cooperatives
$6,000 One year
The grant is financing a study on mechanization in small farmer agriculture. (BE-032)

## DOMINICA

*New Grants*

Castle Bruce Carpentry and Masonry Cooperative (CCMC)
$4,425 One year
CCMC established a workshop to produce building materials and furniture. CCMC also plans to help reconstruct hurricane-damaged housing and provide jobs and skills training for unemployed rural youth. (DO-055)

Giraudel Farming Center
$17,532 Two years
The Farming Center offers training programs to low-income farmers in land preparation, crop rotation, land use, bookkeeping, and marketing. (DO-063)

Management Consultants Limited (MCL)
$124,400 Two years
Management Consultants Limited is providing technical assistance and training to low-income Dominicans seeking to establish small businesses. MCL expects to reduce the failure rate of small businesses and increase their ability to obtain loans from local banks. (DO-065)

Bense Farmers' Cooperative Poultry Project
$7,158 One year
The Bense Farmers' Cooperative produces poultry and eggs. The project will employ 25 people and reduce the cost of poultry products in this impoverished village. (DO-066)

Delices Farmers Cooperative Society
$6,500 One year
The 30 members of the cooperative, whose crops have been destroyed by two successive hurricanes, purchased fertilizer to increase their production of bananas. (DO-067)

Dominica Development Foundation
$5,000 One year
The grant covered part of the costs of producing a film on the destruction from Hurricane David. (DO-068)

Cottage Youth Movement
$12,854 One year
The Cottage Youth Movement is establishing a fishing cooperative to provide employment, support community development, and improve nutrition in the community. Grant funds are being used to purchase two small fishing boats, outboard motors, fishing nets and lines, and materials to construct fish pots. (DO-070)

Bourne Farmers Cooperative Society, Ltd.
$3,571 One year
The Bourne Farmers Cooperative rented a tractor to build two and one-half miles of feeder road, which will permit additional acreage to be placed under cultivation. The cooperative will maintain the road and secure the use of other construction machinery, materials, and technical assistance from the government. (DO-072)

*Supplemental Grants over $10,000*

Marigot Education Council
$18,047
The grant continues support for a secondary school that is operated by the community and offers a curriculum directed to local needs. (DO-032)

## DOMINICAN REPUBLIC

*New Grants*

Mujeres Aplicadas a la Industria (MAI)
$48,000 Two years
MAI is developing five community enterprises that will provide 60 women with full-time employment and 80 others with part-time jobs. The grant established a fund to provide small low-interest loans for the participating enterprises. (DR-051)

Servicio Social de Iglesias Dominicanas (SSID)
$40,100 18 months
Servicio Social de Iglesias Dominicanas coordinates the work of more than 600 Protestant churches involved in community development programs. The SSID is using the grant to assist six communities to build wells and two others to construct community centers. (DR-053)

Centro de Asesorías Evaluación y Estudios (CASE)
$14,800 Nine months
The Centro conducted a study of animal and mechanical traction for small farmers. (DR-057)

Cooperativa de Producción y Trabajo "Asociación de Maderos y Afines" (ASOMACOOP)
$51,500 One year
ASOMACOOP is a small woodworkers' cooperative in Santo Domingo. Grant funds complemented the members' own capital to start a program of marketing, credit, raw material supply, technical assistance, and training. The program will allow an expansion in membership from 36 to more than 100 persons and a reduction in production costs. (DR-059)

Fundación para el Desarrollo Comunitario, Inc. (FUDECO)
$280,071 15 months
In collaboration with the Instituto Nacional de la Vivienda, FUDECO is establishing a rural settlement in the village of La Cienaga for 70 impoverished families left homeless by recent hurricanes. Plans call for setting up workshops to prepare construction material; building 70

houses, a school, a park, and a sports field; and initiating various small enterprises. (DR-060)

Fundación San José, Inc. (FSJ)
$49,985 One year
The FSJ is a private organization that conducts programs of self-help housing and community development. The Fundación is using the grant to secure technical assistance. (DR-061)

Fundación San José, Inc. (FSJ)
$120,978 Two years
The FSJ is completing a project for the self-help construction of 40 low-cost homes. (DR-062)

Fundación Dominicana de Desarrollo, Inc. (FDD)
$365,600 Three years
The FDD is a national development foundation created by business and professional leaders in 1962 to provide credit and technical assistance to low-income farmers. This grant helped establish a new program for small urban enterprises. The program serves businesses with less than six employees and individual entrepreneurs such as street vendors. It is estimated that in three years the program will reach 1,200 small enterprises. (DR-063)

Instituto Técnico Salesiano (ITESA)
$1,000
The grant allowed a representative from ITESA to visit the cooperative community of Mondragón, Spain. (DR-064)

Asociación Agrícola "12 de Octubre"
$8,000 Six months
The Asociación of 50 small farmers is rebuilding its consumer store, which was destroyed by hurricanes two years ago. (DR-065)

Asociación Cultural Popular, Inc. (ACUPO)
$249,200 Three years
ACUPO was created in 1975 by Radio Santa Maria to provide technical assistance, credit, and training to small farmer organizations. ACUPO is expanding its credit program and supporting the development of 16 consumer cooperatives, numerous small animal projects, a local agricultural fair, and savings programs of producer organizations. ACUPO will also provide 30 training courses each year to approximately 300 farmers. (DR-066)

Centro de Asesorías Evaluación y Estudios (CASE)
$22,785 One year
CASE is studying the organizational structure of 180 small farmer associations in the Dominican Republic. The findings will be discussed with farmer organizations and rural development agencies. (DR-068)

Junta de Asociaciones Agrícolas El Llano
$21,950 18 months
The Junta de Asociaciones Agrícolas, an organization of 16 producer associations, provides marketing and credit programs for 450 participating farmers. Grant funds are helping them construct a small building and purchase rice cleaning and packaging equipment. (DR-070)

El Bloque de Asociaciones de Payita y Cano el Sur
$25,950 18 months
The grant to El Bloque, an organization of five producer associations with approximately 200 members, is helping to pay for the construction of a small building and the purchase of rice cleaning and packaging equipment. (DR-071)

Instituto para el Desarrollo Suroeste (INDESUR)
$62,588 18 months
INDESUR coordinates relief and development efforts in impoverished areas of the southwest region of the Dominican Republic. INDESUR is providing technical and financial assistance to community organizations to establish three bakeries and a goat-raising project. (DR-072)

Financiera para el Desarrollo y la Cooperación (FICOOP)
$6,170
This grant enabled three FICOOP representatives to participate in the annual meeting of the World Congress of Cooperatives where they presented a study on the credit programs of Dominican cooperatives. (DR-073)

*Supplemental Grants over $10,000*

CARITAS Dominicana
$107,700
CARITAS, a social service agency of the Catholic Church, is establishing a swine-raising farm. (DR-037)

CARITAS Dominicana
$15,427
CARITAS is providing low-interest loans to small farmer associations in areas affected by natural disasters. (DR-046)

Instituto Técnico Salesiano
$81,000
The Instituto is expanding its technical education programs in industrial mechanics, electronics, and graphic arts. (DR-047)

Fundación para el Desarrollo Comunitario (FUDECO)
$81,400
The Fundación is conducting research and demonstration programs on tropical organic farming methods designed for subsistence farmers. (DR-048)

## GRENADA

*New Grants*

Butler Agricultural Production Society, Ltd.
$3,500 One year
Butler Agricultural Production Society purchased seeds and plantings to expand vegetable production.
(GR-018)

## GUYANA

*New Grants*

Guyana Investment Company, Ltd (GICL)
$53,000 One year
GICL is assisting in the development of small enterprises. (GY-007)

## HAITI

*New Grants*

Holy Cross Fathers
$332,168 Three years
The Institut de Technologie et d'Animation (ITECA), an organization affiliated with the Holy Cross Fathers, is expanding its programs of adult education, leadership training, community development, and agricultural extension. (HA-050)

Institut de Consultation, d'Evaluation et de Formation de Personnel (ICEF)
$825
ICEF evaluated a proposal presented to the Inter-American Foundation by the Cooperative Agricole Cafeière et Elevage de Maniche (CACEM). (HA-051)

Mouvement de Developpement Communautaire de Pilate (MODECOP)
$189,080 Three years
MODECOP is a private community development organization which serves more than 165 community agricultural groups and eight credit unions. MODECOP is using this grant for its programs in education, credit, and coffee marketing and will initiate new programs in community health, agricultural production, animal husbandry, and food marketing. (HA-052)

Institut de Consultation, d'Evaluation et de Formation de Personnel (ICEF)
$7,685 Six months
ICEF, a private development organization, will organize two roundtable discussions on community development issues for local leaders. (HA-053)

Eye Care Haiti Ophthalmic Assistant Program (ECHOAP)
$72,929 Two years
ECHOAP is an organization dedicated to improving eye care services in rural Haiti. ECHOAP is conducting programs for training rural health workers to identify, treat, and prevent eye disease. (HA-055)

Fred Beliard and Associates
$4,448 One year
This consulting firm assisted the Mouvement de Developpement

Communautaire de Pilate (MODECOP), a private community development organization, to improve its financial management. (HA-056)

Centre Animation Rurale Polyvalent a Effect Multiplicateurs (CARPEM)
$683
Eight CARPEM members visited the Mouvement de Developpement Communautaire de Pilate (MODECOP) to learn about MODECOP's programs in agricultural production and marketing, community organization, and health. (HA-057)

Holy Cross Fathers
$267,725 Three years
This grant is enabling IDEA, a church-supported organization in Cap Haitien, to expand its program of adult education and community development in 40 communities in northern Haiti. IDEA will build a new rural training center, establish demonstration projects in agriculture and reforestation, and augment its technical assistance and credit programs for peasants. (HA-060)

## JAMAICA

*New Grants*

Jamaica Foundrymen's Association (JFA)
$11,550 One year
The Jamaica Foundrymen's Association organized a course at the University of the West Indies to help improve the skills and technology used in foundries. (JA-054)

Montego Bay Legal Aid Clinic
$174,480 Three years
The Montego Bay Legal Aid Clinic is establishing a mobile program that will provide legal services to approximately 2,000 rural residents each year. (JA-056)

SISTREN
$24,348 One year
SISTREN is a theater group founded by 13 poor women in Kingston in 1977. The grant enabled them to continue their dramatic performances while establishing a silk-screen enterprise from which they will earn a living. (JA-057)

Caribbean Institute on Mental Retardation (CIMR)
$15,330 One year
CIMR is a private regional organization that conducts training and research on the problems of the mentally and physically handicapped. The Institute is developing low-cost, simple procedures for community health personnel and family members who work with the handicapped. (JA-058)

Jamaica Society for the Blind (JSB)
$15,000 One year
JSB is a private, voluntary organization that provides rehabilitation, educational, and welfare services to the blind in Jamaica. JSB created a small loan fund to help its blind members establish small businesses. (JA-060)

Institute of Jamaica
$95,475 Three years
The Institute of Jamaica is working with the Jamaica School of Drama to develop community theater and assist primary and secondary schools to incorporate drama in their curricula. A repertory theater program is being established to raise income for this program. (JA-061)

Jamaica School of Art
$9,038 One year
The School published *Jamaica Maddah Goose*, a bilingual book of tales and rhymes in Jamaican dialect and English. Proceeds from sales will be used for scholarships for needy students. (JA-062)

Knox Educational and Community Services Foundation
$45,180 Three years
The Foundation initiated a work-study program for 180 rural students which includes training in chicken raising, coffee and citrus cultivation, and low-cost farming methods. The program is expected to raise and sell sufficient produce to become self-sustaining. (JA-063)

Sonia Jones, Kingston Legal Aid Clinic
$4,586
This grant permitted Sonia Jones, Director of the Clinic, to visit legal aid programs in the United States and Canada. (JA-064)

*Supplemental Grants over $10,000*

The Mel Nathan Institute (MNI)
$85,000
The Mel Nathan Institute, a community development organization, studied the development of the Hannah Town area of Kingston and assisted the planning efforts of its poor residents. The Institute also established a loan fund for small enterprises. (JA-051)

Production Pioneer Company, Ltd. (PPC)
$41,000
The Production Pioneer Company is studying and disseminating information about small-scale agricultural and industrial enterprises. It is also helping its members plan projects, secure credit, and arrange for training and technical assistance. In addition, the PPC established a loan fund for small enterprises. (JA-053)

## NETHERLANDS ANTILLES

*New Grants*

Agrarische Kooperatieve en Kredietvereniging (AKKV)
(Farmers' Cooperative and Credit Union of Curaçao)
$112,000 One year
This cooperative built cold storage facilities and is offering credit to its 50 members. (NA-001)

## ST. KITTS

*New Grants*

Newtown's Fisherman's Co-operative Society, Ltd. (NFCS)
$11,330 One year
NFCS is expanding its fishing operations and renovating a cold storage building. (SK-006)

## ST. LUCIA

*New Grants*

Monchy Rural Development Committee (MRDC)
$31,134 One year
The MRDC established a community store and is using the profits for community development projects. Members supplied voluntary labor to construct the community store, while grant funds purchased building materials and paid salaries for one year. (SL-001)

## ST. VINCENT

*New Grants*

Young Workers Creative Organization (YWCO)
$10,660 One year
The YWCO used grant funds for the purchase of materials for increasing crop production and operating a food store. (SV-009)

St. Vincent Craftsmen Cooperative
$55,869 Three years
The St. Vincent Craftsmen Cooperative established a loan fund for women artisans to purchase new materials and supplies. (SV-011)

*Supplemental Grants over $10,000*

Farmers and National Workers Collective Enterprises, Ltd.
$11,626
The Enterprise, which produces fruit and vegetables, is using grant funds to rehabilitate 23 acres for planting cocoa and fruit trees. (SV-007)

## SURINAME

*New Grants*

Algemene Vereniging van Kredietcooperties (Surinam Credit Union League)
$125,000 18 months
This federation of 39 credit unions will establish a consumer cooperative that will sell food staples and household items. The AVKC plans to use the revenues for leadership training programs and for agricultural production loans. (SU-003)

DOE-Theater
$12,000 One year
The DOE-Theater group is establishing a program to encourage popular theater in Suriname. The group is offering performances and workshops to stimulate interest in cultural and social development and helping smaller groups to perform. (SU-004)

Nationale Cooperatieve Vereniging Van Varkenskwekers G.A. (NACOVAR)
$148,000 One year
This cooperative association was organized in 1979 to improve markets for hog producers. NACOVAR is establishing a slaughterhouse and meat processing plant capable of processing 20 hogs per day. (SU-005)

# MEXICO, CENTRAL AMERICA, AND PANAMA

In fiscal year 1981, the Foundation approved grants for $5.1 million in Mexico, Central America, and Panama.

In Mexico, grant funds totaling $1.5 million supported a diverse array of projects. Programs in health, appropriate technology, and research received particular attention. A grant in the remote mountains of Chihuahua supports the training of Tarahumara Indian health workers. Another project is training health promoters for rural communities in the state of Puebla. Funds went to a center that is developing new agricultural technologies for the harsh environment of Mexico's northern desert. The center has developed solar water distillers and heaters, waste recycling and water storage systems, and methods of using wind power for energy.

A grant to an educational planning and research center is assisting studies on the training and performance of rural extension agents, community organizers, and teachers in three Mexican states. The Foundation supported a consumer organization to study patterns of food consumption throughout the country and identify the kinds of nutrition information needed by low-income groups. Another grant was made to an organization which has been working for the past seven years in Nahuatl Indian communities in the mountains of the state of Puebla. The group will evaluate its regional development program, which includes agricultural training, a coffee processing plant, and bilingual education and health programs.

Many grants in Central America made credit available to organizations assisting small businesses and peasants. In Guatemala, support went to a university training institute working with rural community development projects; to a cooperative federation to purchase fertilizer and expand agricultural services to approximately 18,000 small farmers in the highlands; and to an organization that provides agricultural credit and services to 1,400 families in the department of Jalapa. A grant in Honduras is enabling a federation of small business cooperatives to extend credit and marketing assistance to associated groups throughout the country. A national association of seven Indian communities in Costa Rica is establishing a credit fund for agricultural and community development programs.

Programs to strengthen cooperatives and cooperative federations continued to receive support. In Panama, the Foundation made a grant to a federation of 9,000 small farmers to improve the management of member cooperatives. Another grant in Panama was made to strengthen the administrative capabilities of a 1,600 member housing cooperative. Studies to explore the feasibility of worker-managed enterprises in rural areas were funded in Nicaragua and Honduras.

Women's projects in Central America gained increasing support from the Foundation. Grants were made to a national federation of Honduran peasant women providing health and nutrition services for 60 affiliated women's groups and to a Guatemalan organization offering nutrition and health education for rural women in the department of Izabal.

The violence in El Salvador continued to limit the ability of organizations to carry out development projects in rural areas. The Foundation's only funding provided supplemental support to a self-help housing organization in the capital city of San Salvador.

## COSTA RICA

*New Grants*

Asociación Integral de Desarrollo Comunal de Mata de Limón y Gandoca
$34,000 Two years
The Asociación is establishing fish ponds and drilling wells for potable water to improve the health and nutrition of its 63 member families in this remote coastal area. (CR-043)

Asociación de Desarrollo Integral de La Palmera de San Carlos
$47,040 One year
This local community development organization is completing the construction of a calcium carbonate plant. The plant will create employment, produce fertilizer for area farmers, and generate revenue for development activities. (CR-044)

Asociación Indigena de Costa Rica
$116,810 One year
This national organization of Indian groups is conducting programs for leadership training, project development, and cultural expression. (CR-046)

Cooperativa Multiple Santa Elena, R.L.
$6,650 One year
This cooperative, in an isolated mountain community, is exploring ways of diversifying the local economy, which now depends on dairy farming. (CR-047)

Centro Agricola Cantonal de Hojancha
$90,000 Two years
The center is expanding its services and introducing a hog raising program. It will work with low-income farmers to increase their production through crop diversification and will address environmental problems through a reforestation program. (CR-051)

## EL SALVADOR

*Supplemental Grants over $10,000*

Fundación Salvadoreña de Desarrollo y Vivienda Minima (FUNDASAL)
$412,746
This supplemental grant provided institutional support for FUNDASAL to cover salaries and administrative costs for its self-help housing program. (ES-021/022)

## GUATEMALA

*New Grants*

Federación de Cooperativas Agricolas de Productores de Café de Guatemala, R.L.
$82,981 Three years
FEDECOCAGUA is initiating a women's development program in its network of 37 cooperatives. Courses will be taught in home economics, child care, nutrition and health, and sewing skills. The program will also help organize small production enterprises. (GT-101)

Centro de Adiestramiento para Promotores Sociales (CAPS)
$245,000 Three years
CAPS, a training institute at the Rafael Landivar University in Guatemala City, has trained more than 10,000 community leaders. The grant is expanding CAP's loan fund to support economic development projects. (GT-110)

Instituto para el Desarrollo Social de América Central (IDESAC)
$67,914 Two years
IDESAC is establishing an enterprise to produce low-cost construction materials for a 400-family self-help housing program. (GT-114)

Federación de Cooperativas para Mercadeo y Servicios Varios, "El Quetzal," R.L. (FECOMERQ)
$507,500 Three years
The federation is purchasing fertilizer in bulk and distributing it to affiliated cooperatives and other small farmer groups in rural Indian communities. The project will serve approximately 18,000 low-income farmers in the highlands of Guatemala. (GT-117)

Movimiento Guatemalteco de Reconstrucción Rural (MGRR)
$139,000 Two years
The MGRR is establishing a loan fund and providing technical assistance to 1,400 farm families. (GT-118)

Instituto de Desarrollo Económico Social de América Central (IDESAC)
$1,758 Three months
Three IDESAC staff members visited housing projects in Panama and Mexico. (GT-119)

Fundación Guatemalteca para el Desarrollo "Carroll Behrhorst"
$287,940 Three years
The Fundación is using grant funds to support its training programs in preventive health care, agriculture, and nutrition for approximately 8,500 hospital patients and their families and for groups in 20 rural communities. (GT-122)

Centro de Estudios Mesoamericano sobre Tecnologia Apropiada (CEMAT)
$49,710 Two years
CEMAT is establishing a nutrition and health education center and a basic sanitation program in Quirigua. It is also disseminating information about simple technologies that it has developed, including an improved latrine and an energy efficient wood stove. (GR-125)

## HONDURAS

*New Grants*

Federación Hondureña de Mujeres Campesinas, Regional de Occidente (FEHMUC)
$54,663 Two years
FEHMUC is working with 60 women's groups in western Honduras teaching preventive health care, basic first aid, and nutrition. (HO-058)

Grupo Juvenil Dión de la Colonia El Pedregal de San José
$37,712 One year
The Grupo Juvenil Dión is completing construction of a community education and recreation center which will provide programs in vocational training, basic education, literacy, and health. (HO-059)

Instituto de Investigaciones Socioeconómicas (IISE)
$80,540 One year
IISE is exploring the feasibility of introducing worker self-managed enterprises to Honduras. (HO-064)

Federación Hondureña de Cooperativas Industriales, Ltda. (FEHCIL)
$253,915 Three years
FEHCIL is expanding its educational and credit programs for 10 affiliated production cooperatives in Honduras, and helping organize 15 new cooperatives. (HO-066)

*Supplemental Grants over $10,000*

Federación Hondureña de Cooperativas Cafetaleras (FEHCOCAL)
$103,866
The Federación is strengthening and expanding its technical assistance program for 26 affiliated coffee cooperatives in Honduras. (HO-044)

## MEXICO

*New Grants*

Asociación Mexicana de Estudios para la Defensa del Consumidor, A.C.
$114,132 Four years
The Asociación is conducting research on food consumption habits among low-income groups. (ME-154)

Sociedad Cooperativa Artesanal "Don Emiliano," S.C.L.
$51,000 One year
This furniture producing cooperative in Ciudad Netzahualcoyotl is increasing its working capital and expanding a program for apprentice carpenters. (ME-156)

Centro de Investigación y Docencia Económicas, A.C. (CIDE)
$21,896 One year
CIDE is conducting a series of seminars at four research centers in the region. (ME-160)

Centro de Estudios Educativos, A.C. (CEE)
$499,000 Three years
CEE is evaluating community development programs, testing new methodologies for applied research, and training rural extension agents in three Mexican states. (ME-161)

Instituto Mexicano de Médicos Descalzos y Naturistas, A.C. (IMMDEN)
$6,000 One year
IMMDEN is providing training to health workers in two rural communities in the state of Puebla. (ME-163)

Proyecto de Animación y Desarrollo, A.C. (PRADE II)
$151,000 Three years
PRADE is establishing a research center to evaluate its regional development program in Puebla Indian communities. (ME-164)

Center for Latin American Studies, University of Chicago
$4,900
Six historians from Mexico participated in the Sixth Congress of Mexican and United States historians. (ME-165)

Comunidad para el Desarrollo Rural, A.C. (CDR)
$36,500 Two years
CDR is assisting 15 young Mayan women to expand their sewing workshop and generate 35 new jobs by providing technical assistance to diversify production and secure new markets. Funds are being used to build a new workshop, purchase industrial machinery, and pay for skills training. (ME-166)

Proyecto Krutsio
$13,279 One year
IAF funds are supporting the expansion of an appropriate technology center in the Baja California desert and the dissemination of the technologies developed to small farmers and other interested groups in Mexico. The technologies include solar water distillers and heaters, water storage systems, and the use of wind power. (ME-168)

Alejandra Alvarez
$3,400
Alejandra Alvarez, of the Sna Jolobil artisan cooperative, visited similar artisan programs in different parts of Mexico in order to

improve the cooperative's marketing. (ME-172)

Estudios Sociales, A.C. (ESAC)
$110,000 Two years
ESAC is cooperating with the Tarahumara Mission to complete an assessment of health and educational needs and develop a community health program for the people of the Chihuahua sierra. They are training between 10 and 20 Tarahumara Indian and mestizo health workers, producing bilingual educational materials, initiating health education programs, and establishing four community health centers. (ME-173)

Marta Sánchez Soler
$3,539
Marta Sánchez Soler, the manager of Sociedad Cooperativa de Muebles Nacionales de Baja California, will visit worker self-management programs in Costa Rica, Peru, and Chile. (ME-175)

Departamento de Estudios Económicos y Sociales (DEES)
Universidad de Yucatán
$3,800
The Departamento held a workshop for staff of social research and community development organizations of the Yucatan. Participants presented their programs and worked toward more effective coordination. (ME-176)

*Supplemental Grants over $10,000*

Centro de Orientación de la Mujer Obrera, A.C. (COMO)
$18,514
The Centro provides training to women formerly employed in the border assembly plants of Ciudad Juárez. (ME-098)

Xochicalli, A.C./Consultea, S.C.
$60,250
Xochicalli is continuing its efforts to develop and disseminate simple, low-cost technologies for rural communities. (ME-139)

University of California at San Diego (UCSD) Program in United States-Mexican Studies
$262,500
Mexican scholars, graduate students, and development practitioners are participating in a program on U.S.-Mexican border issues at the University of California at San Diego. (ME-149)

Instituto Mexicano para el Desarrollo Comunitario (IMDEC)
$98,000
The Instituto is working to improve the services of nine consumer cooperatives in Guadalajara. Grant funds are being used to expand a central warehouse, distribute supplies, and conduct community education programs. (ME-150)

Fundacion Queretana para el Desarrollo Rural, A.C.
$20,000
The Fundación Queretana has established training and credit programs to assist landless laborers develop small production enterprises. (ME-155)

## NICARAGUA

*New Grants*

Instituto de Promoción Humana (INPRHU)
$102,085 Three years
INPRHU is establishing an agricultural training center for 360 small farmers, who will serve as community organizers and agricultural extension agents. (NC-074)

Conferencia de Religiosos de Nicaragua (CONFER)
$22,110 One year
CONFER is assisting the Cooperativa Banks-Lupia, an 85 member fishing enterprise in an isolated village on the Atlantic coast, to expand its fishing grounds and increase its catch. Funds are purchasing boat motors and other equipment. (NC-085)

Cooperativa de Ahorro y Crédito "Las Americas," R.L.
$19,360 One year
The Cooperativa, a credit union for artisans, shoemakers, carpenters, and other small businessmen, is using grant funds to complete construction of new offices and a community center for the Barrio Las Américas. (NC-091)

Asociación Nacional Pro-Clubes 4-S (ASONAC)
$15,000 Six months
ASONAC will explore the feasibility of establishing worker self-managed enterprises in rural Nicaragua. (NC-094)

*Supplemental Grants over $10,000*

Instituto Centroamericano de Administración de Empresas (INCAE)
$88,643
The Instituto will continue its training seminars for managers of rural enterprises. Seminar topics include resource allocation, project planning, administration of agro-industries, and rural project management. (NC-061)

## PANAMA

*New Grants*

Comité Pro Mejoras de Loma Colorada
$41,250 Two years
The Comite organizes community development activities in a poor neighborhood of David, Panama. The Comite is establishing a training center that will allow students to complete their secondary schooling while acquiring vocational skills. (PN-057)

Fundación Educativa de la Confederación Latinoamericana de Cooperativas de Ahorro y Crédito (FECOLAC)
$137,500 Three years
FECOLAC has established a research and development unit to develop improved educational programs for credit unions in Latin America. (PN-061)

Federación de Cooperativas Agropecuarias de la Republica de Panama, R.L. (COAGRO)
$313,500 Three years
The Federation is expanding programs in membership education, management training, and financial administration for its 30 affiliated small farmer cooperatives. (PN-062)

Cooperativa de Vivienda Nuevo Chorrillo, R.L.
$2,372
Three managers of the cooperative attended the Central American Conference on Housing and Urban Development (COPVIDU) in Guatemala City. (PN-063)

Grupo de Tecnologia Apropiada (GTA)
$24,710 Six months
GTA is studying the processing and marketing of crude sugar and identifying the technical problems of small producers. The study will provide information for developing new technologies and for initiating programs of technical assistance and credit. (PN-064)

Instituto de Investigación y Educación para el Desarrollo (INEDESA)
$16,060 One year
INEDESA is training small farmers in 12 rural communities in Coclé and Chorrera in cooperative organization and agricultural extension. (PN-065)

Cooperativa de Vivienda Nuevo Chorrillo, R.L.
$126,040 Three years
The Nuevo Chorrillo housing cooperative is creating a community education program to provide cooperative management and skills training to its 1,600 members and their families. (PN-066)

# SOUTHERN CONE

In the Southern Cone countries of Argentina, Chile, Paraguay, and Uruguay, the Foundation approved projects totaling $5.7 million. As in past years, most grants assisted rural organizations, but an increased share of funding went to urban-based activities.

Grants for $1 million were made in Argentina. Small farmers are using Foundation funds to increase their income through improved marketing and the development of food processing capabilities. One grant, for example, helped establish a community-run plant for making fruit preserves. The Foundation is also working with Argentina's small Indian population. A project in the northeastern province of Misiones is assisting a migratory group of Guarani Indians to establish a permanent agricultural settlement. In Buenos Aires and Cordoba, the Foundation continued its support for self-help housing programs.

Some $2.3 million went to organizations in Chile, accounting for more than 40 percent of the region's funding. Grants are assisting peasant cooperatives by financing programs of agricultural training, technical assistance, credit, and cooperative education. The Foundation also supported projects that are assisting groups of subsistence farmers to produce for export, to increase their use of locally available inputs, and to take advantage of government programs for reforestation and livestock production. Grants to research centers are funding studies on the effects of new social and economic policies on the poor, on the problems of unemployed workers, and on the situation of community organizations. The Foundation increased its support for urban projects in Chile. One project in Santiago seeks to encourage community participation in health and nutrition programs.

The Foundation expanded its grant-making in Paraguay, where 37 projects for $1.5 million were approved. Grants were primarily directed to the problems of subsistence farmers, helping them meet needs for technical assistance, credit, education, and health services. In urban areas, support went for vocational training and a self-help housing program in the capital city of Asunción. Other projects supported an experimental education program for poor children, the development of small farmer technology, and applied research on issues of poverty and grassroots development.

Grants totaling $835,000 went to organizations in Uruguay. Most projects assisted low-income farmers to improve marketing procedures and develop small processing enterprises. One regional association of farmers received a grant to install a pasteurization plant that would supply milk for urban consumers; another association used funds to begin producing cheese for export. A grant went to a women's cooperative enterprise that manufactures knitted goods. The Foundation also helped to establish a national development foundation that will provide credit and technical assistance to small farms and businesses. A research grant is supporting study of a novel phonetic method for teaching children and adults to read and write.

## ARGENTINA

### *New Grants*

Instituto de Investigación y Capacitación Cooperativa de Trabajo, Ltda. (INCACOOP)
$45,000 One year
INCACOOP expanded its educational and technical assistance programs for small farmer cooperatives. The grant paid for the purchase of a vehicle, educational materials, and administrative costs. (AR-104)

Centro de Estudios de Estado y Sociedad (CEDES)
$164,100 Two years
CEDES is conducting research and training on problems of the urban poor in Buenos Aires. (AR-106)

Instituto Cuyano de Desarrollo Social (INCUDES)
$111,100 Two years
INCUDES is offering training and credit to approximately 400 small farmers and rural workers in five communities of San Juan and Mendoza. (AR-107)

Cooperativa Agricola y Ganadera Rio Chico
$14,000 One year
The Cooperativa established a consumer loan fund for its poorest members. (AR-108)

Roberto Martinez Nogueira
$36,500 Two years
Roberto Martinez Nogueira is assisting the Instituto de Desarrollo Social y Promoción Humana (INDES) to evaluate a small farmer credit and training program supported by the Foundation. (AR-109)

Gerardo Bacalini
$20,100 Two months
Gerardo Bacalini evaluated the educational program of the Asociación de Cooperativas de Trabajo de la Republica Argentina. (AR-110)

Centro de Estudios e Investigaciones Laborales (CEIL)
$34,800 Three months
CEIL evaluated the rural education program of the Asociación de Padres de Escuelas Familiares Agricolas (APEFA). (AR-111)

Cooperativa de Colonización Integral de Fachinal Limitada (COCOINFA)
$5,350 One month
COCOINFA analyzed how community resources can be applied to problems of health, education, employment, and agricultural production. (AR-112)

Fundación "Cardinal J. Dopfner"
$231,300 Three years
The Fundación "Cardinal J. Dopfner" is assisting 66 Guarani families establish community enterprises in agriculture, animal husbandry, and carpentry. (AR-113)

Asociación "Amigos de Luján"
$40,200 Two years
The Asociación "Amigos de Luján" is establishing a community-managed factory to produce fruit and vegetable preserves. The factory will provide employment for workers and a market for small farmers in the region. (AR-115)

### *Supplemental Grants over $10,000*

Instituto de Servicios Agropecuarios del Norte (ISAN)
$15,183
ISAN provides technical assistance and training to 10 rural organizations in three provinces. (AR-074)

Asociación de la Vivienda Económica (AVE)
$24,255
The Asociación provides assistance to four community groups involved in self-help housing programs. (AR-081)

Equipo Técnico de Vivienda (ETV)
$229,503
ETV is expanding its self-help housing programs for slum dwellers in

Buenos Aires. ETV is also providing assistance in self-help housing and other development programs for a community of unskilled laborers. (AR-094)

Cooperativa Agropecuaria y de Servicios Públicos "El Surco," Ltda.
$15,750
The Cooperativa expanded its production and marketing of sweet potatoes and continued to provide credit and training to its members. (AR-095)

Centro para el Desarrollo de Comunidades (CEDEC)
$25,294
CEDEC is providing technical assistance to wool producers in the Western Rio Negro province. (AR-096)

## CHILE

*New Grants*

Colectivo Acciones de Arte (CADA)
$4,500 — Three months
CADA organized a fund-raising program to support an exhibition of indigenous and popular art produced by low-income craftsmen. (CH-200)

Corporación de Investigaciones Económicas para Latinoamérica (CIEPLAN)
$214,000 — Two years
CIEPLAN is studying the effects of new government policies in housing, health, and social security. The research results will assist private development agencies that have organized social and economic programs for poor people. (CH-204)

Taller de Investigación Teatral
$6,500 — Six months
The Taller presented the Chilean play *Tres Marias y una Rosa* in Europe and the United States. The play depicts the lives of four Chilean women struggling to support their families. (CH-207)

Fundación Instituto Indigena
$98,891 — 18 months
The Fundación Instituto Indigena is conducting leadership training and rural development programs for Mapuche Indian farm families. The grant is also being used to provide courses in agriculture, health and nutrition, handicrafts, and leadership training to strengthen Mapuche cultural centers. (CH-208)

Fundación para el Desarrollo de Chiloe (FUNDECHI)
$96,848 — Two years
FUNDECHI will conduct an agricultural training program for 200 farmers and their families on the peninsula of Lacuy and will initiate a feasibility study for a reforestation project in the community of Aguas Buenas. (CH-214)

Victor Hugo Henriquez
$4,460
Mr. Henriquez, a skilled laborer and president of a self-managed firm, studied the self-management experience in Chile from the workers' perspective. (CH-219)

Centro de Indagación y Expresión Cultural y Artistica (CENECA)
$124,860 — Two years
CENECA is studying cultural expression in low-income neighborhoods and helping to develop cultural activities in church centers, mothers' clubs, and schools. (CH-220)

Fundación Chol-Chol
$50,000 — Three years
The Fundación is establishing a crop insurance fund for 300 small farmers. (CH-226)

Juan Guillermo Espinosa
$4,448 — One year
Mr. Espinosa studied worker self-managed enterprises in Peru. (CH-227)

Sociedad de Asistencia Técnica Financiera Campesina (SFC)
$82,460 — Two years
The SFC will establish a fund to finance feasibility studies for agricultural investment projects of small farmer organizations. (CH-228)

Corporación para Investigación Cientifica en Nutrición (CINUT)
$321,500 — 30 months
CINUT will explore and promote ways of increasing community participation in the design and management of health and nutrition activities in a low-income area of Santiago. (CH-235)

Manuel J. Barrera
$5,000 — Four months
Mr. Barrera is studying the effects of recent labor legislation on trade union activity. (CH-236)

*Supplemental Grants over $10,000*

Instituto de Educación Popular (IEP)
$73,400
The Instituto is providing training and organizational assistance to unemployed workers in Copiapo. (CH-080)

Cooperativa Campesina El Sol, Ltd.
$11,000
The Cooperativa is managing a credit fund and an agricultural extension program. (CH-100)

Centro de Estudios para el Desarrollo
$177,300
The Centro is providing technical assistance in administration and financial management to worker-managed enterprises and rural cooperatives. (CH-150)

Diakonia
$12,050
Diakonia conducted rural development programs among 1,800 small farm families. (CH-153)

Oficina Coordinadora de Asistencia Campesina
$58,220
The Oficina is training leaders of peasant organizations and private rural development agencies. (CH-154)

Instituto Chileno de Educación Cooperativa (ICECOOP)
$213,050
ICECOOP is producing radio programs and publishing a newsletter providing information to small farmers. (CH-155)

Academia de Humanismo Cristiano
$238,200
The Academia is continuing its programs of social and economic research. (CH-158)

Instituto de Promocion Agraria (INPROA)
$474,000
INPROA is offering technical assistance and training to small farmer cooperatives. INPROA will initiate an experimental program for 1,400 low-income families in farm management, livestock raising, accounting, and organizational development. (CH-159)

Confederación General de Cooperativas (CONFECOOP)
$36,000
The Confederación is providing training and technical assistance to member cooperatives. (CH-190)

## PARAGUAY

*New Grants*

Cooperativa Agricola Aperea, Ltda.
$79,650 — One year
The Cooperativa Agricola Aperea has built facilities to store produce for sale during periods of favorable prices and has installed scales to insure accurate weighing. (PY-038)

Coordinación Regional de Comités de Agricultores del Guairá y Caazapa
$259,500 — Two years
The Coordinación Regional, an organization of peasant farmers, is expanding its credit program and establishing a central supply of consumer goods for its members. (PY-039)

Comunidad Carbonera Caaguazu
$4,875 — One year
This small community organization has expanded its storage facilities and built two processing ovens to increase its production of charcoal. (PY-042)

Instituto para el Desarrollo Armónico de la Personalidad (IDAP)
$180,600 Two years
IDAP is organizing programs of teacher training, adult education, and technical assistance. (PY-043)

Comunidad Campesina Pira Reta
$3,100 18 months
The Comunidad Campesina is cultivating a five-acre plant nursery to improve the quality and increase the production of its orange trees. (PY-045)

Centro Paraguayo de Estudios Sociológicos (CPES)
$63,000 One year
CPES is editing and publishing a series of books and articles on development. (PY-046)

La Cooperativa de Ahorro y Crédito "La Rosena"
$40,900 Two years
The cooperative is organizing a vegetable production and marketing program for 50 low-income families. (PY-047)

Fundación Santa Cruz
$42,200 Two years
The Fundación Santa Cruz is offering training in industrial sewing, electrical installation, and masonry to 500 unemployed workers in Asunción, Puerto Stroessner, and Encarnación. (PY-048)

Coordinación Campesina San Pedro-Caaguazu
$8,000 Six months
The Coordinación Campesina provided credit for marketing cotton produced by its 100 members. (PY-049)

Sociedad de Análisis, Estudios y Proyectos (SAEP)
$13,710 Six months
The Sociedad has studied the Cooperativa San Agustin's management, production and marketing procedures, and its educational program. This evaluation is providing the cooperative with information to improve its operations. (PY-050)

Misión de Amistad
$373,300 Three years
The Misión de Amistad is organizing development commissions in 11 communities, training community leaders and health workers, and offering courses in preventive medicine. (PY-051)

Cooperativa de Ahorro y Crédito de Agricultores Unidos de Horqueta
$7,000 18 months
The Cooperativa Horqueta is establishing a loan fund for production and marketing activities. (PY-052)

Cooperativa de Ahorro y Crédito Mburicao, Ltda.
$4,700 Three months
The Cooperativa studied the feasibility of opening a cooperative supermarket in Asunción. (PY-053)

Comité de Iglesias
$195,575 One year
The Comité de Iglesias is purchasing materials and providing technical assistance for 50 families involved in a self-help, low-cost housing project. (PY-054)

Comité de Iglesias
$71,800 18 months
The Comité de Iglesias is studying problems of poverty in Paraguay. (PY-057)

Centro de Capacitación Agricola Katuete
$162,900 Three years
The Centro de Capacitación is providing training and technical assistance for subsistence farmers to increase and diversify their production. (PY-060)

*Supplemental Grants over $10,000*

Instituto para el Desarrollo Armónico de la Personalidad (IDAP)
$30,030
The Instituto is conducting programs of applied research, teacher training, and evaluation. (PY-030)

## URUGUAY

*New Grants*

Centro Interdisciplinario de Estudios sobre el Desarrollo de Uruguay (CIEDUR)
$105,370 Two years
This center for development studies is studying the effects of recent economic policies on small farmers in Uruguay. (UR-045)

Federación del Noreste de Canelones
$250,000 Three years
This federation of small farmer associations is seeking to expand the cultivation of alfalfa, which will slow erosion, return nutrients to the soil, and serve as a cash crop. (UR-046)

Manos del Uruguay
$2,860
A representative of Manos del Uruguay participated in the Women's World Banking Conference in Italy. (UR-049)

Centro de Investigaciones y Experimentación Pedagógica (CIEP)
$2,200
Two CIEP researchers traveled to Santiago, Chile to visit the adult education programs of the Centro de Investigación y Desarrollo de la Educación (CIDE). (UR-051)

Fundación Uruguaya de Cooperación y Desarrollo Solidarios (FUNDASOL)
$89,200 One year
FUNDASOL is a private development foundation that was recently established by six organizations representing low-income farmers, artisans, and urban workers. The grant provides funds for FUNDASOL to hire a director, organize leadership training seminars, and develop accounting and management procedures. (UR-052)

Centro de Informaciones y Estudios del Uruguay (CIESU)
$60,435 18 months
CIESU is developing a new method of literacy training and comparing it with other methods. (UR-055)

Comite de Fomento de Huertas y Granjas de Fraile Muerto
$42,470 Two years
The committee is expanding its agricultural training program for small farmers to increase their production and improve family nutrition (UR-057)

*Supplemental Grants over $10,000*

Cooperativa Agropecuaria de Lecheros de Quebracho (COLEQUE)
$205,440
COLEQUE has purchased and installed equipment for its new milk pasteurization plan. (UR-014)

Sociedad de Fomento Rural de Durazno (SFRD)
$60,000
The Sociedad is completing construction of its milk pasteurization and cheese processing plant. (UR-037)

Cooperativa Agropecuaria Ltda. de Agua para Riego (CALAGUA)
$25,000
The cooperative is completing a study of the feasibility of developing an industry for the export of frozen fruits and vegetables. (UR-040)

Asociación de Colonos del Uruguay (ACU)
$11,459
The Asociación is assisting small farmers to prepare rural development plans and expanding its information programs. (UR-042)

## LATIN AMERICA REGIONAL

*New Grants*

Andean Commission of Jurists
$75,000 Three years
The grant provided support for establishing an Andean Commission of Jurists, a private organization that will help protect the legal rights of the rural poor in the Andean region. (LA-056)

Federación Venezolana de Fundaciones Privadas
$5,000
The Federación coordinates the work of 28 private foundations providing social and educational services in Venezuela. This grant complemented contributions from other U.S. and Latin American foundations in support of a three-day conference of Latin American foundations in Caracas. (LA-061)

Inter-American Legal Services Administration (ILSA)
$10,000
ILSA organized a three-day conference in Costa Rica on the delivery of legal services in Latin America and the Caribbean. The grant covered travel expenses of 10 Latin American and Caribbean participants. (LA-062)

International Educational Development, Inc. (IED)
$5,000 Six months
The IED is publishing a Spanish edition of *Latin America Women: The*

*Meek Speak Out*. The book is a collection of 13 essays on the development experiences of low-income women. (LA-063)

Center for the Social Sciences, Columbia University
$170,674 One year
Robert Wasserstrom of Columbia University is preparing oral histories of six organizations which have been recipients of IAF support. The oral histories will provide poor and disadvantaged groups in Latin America and the Caribbean with the opportunity to speak on their own behalf and explain the experiences and approaches of their organizations. (LA-065)

Amazon Research and Training Program (ARTP)
$20,000
The grant paid the travel expenses of Latin American participants in a conference on Amazon development at the University of Florida. (LA-067)

Woodrow Wilson International Center for Scholars
$80,500 Two years
The grant is paying the travel expenses of Caribbean and Latin American participants in a series of workshops and seminars on the Caribbean. (LA-069)

Department of Cultural Affairs of the Organization of American States
$5,000
The Foundation provided funds to bring several Latin Americans and Caribbeans to a planning conference in Barbados on "Kindred Spirits: The Art and Science of Blacks in the Americas." (LA-070)

Comite Organizador, XIV Congreso Latinoamericano de Sociologia (ALAS)
$10,000
IAF funds covered the travel expenses of 15 Latin American participants in panel discussions related to grassroots development. The Congress was held in Puerto Rico. (LA-071)

*Seeds* Steering Committee, The Population Council
$7,585 One year
The *Seeds* Steering Committee is disseminating 3,000 copies of a Spanish edition of its pamphlet "Market Women's Cooperatives Giving Women Credit." (LA-072)

*Supplemental Grants over $10,000*

Department of Rural Sociology, University of Wisconsin
$13,600
The grant permitted the completion of a research project on social mobility among the Brazilian poor. (US-107)

---

# OFFICE OF PLANNING AND RESEARCH

In June 1980, the IAF established an Office of Planning and Research to give greater emphasis to research and evaluation of the Foundation's work. The new office collaborates with regional staff in efforts to learn systematically from the IAF's experience, to encourage social and economic research on issues affecting the poor and disadvantaged in Latin America and the Caribbean, and to develop better ways of sharing its ideas and experiences with grantees and other development institutions.

During the past year, the Foundation initiated surveys of its work in rural credit, consumer cooperatives, community health, worker-managed enterprises, small business, and legal assistance. The IAF also sponsored more than 30 outside evaluations of grant-supported projects and conducted reviews of its fellowship and internship programs. Other learning activities included the preparation of a statistical report on the IAF's ten years of grant-making; the compilation and dissemination of some of the major lessons of the Foundation's grassroots development experience; and the commissioning of a series of oral histories of selected grantee organizations. The Foundation continued to publish its *Journal* twice yearly as a means of reporting the results of the IAF's work, explaining the Foundation approach to development, and exploring grassroots development issues generally.

# FELLOWSHIP PROGRAM

Foundation fellowships for field research in Latin America and the Caribbean were awarded last year to 19 masters students, 16 doctoral candidates, and one postdoctoral scholar. These fellowships are the Foundation's principal contribution to developing knowledge and understanding about Latin America in the U.S. Fellowship recipients were drawn from 21 U.S. universities located in 16 different states. Their research will be carried out in 17 countries of the region, with the largest numbers of fellows planning to study in Mexico, Peru, and Brazil. The 38 fellowship recipients were selected in a national competition from a total of more than 200 applicants.

Masters degree candidates receiving awards were:

Nancy Andes, Cornell University, "Mortality in Peru"

Martha Ardila, University of Texas, "Undocumented Colombian Migration to Venezuela: Study of Peripheral Migration and Its Impact on the Informal Sector"

John Butler, University of Florida, "Public and Private Colonization in Amazonia: A Comparative Study of Colonist Selection"

Laura Graham, University of Texas, "Political Oratory Among the Shavante of Brazil"

Philip Herr, Columbia University, "The Use of Appropriate Technology in a Rural Development Project in Yoro, Honduras"

Lynn Meisch, San Francisco State University, "The Effect of Tourism on Traditional Textiles in Tarabuco, Bolivia"

Barbara Morley, Iowa State University, "The Role of Traditional Birth Attendants in a Highland Mayan Community in Chiapas, Mexico"

Patricia O'Connor, Tulane University, "Traditional Medical Practices in Ecuador"

Richard Pace, University of Florida, "Urban Adaption and Socio-Economic Networks in Religion"

Craig Perkins, University of California at Los Angeles, "National Agrarian Policy and Local Response in Peru"

Daniel Sandweiss, Cornell University, "Man and Mangrove on the North Coast of Honduras"

Ben Schneider, University of California at Berkeley, "Worker Self-Managed Enterprises in Chile"

Ellen Schnepel, Columbia University, "Social Implications of Diglossa in the Town of Ste. Rose, Guadaloupe, French West Indies"

Laurence Szott, Duke University, "An Analysis of Plantation Forestry in Tropical America"

Karen Tice, Columbia University, "A Handicraft Cooperative: Cuna Women in the San Blas Islands of Panama Take Active Leadership"

Cynthia Truelove, Johns Hopkins University School of Advanced International Studies, "Participation of Women in Social, Economic and Political Organizations in the Cauca Valley"

Thomas Turino, University of Texas, "Change in the Indigenous Folk Music Tradition of Cuzco, Peru"

Nancy Westrate, Duke University, "Transhumant Nomads in the Southern Andes"

Sandra Witt, University of Florida, "The Pharmacy, Health Services and Frontier Expansion in the Ecuadorian Amazon"

Doctoral award winners and their projects were:

Jaime Biderman, University of California at Berkeley, "The Development of Capitalism in Nicaragua: Economic Growth, Class Relations and Uneven Development"

Maria de los Angeles Crummett, New School for Social Research, "Agrarian Structure, Subsistence Production and Migration in Aguascalientes, Mexico, 1960-1980"

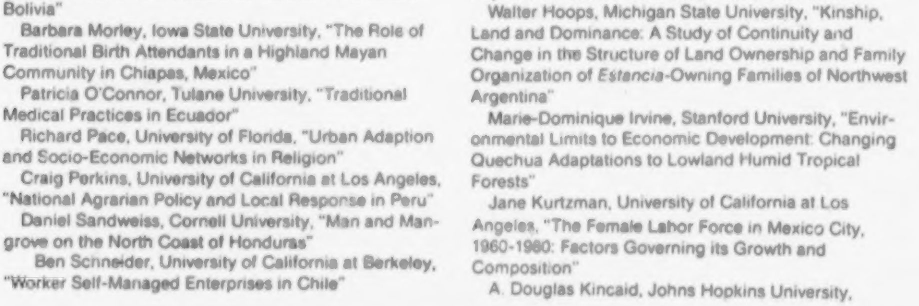
John French, Yale University, "Industrial Workers and Populist Politics in São Paulo, Brazil, 1945-1964"

Walter Hoops, Michigan State University, "Kinship, Land and Dominance: A Study of Continuity and Change in the Structure of Land Ownership and Family Organization of *Estancia*-Owning Families of Northwest Argentina"

Marie-Dominique Irvine, Stanford University, "Environmental Limits to Economic Development: Changing Quechua Adaptations to Lowland Humid Tropical Forests"

Jane Kurtzman, University of California at Los Angeles, "The Female Labor Force in Mexico City, 1960-1980: Factors Governing its Growth and Composition"

A. Douglas Kincaid, Johns Hopkins University,



Number of Fellowships

"Agrarian Development, Migration and Mobilization in Central America"

Maria Lagos, Columbia University, "Intermediation and Production: A Socio-Economic Study of *Transportistas* in Cochabamba, Bolivia"

Teresita Martinez, University of Texas, "Changing Patterns of Social and Economic Relations in the Late Nineteenth Century: The Puerto Rican Rural Population, 1873-1898"

Eva Paus, University of Pittsburgh, "The Impact of Export-Promoting Development on Employment and Welfare of the Labor Force: The Case of Colombia"

John Pulis, New School for Social Research, "Religious Movements and Social Change: The Rastafarian Brethren of Jamaica"

Thomas Reardon, University of California at Berkeley, "Terms of Trade Policy for Peruvian Agriculture: Multisectoral Growth and Income Effects"

Richard Reed, Harvard University, "Economic Integration and Small-Scale Societies: Agricultural Development and the Paraguayan Indians"

Rene Rios, University of Wisconsin, "The Role of Women in the Process of Peasant Differentiation: Mapuche Women and the Division of Indian Land in Southern Chile"

R. Livingston Robinson, University of Chicago, "Public Educational Investments in Jamaica: The Economic Costs and Returns of Academic and Technical Secondary Education"

Thomas Sheridan, University of Arizona, "The Cucurpe Community: Social Stratification in Economic Development and Peasant Control of Scarce Resources"

James Vreeland, University of Texas, "Rural Artisan Weavers: A Case Study in Appropriate Technology and Social Change in Arid Coastal Peru"

The postdoctoral award went to Faith Mitchell of the University of California at San Francisco for research on "The Role of the Pharmacy in Medical Care in Jamaica."

Members of the fellowship selection committee were:

William Glade, University of Texas
Kevin Healy, Inter-American Foundation
Larissa Lomnitz, National University of Mexico
Benjamin Orlove, University of California at Davis
Alejandro Portes, The Johns Hopkins University
LeRoy Richardson, Inter-American Foundation
Peter Smith, Massachusetts Institute of Technology
Carl Stone, University of the West Indies
William Thiesenhusen, University of Wisconsin

# FINANCIAL INFORMATION

## Funds Available to the Foundation

The Foundation receives money from the United States Congress and from the Social Progress Trust Fund of the Inter-American Development Bank. The Fund holds repayments from loans made several years ago by the United States Government to Latin American and Caribbean countries.

### Congressional Appropriations

| | |
|---|---|
| **FY 1979** | **$13.6 million** |
| **FY 1980** | **$13.6 million** |
| **FY 1981** | **$15.8 million** |
| **FY 1982** | **$12.0 million** |

Congressional appropriations can be used for grants or for administrative expenses. Congress appropriates money annually for a fiscal year that runs from October 1 to September 30.

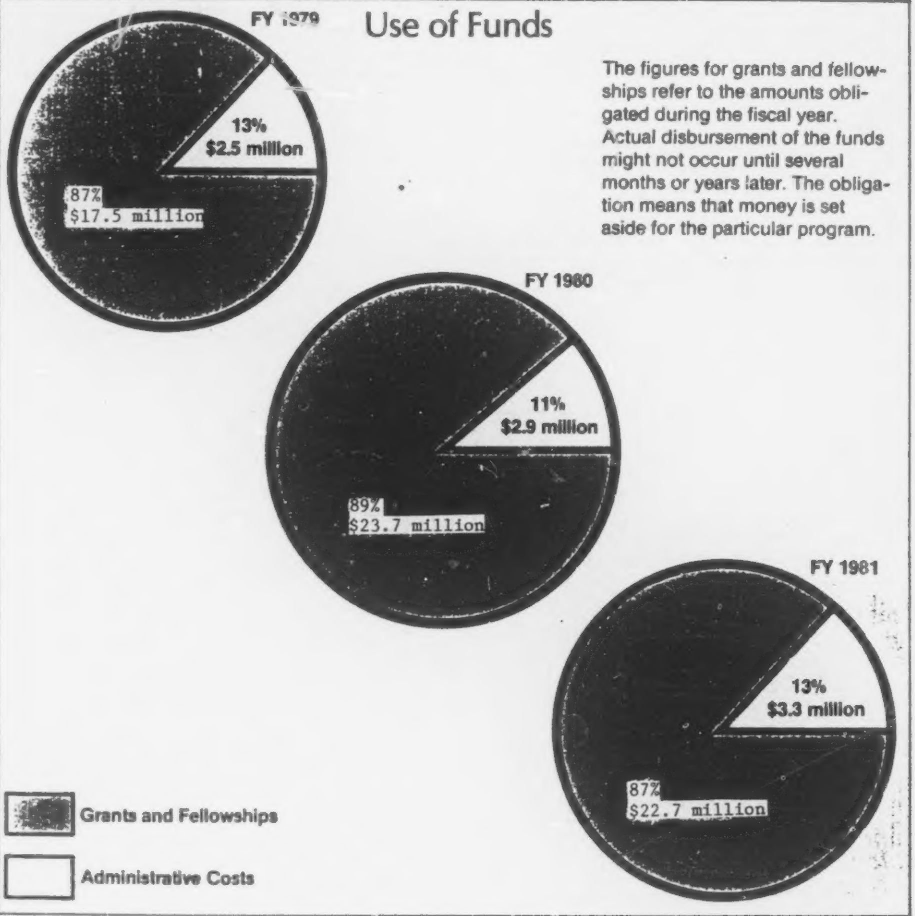
### Social Progress Trust Fund

| | |
|---|---|
| **1977-1979** | **$48 million** |
| **1980-1982** | **$48 million** |

Money from the Fund can be used only for grants. The money, which is available over a three-year period, is allocated by country and restricted for use in the following areas: land use, housing, sanitation, education, health, and financial institutions.

## Use of Funds

The figures for grants and fellowships refer to the amounts obligated during the fiscal year. Actual disbursement of the funds might not occur until several months or years later. The obligation means that money is set aside for the particular program.



## Distribution of Grants by Country in FY 1981

## Grant and Administrative Costs

1971-1981

($ in thousands)

| Fiscal Year | Grants | Administrative Costs | Total |
|---|---|---|---|
| 1971 | — | $ 376 (100%) | $ 376 |
| 1972 | $ 2,794 (71%) | 1,125 (29%) | 3,919 |
| 1973 | 2,998 (67%) | 1,482 (33%) | 4,480 |
| 1974 | 12,704 (89%) | 1,604 (11%) | 14,308 |
| 1975 | 13,650 (88%) | 1,889 (12%) | 15,539 |
| 1976* | 12,593 (83%) | 2,552 (17%) | 15,145 |
| 1977 | 15,275 (88%) | 2,181 (12%) | 17,456 |
| 1978 | 12,348 (85%) | 2,219 (15%) | 14,567 |
| 1979 | 17,480 (88%) | 2,488 (12%) | 19,968 |
| 1980 | 23,675 (89%) | 2,944 (11%) | 26,619 |
| 1981 | 22,703 (87%) | 3,334 (13%) | 26,037 |
| Total | $136,219** | $22,194 (14%) | $158,413 |

*Includes three months of transition period 1976 (1976T) when the beginning of the fiscal year was changed from July 1 to October 1. FY 1976 therefore equals a 15-month period.

**Includes approximately $3 million dollars for fellowships and small travel awards.

## Grants by Country

1971-1981

| Country | Amount (thousands) | No. of Grants |
|---|---|---|
| Chile | $ 22,186 | 87 |
| Peru | 12,552 | 68 |

## Grants By Program Area

1971-1981

| Program Area | Total (thousands) |
|---|---|
| Agricultural and Rural Development | $ 55,640 |
| Education and Training | 21,610 |
| Urban Enterprises | 17,470 |
| Community Services | 16,590 |
| Research and Learning | 13,730 |
| Cultural Expression | 5,400 |
| Legal Assistance | 3,130 |
| Total | $133,570 |

# APPLYING FOR A GRANT

The Foundation selects projects for support from the large number of proposals it receives. It does not have fixed priorities or guidelines for the allocation of its funding among countries, institutions, or program sectors.

The Foundation has no standard application form for its grants, but it does require information about:

- the group that would manage the grant, including its history and current activities, its organization and staff, its sources of financing, and its relations with other institutions;
- the background of the project, including its origins and objectives, and the significance of the problems it would help solve;
- the activities that the project is designed to support, the time required for completing these activities, and the expected beneficiaries of the project; and
- the budget for the project, including the amount requested from the Foundation and funds that might be available from other sources.

Once the Foundation receives a completed proposal, it normally takes about three months to reach a decision on the suitability of the project for support. When the Foundation approves a project it enters into a formal agreement with the grantee confirming the activities to be carried out and the financial and administrative procedures to be followed. The Foundation requires financial and narrative reports on project activities every six months. It also requires (and pays for) periodic audits by a local audit firm.

Groups or individuals interested in submitting a proposal for Foundation funding can obtain an initial reaction to their project by sending a brief letter of inquiry outlining the project's purposes, the means proposed for achieving them, and the amount of resources required. Further information regarding the Foundation's programs of grants and fellowships and a list of recent publications can be obtained by writing to:

### FIELDING OF PEACE CORPS VOLUNTEERS

Senator KASTEN. Thank you, Mr. Bell.

In her prepared statement which we will receive after your testimony, the Peace Corps Director suggests the possibility that private voluntary organizations might be used to field Peace Corps volunteers in countries where the Peace Corps does not have a full-fledged program.

Would your mandate allow or do you think it would be a good idea for your group to be used in any way to field Peace Corps volunteers?

Mr. BELL. Mr. Chairman, I do not believe that our group directly would be appropriate for fielding volunteers. There have been Peace Corps volunteers in the past who have served with organizations which have been grantees of the Foundation, but those are decisions which have been taken by each of these indigenous voluntary organizations. That would seem to us to be the best way to proceed.

We are most respectful of the decisionmaking of those organizations. In keeping with the way in which both the Peace Corps and we proceed, it is possible that further conversation between the Inter-American Foundation and the Peace Corps might be helpful in terms of identifying for the Peace Corps organizations that might take advantage of the service of Peace Corps volunteers.

Senator KASTEN. Your statement indicates that all of your staff operates out of Rosslyn, Va., and I would assume therefore that your field representatives must travel to and from their areas of support, which possibly might give them a limited exposure to Latin Americans' needs and limited time for followup work.

### ESTABLISHING PERMANENT PRESENCE OVERSEAS

First of all, is that true and have you considered establishing a permanent presence overseas? What would the relative advantages or disadvantages be if you went in that direction? I would assume that this is something that has come up.

Mr. BELL. It is a continuing question for us. Underlying your question is, of course, the correct assumption that we do have the legislative authority to post staff in Latin America or the Caribbean if we choose to do so.

I should say first that all members of our representational staff have extensive experience in Latin America or the Caribbean prior to coming to the Foundation. I myself lived and worked in Chile and in Brazil for nearly 8 years.

Other members of the staff have comparable experience so that they are usually going into countries of assignment with considerable experience.

There are tradeoffs. One reason we maintain our staff in Rosslyn rather than in the field is simply that it is considerably less expensive. Typically, when foreign assistance organizations have staff people abroad they get into a whole host of support expenses that drive up the costs considerably.

The other factor for us is that we believe that our grantees know best what they must do for themselves, and that they themselves must struggle with their problems. We believe that by perhaps visiting our grantees a little less often than they might like, we help to reinforce the importance of their making those decisions for themselves and our not intervening in them.

But this is a question in which the final answer is not necesarily in, and we do experiment from time to time. Typically the members of our staff travel for perhaps 2 to 3 weeks at a time, but there are times when staff spend as much as 6 weeks or more in the field on one visit.

### INFORMATION SHARING ON PROJECTS

Senator KASTEN. Do you have a method whereby you disseminate information or share information on the successes and ideas, also the failures of the projects and the work that you do so that lessons learned or the successes established are communicated within the overall group of people that you are working with?

Mr. BELL. Yes; we do have methods by which we do that. We have been working very hard especially over recent years in trying to improve those methods.

Senator KASTEN. Is that a formal mechanism or is it informal?

Mr. BELL. We have both formal and informal means. One regular mechanism is a journal published both in English and Spanish. It comes out every 6 months and draws on some of our experiences and the experiences of our grantees. Very often these are told by the grantees themselves. We are trying to pinpoint the audiences to which the journal is directed, and I think that it is becoming increasingly effective.

Senator KASTEN. That is a PR vehicle or is that more like a formal evaluation?

Mr. BELL. I think it has some public relations value, but we are working very hard to make it a more serious journal than it is already. We find throughout the hemisphere—in other development organizations and even university campuses—that it is used. The articles are used to convey what has worked and what has not worked in development. We think it can be made better, and we have concrete plans to do so.

Beyond that we have also commissioned, both with Foundation staff and in some cases people outside the Foundation working closely with us, a series of evaluations. At times these look at specific projects. In other cases, they look at our experience in a broad field like community health, rural cooperatives, or small businesses in the Caribbean, and evaluate that experience and draw lessons from it.

In each case we systematically circulate these evaluations to other development organizations and other people involved in development who would have an interest in them.

### AID ASSISTANCE IN EVALUATIONS

Senator KASTEN. Do you work with AID in those evaluations?

Mr. BELL. We certainly do make them available to AID at multiple levels. Just to go back to the journal, soon after our recent issue came out, we were requested by AID to supply them with an additional 24 copies. I think they were particularly interested in the article called "Lessons From Our Grassroots Experience," which pulled together some of the most important elements of that experience.

Senator **Kasten**. One of the things we were talking to AID, IG, and GAO about the other day was they didn't seem to feel that successes were being shared very well, or failures, and that you were reinventing the wheel or experiencing the same type of problems because people would be transferred.

Are you satisfied that you are working reasonably well with them?

Mr. **Bell**. I think we can and should do better. There is a sense in which you can never do well enough, and our relations with AID in particular vary. They tend to be established on a country-by-country basis, with our representative working in country X together with the AID mission director in that country.

We try to maintain those communications on a regular basis every time we go into the field. The Administrator of AID, Peter McPherson, does serve on our Board of Directors, so there is some cross fertilization through his participation on our Board.

At the same time, we are a very small organization in comparison with AID, and I am sure that there are people in parts of AID, particularly outside of Latin America, whom we should do a better job of reaching.

### SOCIAL PROGRESS TRUST FUND

Senator **Kasten**. Your statement indicates that your agreement to use the social progress trust fund of the Inter-American Development Bank ends next December?

Mr. **Bell**. Yes.

Senator **Kasten**. Who are the parties of the new negotiation and what changes would you like to see on your use of these funds in a new agreement, assuming the new ageement is to be reached?

Mr. **Bell**. We have had three agreements over a 9-year period, totaling $127 million, to give us access to the social progress trust fund, which are reflows on loans that were made under the Alliance for Progress and are held in trust by the Inter-American Development Bank.

We are now seeking a fourth agreement. While the moneys are held in trust by the Inter-American Development Bank, the Agency for International Development holds the key to IDB on behalf of the U.S. Government. Therefore, we need a three-party agreement comprised of the Inter-American Foundation, the Agency for International Development, and the Inter-American Development Bank, and we need to work together.

We have begun a formal process of negotiation toward reaching that agreement. We are seeking a continuation of our current agreement: Another 3-year agreement for access to $48 million, with, we hope, an improved country distribution of funds. Those funds are very important to us, almost as important to us as our appropriated funds.

Senator **Kasten**. But things are progressing, and you are satisfied with the progress that you are making?

Mr. **Bell**. The negotiations are just getting underway. I think the problem in negotiations of this sort is that this is something that is very important to us. Moreover, Congress, in 1973 or 1974, expressed the view that the Inter-American Foundation should have preferential access to those funds. Nevertheless, it is, understandably, sometimes a lower priority for the other agencies involved.

I am hopeful that we will progress rapidly toward an agreement before the end of this year.

Senator KASTEN. The reason I am asking is that we would be interested in working with you to try to be of help here, if that would be useful.

Mr. BELL. I greatly appreciate that. It well might be useful to us and I appreciate your saying so.

### HERITAGE FOUNDATION REPORT

Senator KASTEN. Some time ago the Heritage Foundation issued a report on your activities, and I would like to get your evaluation of that report. I understand they specifically criticized your funding of some groups which, in their opinion, were Communist or leftist.

Could you give me a summary of that report, of what, if anything, you have done in response to it, and specifically if you can address yourself to the kind of groups that they were objecting to.

Mr. BELL. Mr. Chairman, perhaps the most constructive way to respond to your question would be to offer to you for the record a copy of a response that we did prepare to the Heritage report. We can do that right now.

Senator KASTEN. We will include that in the record and maybe you could just briefly address yourself to the question of the leftist leaning groups.

Mr. BELL. First of all, it has been some months since that report was issued, but, as I recall, the report did single out a half dozen or so organizations and alleged that they were of a leftist nature. It should be pointed out that this is a half a dozen among more than 900 organizations that we have supported over the last 11 years.

The Inter-American Foundation has a very strict policy developed by our Board which forbids us from supporting partisan organizations of any stripe—right, left or center.

### HERITAGE FOUNDATION REPORT RESPONSE

In looking at the specific allegations that were made in the report about those few organizations, you will see in our response that in a very small number of those cases we do believe that the Foundation was in error. In those cases we sought to rectify those mistakes by terminating the grant agreements as soon as possible.

I think our record overall during these 10 years is very good. In some other cases, as you will see from our reponse, we believe that the allegations that were made were ill-founded. There is no basis for them.

Senator KASTEN. We will make the response a part of the record.

[The information follows:]

# A RESPONSE TO THE HERITAGE FOUNDATION REPORT ON THE INTER-AMERICAN FOUNDATION

The Heritage Foundation has released a report on the Inter-American Foundation (IAF) prepared by Cleto DiGiovanni. As the Heritage report recognizes, Congress created the IAF to foster innovative and experimental approaches to supporting self-help efforts of poor people in Latin America and the Caribbean. Unlike traditional development agencies, the IAF was instructed by Congress to "operate primarily through private rather than governmental channels on a . . . people-to-people level." The IAF has implemented that mandate by responding directly to the needs and initiatives of private grassroots organizations. Congress created the Foundation as an independent agency so that it would not be affected by short-term U.S. foreign policy considerations or drawn into partisan political activities.

In some respects, the Heritage report's assessment of the Foundation is favorable. It notes Congress' intent "to keep the IAF above partisan politics," and states that the IAF has "helped several worthwhile groups and projects with a variety of missions." Dr. DiGiovanni and the Heritage Foundation have observed that "the IAF has been able to provide assistance to the Latin American and Caribbean poor without getting enmeshed in U.S. or local politics." The report also commends the IAF's ability to reach the poor in an innovative and efficient manner:

> The IAF has charted new paths in participatory development projects; it has demonstrated that people take more interest in developing and maintaining a program in which they have had a role since its inception than in a program imposed on them. The IAF has shown that it can carry out its programs with low overhead costs. . . . The U.S. government is fortunate to have a mechanism like the IAF, with its quick response time and relatively simple and inexpensive overt vehicles for delivering development assistance, even if a few hundred dollars, directly to target groups overseas.

The report argues that "the IAF made sense--and it still does," and that "the IAF should not be eliminated or downgraded," a conclusion that contrasts markedly with Heritage's statements about most foreign assistance in its book Agenda for Progress.

The Heritage report also contains criticisms of the IAF and makes recommendations for redirecting its activities. By and large, however, the criticisms and recommendations are based on a mistaken view of the IAF and its Congressional mandate, or on a misunderstanding of what the IAF has actually done. The report, for example, admonishes the IAF "to acquire a new economic and political philosophy" or, more specifically, "to pursue programs designed to strengthen the private sector and a market economy." In addition, the report argues that "the IAF must return to its basic purpose: to devise innovative ways to help marginal people move into the mainstream of their societies." These recommendations do not in fact point to any new directions for the IAF. Indeed, in cooperation with members of business communities in Latin America and the Caribbean, the IAF is working to strengthen private sector initiatives and to assist poor people increase their productivity and become more active participants in the market economy.

Dr. DiGiovanni conflicts squarely with the intent of Congress when he questions the ability of poor people to design and manage their own development projects:

> It is fine to involve them in the development projects, but not to put them in charge.

This view is erroneous and patronizing to the many thousands of farmers, fishermen, factory workers, and small entrepreneurs who are developing and managing their projects and making them succeed. Congress has time and again endorsed this approach. In its report on the 1982 Foreign Assistance Appropriation Bill, the Senate Appropriations Committee commended the fact that the IAF "engages the poor and the disadvantaged in the process of development. Rather than being the objects of development schemes concocted by outsiders, the recipients of Foundation grants are themselves the initiators of projects." Local business leaders are involved in many IAF projects, and have often arrived at the same well-tested judgment that their role should be supportive rather than directive, responsive rather than prescriptive.

The IAF has made approximately 1,200 grants to more than 900 organizations in its ten-year history. The report, however, attempts to sustain its judgments by giving selective emphasis to a very small number of projects that are hardly representative of the full range of IAF activities. The final chapter of the report, "Discussion and Recommendations," is particularly critical of the Foundation, but many of the concerns expressed are not justified by the analysis and information presented in earlier chapters. The major allegations of the Heritage report are discussed below in an effort to set the record straight. The allegations suggest that the IAF (1) has a bias against business and the market economy; (2) supports leftist organizations; (3) pays insufficient attention to evaluation; (4) lacks adequate external oversight; and (5) conducts itself in ways that are incompatible with U.S. bipartisan foreign policy.

## 1. Alleged Bias Against Business

The report says the IAF is anti-business and antagonistic to free enterprise. It alleges that the IAF has an "anti-market economy philosophical orientation." The implication that the IAF favors a state-centered, collectivist approach to development is puzzling because, by virtue of its Congressional mandate, the Foundation works primarily and overwhelmingly with organizations and individuals in the private sector. If there is a single common element throughout the Foundation's program of grants, it is precisely that of supporting efforts of poor people to enter the market economy.

Approximately $100 million out of the total of $135 million in IAF grants have supported privately owned businesses and farms. Most of the remainder has assisted community-organized services, and research and learning on issues of poverty and grassroots development. This IAF funding in Latin America and the Caribbean has been more than matched by the contributions of others, including commitments from local business communities and from the low-income beneficiaries themselves.

In urban areas, IAF grants assist a variety of small businesses that, for example, manufacture furniture, produce clothing, or sell food. IAF-funded projects in rural areas also help small enterprises in such activities as food processing and artisan crafts. The bulk of the Foundation's assistance in rural areas is directed to small farmers who own their land. Many grants have been made to cooperative associations which enable these small producers to buy raw materials at lower cost, to expand the markets for their products, or to obtain access to commercial credit. Some projects, largely in Indian communities, are assisting peasant groups engaged in traditional forms of cooperative farming.

The cooperative enterprises supported by the IAF are not, as the report states, "collectivist" or "socialistic." Cooperatives are either private businesses themselves, or provide services to other small enterprises; they compete in the market and are subject to market forces. They are privately owned, their membership is voluntary, and they engage in economically productive activities. In some settings, cooperatives are the only opportunity available to the poor to invest productively what little they have, to become owners of property, and to participate in the market economy. Local business leaders are often important contributors to these cooperative efforts.

Members of business communities throughout Latin America and the Caribbean make private sector funds and management expertise available to IAF-supported organizations. In many countries, they have promoted the establishment of national development foundations (NDFs) to mobilize local resources for fostering self-help initiatives of poor people and drawing them into the market economy. The Mexican Rural Development Foundation, for example, was established twelve years ago by successful Mexican businessmen and now offers credit and technical assistance to 15,000 small farmers in 18 states of Mexico. Similar foundations in the Dominican Republic, El Salvador, and elsewhere are showing the special contribution the private sector can make to development efforts. They are reaching groups that government bureaucracies have neglected, and are providing support in flexible and imaginative ways to activities that would not be assisted by official agencies.

The report alleges that since the Foundation's initial support for NDFs in Mexico, the Dominican Republic, and El Salvador, "the IAF has chosen to take little advantage of the NDFs as channels through which it could provide assistance to poor people." In fact, over the past ten years, the Foundation has made more than forty grants, totalling $13 million, to some thirteen NDFs. The IAF has continued its support of the NDFs in Mexico, the Dominican Republic, and El Salvador. More recent grants have been made to NDFs in Nicaragua, Ecuador, Uruguay, Colombia, Bolivia, Argentina, Trinidad and Tobago, Guatemala, and Honduras. The largest portion of these grants has been for revolving loan funds for rural cooperatives, small enterprises, and self-help housing.

The report appears to equate the IAF's concern for the equitable distribution of income and resources with an anti-market approach. The IAF does not promote redistribution through government programs. Instead, IAF grants are assisting local private organizations that provide the poor with opportunities to own businesses or secure productive employment so they can increase their resources and income.

As the report points out, corporate executives from the U.S. business community are prominent among the members of the IAF's Board of Directors and Advisory Council. They include the senior vice president and general counsel of Levi Strauss, the former vice chairman of the board of Quaker Oats, and a former senior vice president of Sears. These individuals are strong advocates of free enterprise and private initiative.

## 2. Alleged Support for Leftist Organizations

The report alleges that the IAF supports some groups on the left that espouse Marxist-Leninist ideologies and are hostile to the United States. As evidence, it cites IAF assistance to twelve organizations, characterizing them as "advocating a leftist position," "communist," "appearing to involve leftists," "socialist or Marxist-Leninist oriented or controlled," and "associated with groups or individuals of the far left."

As a matter of established policy and practice, the Foundation does not support partisan political groups of any stripe. The IAF's procedures for reviewing grant proposals have been effective in screening such organizations from obtaining Foundation support. In those few instances in which a grant-supported organization is subsequently found to be engaged in partisan political activities, the IAF's normal procedure is to suspend disbursement of funds, investigate the situation, and, when warranted, terminate the grant.

The twelve groups cited in the report are a small fraction of the 900 organizations that have received IAF grants over the past decade. Moreover, only three of these twelve groups actually had a partisan political affiliation. IAF funding to each of them ended at least three years ago. In each of the three cases, the Foundation discussed the situation openly with both the grantee and the local government and moved to terminate the relationship. The other groups are all legitimate, nonpartisan organizations working openly and constructively in their countries. (Each of the twelve groups is discussed in Attachment A.)

## 3. Alleged Inadequacy of Learning from Experience

The report criticizes the IAF for not fulfilling its responsibility as an experimental institution, stating that the IAF has not evaluated its projects and communicated the lessons of its experience to other institutions.

In its early years, the Foundation was intent primarily on gaining experience in grassroots development in Latin America and the Caribbean. It was the Foundation's view that such experience, combined with a pragmatic sorting of what worked and what did not work, was a prerequisite to any more ambitious, systematic effort at learning and dissemination. As indicated by the various IAF publications cited in the report, however, the IAF has from the outset given attention to evaluation--to enrich the work of the organizations and individuals which it supports, to improve the quality of the IAF's own decisions, and to generate new ways of thinking and acting on development problems.

Over the years, as the Foundation has extended its grant-making, it has sought to strengthen its ability to learn from its experience and effectively disseminate the findings. In June 1980, the IAF created a new Office of Planning and Research that has given greater emphasis to research and analysis in the IAF's work and expanded the Foundation's capacity for evaluation. It is sharing the knowledge gained with grantees and other development institutions.

The Heritage report focuses attention on a preliminary version of one document produced by this new office, "The Inter-American Foundation: Lessons from Its Development Experience." The document is described as "tardy and brief," and its substance is given a mixed review; but the Heritage report does note that the Agency for International Development considers that "the conclusions are generally valid and significant and should be helpful to the development community."

Other program reviews and evaluations which have been conducted by the Foundation were not mentioned in the report. Over the past year, these have included more than 30 outside evaluations of IAF-supported projects; surveys of the IAF's grant-making in rural credit, community health, and worker-managed enterprises; evaluations of the IAF's fellowship and internship programs; and a paper reviewing the IAF's support for small businesses in the Caribbean. The IAF has recently commissioned a series of oral histories of Foundation-assisted grassroots organizations; initiated a study of consumer cooperatives in four Andean countries; and completed a statistical report on the IAF's ten years of grant-making.

## 4. Alleged Inadequacy of External Oversight

The report commends the IAF for its decentralized decision-making and "informal bureaucratic style in which significant responsibility is dispersed throughout its professional staff." But the report expresses concern that the IAF operates "with little effective outside supervision or oversight"--even as it observes that "effective oversight of an organization the size of IAF has to be internal, i.e., it has to be done by the Board of Directors." It asserts that the IAF's internal auditing procedures are weak, that the Board of Directors has delegated too much authority to the President and staff, and that Congress does not subject the IAF to close scrutiny.

Continual and careful oversight of the IAF is exercised by Congress, the Office of Management and Budget (OMB), and the General Accounting Office (GAO). Relative to its size and expenditures, the IAF receives more attention from these organizations than most other government agencies. Members of Congress and their staffs are knowledgeable about the IAF and its activities. Besides the normal give-and-take at Congressional hearings, they visit IAF projects in the field. This year, Members of Congress or their staff assistants have visited IAF grantees in Haiti, Paraguay, Argentina, and Ecuador. Staff of OMB are in frequent communication with IAF staff and are regular visitors to the Foundation's offices. The GAO conducts a financial audit each year that requires two or three auditors to spend five months at the IAF examining its records. In addition, the GAO is now conducting a program review of the IAF. As part of the study, which began last May and will be completed within the next several months, GAO auditors have visited IAF grantees in the Dominican Republic, Honduras, Costa Rica, Panama, and Peru. The IAF also publishes and widely distributes an annual report which provides information on each grant made in the previous year.

As the Heritage report acknowledges, the Foundation's internal rocedures are decentralized and provide for rapid and flexible esponses to proposals while maintaining high standards in aking grants. The Board of Directors has delegated grant pproval authority to the IAF President, who serves at the will f the Board. The President has redelegated that authority to our regional directors; but he retains ultimate responsibility or each grant decision and must sign all grant agreements. he President, in turn, reports all grant decisions to the oard of Directors and consults with the Board in advance on rants that might be controversial, that would establish new Foundation policy, or that are in excess of $500,000.

The Board, which is vested by law with governance over the IAF, eets four times a year at the Foundation's offices and once a ear in Latin America or the Caribbean, where it reviews in etail the activities in a specific country. An audit ommittee of the Board oversees the Foundation's financial operations. As the report itself states, the Board has always been composed of dedicated individuals who have taken their responsibilities seriously. They are assisted by an Advisory Council, which meets annually as an outside visiting committee. While the report dismisses the Council as a "safe-haven for former Board members," the Council has, in fact, helped to assure the continuous, long-term, nonpartisan approach of the Foundation. Both Board and Council members serve without compensation, but give generously of their energy, talent, and experience.

Congress stipulated that the IAF be separate from the State Department, the Agency for International Development, and other foreign policy or development assistance agencies. It also instructed that the Foundation be removed from short-term foreign policy considerations and from "the ebb and flow of political currents;" however, the IAF has never mistaken that independence for a license to avoid accountability.

## 5. Alleged Incompatibility with U.S. Bipartisan Foreign Policy

The report suggests that the IAF has "developed an operational philosophy, as seen in some but not all of its projects, which is not only incompatible with the philosophy of the Reagan Administration, but also has aspects which are inconsistent with traditional bipartisan foreign policy objectives of the United States." The report goes on to recommend that the IAF "acquire a new economic and political philosophy," and suggests that this change "would be welcomed by a broad spectrum of foreign policy and foreign development specialists--Republicans and Democrats, conservatives and moderates."

The Foundation's Board of Directors and Advisory Council have lways been composed of both Republicans and Democrats. Membership has included high government officials from the State Department, the Agency for International Development, and the Treasury Department as well as executives of leading orporations and banks. Three former Assistant Secretaries of State for Inter-American Affairs from the Eisenhower, Nixon, and Carter administrations currently serve on the Advisory ouncil.

The Foundation has consistently received bipartisan support rom Congress. The legislation establishing the Foundation was ponsored principally by Congressman Dante Fascell (D-Fla.) and former Congressman Bradford Morse (R-Mass.). Last year, Members of Congress Jack Kemp (R-N.Y.), Bob Michel (R-Ill.), Mark Andrews (R-N.D.), John Myers (R-Ind.), Virginia Smith (R-Neb.), and Bill Young (R-Fla.) submitted a minority report o the 1981 Foreign Assistance Appropriation Bill that was critical of foreign aid in general but praised the Inter-American Foundation as a model for other U.S. foreign aid programs. The minority report cited the Foundation as "an effective and worthwhile program which we are in support of." Coincident with the release of the Heritage report, the Senate Appropriations Committee commended the Foundation in its report accompanying the 1982 Foreign Assistance Appropriation Bill:

> The Committee strongly supports and encourages the Inter-American Foundation in its approach to development. Not only have we been impressed by the Foundation's policies and projects, we have also been impressed by the character and capability of its management and staff.

(The relevant section of the Senate report is presented as Attachment B.)

The Reagan Administration has set forth two principles to guide U.S. policy toward the developing world. First, developing countries should take primary responsibility for solving their own economic problems. Second, developing countries should place greater reliance on private sector initiatives to achieve their development goals. The work of the Inter-American Foundation is fully consistent with the President's principles. Moreover, as the IAF's continued support in Congress demonstrates, its program is in accord with the bipartisan ideas which led to the Foundation's creation and sustained it through its first decade.

### CARIBBEAN BASIN INITIATIVE

Senator KASTEN. Has the President or Assistant Secretary Enders indicated to you what role, if any, your organization might play in the Caribbean Basin Initiative?

Mr. BELL. We were consulted during the preparation of the Caribbean Basin Initiative and did make some recommendations. Not surprisingly, those recommendations were along the lines of our own activity.

We suggested that the Caribbean Basin Initiative give attention to the importance of the development of grassroots organizations, small enterprises, and small farming within the societies of the Caribbean. So there has been that opportunity for consultation.

Beyond that, we have made a continuing effort to keep our colleagues in the State Department and AID informed about what the Inter-American Foundation is involved in the Caribbean.

Last evening we had a meeting of our board of directors and advisory council which focused specifically on the foundation's program in the Dominican Republic. We invited to that meeting Ambassador Robert Ryan, who has worked on the Caribbean Basin Initiative for Assistant Secretary Enders. He was an active participant at the meeting, and we had a good exchange about the Caribbean Basin Initiative and its implications for the Dominican Republic.

But we are not in any formal sense a part of the legislative proposal that the administration has sent to Congress with regard to the Caribbean Basin Initiative.

Senator KASTEN. And I guess I should assume from your remarks that a number of your suggestions weren't followed necessarily as much as you would have wanted them to be followed. I don't want you to be critical of what they are doing, but do they have enough private sector voluntary involvement in the CBI?

Mr. BELL. Of course, the foundation does continue in its activities, and we have been working in the Caribbean for 10 years. The continuation of our activities is, I think, important and compatible with the Caribbean Basin Initiative.

### SUBMITTED QUESTIONS

Senator KASTEN. Peter, I think I have some other questions here, but I think what we will do is submit those questions to you; they are detailed questions about funding levels and other kinds of things.

[The following questions were not asked at the hearing, but were submitted for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### BUDGET

Senator Kasten: Your request for Fiscal Year 1983 is below what you received in Fiscal Year 1982.

Why?

Mr. Bell: Our appropriation for FY 1982 is $12 million. We are here to testify in support of $10.6 million for FY 1983 in accordance with the President's budget.

### COUNTRY ACTIVITY

Senator Kasten: To what extent, if any, will you be operating in the following countries?

El Salvador
Nicaragua
Jamaica
Haiti
Costa Rica
Honduras
Guatemala

Mr. Bell: During our eleven years of operation, the Foundation has made grants to private indigenous organizations in all of these countries. We continue to make grants to nongovernmental organizations in Jamaica, Nicaragua, Haiti, Costa Rica, and Honduras whenever we receive promising proposals. A list of grants we made in these countries last year is included in the annual report submitted with my testimony.

In Guatemala, we are still operating, but must restrict our activities to areas of the country where it is safe for IAF staff to travel. In El Salvador, we have not made any new grants since 1979 because we do not believe it has been safe for staff to travel in the country. Our only funding in El Salvador during the past year has been a supplemental grant to a recognized and successful self-help housing group we had assisted previously and which continues to operate effectively.

### TECHNICAL ASSISTANCE

Senator Kasten: As I understand it, you do not provide technical assistance to your grantees, but from time to time you arrange and finance such assistance from other sources.

How and to what extent are grant proposals reviewed to determine what technical assistance, if any, may be needed by the prospective grantees?

Mr. Bell: When we review proposals, we consider all aspects of the budget, including, if applicable, the provision of funds for technical assistance. As with any other type of expenditure, we consider whether it will help the grantees achieve the purposes of the projects in an efficient and effective manner. When we consider requests for technical assistance, we examine, among other things, the complexity of the projects, the current capabilities of the grantees, and the qualifications of those who would provide the assistance. We also examine how the technical assistance would help the groups achieve their objectives and how it would advance the groups' own abilities to be more self-reliant in the future.

Senator Kasten: Are the groups which submit their proposals generally aware at that time of any needs they may have for technical assistance?

Mr. Bell: Many groups are aware of their need for technical assistance and include it in their proposal. If the Foundation approves a project that does not include technical assistance, and it subsequently becomes evident that such assistance is necessary, we do sometimes make supplemental grants to organizations. We believe that a commitment to learning from experience, including the relevant experience of others, is a sign of the vitality of our grantees. Thus, IAF-supported groups seek to learn as they develop and, on occasion, do seek outside training and advice to assist in the process even after a project is under way. We try to remain flexible so that we can respond to the grantees' changing needs.

Senator Kasten: If such assistance is needed, how do you go about arranging for it, and who do you look for to do the work?

Mr. Bell: For the most part, we do not arrange for the technical assistance. The grantees themselves usually know of local groups that can provide the assistance, and they make the arrangements. In some cases, however, the grantees do ask us for our advice, and we introduce them to groups with which we are familiar, including those that have worked successfully with other IAF grantees.

When we suggest people to provide technical assistance, we usually try to identify local organizations that know the country, are sensitive to the needs of the grantee, and can help the grantee develop its own institutional capacities to solve the kinds of problems that call for outside technical assistance.

## MONITORING

Senator Kasten: I understand that as part of your project monitoring process you require regular programmatic and financial reports from your grant recipients, and also that certain grantees receive independent audits.

To what extent and how are these documents used as project monitoring tools in order to determine what problems grantees may have experienced or the possible noncompliance with grant terms?

Mr. Bell: The programmatic and financial reports, as well as the independent audits, help us in monitoring the progress of projects. They are one way in which we verify compliance with the terms of the grant agreements and learn if there are any problems. In addition to these reports and audits, we also monitor projects through periodic visits by IAF staff to the projects. Our policy is to require that active projects be visited by IAF staff at least once a year. We are in more frequent contact with grantees whose projects are relatively large or complex.

## REPORTING REQUIREMENTS

Senator Kasten: What has been your experience generally with grantee compliance with reporting requirements?

Mr. Bell: Most grantees comply with the reporting requirements conscientiously. We find, however, that in some cases, reports are incomplete or are submitted late. This often occurs when we begin grants with organizations that have little experience in keeping records or in receiving outside support. Before we disburse funds, we explain to grantees what kinds of reports are necessary, but it sometimes takes additional instruction and even technical assistance before organizations can actually produce the reports expected of them. Both the Foundation and most of our grantees regard the timely and conscientious preparation of these reports as important in fulfilling our formal requirements and in developing means of accountability within the organizations themselves.

Senator Kasten: How does IAF verify the accuracy and reliability of data reported?

Mr. Bell: We verify the accuracy of the reports through the visits to the projects by IAF staff and by the independent audits that are performed by in-country certified public accounting firms.

Senator Kasten: How do you respond if it is found that grantees are not in compliance with reporting requirements?

Mr. Bell: If reports are late or are not completed satisfactorily, we will inform the grantees of the terms of the grant agreement, which require timely reports. In the rare cases in which we cannot obtain meaningful reports, we will suspend disbursement of funds or terminate the grants.

## PROJECT EVALUATIONS

Senator Kasten: Have your formal project evaluations proven to be useful?

Mr. Bell: Yes, they are useful to the grantee or grantees being evaluated, to IAF staff members most familiar with the projects, and to other IAF staff analyzing proposals for similar projects. Evaluations are very important to the Foundation, and to our ability to learn, because they help tell us what works and does not work in grassroots development.

Senator Kasten: How are they used?

Mr. Bell: We are trying to make greater use of evaluations. In recent months, we have improved the quality of our studies. We are careful in selecting qualified evaluators, and in requiring that the reports be well written. In addition, the Foundation's Office of Planning and Research is improving the Foundation's ability to draw on evaluations of grants in one country when we review similar proposals in another country.

To further improve our efforts at evaluating our work, we are now undertaking a comprehensive review of some 200 evaluations contracted by the Foundation during the past 11 years. The study will help us understand how better to structure evaluations to benefit the Foundation, our grantees, and other development organizations.

In addition, now that the Foundation has had more than a decade of experience, we recognize the need to work more systematically in disseminating the results of our evaluations. Through our Journal as well as other means, we hope to communicate the lessons of our work more broadly.

## CONCLUDING REMARKS

Senator KASTEN. Let me just say that, number one, if we can work on this social progress trust fund and work that out, we will be happy to try to help. On behalf of the committee I would like to thank you for the work you are doing. We have had a good working relationship with you, and we appreciate what you are doing, and we want to try to work with you any way we can.

Thank you very much for your testimony here today.

Mr. BELL. Your support means a great deal to us.

# PEACE CORPS

## STATEMENT OF MS. LORET MILLER RUPPE, DIRECTOR, THE PEACE CORPS

ACCOMPANIED BY:

EVERETT ALVAREZ, JR., DEPUTY DIRECTOR OF THE PEACE CORPS

MRS. M. CHRIS SALE, DIRECTOR OF THE OFFICE OF FINANCIAL MANAGEMENT OF THE PEACE CORPS

### BUDGET REQUEST

Senator KASTEN. The next witness will be Ms. Loret Miller Ruppe, Director of the Peace Corps.

Ms. Ruppe.

Ms. RUPPE. Mr. Chairman and members of the committee, I am delighted to be here today to testify on behalf of the fiscal year 1983 Peace Corps appropriations request of $97.5 million, and to provide you with an update on our recent activities and plans for the coming fiscal year.

Accompanying me today are Everett Alvarez, Jr., Deputy Director of the Peace Corps, and Mrs. M. Chris Sale, Director of the Office of Financial Management of the Peace Corps, and it is my pleasure to introduce them to you.

### THE PAST YEAR

This past year has been a most significant one for the Peace Corps. We have maintained over 5,000 hardworking volunteers in approximately 63 countries; we have reorganized our management staff; and we have become an independent agency. I am pleased to report that the Peace Corps is alive and well, entering its 21st year with renewed vitality.

During the past 12 months, I have visited some of our programs in Africa and Latin America, witnessing firsthand the inspiring efforts of our volunteers and Peace Corps field personnel to help the people of the underdeveloped countries realize their own creative talents, and thus better their own lives.

I have talked with country presidents, foreign and U.S. ambassadors, prime ministers, and village leaders, and their responses are unanimously enthusiastic—reaffirming time and again that the Peace Corps is one of the most positive American presences abroad.

I remember particularly one village in Senegal—Maleme Thieurigne—where the people waited all day under the broiling sun to thank us personally for Michael Levitan of Wyncote, Pa, the one Peace Corps volunteer we had placed there.

It has truly proven to me that the Peace Corps is our most positive American presence overseas.

President Moi of Kenya, Prime Minister Seaga of Jamaica, and many other high-ranking officials in countries where we have programs, have expressed their enthusiastic appreciation for the work of our volunteers.

I am continually hearing from our returning volunteers that their terms of service in the Peace Corps enriched their lives immeasurably. At the same time, they brought back to the United States valuable expertise and understanding of the cultures of the developing world.

In Washington I have talked with corporate executives and people well-versed in the field of international economics and development, and they, along with officials of AID and the Department of State, reiterate that the Peace Corps is one of the most cost-effective means of conveying American good will and assistance to the developing world.

With all the positive support and enthusiasm engendered by the Peace Corps, particularly overseas—I wonder why so many Americans are unaware of our continued existence. "Is the Peace Corps still around?" I am often asked. I recognize that one of the continuing major tasks is to update the American people about the Peace Corps, our basis in voluntarism, and our goals for helping people of the Third World become productive and self-sufficient, objectives strongly embraced by the Reagan administration. We began this task in 1981, as we celebrated our 20th anniversary.

## PEACE CORPS SEPARATION

As you know, the Peace Corps is now a separate agency as a result of title 6 of the International Security and Development Cooperation Act of 1981, passed by this Congress and signed by President Reagan. Our staff worked long and hard hours to complete the many tasks required by separation. But the job was completed—on schedule—with a minimum of disruption. By now, the OMB report and GAO followup, as required by the separation legislation, have been forwarded to Congress

## PEACE CORPS GOALS

As the first Director of the Peace Corps established under the autonomy legislation, I am proud to reaffirm to you my commitment to the three goals of the Peace Corps:

One, to promote world peace and friendship;

Two, to help the peoples of such countries and areas in meeting their needs for trained manpower, particularly in meeting the basic needs of those living in the poorest areas of such countries; and

Three, to help promote a better understanding of the American people on the part of the peoples served and a better understanding of other peoples on the part of the American people.

## REORGANIZATION OF HEADQUARTERS OFFICES

During the past year, we have reorganized our headquarters offices, not only to manage the 283 new positions transferred to the Peace Corps, but to better carry out the directions which I see as critical for our operation in the coming years. Without describing that reorganization in detail, let me point out some key changes:

One, we have established a position of Associate Director for Recruitment and Placement. (Prior to separation, Peace Corps recruitment of new volunteers was handled by ACTION.) Recruitment and placement will receive their proper emphases as two of the most vital U.S. staff activities. As a result there are now three major divisions which direct operations: (a) recruitment and placement; (b) overseas operations; and (c) agency management.

Two, we have created a training coordination unit in my office, to oversee all volunteer and staff training efforts. This unit will give me improved ability to manage and coordinate efficient, quality training. It will also provide better information to make an evaluation of our training efforts.

Three, we have instituted a new private sector development office to encourage joint participation in some of our projects. It is our intention to seek to develop a positive partnership with American business, the educational community, the foundation world and the Peace Corps. Our efforts will be in keeping with President Reagan's policy directives that all Government agencies should seek to reach out to the private sector in Government programs.

Since my confirmation in May of 1981, one of my major concerns has been the establishment of the most efficient management procedures. We conducted a major review of the headquarters organization, restructuring Peace Corps Washington and reducing staffing here by 10 percent.

We also reviewed the Peace Corps training management process and instituted review procedures which assure greater competitiveness among contractors. We assessed country programs against a variety of factors and prepared an orderly contingency plan for various fiscal requirements.

In addition, we strengthened Peace Corps' capability to work in collaboration with other Federal and private development agencies to leverage U.S. dollars overseas for maximum effectiveness.

Last but not least, we now have in place a strong management team to provide leadership and direction in all the various phases of Peace Corps activities.

Since the passage of the Peace Corps Autonomy Act, further organizational changes and program considerations have been required. As I have outlined, the reorganization mandated by separation has been accomplished.

## FORWARD PLAN

We will now direct our attention to defining a new direction for Peace Corps, both overseas and here in the United States, by implementing several major initiatives through a major forward planning process. These initiatives will address training, overseas programing, private sector development, increased public awareness of the Peace Corps, strengthening volunteer recruitment, efforts to increase host country contributions to our overseas programs, and increased volunteer assistance in food and energy areas.

These endeavors will promote economic development and self-sustaining productive capacity, and development of free market mechanisms.

Our forward plan will continue to emphasize recruitment of older Americans with scarce skills, and minorities. We will be using demographic research to target recruitment efforts, applying a cost-benefit analysis to all recruitment activities.

With regard to host country contributions, Peace Corps will review and revise the host country contributions policy and reporting procedures with clearer definitions and guidelines.

In preparing our fiscal year 1983 budget, we have thought carefully about the kinds of activities our volunteers can do overseas. One aim of President Reagan's foreign policy initiative is to help others by establishing conditions under which creativity and self-help can flourish—principles long supported by the Peace Corps.

### FISCAL YEAR 1983 BUDGET

As President Reagan noted in his speech February 24, 1982, on the Caribbean Basin, the Peace Corps will give special emphasis to recruiting volunteers with skills in developing local enterprise. We certainly were pleased to be included in the President's address, and we felt it was the recognition that our volunteers truly deserved and earned for their efforts over the years.

We now have 861 volunteers in countries in the Caribbean Basin, and as part of our forward plan initiatives, new assignments will be created to support and promote local economic development and self-sustaining productive capacity, particularly in areas of food and energy. This will be done without abandoning commitments in other sectors of human development.

Our fiscal year 1983 request is for $97.5 million, compared to the $105 million appropriated for the current fiscal year. It is essential to the success of the President's economic program that all of us trim back wherever possible, even small agencies such as the Peace Corps. We are proposing a budget for 1983 which is $7.5 million below that of the current year.

Much of that reduction will be in the Washington headquarters operation, though we are requesting less money in all budget categories. One effect of a smaller budget in fiscal year 1983 will be a small reduction in the numbers of volunteers serving overseas. We have chosen to emphasize quality over quantity, concentrating on providing a solid basis that leaves us in a position to pursue as many options as possible.

We do not anticipate, for instance, that Peace Corps will have to depart from any countries in fiscal year 1983. We plan to reduce the number of new trainees going to the field by about 250 in fiscal year 1983, placing 2,600 trainees. This should lead to an overall field strength of approximately 4,641 volunteer-years of service. The Peace Corps will continue to operate in at least 62 countries during fiscal year 1983.

Despite the decline in overall volunteer numbers, Peace Corps will continue to provide the same complex range and breadth of training and volunteer support activities. The variety of languages taught and the technical and cross-cultural skills learned, for instance, will be only marginally less than in fiscal year 1982. In spite of the planned budget reduction, many programmatic improvments and innovations will take place.

### JOINT PROGRAMS WITH PRIVATE SECTOR

Additionally, as part of our forward plan initiatives, Peace Corps will continue to develop joint programs with the U.S. private sector—both profit and nonprofit and with appropriate Federal and international organizations. Through a successful program of cooperation with the Agency for International Development [AID] in energy and forestry, for example, Peace Corps has increased its placement of volunteers in these areas, strengthened support to those volunteers, and developed improved training and technical materials.

Peace Corps is developing, with the cooperation of AID Administrator Peter McPherson, a former Peace Corps volunteer, similar programs in water and sanitation, in fisheries, and in disaster preparedness. All of these efforts result in stronger support for our volunteers, and an increased capacity to assist basic needs of our host countries.

We are also exploring the feasibility of instituting pilot programs in several countries in which Peace Corps volunteers will be fielded directly through private volunteer organizations [PVO's]. It is expected that PVO's will provide assistance in programing, staff support, and in-country volunteer costs, while the Peace Corps will continue to provide the necessary resources for recruiting, selection and training, travel to and from the country, and the volunteer readjustment allowance.

We hope this will enable us to field those volunteers for less cost. The specifics of our fiscal year 1983 program and their dollar implications are included in more detail in our budget submission, and I am prepared to provide you with additional information as needed. The specifics of our program and the dollar applications are contained in our report.

### PEACE CORPS ADVISORY COUNCIL

I would like you to know that the Peace Corps Advisory Council appointed by President Reagan earlier this year, has just concluded 2 days of meetings here in Washington. They received an orientation regarding the Peace Corps, our goals, and our organization. I look forward to working with this dedicated group.

As a part of the separation legislation, section 5(c) of the Peace Corps Act was amended to lift the volunteer readjustment allowance cap of $125 a month. Since February, PCV's receive $175 each month as a readjustment allowance.

However, the legislation did not provide similar benefits for volunteer leaders whose services are required for supervisory or other special duties or responsibilities in connection with our programs. Volunteer leaders are appointed, in the field, by country directors under section 6 of the Peace Corps Act. Consequently, a technical amendment lifting the $125 a month readjustment allowance cap for our volunteer leaders has cleared OMB, and is being submitted.

We would appreciate your early consideration of this technical amendment.

Thank you very much and I welcome any questions.

Senator KASTEN. Thank you.

[The prepared statement of Loret Miller Ruppe follows:]

## PREPARED STATEMENT OF LORET MILLER RUPPE, DIRECTOR, PEACE CORPS

Mr. Chairman, members of the subcommittee, I am pleased to be here today to testify on behalf of the fiscal year 1983 Peace Corps appropriations request of $97.5 million, and to provide you with an update on our recent activities and plans for the coming fiscal year.

This past year has been a most significant one for the Peace Corps. We have maintained over 5,000 hardworking volunteers in approximately 63 countries; we have reorganized our management staff; and we have become an independent agency. I am pleased to report that the Peace Corps is alive and well, entering its twenty-first year with renewed vitality.

During the past 12 months, I have visited some of our programs in Africa and Inter-America, witnessing first-hand the inspiring efforts of our volunteers and Peace Corps field personnel to help the people of the underdeveloped countries realize their own creative talents, and thus better their own lives. I have talked with country presidents, foreign and U.S. Ambassadors, prime ministers, and village leaders, and their responses are unanimously enthusiastic—reaffirming time and again that the Peace Corps is one of the most positive American presences abroad.

I remember particularly one village in Senegal (Maleme Thieurigne), where the people waited all day under the broiling sun to thank us personally for Michael Levitan of Wyncote, Pa., the one Peace Corps volunteer we had placed there.

President Moi of Kenya, Prime Minister Seaga of Jamaica, and many other high-ranking officials in countries where we have programs, have expressed their enthusiastic appreciation for the work of our volunteers. I am continually hearing from our returning volunteers that their terms of service in the Peace Corps enriched their lives immeasurably. At the same time, they brought back to the U.S. valuable expertise and understanding of the cultures of the developing world.

In Washington I have talked with corporate executives and people well-versed in the field of international economics and development, and they, along with officials of AID and the Department of State, reiterate that the Peace Corps is one of the most cost-effective means of conveying American good will and assistance to the developing world.

With all the positive support and enthusiasm engendered by the Peace Corps, particularly overseas—I wonder why so many Americans are unaware of our continued existence. "Is the Peace Corps still around?" I am often asked. I recognized that one of the continuing major tasks is to update the American people about the Peace Corps, our basis in volunteerism, and our goals for helping people of the Third World become productive and self-sufficient, objectives strongly embraced by the Reagan administration. We began this task in 1981, as we celebrated our 20th anniversary.

As you know, the Peace Corps is now a separate agency as a result of title 6 of the International Security and Development Cooperation Act of 1981, passed by this Congress and signed by President Reagan Our staff worked long and hard hours to complete the many tasks required by separation. But the job was completed, on schedule, with a minimum of disruption. By now, the OMB report and GAO follow-up, as required by the separation legislation, have been forwarded to Congress. As the first director of the Peace Corps established under the autonomy legislation, I am proud to reaffirm to you my commitment to the three goals of the Peace Corps:

1. To promote world peace and friendship;
2. To help the peoples of such countries and areas in meeting their needs for trained manpower, particularly in meeting the basic needs of those living in the poorest areas of such countries; and
3. To help promote a better understanding of the American people on the part of the peoples served and a better understanding of other peoples on the part of the American people.

During the past year, we have reorganized our headquarters offices, not only to manage the 283 new positions transferred to the Peace Corps, but to better carry out the directions which I see as critical for our operation in the coming years. Without describing that organization in detail, let me point out some key changes:

1. We have established a position of associate director for recruitment and placement. (Prior to separation, Peace Corps recruitment of new volunteers was handled by ACTION.) Recruitment and placement will receive their proper emphases as two of the most vital U.S. staff activities. As a result there are now three major divi-

sions which direct operations: (A) Recruitment and placement; (B) overseas operations; and (C) agency management.

2. We have created a training coordination unit in my office, to oversee all volunteer and staff training efforts. This unit will give me improved ability to manage and coordinate efficient, quality training. It will also provide better information to make an evaluation of our training efforts.

3. We have instituted a new private sector development office to encourage joint participation in some of our projects. It is our intention to seek to develop a positive partnership with American business, the educational community, the foundation world and the Peace Corps. Our efforts will be in keeping with President Reagan's policy directives that all Government agencies should seek to reach out to the private sector in Government programs.

Since my confirmation in May of 1981, one of my major concerns has been the establishment of the most efficient management procedures. We conducted a major review of the headquarters organization, restructuring Peace Corps Washington and reducing staffing here by 10 percent. We also reviewed the Peace Corps training management process and instituted review procedures which assure greater competitiveness among contractors. We assessed country programs against a variety of factors and prepared an orderly contingency plan for various fiscal requirements. In addition, we strengthened Peace Corps' capability to work in collaboration with other Federal and private development agencies to leverage U.S. dollars overseas for maximum effectiveness. Last but not least, we now have in place a strong management team to provide leadership and direction in all the various phases of Peace Corps activities.

Since the passage of the Peace Corps Autonomy Act, further organizational changes and program considerations have been required. As I have outlined, the reorganization mandated by separation has been accomplished. We will now direct our attention to defining a new direction for Peace Corps, both overseas and here in the United States, by implementing several major initiatives through a major forward planning process. These initiatives will address training, overseas programing, private sector development, increased public awareness of the Peace Corps, stengthening volunteer recruitment, efforts to increase host country contributions to our overseas programs, and increased volunteer assistance in food and energy areas. These endeavors will promote economic development and self sustaining productive capacity, and development of free market mechanisms.

Our forward plan will continue to emphasize recruitment of older Americans with scarce skills, and minorities. We will be using demographic research to target recruitment efforts, applying a cost-benefit analysis to all recruitment activities.

With regard to host country contributions, Peace Corps will review and revise the host country contributions policy and reporting procedures with clearer definitions and guidelines.

In preparing our fiscal year 1983 budget, we've thought carefully about the kinds of activities our volunteers can do overseas. One aim of President Reagan's foreign policy initiative is to help others by establishing conditions under which creativity and self-help can flourish—principles long supported by the Peace Corps. As President Reagan noted in his speech February 24, 1982 on the Caribbean Basin, the Peace Corps "will give special emphasis to recruit volunteers with skills in developing local enterprise." We now have 861 volunteers in countries in the Caribbean Basin, and as part of our forward plan initiatives, new assignments will be created to support and promote local economic development and self-sustaining productive capacity, particulary in areas of food and energy. This will be done without abandoning commitments in other sectors of human development.

Our fiscal year 1983 request is for $97.5 million, compared to the $105 million appropriated for the current fiscal year. It is essential to the success of the President's economic program that all of us trim back wherever possible, even small agencies such as the Peace Corps. We are proposing a budget for 1983 which is $7.5 million below that of the current year. Much of that reduction will be in the Washington headquarters operation, though we are requesting less money in all budget categories. One effect of a smaller budget in fiscal year 1983 will be a small reduction in the numbers of volunteers serving overseas. We have chosen to emphasize quality over quantity, concentrating on providing a solid basis that leaves us in a position to pursue as many options as possible. We do not anticipate, for instance, that Peace Corps will have to depart from any countries in fiscal year 1983.

We plan to reduce the number of new trainees going to the field by about 250 in fiscal year 1983, placing 2,600 trainees. This should lead to an overall field strength of approximately 4,641 volunteer-years of service. The Peace Corps will continue to operate in at least 62 countries during fiscal year 1983.

Despite the decline in overall volunteer numbers, Peace Corps will continue to provide the same complex range and breadth of training and volunteer support activities. The variety of languages taught and the technical and cross-cultural skills learned, for instance, will be only marginally less than in fiscal year 1982. In spite of the planned budget reduction, many programmatic improvements and innovations will take place.

Additionally, as part of our forward plan initiatives, Peace Corp will continue to develop joint programs with the U.S. private sector (both profit and nonprofit) and with appropriate Federal and internations organizations. Through a successful program of cooperation with the Agency for International Development (AID) in energy and forestry, for example, Peace Corps has increased its placement of volunteers in these areas, strengthened support to those volunteers, and developed improved training and technical materials. Peace Corps is developing, with the cooperation of AID Adminstrator Peter McPherson (a former Peace Corps volunteer), similar programs in water and sanitation, in fisheries, and in disaster preparedness. All of these efforts result in stronger support for our volunteers, and an increased capacity to assist basic needs of our host countries.

We are also exploring the feasibility of instituting pilot programs in several countries in which Peace Corps volunteers will be fielded directly through private volunteer organizations (or PVOS). It is expected that PVOS will provide assistance in programing, staff support, and in-country volunteer costs, while the Peace Corps will continue to provide the necessary resources for recruiting, selection and training, travel to and from the country, and the volunteer readjustment allowance. We hope this will enable us to field those volunteers for less cost.

The specifics of our fiscal year 1983 program and their dollar implications are included in more detail in our budget submission, and I am prepared to provide you with additonal information as needed.

The Peace Corps advisory council, appointed by President Reagan earlier this year, has just concluded 2 days of meetings here in Washington. They received an orientation regarding the Peace Corps, our goals, and our organization. I look forward to working with this dedicated group.

As a part of the separation legislation, Section 5(c) of the Peace Corps Act was amended to lift the volunteer readjustment allowance cap of $125 a month. Since February, PCVS receive $175 each-month as a readjustment allowance. However, the legislation did not provide similar benefits for volunteer leaders (whose services are required for supervisory or other special duties or responsibilities in connection with our programs). Volunteer leaders are appointed, in the field, by country directors under Section 6 of the Peace Corps Act. Consequently, a technical amendment lifting the $125 a month readjustment allowance cap for our volunteer leaders has cleared OMB, and is being submitted. We would appreciate your early consideration of this technical amendment.

### BUDGET REQUEST

Senator Kasten. What was your 1983 request to OMB, and what were you asking for in the initial negotiations?

Ms. Ruppe. In the very initial budget we submitted, you mean?

Senator Kasten. Yes.

Ms. Ruppe. $112 million.

Senator Kasten. And we are at $97,500,000?

Ms. Ruppe. Yes, but we had been placed at $80 million by OMB and we appealed and were brought up to $97,500,000.

Senator Kasten. Now, you mentioned the $175 allowance for the supervisory group, but the reduction from last year's budget won't affect your ability to provide the $175 readjustment allowance for volunteers?

Ms. Ruppe. No, it won't. We have that worked out.

### PEACE CORPS AUTONOMY

Senator Kasten. You mentioned very briefly, but I would like to get you to expand a little bit more on the Peace Corps separation from ACTION. The transition took place, and I think we all thought it went through smoothly and basically to everyone's satisfaction.

Is that your assessment as well?

Ms. Ruppe. Yes. Each agency appointed a task force and they worked very closely and met however many long hours, and I must commend them for all of their hard work. It had a great deal of input. OMB saw each side was well represented, and I know speaking for my agency, that we felt it went well and it has been done, and we are pleased that each agency can work on its own initiatives.

Senator Kasten. I understand there is some concern that some of the transferred positions you took under the separation were top heavy, making the Peace Corps generally top heavy. I guess we are talking about the chiefs versus the Indians that we are always talking about in a lot of agencies.

Is that your opinion and do we have more people in the higher grades at higher salary levels and more managers than we really need?

Ms. Ruppe. Well, it was really divided according to function. Each office was looked at and divided specifically according to how many people in that office had worked either for the Peace Corps, and Everett Alvarez was in on most of the negotiations. Maybe he would like to respond to that, but I would not say that we are top heavy. We took people who were primarily doing Peace Corps work and have what we think was a fair and equal arrangement.

Senator Kasten. Do you want to comment in addition, Mr. Alvarez?

Mr. Alvarez. Basically both agencies assigned task teams and we looked at the 15 functional areas that were involved in the joint support areas and identified all of the personnel that were performing Peace Corps work and those that were performing mostly ACTION work.

All of this was done during a process of negotiation between the task teams for each individual area. Every person that was identified and every function that was identified in the transfer was a result of a negotiation that was finally accepted by both sides.

Then of course OMB was involved in the negotiations throughout, and it was worked out satisfactorily for both sides.

### HEADQUARTERS REDUCTIONS

Senator Kasten. In your statement you said that in order to live within the reduced budget you are going to somewhat reduce the Washington headquarters operation.

How does that fit in view of the fact that there were some additional people that you took on as a result of the separation business?

Ms. Ruppe. Because of our 5-year rule we have a higher rate of attrition than most other agencies, so most of those positions will not be filled. In the reorganization that had gone on originally we had combined some offices which cut down some of our costs, and we are just going to work very hard.

We also got an FTE ceiling we felt we could work under, and we won't fill some of those. It is just the very support that goes into trainees, the additional costs of more training and more things will save us some money even in Washington headquarters.

Senator KASTEN. So you are confident this will all work its way through?

Ms. RUPPE. Yes, and we will watch our travel very closely.

### PRIVATE VOLUNTARY ORGANIZATIONS

Senator KASTEN. I am interested in your suggestion that private volunteer organizations might directly field Peace Corps volunteers or work more closely with you.

Have the PVO's themselves suggested such an interest and did they come forward and suggest this interest and made these suggestions to you, or is this something that you are hoping to explore with them?

Ms. RUPPE. Well, there is actually a longstanding policy of the Peace Corps to work with PVO's. The Peace Corps from the very beginning assigned volunteers to private voluntary organizations overseas in projects that they have initiated.

I was very happy that you brought it up with the Inter-American Foundation because we have talked with them about the possibility of putting volunteers in or encouraging that type of coordination. We are strongly trying to talk with groups and encourage even more joint programing requests. This will give us the ability to have more volunteers because it does take up some of our costs.

We are also talking about the possibility of fielding volunteers in countries where we do not have a staff or overviewing under the complete aegis of AID or private organizations. But at the present moment we have ongoing projects with 60 organizations where Peace Corps volunteers are working with PVO's. We have found six private voluntary organizations which are interested in utilizing Peace Corps volunteers in their programs in countries where Peace Corps, as I said, has no operational program. We feel that was very helpful.

Senator KASTEN. So the request and the suggestions are coming from them as well as from you?

Ms. RUPPE. We are trying to initiate them, and we are strongly encouraging that our regional directors meet with any private voluntary organization that is working in the countries.

Senator KASTEN. I wonder if you could provide for us exactly how many Peace Corps volunteers are actually being fielded through these different organizations. I think it is very positive, and we want to do everything we can to be of help.

Ms. RUPPE. Thank you.

[The information follows:]

### PEACE CORPS VOLUNTEERS IN PVOs

Peace Corps currently has no volunteers fielded through PVOs in countries where we have no official Peace Corps presence. Negotiations to establish such agreements continue, as we attempt to ensure the viability of each fielding and the mutuality of Peace Corps and PVO philosophies. However, Peace Corps volunteers continue to cooperate and work with over 60 PVOs and foundations in virtually every country in which Peace Corps has a program. They are working with such organizations as: Food and Agricultural Organization (FAO), UNESCO, United Nations Capital Development Fund (UNCDF), Cooperative League of the United States of America (CLUSA), and Project Hope, to name a few.

## INSURANCE FOR FOREIGN SERVICE NATIONALS

Senator KASTEN. Senator Inouye had a particular question on an employee, and it has to do with the claim of Maria Bolinas. The essential facts of this claim as I know them are as follows:

That she was a foreign service national employee of the Peace Corps in the Philippines where she is employed as executive director, and she has been employed by the Peace Corps for roughly 13 years.

From January 10, 1981, to May 15, 1981, she was assigned on temporary duty to Washington, and during this period she was designated acting country desk officer. When she was here she became ill and required medical attention and was hospitalized and she incurred medical expenses totaling $2,127. She paid a partial payment of these expenses and, in fact, borrowed funds from a former Peace Corps volunteer to pay her hospital bill in full.

Mrs. Bolinas, who earns less than $4,000 per year, is a foreign service national employee, has evidently had to pay these expenses out of her own pocket because her health insurance only covers illness in the Philippines.

Are you familiar with her case?

Ms. RUPPE. Yes. I just signed a letter stating that we would be able to pick up her expenses, thank goodness, and we regret very much that she has been under such financial duress. I will make that letter available for the record.

[The letter follows:]

Peace Corps

Washington, D.C. 20525

RUPPE AUTHORIZATION

April 23, 1982

Per Peace Corps Act Section 10(h) (P.L. 95-331, 92 Stat. 414), the following approval was granted on 4/26/82:

TO: Loret Miller Ruppe, PC/Director
THRU: Luis del Rio, Actg Associate Director/Program Operations

CAW

FROM: Carol A. Wzorek, Actg Regional Director, NANEAP

SUBJECT: FSN Reimbursement for Medical Expenses While Out of Country of Origin

Attached is a medical claim for Helen Bolinas, FSN Executive Officer for Peace Corps/Philippines. On January 10, 1981, Helen came to Peace Corps/Washington to represent the country at a CAST session. Subsequent to that, Helen was asked by the Region to accept a TDY as Philippines Desk Officer while we were interviewing prospective candidates for the position.

During her stay in Washington, which provided additional staff training/experience for her in her role as executive officer as well as tremendous assistance to the Region, it become necessary for Helen to be hospitalized. At that point, it was discovered that Helen's health insurance policy in the Philippines did not cover any illnesses outside of that country. Helen filed with Workman's Compensation in order to be reimbursed for her expenses (see attached), but her claim was denied.

Upon further research, we found that Helen could be granted payment for her medical expenses under the Peace Corps Act (see attached). As Helen's salary in the Philippines is only slightly over $4,000 per annum, hospital bills totalling $2,127.20 are obviously an extreme hardship for her to bear. NANEAP is, therefore, asking that you approve payment of Helen's bills under the conditions of the Peace Corps Act. Both Helen and the Region will be very grateful for your help.

APPROVED: ______

DISAPPROVED: ______

DATE: 4/26/82

## AUTOMATIC COVERAGE OF HOST COUNTRY NATIONALS

Ms. RUPPE. We are going to investigate our policy as to how there will be an automatic coverage of host country nationals when they come to this country.

Senator KASTEN. The question I was going to ask was, is it customary for the Peace Corps to assign national service employees to Washington without seeing that they have adequate medical insurance, and from now on you are going to try to do that?

Ms. RUPPE. We fully intend to do that. The Peace Corps Act had provided authority to pay for such hospital costs, but in order to assure that a person doesn't have to go through what she went through, we will have that.

Senator KASTEN. You do have the authority to reimburse?

Ms. RUPPE. Yes. You asked about host country nationals coming to this country and on occasion we do like to have them come in and give them further training.

One of the problems has been the lack of training that has been given to our staff in general and to our host country nationals, particularly in administrative services. We are right now having a series of conferences overseas addressing some of that, upgrading their training in those fields.

We do bring them back occasionally to really get a handle on the Washington operations so they can better respond in the field.

## IVORY COAST PROGRAM

Senator KASTEN. In view of the increased budget support which the Congress provided last year, and I think together with the likelihood that close to this level will be continued through fiscal 1983, can we expect now that you will reintroduce the Peace Corps program in the Ivory Coast which, because of budgetary constraints, was terminated last year?

Ms. RUPPE. Well, you know before that decision was made, I visited with Ambassador Rouse and our country director and you know there was a strong feeling not to remove the program to start out with, but we felt under the criteria that we use in exiting a country, that the Ivory Coast was a prime candidate because of the high per capita income.

We found it difficult to fill most of the jobs that our volunteers had been filling, the skill requests were extremely high, and we were unable to fill large percentages of the training requests that we had.

Since that time we have phased out the program, there really has been no programing. I have not done any progressive programing because our budget wouldn't support it. If in the future there is an interest on the part of the government we certainly would explore the possibilities.

Senator KASTEN. But the preface to my question is "no"? It is our understanding that there are a number of countries with per capita income equal to or higher than the Ivory Coast that you are working with. That is correct, isn't it?

Ms. RUPPE. Yes. A lot of it was really on site programing difficulties, where they required such a high level of French ability, where they required such technical skills that we simply could not recruit the people to fill them. That was an additional difficulty at that particular time.

### GAO REPORT ON VOLUNTEER PREPARATION

Senator KASTEN. About a year ago the GAO came up with a report entitled "Preparation of Volunteers for Peace Corps Service," which pointed out some areas need management attention, and in which it examined at least three specific areas relating to the preparation of volunteers for Peace Corps service.

Generally speaking, it is my understanding that you agreed with those GAO recommendations. What I would like for you to do is give us a general comment on how you have progressed with those recommendations, how you have met each of those recommendations, and specifically if you could lay out some changes or procedures that have been changed or adapted.

Ms. RUPPE. Well, I had been in the office for a short time when I realized beyond the findings in the GAO report, that we didn't have much coordination of our training or much effective evaluation of it.

It was at that point that I determined I would create a new Office of Training Management Coordination, to try to coordinate training that was done independently in these regions, and to make sure that there was a manager looking at training, checking to see that the insights we developed at one region would be brought to another region, as well as exploring the concept of having regional training centers which we find are very cost-effective. We are starting a regional training center in Jamaica that we feel will be highly effective.

The whole question of staging and the way we select or deselect volunteers or orient them has definitely been examined, as suggested by the report.

We have established a new type of process called a center for reassessment and training ("CREST"), which is a new staging capability. Now that we have organized recruitment, placement and staging all together, we believe that will improve the situation.

The Corps curriculum has been disseminated to the field and is in an implementation stage. The training of trainers also is something that is being implemented to make sure that we have the quality consistency.

We also, as I mentioned before, are sponsoring administrative officer conferences to better upgrade the skills of our administrative people overseas. Those are all various ways we are meeting the GAO report.

### MALAYSIA PROGRAM

Senator KASTEN. Our subcommittee staff investigations have found widespread support for a continuation of the Peace Corps program in Malaysia. While that country has known relative economic success over the last several years, it is our understanding that there are still pockets of extreme poverty and need that remain.

In view of the successful relationship the Peace Corps has developed in that country, why not keep at least a small program there instead of phasing it out completely?

Ms. RUPPE. Well, we are seeking other ways of keeping trained mature volunteers in countries which are doing better. I had a very interesting conversation with an Ambassador who pointed out if Peace Corps continues to come out of these better developing countries, what might result is some stigma of the Peace Corps only being in the least developed countries.

I also see the needs where, as you say, so many areas have pockets of poverty, some large areas of poverty, so we are trying to seek out other ways we could stay in these countries. I have talked with the Ambassador of Malaysia who is discussing with the government there and other organizations if there is any possibility of us keeping some volunteers there who would be overviewed or managed by other groups that would result in the reduction of our costs.

Otherwise we really would have to move ahead with the complete phaseout. But we are thinking of returning to countries that we have left and that would be something to consider for the Ivory Coast.

We have gone back to Korea to discuss the possibility of sending Peace Corps volunteers once more under the aegis of the government or some private group in Korea. We are trying to do things like that with the budget that we have.

Senator KASTEN. Now, with the budget that you requested which was $112 million, would you have been able to keep all of the volunteers in place, and how much of an add-on over the request right now would be required to insure that there would be no reduction in the number of volunteers serving overseas?

Ms. RUPPE. I really shouldn't address anything over the budget mark that we have. We feel that the President does have certain priorities.

Senator KASTEN. If we were to try to maintain that level, I could ask the question in a different way, and say, how much of a cut would we have to make, or one way or the other in the report language, in Washington staff or other kinds of things in order to keep the level of volunteers overseas the same?

Do you know the amount of money that you are saving by cutting people overseas? That is by cutting people out of countries?

Ms. RUPPE. We have a very good idea of that. You mean in the Malaysia program?

Senator KASTEN. Assuming you left everybody in place, what would it cost? What is the difference between what you were going to be and where you are?

Mrs. SALE. It amounts to about $4 million.

## CARIBBEAN BASIN INITIATIVE

Senator KASTEN. There has been some talk of the Peace Corps becoming involved in the Caribbean Basin Initiative.

Could you give us any information on this: What, if anything, are you doing in this area, and what, if anything, do you intend to be doing in this area?

Ms. RUPPE. This is a very important program for the Peace Corps because of the large number of volunteers we actually have had throughout the Caribbean Basin, 861 American volunteers work there at present.

When there were more and more suggestions that the administration was working on a policy, we tried to get in on every step of the way. We were in the interagency task force, and we have done as much as we could to get readings on how we could be effective in the Caribbean policy.

We are very pleased that the President mentioned us in his speech introducing the CBI. We are concentrating in this area. We started a few training centers there, and we will emphasize working toward developing the small and medium skill enterprises which make the most sense in the Caribbean. We will work toward bringing the rural assistance populations into the mainstream of their countries' production through this type of enterprise development.

Right now we are in the forefront of this type of agricultural production area. While relatively new to much of the Caribbean, it is extremely promising at various skill levels. We are in fish farming, we are in locally produced low-quality feed for our ruminating animals, such as cows.

We are in multiseasonal things, biomass production, beekeeping and the use of resistant fungus crops. I only state them, and I know that you know about them, but I think a lot of the Ameican public has no idea of the variety of our efforts and the really professional way volunteers are doing this work in these developing countries.

The Peace Corps will also be expanding its training and assignment of volunteers, the lack of which really causes bottlenecks. Included among these are feasibility evaluations, businessman's development, and market identification and development. There is a real need for more of these skills.

We are considering starting a private enterprise sector along with our other sectors that we have in forestry and agriculture and water and sanitation. This is a very logical sector for us to try to implement the volunteers that we have or the applicants with business skills.

If we can find ways to put them in the countries where it will encourage and foster the type of development these countries need for the investment of American business which the President is calling for, that is another reason for our private sector development. We are saying there is a logical partnership, and a mutually beneficial partnership between American business and the Peace Corps.

## EVALUATION

Senator KASTEN. How is the evaluation function being performed within the Peace Corps? Is it being contracted out, to have management consultants come in and how is your overall performance evaluation function handling this?

Mr. ALVAREZ. We did have an evaluation function over a year ago, but due to the reorganization, this function was phased out.

Presently we are developing new evaluation programs within the regions and in the Office of Planning and Assessment. A model evaluation program has been tested in Paraguay in which the country staff and the volunteers have been looking at new ways of evaluating the work they are doing, and in doing this, involving the host country and agency officials by eliciting their assessments of the projects and the work being done by volunteers.

We think this is going to be very beneficial, and very positive for people who are involved in the actual evaluation. We are looking at new ways to bring this information back up into Washington through a management information system which will give the director a managerial tool for decisionmaking. We are testing this in one country, and we plan to test it in other countries in the Caribbean area.

Senator KASTEN. It is your hope that you will be doing the evaluation in-house?

Mr. ALVAREZ. Yes, and it is a developing process now with the models we are working on, the pilot models, but we plan to incorporate these models into the assessment and the computer system that we are developing now inhouse.

Ms. RUPPE. This is an interesting process because through it we should be able to measure the impact that our program had in a country. Before we said "Ten wells, and 4,000 cows inoculated and so many people treated." This we think should really give us the ability to show the direct impact that we have had in that country from year to year on the economy and in the rural areas and their ministry.

So it is a new thing, but we expect it to work extremely well.

## RECRUITING

Senator KASTEN. I wanted to inquire as to the experience that you are going through now in recruiting, how the recruiting efforts are going, are you able to recruit and attract the kind of volunteers that you want and that you need and the styles that you want and need? How is the overall recruiting going?

Ms. RUPPE. We have over 50,000 inquiries a year including phone calls, mail, and walk-ins in our recruiting offices. Out of those, 15,000 applications emerge which we consider serious applications. From those we take approximately 6,000 for nominations, and out of that group we would select or end up with 2,600 or 2,700 trainees.

This particular year because our appropriation came very late in the fiscal year, we have allowed for the flexibility to try to get 300 additional trainees.

When you asked for an update to our recruiting capability we have had a 92 percent spring fill, but summer will be highly critical.

Senator KASTEN. What is a spring fill?

Ms. RUPPE. Well, that would be the goal that was established in the spring season in terms of nominations into the program.

Mrs. SALE. Those are the people who came in as live candidates for placement. That is a record high for the last 4 or 5 years.

**Ms. Ruppe.** We are at 80 percent for our summer fill, but we are very concerned for our end of year goal. We are not recruiting the numbers needed with proper skills, agricultural degrees and/or experience, and engineering degrees. That is why we feel it is vital that we improve and increase our public awareness in this country.

Americans are willing to serve, but over 60 percent of them don't know that the Peace Corps is around and needs them. The developing world needs them more than it ever has. We are determined to do a better job, and we think our outreach to the private sector will help us.

We are trying to get a strong emphasis on minority recruiting. At the present time we have about 6-percent minority serving as volunteers, and our rate of nominations for 1981 is at 8.2 percent, so we are pleased that there seems to be some way of increasing in minority recruitment because we are determined to do that.

We have approximately 300 volunteers who are 50 years of age or older. We have no upper age limit. We are strongly interested in recruiting among retiring farmers and among retirees from the private sector. We would like to insure that Peace Corps service is presented as an option in preretirement counseling and to meet with some of the unions to encourage that idea. Their labor contracts have a provision for leaves of absence. We would like to strongly encourage the granting of leaves of absences for Peace Corps service.

We have been reaching out trying to reestablish several links that Peace Corps had back in the sixties in the business, educational, and cultural segments of our society but whose participation declined in the last decade.

## SUBMITTED QUESTIONS

**Senator Kasten.** We have some additional questions, and I think some of the Senators may have additional questions, and we will submit those questions to you in writing.

[The following questions were not asked at the hearing, but were submitted for response subsequent to the hearing:]

# QUESTIONS SUBMITTED BY SENATOR KASTEN

## REORGANIZATION AND REGIONAL DOWNGRADE

Senator Kasten: One result of your reorganization of the Washington operation is the downgrading of the regional bureaus and the regional directors, with resulting concentration of authority at the top. It would seem to me that since the regional bureaus are closest to the field operations that this downgrading is not a step in the right direction.

I wonder if you might now reconsider this aspect of your reorganization so that field operations are not hurt by decision-making which is farthest from them?

Mrs. Ruppe: Prior to our reorganization which established the three Associate Directors, one of which specifically has responsibility for field operations, the three regional directors reported directly to the Deputy Director of the Peace Corps. The Deputy Director had the responsibility for overall field coordination and the allocation of resources among the regions as well as for overall Peace Corps management and volunteer delivery. Needless to say, this was a sizable job.

Our recent reorganization was structured not to centralize more power in the Director's office but to delegate the authority of the Deputy Director to carry out his responsibilities in program operations, administrative management and volunteer delivery to the three Associate Directors. This move has allowed the Director and Deputy Director to use more of their time to concentrate on program policy and external relations. The Associate Director for Operations now has responsibility for assessing overall program coordination, priorities and resource allocation among the regions. To effectively carry out this function a small administrative staff has been established at the Associate Director's level. Several members of this staff had worked for the regions but their functional move has not lessened to any extent the degree of authority of the regional directors. The Regional Directors' roles are essentially unchanged, however they report to the Associate Director for Operations instead of the Deputy Director as they had done previously.

## AGENCY FOR INTERNATIONAL DEVELOPMENT

Senator Kasten: In your statement you indicate a successful program of cooperation with the Agency for International Development.

Subcommittee staff investigations have indicated in the past that such good cooperation is usually dependent on good relations at the field level, because most A.I.D. Bureaus are reluctant to become too involved with Peace Corps activities.

While you indicate good cooperation with Peter McPherson, himself a former Peace Corps Volunteer, what about problems with A.I.D. Bureaus and Bureau Heads?

Mrs. Ruppe: It is correct that good cooperation depends on good relations at the field level, since both Peace Corps' and A.I.D.'s project ideas come from the field, from people who see the needs first-hand. On the other hand, leadership from Washington is helpful in setting the tone for that cooperation, and nurturing it despite the inevitable problems associated with differing procedures, differing time frames and communications over long distances.

Each of my Regional Directors has an established relationship with his or her counterpart in A.I.D.. These relationships extend beyond the Directors down through the regional country desk staff. There are periodic formal contacts as well as numerous informal exchanges. There are no problems in dealing with A.I.D. bureau heads. Quite the contrary, we find that Peace Corps gets rapid and interested responses from the A.I.D. Geographic Bureaus.

## PEACE CORPS COUNTRY ENTRY

Senator Kasten: Does the Peace Corps have any difficulties going into certain countries? If so, which countries, and what are the problems?

Mrs. Ruppe: During the first few years of Peace Corps operations, entry into new countries was affected primarily by skepticism about the organization itself. General volunteer success in the early years erased most of this skepticism. Thus, over the last several years, new country entries have been related more to interest by the host government in having a Peace Corps program, ability of the host government to provide minimum support and protection for volunteers, and an interest by the host government in developing projects for volunteers that both meet Peace Corps' goals and use volunteers with recruitable skills.

For example: India shows little interest in having Peace Corps return to that country and Bangladesh, at the present time, is considered too unstable for a Peace Corps program. However, changing circumstances in Egypt make a potential program there now possible. Potential countries world-wide are reviewed regularly to determine whether or not any change in the situation would make an entry feasible, and plans are then made accordingly.

## PEACE CORPS PROGRAM IN BARBADOS

Senator Kasten: Would you tell us the make-up of the Peace Corps program in Barbados -- How many Volunteers do you have in that country?

Mrs. Ruppe: The Peace Corps office in Barbados is the headquarters for our program in the Eastern Caribbean. Currently, there are 161 Peace Corps Volunteers serving in various programs in the islands of Barbados, Anguilla, Antigua, Dominica, Carriacou, St. Kitts/Nevis, Montserrat, St. Lucia, and St. Vincent and the Grenadines.

The areas in which Peace Corps Volunteers provide assistance to the people of the Eastern Caribbean islands are the following: agricultural development, small business development, education, and health.

In agriculture, for example, because of the islands' excessive reliance on food imports, the cost of food items is very high. Volunteers assist Eastern Caribbean farmers in increasing food production by transferring skills in agronomy, horticulture, veterinary sciences, livestock care, home economy, food technology, and like areas.

In an effort to improve economic development in the Eastern Caribbean by transferring to individuals the skills necessary to participate more productively in the business economy, volunteers train cooperative specialists and small business owners in accounting marketing, sound business practices, and other such skills. Volunteers also work as vocational instructors and handicraft specialists. This program is directly related to President Reagan's Caribbean Basin Initiative.

The Peace Corps program in the Eastern Caribbean also addresses the problems of inadequate educational and health systems. Volunteers serve as secondary school teachers, special education teachers, educational administration specialists, vocational instructors, and health and nutrition educators.

In Barbados, in particular, approximately twenty Peace Corps Volunteers are working in all of the above areas. The remaining volunteers are distributed throughout the islands as follows: Anguilla (4), Antigua (23), Carriacou (1), Dominica (24), Montserrat (9), St. Kitts/Nevis (20), St. Lucia (25), St.Vincent/Grenadines (35).

Approximately twenty percent of the volunteers serving in the Eastern Caribbean are older American Volunteers.

## PEACE CORPS PROGRAM IN HAITI

Senator Kasten: In Haiti?

Mrs. Ruppe: Peace Corps has been conducting negotiations with Haiti since 1968. Although at various times during the early 1970s both Governments expressed interest in the establishment of a Peace Corps program in Haiti, and several Haitian and international organizations made specific requests for volunteers, the negotiations were unsuccessful. It was reported that President Duvalier's reactions to each proposal were either negative or noncommittal.

In March 1976, a draft country agreement between the United States and Haiti, constituting the basis for the Haitian government's formal request for a Peace Corps program, was drawn up and presented to the Haitian government. It was not signed, and the Government's failure to act was again ascribed to President Duvalier's negative feeling about having Peace Corps Volunteers in the country. In October 1976, the Haitian Ambassador to the United States indicated that lack of progress in formalization of the Peace Corps agreement with the Government of Haiti might have been due to fear that the Peace Corps would produce the same problems that an apparently poorly-planned volunteer program had created in Haiti some years before.

During the period 1977-1981, the Peace Corps Country Director for the Dominican Republic made several trips to Haiti to hold informal discussions with Haitian officials. These were intended to keep the issue of a Peace Corps program alive, and to ascertain if there was any change of attitude towards Peace Corps. In mid-1980 USAID/Haiti proposed to the Haitian government that a small group of Peace Corps Volunteer Civil Engineers work in conjunction with an AID-sponsored rural construction project. Discussions were held with the U.S. and Haitian Ambassadors and Haitian government officials, but again, the government of Haiti declined to act.

The current round of negotiations with Haiti began in July, 1981, when the U.S. Ambassador to Haiti, Ernest Preeg, met with Loret Miller Ruppe, Director of Peace Corps. Ambassador Preeg expressed interest in establishing a small Peace Corps program in Haiti. In September, Peace Corps Inter-American Region officials met with Haitian Ambassador Georges Lege, who also expressed interest in Peace Corps. Ambassador Lege indicated that he would discuss the matter with other officials of the Haitian Government.

In November, a Haitian delegation composed of Secretary of State for Planninng, Pierre Sam, Secretary of State for Interior, Edouard Berrouet, and Ambassador Lege met with Peace Corps officials. The possibility of a Peace Corps program was well-received and, shortly thereafter, at the suggestion of the Haitians, Peace Corps sent a team to Haiti to explore program possibilities.

In early 1982, a second draft country agreement was prepared, and approved by the U.S. Department of State, and submitted to Ambassador Preeg. Peace Corps officials planned a visit to Haiti in April to negotiate the country agreement. Late in March, Ambassador Preeg advised Peace Corps to cancel the trip because of changes in the Haitian Cabinet and expressed concerns on the part of the Haitians regarding their participation in the Caribbean Basin Initiative. It was felt that it would be advisable to await more opportune timing for presentation of the draft agreement.

At the end of April, Ambassador Preeg informed Peace Corps that the draft agreement had been submitted to the Government of Haiti. Preliminary responses were favorable and Peace Corps is now waiting final action by President Duvalier.

If the draft country agreement were approved, Peace Corps and the Government of Haiti would begin joint planning for a small Peace Corps program of perhaps ten or twelve volunteers. Areas in which Haitian Ministries have seen a potential need for Peace Corps Volunteers include agricultural development, reforestation, health, and water supply. Volunteers would assist in Ministry programs, as well as projects of private voluntary organizations which have been approved by the Haitian Ministries.

## PEACE CORPS ADVISORY COUNCIL

Senator Kasten: For the record, please provide a membership list of the Advisory Council.

Mrs. Ruppe: The Peace Corps Advisory Council was formed pursuant to Executive Orders 12137 and 12258; in Section 9C of the Federal Advisory Committee Act. The objectives of the Council are to advise the President and the Director of the Peace Corps on initiatives needed to promote the purposes of the Peace Corps Act and to assist in the implementation of such activities. Members serve at the pleasure of the President.

The Council reports to the Director of the Peace Corps. In addition, the Council will submit an Annual Report to the President through the Director of the Peace Corps. This report will set forth its recommendations and its activities. The Council is required to meet at least two times each calendar year. However, it may meet more often as needed. The Council will terminate on December 31, 1982, unless extended. However, it is our expectation that the President will in fact extend the Council.

The membership list is as follows:

ROBERT R. BARRY, 66, is President of Calicopa Corporation and resides in Woodside, California.

CAROL E. BELTON, 54, is Vice President, Special Marketing, for Tenneco Oil in Houston, Texas.

MAURICE L. BURKE, 58, is Owner of M.L. Burke Company in Union City, California.

RICHARD W. CARLSON, 41, is Senior Vice President of San Diego Savings and Loan in San Diego, California.

W. DEWEY CLOWER, 46, is President of Food Processing Machinery and Suppliers Association in Washington, D.C.

HOLLY COORS, 61, is active in Citizens for a New Beginning in Englewood, Colorado.

RAYMOND E. CROSS, 60, is President of Federal Chicago Corporation in Lake Forest, Illinois.

DON DE FORE, 68, is an actor in Los Angeles, California.

DIANA D.S. DENMAN, 48, is a Ranch and Farm Owner in San Antonio, Texas.

GEORGE K. GRAEBER, 66, is a business consultant with George Graeber Associates in Washington, D.C.

ALEXANDER HEYMEYER, 71, is Counsel with Isham, Lincoln, and Beale in Chicago, Illinois.

JOSEPHINE HONG, 82, is Chairman of the Chinese-American Republican National Federation in New York.

VAN DYCK HUBBARD, 71, is a retired Captain with the United States Coast Guard. He resides in Los Angeles, California.

ALF EDGAR JACOBSON, 57, is Professor, Department of Social and Behavioral Sciences, at Colby-Sawyer College in New London, New Hampshire.

DAVID L. JONES, 59, is President, D.L. Jones and Associates in New York, New York.

TONG JOON ANTHONY KIM, 47, is Chairman of the New York State Korean-American Republican Federation in Brooklyn, New York.

ROBERT P. LEMARR, 52, is with LeMarr Limited in Phoenix, Arizona.

MARIA MALOOLY, 43, is a Regional Political Director for the Republican National Committee. She resides in Shorewood, Minnesota.

PETER F. MCCLOSKEY, 47, is President of Electronic Industries Association in Washington, D.C.

MINDY MEIKELJOHN, 52, is Vice Chairman of the Republican Party of Colorado. She resides in Arvada, Colorado.

WILLIAM J. MOSHOFSKY, 58, was employed with Georgia-Pacific Corporation and resides in Portland, Oregon.

JOSEPH A. PLONSKI, 63, is owner of Plonski Agency in Jersey City, New Jersey.

MARGARET P. SCOTT, 63, has been active in Republican Party politics on national, state, and local levels for over 20 years. She is from Los Angeles, California.

EDWIN J. SIMCOX, 37, is Secretary of State, State of Indiana. He resides in Indianapolis, Indiana.

PAUL A. THIRY, 77, is President of Thiry Architects, Inc. in Seattle, Washington.

THOMAS N. TRIPP, 39, is an attorney in Gahanna, Ohio.

Additional as of March 29, 1982:

WILLIAM SADLIER - Salt Lake City, Utah

HARRY SOKOLOV - Beverly Hills, California

ESTELLE SOTIRHOS - New York City, New York

KITTY KIDD ROBINSON - Chicago, Illinois

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### PEACE CORPS BUDGET

Senator Inouye: In your prepared statement, you cite expressions of enthusiastic appreciation of the work of the Peace Corps from "President Moi of Kenya, Prime Minister Seaga of Jamaica, and many other high-ranking officials in countries where we have programs."

You also state that you have talked with "corporate executives and people well-versed in the field of international economics and development, and they, along with officials of A.I.D. and the Department of State, reiterate that the Peace Corps is one of the most cost-effective means of conveying America'a good will and assistance to the developing world."

In view of this overwhelming support of the Peace Corps, by officials in both the U.S. and foreign governments, how do you explain the proposed reduction in Peace Corps funding?

Mrs. Ruppe: We are, of course, gratified by the support we receive both at home and abroad. However, in view of the current economic situation, the need to reduce overall government spending and the critical needs of many other government programs, the President has made the decision to fund Peace Corps at $97.5 million in 1983. We support the President's decision.

Senator Inouye: You justify the proposed reduction of Peace Corps funding by stating, "It is essential to the success of the President's economic program that all of us trim back wherever possible, even small agencies such as the Peace Corps."

In view of the President's proposed $1 billion increase in International Security Assistance programs, do you really believe a $7.5 million reduction in Peace Corps funding is "Essential to the success of the President's economic program"?

Mrs. Ruppe: I don't believe I am qualified to determine which parts of the President's budget are essential and which are not. The President has responsibility for the entire Federal budget, whereas I am responsible for only one small part. I must assume that the President would not propose this reduction if it were not essential.

Senator Inouye: If the Congress were to approve the proposed $7.5 million reduction in Peace Corps funding, what would be the specific amount of the reduction in Washington Headquarters operations?

Mrs. Ruppe: Our current plans call for a reduction of about $1.6 million in Headquarters operations. Another million dollars will be generated by not repeating this year's vehicle purchase.

Senator Inouye: What specific reductions would be required in each of the other major budget categories?

Mrs. Ruppe: Planned reductions in Trainees and Volunteers are expected to generate savings of $2.5 million in training, $900 thousand in Recruitment and Placement, and $1.5 million in other costs.

Senator Inouye: In your statement, you note that the President's budget request for the Peace Corps represents a $7.5 million reduction from Fiscal Year 1982. That, I assume, is the nominal reduction.

Mrs. Ruppe: That is correct.

Senator Inouye: If the Congress determined it to be in U.S. national interests to continue, in real terms, the level of support provided to Peace Corps activities in Fiscal Year 1982, how much would be required for appropriation in Fiscal Year 1983?

Does this amount provide for increases in overseas costs due to inflation in host countries? Does this amount provide for increases in costs resulting from U.S. inflation? Does this amount incorporate any assumed cost savings as a result of management actions you have taken or propose to take? If so, please identify those savings.

Mrs. Ruppe: Our internal estimates are that it would cost about $109 million to maintain our current program levels in 1983. This amount includes allowances for both domestic and overseas inflation. It also presumes savings of $700 thousand due to streamlining of those functions transferred from ACTION as a result of separation.

I am compelled to point out that this estimate does not in any way constitutue an appropriation request. The President has made a determination that the appropriate level for the Peace Corps for 1983 is $97.5 million. I fully support that determination as do other Peace Corps officials. We are working hard to ensure that we have the best possible Peace Corps that our budget will buy.

## NEW COUNTRY ENTRY

Senator Inouye: You note that the Peace Corps does not anticipate that it will have to depart from any country in FY 1983.

Under the budget proposed by the President, will the Peace Corps find it necessary to defer entry into any countries which have requested programs? If so, please identify those countries.

Mrs. Ruppe: Under current planning, Peace Corps will be able to enter those countries that have specifically requested programs. Peace Corps' ability to enter new countries at this point is related more to individual country relationships than to the budget.

## FIELDING PEACE CORPS VOLUNTEERS THROUGH PVOs

Senator Inouye: You have indicated that the Peace Corps is investigating the possibilities for fielding Peace Corps Volunteers directly through Private and Voluntary Organizations.

How will you ensure that the Peace Corps and its volunteers retain a distinct identity in this relationship? Is it not possible that the Peace Corps will come to be regarded as nothing more than a clearinghouse for volunteers to work in AID or PVO projects?

Mrs. Ruppe: We are not concerned that Peace Corps will lose its institutional identity through its relationship with Private and Voluntary Organizations. Since its creation by Congress, Peace Corps has not only served as a generic term for an institution, but its name has equally represented a new idea and spirit in American international cooperation. Peace Corps, as both an institution and as an idea, has stood for our country's commitment to help promote a better understanding of the American people and to help other countries meet their needs for trained manpower.

Through the historic Peace Corps Act of 1961, Congress established Peace Corps as both an institution and a process to help promote world peace, friendship and understanding by making available to interested countries men and women of the United States qualified for service abroad in development activities.

Since the first days of operations, volunteers have served in Private and Voluntary Organizations in almost every country that has hosted Peace Corps. Those countries that have requested American volunteers to serve with PVOs have always been completely aware that the individuals were representatives of the institution, Peace Corps, but more importantly, were representatives of the United States. Similarly, the volunteers assigned to PVOs were always trained by the Peace Corps. Consequently all Peace Corps Volunteers maintained a distinct identity as a result of the training experience.

The expansion of the PVO program in no way alters the basic Congressional purpose of the historic 1961 Peace Corps Act which is to make available to interested countries and areas men and women of the United States qualified for service abroad.

## FORWARD PLAN

Senator Inouye: Your statement discusses at length what is called a "Major Forward Planning Process." I am, however, uncertain what is meant by this term. Would you provide a synopsis of this process?

Mrs. Ruppe: The Peace Corps Forward Plan is a strategy document and process which was designed to identify and develop the priority initiatives of the Peace Corps for the next three years (FY 83-85). It was conceived as a mechanism to facilitate the incorporation of the Director's and the Administration's programmatic and management initiatives into the Peace Corps planning process while at the same time enlisting broad-based participation among senior staff in the development of such policy.

The Plan includes broad philosophical discussions of nine major initiatives of the Peace Corps and sets within that broad framework specific short term initiatives with specific milestones identified and project managers assigned. The Forward Plan will provide the framework for the preliminary budget, the legislative agenda, and as a result, the agency's programming system. It is envisioned that the Plan will be a flexible document and will at minimum be assessed and revised on an annual basis.

The process of developing the Peace Corps Forward Plan involved the assignment of the nine initiatives to one or more of the Associate Director's staffs. The Associate Directors for Management and for Recruitment and Placement took the lead on three of the nine while the Operations staff likewise addressed three and the remaining three were jointly addressed. The initiatives which were developed by the respective staffs included the following steps:

(1) Identification of the problem including a discussion of the background, the relevant priority of need, steps taken in the past and constraints;

(2) Development of alternatives including a discussion of costs and benefits, both tangible and intangible; and

(3) Recommendation of alternatives with specific short

term objectives including assignments of project managers and milestone completion dates.

Once developed, the initiatives were exchanged between the staffs and critiqued. Joint teams were established to make final revisions and to present the initiatives to the Director and senior staff for discussion. Following the discussions, the Director made specific policy decisions which were reflected in policy guidance which was sent out to the field as well as to headquarters offices for each to use in developing their FY83 plans.

Senator Inouye: How will the Forward Planning process promote the development of free-market mechanisms? As an example of how this process is to function, please demonstrate how it will help the Private Sector Development Office "encourage joint participation in some of our projects".

Mrs. Ruppe: The Forward Planning process will facilitate Peace Corps' promotion of free market mechanisms because one of the initiatives we developed specifically addressed this issue. As you can see from the initiative statement shown below, Peace Corps has brought the experience and creativity of its senior staff to see how it can best help (at the individual and community level) third world countries move toward free market economic approaches.

In further detailed response to your question, copies of Forward Plan Initiatives 4 and 5 follow:

## INITIATIVE 4

Initiative: Expand mutually beneficial and appropriate relationships, including joint programs, with other public and private sector organizations (including international organizations) in the United States and in developing countries.

Preface: The review team assigned to this initiative proposes that its wording be modified to reflect the fact a number of relationships between the Peace Corps and the private sector already exist and that the goal therefore is to expand, rather than develop such relationships. The team also proposes that the goal be focused on "mutually beneficial and appropriate relationships, including joint programs" rather than on "joint programs which build" such relationships.

This paper provides an outline of Peace Corps's current public and private sector relationships, most of which (as the paper points out) have been built at the country-level. The paper also outlines the major types of constraints and risks of initiatives in this area, noting that actual constraints will range considerably depending on the type of relationship and the number and type of organizations involved.

Finally, the paper presents seven alternative approaches to develop public and private sector relationships. The alternatives are not mutually exclusive, but the team in no way suggests that all be implemented at the same time.

The team does recommend, however, that special consideration be given to the idea of focusing development of relationships with private sector profit-making organizations in the United States at least initially.

While the team has proposed some specific objectives and milestones under each alternative, these are intended to serve as examples and/or starting points from which the Project Manager would develop a more specific plan for subsequent review by Senior Staff and approval by the Director.

Issue Identification: A major challenge in most endeavors is making the most effective use possible of limited resources. This is especially true for organizations like the Peace Corps whose principal resources are its positive image and reputation in the United States and overseas, the voluntary services of individual Americans, the financial support of the American taxpayer, and the cooperation and support of the people of countries whom the volunteers seek to serve.

One of the most effective ways to make the most of limited resources is to collaborate with others who share a common interest through mutually beneficial and appropriate relationships, including joint programs. Over the past twenty years, the Peace Corps has developed a wide variety of such relationships, primarily with private voluntary organizations (e.g. CARE, Oxfam, etc.) and public sector development assistance agencies (e.g. USAID, WHO, etc.). Most of these relationships have been built through the local programming activities of Peace Corps staff in individual host countries.

In recent years, Peace Corps has entered into several joint programs through agreements negotiated at the headquarters level. Several inter-agency agreements (Participating Agency Service Agreements or PASAs) have been made with the U.S. Agency for International Development. These PASAs generally have grown from U.S. AID's need for assistance in implementing its programs at the grass-roots level where volunteers work and Peace Corps' need to ensure that the projects in which volunteers work have the necessary technical and financial support. U.S. AID has thus provided support for the development of Peace Corps programming and trainng capacity in several areas of common interest.

Peace Corps has also begun to negotiate a few other agreements (principally with private voluntary organizations or PVOs) which open opportunities for volunteers to work in countries where Peace Corps does not have established programs. Collaborating agencies assume responsibility for many of the in-country volunteer costs and program support (staff) functions which are normally the responsibility of the Peace Corps, and volunteers are assigned to work in collaborating agency projects which meet Peace Corps programming criteria. One such agreement is being negotiated now for volunteers to work in Haiti.

The Peace Corps has entered into very few, if any, joint programs with public or private sector organizations in the United States (where until recently its recruitment, public information and Returned Volunteer programs have been administered by ACTION), nor has Peace Corp pursued collaborative relationships with profit-making organizations in the private sector overseas.

In an era of increasing emphasis and reliance on private sector development initiatives, of increasingly limited prospects for greater federal funding, and of increasing need for higher visibility in the United States, for more effective domestic and overseas programs, and for higher visibility in the United States, the challenge facing the Peace Corps is to expand mutually beneficial and appropriate relationships, including joint programs, with other public private sector organizations (including international organizations) in the United States and developing countries.

Constraints and Risks

The specific constraints and risks in developing relationships with public or private sector organizations vary depending upon the type of relationship envisioned and the number and type of organizations involved. However, several overall constraints and risks involved in expanding such relationships can be identified:

1. Organizational priorities/interests/purposes: Relationships, and especially joint programs, will of necessity be limited to those areas where enough commonality of priority, interest and purpose exist to make the relationships and objectives mutually beneficial and acceptable.

2. Organizational capabilities: In expanding public and private sector relationships, including joint programs, Peace Corps is constrained by its own institutional capacity (and that of the other organizations) to explore, negotiate, coordinate and effect agreements. Each organization has its own legal authorities, established procedures and time frames for action, with varying degrees of flexibility for each. Equally and, in some cases, more significant are the resource (staff and funding) constraints on an organization's capacity to get joint programs started.

3. Organizational policies/image: Relationship will also be constrained by organizational policies regarding associations that, for any variety of reasons, may not be in the organization's overall best interest. Certainly Peace Corps, for example, would not involve itself with any other organization identified, either in fact or by reputation, with intelligence activities. We would also not want to involve ourselves with any other organization whose activities, reputation, or image is such that association with it might damage our reputation or credibility either in the U.S. or, especially, overseas.

ALTERNATIVES

1. Complete a review of current joint programming overseas.

   Time: 6 months (Aug. 1982) to be completed as part of the review of country specific strategies in May.

Project Manager: Associate Director/Operations [Chief of Operations for each Region to prepare regional reports. Follow-up with Office of Private Sector Development and OPD.]

Objectives:

Identify all current collaborative projects, country-by-country (includes private profit, non-profit, AID, PVOs) - (May 1982).

Summarize projects by type of collaboration (June 1982).

Compare results with material already available in Peace Corps (May-June 1982).

Identify which projects are replicable in other places (July 1982).

Make information available throughout agency (Aug. 1982).

2. Enhance opportunities for continued and expanded Peace Corps/ AID collaboration.

Time: One year and beyond.

Project Manager: Director, Office of Program Development.

Objectives:

Begin half yearly meetings between Associate Director and high-level AID personnel to review current projects, including implementation problems, possible new initiatives and time frames for the initiatives. Communicate summary of meetings to field. (Begin March 1982)

Continue and enhance PASA agreement opportunities, including further development of sector specialists, their training, and the training of in-country staff. (Monthly AID Meetings)

Set revised goal for number of new AID/PC projects to be begun by end of FY 83. (September 1982)

Assign PCVs to AID sponsored project in-country where no Peace Corps program exists. (March 1983)

Negotiate and have a system in place whereby AID funds all Volunteer support for those Volunteers working in one AID collaborative project (Oman). (End of March 1983)

3. Identify other federal agencies with activities in the developing world and review opportunities for joint collaboration.

Time: 4 months and beyond.

Project Manager: Director, OPD.

Objectives:

Review status report on joint programming (prepared after Country narrative Strategy review) to determine current collaborative efforts. (June 1982)

Beginning with State Department, identify government groups with projects in developing world. (July 1982)

Contact each organization to: (a) describe current collaborative projects; (b) review briefly what Peace Corps does; and (c) begin discussion on potential areas of collaboration. (final quarter of FY 82)

As areas of interest begin to emerge, bring in desk and regional units to expand details. Send summaries of meetings to the field. (first two quarters of FY 83)

Begin two new joint programming efforts during FY 83, to be identified with more specific plans by October, 1982.

4. Undertake joint programming arrangements with a Private Voluntary Organization.

Time: One year.

Project: MLP Coordinator in OPD.

Objectives:

Identify current joint programming with PVO's if any. This can be done partly through results of report already mentioned. (June 1982)

Review results of letters sent to PVO's in October, concerning initiating Peace Corps projects through their organizations. (April 1982)

Review history of any such activity in the past. (April-May 1982)

If letters have been unsuccessful to date, review reasons by contacting some PVO's directly. (May 1982)

Review ways PVO's can be involved with Peace Corps other than those outlined in October letter. (April-May 1982)

Decide on two joint PVO projects to begin during FY 1983. (September 1983, after having series of meetings with heads of PVOs.)

5. Build opportunities for joint collaboration with the U.S. private sector through private sector activity in the United States.

Time: One year and beyond.

Project Manager: Office of Private Sector Development

A. Identify three firms which could provide technical support and assistance (full or part-time) to the sector specialists in OPD.

Discuss types of technical support needed for expansion with sector specialists. (April 1982)

Identify firms that have the types of expertise needed. (May - July 1982)

Contract firms for donation of required expertise. (Aug - Sept 1982)

B. Identify firms that can provide and donate technical expertise to stateside pre-service training programs (such as diesel mechanics, boat building, appropriate technology).

1. Discuss with Desks types of technical assistance needed that might not be covered in stateside contract or could supplement contract. (April or beyond)
2. Make contact with firms with required expertise. (May 1982)
3. Solicit support, both people with technical skills and equipment for training (engines, boats, etc.). (July - Sept 1982)

C. Identify firms that can provide and donate technical expertise to overseas Pre-Service and In-Service training programs. Same as above, except that firm would also furnish transportation for person(s) going overseas.

D. Identify private sector U.S. firms that can provide appropriate resources for host country projects on which volunteers are involved.

With desk and regional units, review specific ongoing or proposed projects which have been identified as priority projects for countries, particularly projects that cannot be started or continued because of lack of resources (cement or iron for wells, materials for school building, seeds of garden projects, etc.) (Spring 1982)

Select those projects that are most likely to be fundable, prioritize list. (Summer 1982)

Identify firms with resource potential that matches needs. (Fall 1982)

Build solicitation (?) campaign to these firms. Contributions would not be to Peace Corps, but would be to the country directly or to Peace Corps Partnership.

6. Build opportunities for joint collaboration with the private sector through private sector activity overseas.

Time: One year and beyond.

Project Manager: Office of Private Sector Development.

Objectives:

Identify potential firms working in Peace Corps countries that might donate in-kind resources for projects.

7. Focus private sector initiatives in the United States on relationships and joint programs which enhance recruitment and public awareness.

Project Manager: Director of Recruitment

Objectives:

A. Detailed 2-year strategy proposal for Director's review and approval submitted. (May 1)

B. Approved strategy reflected in FY 83 proposed management plans of all involved offices. (July 1)

Target organizations for strategy and plan:

1. Associations willing to support and publicize need for Peace Corps and for private sector support.

2. Organizations willing to support or participate in experimental programs aimed at increasing effectiveness of Peace Corps recruitment and public awareness efforts: (e.g. loan/provision of mailing lists, air time, facilities, equipment, technical assistance, etc.).

3. Employers willing to implement and publicize employment policies which:

   (a) Encourage Peace Corps volunteers or staff service by employees (leaves of absence, loaned staff, etc.);

   (b) Encourage employment of RPCV's (active recruitment program, etc.); and

   (c) Encourage continuing education of RPCV's (provision of scholarships, work/study programs, etc.).

4. Educational institutions willing to:

   (a) Grant credit for Peace Corps service;

   (b) Provide technical assistance to volunteers or staff in particular specialized areas;

   (c) Provide fellowships/scholarships for RPCV's; and

   (d) Assist in other ways.

## INITIATIVE 5

### Background

1) Historically two policies have contributed to the retardation of the pace of development in Peace Corps countries. There are a lack of use of free market mechanisms and a lack of local initiative in the planning execution of development projects.

2) Recently market-based policies have been advocated by the World Bank (particularly in Agriculture and Energy). The growth rate of GNP in countries like Korea, Singapore, Ivory Coast and Brazil has made market-based policies more attractive to many countries of the developing world. Therefore, there is a new emphasis on the use of free market mechanisms among some countries.

### Impact on Peace Corps and Past Attempts to Address Problem

1) Neither the use of free market mechanisms nor the use of local initiative are new to Peace Corps Projects.

2) In FY 81 Peace Corps assigned 209 trainees, recruited from four skill cluster assignment areas (Agricultural Economics, Business Management, Cooperatives and Accounting) to provide market economic skills.

3) In Agriculture projects, like Fisheries and vegetable production, Peace Corps has generated new economic activities and market possibilities.

4) The use of local initiative in the project planning and execution process is more the modus operand at Peace Corps than any other U.S. Development Agency; this has been the main raison d'etre for PASA's with USAID.

### Goal of Solution

Increase the functioning of free market mechanisms and increase local initiative in Peace Corps' projects.

Constraints which influence solutions are:

1) In some Peace Corps countries the level of direct active government planning and participation will make the adoption of free market mechanism and market-oriented projects difficult.

2) The use of free market mechanisms and local initiative must be adapted to traditional socioeconomic systems of the host countries.

Other factors which affect alternative solution and its implementation.

1) Projects should be geared to affect microeconomics operations.

2) Project emphasis should take into account local skills and traditions, the roles of the sexes, and the use of community development skills.

3) There is a need to adapt training to new projects with an emphasis on non-formal education materials development.

Recommended Alternatives.

See main body for recommended alternatives.

1. PROBLEM:

There is a lack of functioning of free market mechanisms and of the use of local initiatives in the developing world.

2. BACKGROUND TO PROBLEM:

In the past 30 years many people in the developing world have questioned the pace and direction of development within their countries. This questioning has included a questioning of direct foreign investment, and the examples of individual participation and local initiative in the development process. As Americans we share a past reflective of the common struggle of human existance as recorded through history; Americans have risen from poverty by incremental growth and development. As a nation, Americans made use of new inventions, new methods, and new ideas to help develop its resources and its economy. This rapid and successful development was made possible by the emergence of political-economic beliefs in democratic capitalism--an adherence to market-oriented output, a trust in economic liberty, and democratic participation to unlock the human potential from which production growth, and development flow. We have linked personal initiative and local participation with economic reward.

A questioning of the examples of the developing world was made possible by the availability of alternative sources of capital, technology, managerial talent and entrepreneurship for achieving economic diversification and growth. Alternate sources for some of the necessary inputs to growth and development were made possible by the creation of the World Bank, International Monetary Fund and direct bilaterial aid. Although these sources were highly successful at reestablishing the economies of Europe at the end of WWII (the reason for their creation), they were injected into systems which were based on principles of market-oriented capitalism and principles of participation as defined by democracy. The decisions of social investment were determined by these principles. Often in the developing world decisions of social investment are determined by central governments, in top-down planning process. Therefore, the infusion of development capital and other resources has proceeded with little regard for the actual desires and needs of local areas; or with little regard for local initiative.

As former colonies became developing nation-states they gained control over their economic relations and operations. The exercise of this control, the form it took, and the extent to which it lead to growth and development was in many ways dependent upon the level and type of government intervention or participation in the economy to give it direction. Too often in the developing world government participation has retarded incentives for people to produce, save, invest, and profit from legitimate risks and increase in labor productivity. From a macro perspective this has lead to economics which lack growth and development. It has also lead to economics unable to fully participate in the increasingly interdependent world economy of international trade. Therefore many of the benefits of international trade have also eluded these developing economics. From a micro perspective some forms of government participaiton have retarded the development of economic activists, entreprenuers with the necessary skills and incentives to try new methods and take new risks to increase productivity. Increasingly there are efforts among developing countries to include aspects of free market mechanisms in their economies.

## 3. IMPACT ON AGENCY:

The desire to increase the functioning of free market mechanisms and increase local initiatives has an effect on the content of Peace Corps programs in all sectors. This desire should lead to a somewhat different composition of programs, and a different emphasis within current programs. Program objectives should place less emphasis on the completion of physical aspects of projects (i.e., building roads or water projects, and delivering medicines) and concentrate more on helping people to attain capacity (i.e. training host country nationals how to build roads and water systems, and how to locally develop community health systems.). In agriculture the desire to increase functioning of free market mechanisms is intended to provide through market determined prices the incentives for, and lead to a self-sustained agricultural system by directly compensating farmers with increased income for socially desired production.

## 4. PAST ATTEMPTS TO ADDRESS PROBLEM:

Peace Corps is neither a stranger to the provision of market skills nor to institution and/or capacity building based on local initiative.

Peace Corps, with its unique developmental philosophy of grass-roots, human, people-to-people approach to unlocking potential, has been recognized for its volunteers' contribution to activating men and women to think new ideas, try new methods, and reduce material suffering. The use of local initiative is more the modus operandi at Peace Corps than any other U.S. Development agency; and therefore, the raison d'etre for PASA's with USAID.

Past activities to redress the lack of functioning of market mechanisms have been concentrated in assistance to small business enterprises and in agriculture sector activities. Currently Peace Corps has volunteers recruited from four skill cluster assignment areas (agricultural economics, business management, cooperatives, and accounting) involved in providing business skills consistant with the use of market principles. These skills, needed to develop economic activists, are necessary to extend the marketing infrastructure (making use of the functional approach to the provision of goods and services which includes physical functions, marketing functions, and facilitating functions, the area of Peace Corps' increased concern concentrates on marketing and facilitating functions.) Areas of Peace Corps programming range from cottage industries and general stores to the production and marketing of handicrafts. Most programs of this type are rural based and related closely to rural/agricultural activities. Most are aimed at supplying goods and services to farmers and farm families.

In agriculture, Peace Corps cooperative programs may take the form of processing cooperatives, rural supply cooperatives, marketing cooperatives, and transportation cooperatives. Projects have also been undertaken which work with women on aspects of agricultural processing and marketing. Within the agricultural sector the goals of the sector have been redefined to place less emphasis of the physical function of crop or animal production and place greater emphasis on the physical function of storage and aspects of marketing.

In Fisheries programs, Peace Corps has consistently emphasized the importance of capacity-building objectives, (i.e., the development of more highly skilled fishermen and fish farmers). This contrasts with many development fisheries projects over the last two decades which have devoted their efforts to production goals such as maximizing kilograms/hectare/year; and to constructing large government fish culture stations. The key factors in Peace Corps' success in fisheries has been the intensity of the extension effort around profit incentive, independence of the fishermen/farmers, and the simplicity of the technology.

With some exceptions, Peace Corps Fisheries programs have not strongly emphasized marketing aspects. Geographically close, immediate demand for fish has been so high relative to supply that most of the effort has been logically aimed at improving people's ability to produce fish. Marketing will become a higher priority when significant bottlenecks develop because of needs to process and transport fish.

Village and community level projects in health and nutrition attempt to include the active participation of community representatives in the planning implementation and evaluation of projects. This involvement preferably can be realized through existing community, organizations. Where these are ineffective or insufficient, new ones (e.g. village health committees) might be organized. The goal is to build local capacities to deal with community health problems and to develop programs related to the needs identified by the community. Projects would include for example:

- training traditional healers or local volunteers to deliver primary health care;

- vegetable gardening and food preservation to supplement the diet, and marketing to generate additional income (often for the community health project);
- mother's classes to promote better health and nutrition awareness;
- community-based nutrition rehabilitation centers where preschoolers can be periodically weighed, and given supplementary food prepared by the mothers; and
- school-based nutrition and health activities.

Volunteers working in the area of energy have been focusing on developing prototypes for a number of technological interventions and training local artisians in the construction, operation and maintenance of such systems. Successful examples of such work are in the areas of hydrams for irrigation or village water supply, solar food dryers, and improved cookstoves. The most noteworthy example is with cookstoves in Senegal where one volunteer has trained Senegalese masons and other PCV's and government agriculture extension workers in the art of construction. Thousands of stoves have already been built in a number of villages scattered throughout the country.

There is an increasing emphasis and commitment by the Water/Sanitation sector to encourage trainees and volunteers to be trainers of counterparts and villagers who are involved with Water/Sanitation programs. The role of the volunteer as a trainer, passing his/her skills to counterparts, is gaining greater attention in the design and conduct of the technical training programs.

In Forestry and Natural Resource projects, Peace Corps strives to enable rural people to achieve a greater degree of self-reliance in meeting their needs for wood, water, and fertile soil. To develop this capability, PCV's live at their work site and implement projects that use local labor and appropriate technology.

More specifically, PCV's help establish village woodlots that supply building materials and fuelwood. Volunteers work as forestry extension agents, introducing soil conservation techniques that preserve or improve soil fertility and maintain a regular supply of potable water for a community.

The outputs from Peace Corps forestry and natural resource projects are often commercially viable. Farmers can plant fast growing species of trees that within one or two years can be used for fuelwood or poles for construction. There is a consistently strong market for these products throughout the developing world. Tree seedlings grown in small nurseries can also be a source of income for farmers and rural people. Although Peace Corps generally tries to increase production of a commodity, one exception is the introduction of more fuel efficient wood-burning stoves by PCVs in many countries. Yet, while reducing consumption of one commodity, the stoves themselves have become a marketable item for enterprising villagers. By developing projects that clearly satisfy a local need, Peace Corps Forestry enhances a community's independence and enterprise.

Within the education sector Peace Corps Volunteers are engaged in both income generation projects, making use of market principles and projects to increase local initiative through a variety of secondary projects. For example: market-oriented projects exist in the areas of school gardens and more importantly small animal husbandry; and secondary projects making use of local initiative exist in the areas of health, energy, and water and sanitation.

5. GOAL OF SOLUTION:

Increase the functioning of free market mechanisms and increase local initiative in Peace Corps' projects.

6. RELATIVE PRIORITY OF NEED:

Since the administration's emphasis will be on the importance of market-oriented policies and the development and strengthening of local initiative, the addressing of this problem should be of the highest priority.

7. CONSTRAINTS WHICH INFLUENCE SOLUTIONS:

The two major constraints to increasing the functioning of free market mechanisms are external to the Peace Corps programming system. The first constraint is generated by the political economic relationships established by some host countries. As mentioned above all economics include some type of government participation. Government participation is abstracted into two models. The first model is distinguished by the market mechanism determining prices and levels of output, and allocating resources between various sectors of the economy. Here, government participation is indirect active. The government, as administrator of the economic system provides a general climate within which the economy can grow and develop (i.e., the government does things like control the money supply). The government also can provide incentives or can place constraints on both private and public sectors which can make that economy's growth more consistent with development goals. In the second model, the centrally planned economy, the government controls and allocates resources to productive ends. This is accomplished not on the basis of supply, demand, and price; but in relation to targets as dictated by a centrally conceived plan which reflects the governments desires for levels and types of distribution, and consumption of goods and service produced by the society. This is called direct active participation by government. Most countries within which Peace Corps operates are in reality mixed economies and have adopted modes of operation which are a compromise between government direct and indirect active participation. The closer this compromise is to the use of the free market model, the more appropriate Peace Corps' desire to increase market mechanisms and local initiatives will be; also the more receptive these countries will be to Peace Corps new program directions.

The second constraint is generated by the socioeconomic systems traditional to some host countries. Concepts of wealth, profit, capital, savings and economic investment are different from those Adam Smith envisioned. Also, there are differences in beliefs of the social sharing of skills, responsibility, and returns to investment. To the extent that increasing the use of free market mechanisms is dependent upon shared socioeconomic beliefs, this increase will be slow in some Peace Corps countries and projects.

8. OTHER FACTORS WHICH AFFECT ALTERNATIVE SOLUTIONS AND THEIR IMPLEMENTATION:

1) Because Peace Corps is not a financial donor organization, we can have little impact on macroeconomic planning. However, we can impact microeconomic operations.

2) Project emphasis should take into account local skills and traditions. Local initiatives should build on local organizing and operating principles.

3) Projects must be aware of the roles of the sexes and how proposals affect these roles.

4) Projects suggest a move from specific skills to community development skills with different characteristics for recruitment and selection.

5) There will be a need to adapt core curriculum, inservice and preservice training.

6) There must be development of simple ways of presenting materials and concepts without reading and writing (Non-Formal Education use of pictures and color codes to maintain projects).

9. RECOMMENDED ALTERNATIVES

Alternative #1: Increased Use of Local Initiative.

Because Peace Corps is currently in the vanguard in designing and implementing projects which instill and make use of local initiative no recommendations are being made for any change.

Alternative #2: Increased Use of Free Market Mechanisms.

The primary goal is to develop volunteer programs geared to the free enterprise system and open markets enhancing the capacity of Peace Corps to train and program at the grass-roots level to increase the understanding, operation, and implementation of economic activities and enterprises which make use of free market mechanisms. This alternative has three main objectives; two sector specific and one geographically specific.

Objective #1:

Increase the number of volunteers to work with emerging economic activities and forms of organization by enhancing the capacity of Peace Corps to program and train in the area of small scale enterprise and cooperative development operating with the use of free market mechanisms.

Tasks would include:

A. An ability to increase small business enterprise and cooperatives programs worldwide, and adapt these programs to a variety of development situations. Management systems affected include: Recruitment Programming, Assessment and Tracking System.

B. An ability to better train in community analysis skills and the adaption of those skills to a variety of settings and differing stages in the use of market economic principles. Peace Corps currently has some useful information on this area. There is a cooperatives resource packet developed and used by I.C.E. PC/Columbia developed an accounting system for small business.

The objective would most likely require the development of a sector to handle Small Scale Enterprise and Cooperative development. Such a sector (composed of a sector specialist supported by an assistant and secretary) would have first year outputs of: development of a programming manual; programming 3 countries in each region; conducting in-service training for 9 countries; and the preliminary development of a training manual. The second year would involve programming 9 more countries; in-service training; and completion of a training manual. Estimated budget for two years is:

PROPOSED 2 YEAR BUDGET

| | |
|---|---|
| Personnel Salaries and Benefits | 174,800 |
| 1st Year Programming, and Program Manual Development | 82,500 |
| 2nd Year Programming | 29,500 |
| Development of Training Manual | 95,000 |
| In-Service Training Workshops | 405,000 |
| Recruitment Efforts | 100,000 |
| TOTAL | 886,800 |

The establishment and support of such a sector should be of interest to the U.S. Chamber of Commerce. A decision is necessary on which responsibilities would rest with private sector coordination and which would rest with OPD.

Objective #2:

Increase volunteer strength in agricultural sub-sectors which improve the ability of farming populations to take advantage of market-oriented production opportunities by enhancing the capacity of Peace Corps to program and train volunteers for Post Harvest sub-sectors of the agricultural system. The extension of market-oriented policies is dependent upon the following tasks:

A. Analysis on a country-by-country basis to determine the extent of market-oriented production opportunities and current organizations and institutions involved with the marketing of food crops. This in-country data collection could rely on primary work done by USAID, UNDP, FAO, World Bank and host country ministries and requires no additional resource costs.

B. Increase in Peace Corps ability to work in the area of storage by enhancing Peace Corps capacity to program and train in aspect of storage. It is necessary to develop a program criteria document. Currently Peace Corps is attempting to coordinate training activities with USAID to make use of contracts with Kansas State University (who has already trained volunteers in storage for Tanzania), and the University of Idaho. The estimated cost of this training was $45,615; without use of USAID's Kansas State contract, this training program would have cost Peace Corps approximately $65,000. There is a possibility to establish an S.S.T. for approximately 30T's per year in grain storage. Besides a training capability, Kansas State through USAID could in the future also provide some needed expertise in the field to assist with in-service training and programming. Kansas State University has also drafted a training manual.

C. Increase Peace Corps ability to work in the area of marketing functions by enhancing Peace Corps capacity to program and train volunteers in market relations.

D. Increase Peace Corps ability to work in the area of facilitating functions such as credit and market information, and grades and standards by enhancing Peace Corps capacity to program and train in the area of facilitating functions.

Tasks C and D require the development of Program Criteria Documentation. Assistance to the field for program development if carried out by PSCs would cost approximately $10,000 per person/month. It would also be necessary to establish a S.S.T., in-country, or third country training capability. It may also be possible to coordinate some of these activities with USAID.

Note on Objective #2

Currently, most of the volunteers in the agriculture sector are concentrated in the productive sub-sector. This has improved farmers' abilities to produce more agricultural produce. However, very little has been done to assist farmers in other sub-sectors which would enable them to take advantage of market opportunities which have merged because of increased needs for food in urban places. Most countries within which Peace Corps operates have done little to make use of market principles in the disposition of surplus food from rural areas. This has been the greatest factor in retarding self-sustaining agricultural system in these countries. It is worth noting that food marketing is an area where the constraints pointed out earlier may have an effect. Urban populations are often an important target group for politicians and therefore prices are often kept artificially low to minimize urban bills. State Corporations also abound in agricultural sectors.

Objective #3:

Increase the functioning of market mechanisms at the geographical point critical to providing economic incentives to farmers, and farm families, and nonfarm agriculturally related enterprises by enhancing Peace Corps capacity to program and train volunteers to be located in secondary cities (market towns).

This objective is geographic and therefore provides a geographical focus to tasks mentioned elsewhere. One new task is:

A. The development of projects which assist regional planning efforts within Host Countries where trained personnel are in short supply. There may be some coordination possibilities with USAID, Office of Urban Development.

Note on Objective #3

Secondary cities (market towns) have emerged as very important to the economic well-being of rural residents; and it is the most important geographical location for market mechanisms to be understood and implemented. From an economic functional view, this is the most important location for marketing functions to take place. This is true both for farm production moving from urban market (amassing bulk) and for manufactured and imported goods moving from urban areas to rural residents (breaking bulk). Secondary cities are also important focuses for two other reasons. First, they are areas where, as labor specialization increases, farm families obtain an increasing level of services. Also, as rural to urban migration patterns have shifted, secondary cities have become areas where population growth of currently under employed rural residents is taking place. Therefore, since they are important areas for the marketing of goods and services; as well as areas where employment opportunities exist, and areas with a need to generate employable skills, secondary cities are necessary focuses for programs of income generation involving the market mechanism.

## RECRUITMENT/COST BENEFIT

Senator Inouye: With reference to the number of volunteers serving overseas, you have stated, "We have chosen to emphasize quality over quantity."

I think this is a laudable goal, but I am curious as to how you can, given this emphasis, "Apply a cost-benefit analysis to all recruitment activities." Can you explain?

Mrs. Ruppe: The budgetary constraints which face the Peace Corps require that we review all our activities to assure that we are investing our funds only in those processes which are most productive. In the recruitment area this means a review, campaign by campaign, of where we are having the highest degree of success -- in terms of generating recruits -- and a weeding-out of those activities that are planned "because they've been done every year" which are less productive. Under no circumstances will we jeopardize quality over quantity in this process.

## CONCLUDING REMARKS

Senator Kasten. I would like to say thank you for the job you are doing. We enjoyed working with you last year, and we were happy to get a bill passed last year. We are happy to make the kind of progress that we are making.

I congratulate you for the job you are doing, and we want to work with you particularly, and I personally would like to work with you in any way on this private sector effort. I am very interested in that, and I think this is clearly the way to go for a number of the reasons which you discussed.

If we as a subcommittee could be of help in that area in particular, we would like very much to do it.

So the record of this hearing will remain open for 2 weeks in order that members of the subcommittee may submit questions for the record.

## SUBCOMMITTEE RECESS

The subcommittee will now stand in recess until Thursday, April 29, at which time we will hear testimony from Under Secretary of State Buckley on the administration's fiscal 1983 budget request for their international security assistance program.

Thank you.

[Whereupon, at 3:10 p.m., Tuesday, April 27, the subcommittee was recessed to reconvene on Thursday, April 29.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

THURSDAY, APRIL 29, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 3 p.m., in room 1223, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman), presiding.

Present: Senators Kasten, Inouye, and Leahy.

## DEPARTMENT OF STATE

### SECURITY ASSISTANCE, SCIENCE AND TECHNOLOGY

### STATEMENT OF HON. JAMES L. BUCKLEY, UNDER SECRETARY OF STATE FOR SECURITY ASSISTANCE, SCIENCE AND TECHNOLOGY

### ACCOMPANIED BY DR. HENRY H. GAFFNEY, DIRECTOR FOR PLANS, DEFENSE SECURITY ASSISTANCE AGENCY

### OPENING STATEMENT OF SENATOR KASTEN

Senator KASTEN. The subcommittee will come to order.

This afternoon we will receive testimony in support of the administration's fiscal year 1982 supplemental and fiscal year 1983 regular request for international security assistance. These requests, especially the one for fiscal year 1983, represent for the Reagan administration both the heart of its foreign assistance program and the departure point from previous administrations' foreign assistance policies and programs.

In addition, it will be a focus of controversy and difficulty here on Capitol Hill as this administration's total foreign assistance request exceeds the current level by nearly $1.5 billion or 18 percent. Obviously at a time when domestic programs of all types are being reduced, an increase for foreign aid will be difficult.

We are going to be asking many of the new leaders in Congress who have opposed foreign aid in the past to fight for this increase, despite the budgetary constraints and restraints on programs which are close to many of our constituents.

While I recognize the funds that you are seeking on an individual case-by-case basis are largely justified, I think it is going to be very difficult as we work through this year's budget.

Additionally, the request is going to be difficult because there seems to be an air of conflict between the Hill and the administration, both in the Senate and in the House on a number of these issues.

Last year's extraordinary effort will have to be exceeded this year, although there remain some sore points, especially with regard to the administration's disregard of the direction by this committee on the economic support funds for Israel.

A continuing disregard of these directions is not going to help to reformulate the coalition which passed foreign assistance last year. So, while I want to be helpful, and I will be helpful, it is going to take a lot of work and a new effort by the administration and the State Department, in particular, to be more responsive to Congress in the days ahead.

We have received a statement by Dr. Gaffney of the Defense Security Assistance Agency who is, I understand, here to provide you with technical backup. We have not reviewed Mr. Gaffney's statement, nor do we have questions of him, but I will insert his statement in full in the record.

Now, first of all, Senator Inouye, do you have any statement at this time?

Senator INOUYE. I just want to point out that I haven't received Dr. Gaffney's statement. I just got it and I haven't had time to look at it. I won't be in any position to ask any questions.

Senator KASTEN. We received it late last night.

Senator INOUYE. I think it is an unusual procedure, but it is difficult for me to endorse or be against anything not knowing what is in there.

Senator KASTEN. As Secretary Buckley knows, we have been in a continuing conflict with the State Department to try to get this information up to us in time. Your statement was here 3 days before the hearing this time.

But nevertheless, Secretary Buckley, if you could proceed with your statement, which I know you will summarize, then we will proceed with questions.

Secretary Buckley.

### INCREASED FUNDING FOR FOREIGN ASSISTANCE

Mr. BUCKLEY. Thank you, Mr. Chairman.

What I will read is an abbreviated version of the whole, but I would appreciate the original being inserted in the record.

Custom decrees that I say I am delighted to be here to present the administration's 1983 foreign assistance program. The fact is that we find no more joy in presenting a request for increased funding than I know your committee does in having to entertain it.

We are grateful for the committee's approval of our full request last year, and we are as concerned as you about the need to keep Federal spending at the lowest feasible levels. Yet we have no responsible choice but to urge your approval for the security assistance program the President has proposed for fiscal 1983.

These levels are the minimum necessary to support the highest priorities of U.S. foreign policy. These reflect the hard need imposed by events outside our borders which have direct impact on our ultimate safety and well-being.

We are familiar with the events in the last year. The Soviets have established and continue to apply pressure on countries around the globe, and they are launching new offensives in Afghanistan. Poland's bid for greater freedom has been crushed. Vietnamese troops occupy Kampuchea. In Africa and the Caribbean Basin Cuban troops or Cuban-supported troops pose a direct threat to our vital interests.

### SOVIET POWER SHIFT TO LESS-DEVELOPED NATIONS

If history teaches us anything, it is that weakness attracts the predator. Hence we have seen a shift in the Soviet's global challenge from the industrialized states of Europe to the less developed nations of the Middle East, Africa and, closer to home, the Caribbean.

To meet these urgent challenges abroad and to minimize the cost to taxpayers at home, this administration has adopted a fundamentally new approach in arriving at our security assistance program for fiscal 1983. We have explicitly defined our Nation's vital foreign policy objectives and painstakingly allocated all foreign assistance resources against our priority goals.

The resulting program will marshal the minimum resources necessary to promote peaceful solutions to regional rivalries, assure U.S. access to critical military facilities and basic raw materials, confront growing military threats and subversive efforts by the Soviets and their proxies, and reduce the economic and social degradation that breeds domestic violence and invites external intervention.

The details of our fiscal 1983 request are set forth in the Department's booklet, "International Security and Economic Cooperation Program," which has been made available to the Congress.

What I would now like to do is review briefly the major foreign policy objectives described in that booklet and explain why the requested security assistance is necessary to attain our goals.

### MIDDLE EAST

Over 53 percent of the entire fiscal year 1983 security program will be directed in support of our Middle East objectives; namely, the search for a just and lasting peace and the urgent requirement that our friends in the region be secure against external threats. These objectives are mutually reinforcing.

The security and economic health of Israel and Egypt are requisite for further broadening the peace process in the Middle East. U.S. assistance programs tangibly reflect our support and help give these nations the confidence to continue in the path toward peace begun at Camp David.

Our assistance to Israel and Egypt, along with our aid to Jordan, Lebanon, and the regional program provides a security and economic basis essential to ultimate stability in the region.

### EUROPE

The President is allocating 19 percent of the program, $1.6 billion, in support of our interests in Europe. The strategic importance to NATO of Europe's southern flank has been dramatically underscored by events this past year.

With neighboring regions facing a growing challenge, our efforts to assist Greece, Turkey, Spain, and Portugal have assumed increasing importance. Helping these nations through our security assistance program is an important contribution to our common defense, not only against threats to Europe, but also against challenges to our common interests beyond the geographic bounds of the Alliance.

Turkey, for example, lies at the intersection of our NATO, Middle East, and Persian Gulf security concerns. Spain and Portugal, the other major security assistance recipients, are important not only to our NATO defenses, but also to our capabilities to project military forces from the United States to Africa and the Middle East.

### PERSIAN GULF AND SOUTHWEST ASIA

Ten percent of our proposed security assistance program is directed to insuring our continued access to Southwest Asia and the Persian Gulf and to the region's critically important resources.

Almost all nations in the area stretching from Morocco to Pakistan face serious economic problems and potential subversion or regional threats. Our proposal for military modernization and economic assistance will help Pakistan to deter attacks from Afghanistan and facilitate the economic development essential to internal stability.

Sudan, Morocco, and Tunisia all face, to one degree or another, threats of subversion or aggression emanating from Libya. All are important not only to our strategy for the security of the Persian Gulf, but potentially to the prospects for peace in the Middle East, as well.

To help secure our interests in the Indian Ocean, we are helping Kenya and Somalia achieve economic self-reliance and improve defense capabilities. In turn both nations provide U.S. forces with access to facilities, thus contributing significantly to our ability to sustain a credible deterrent posture in the region.

### CARIBBEAN BASIN

Our plan for restoring stability and improving economic prospects in the Caribbean Basin will require $433 million in security assistance for 1983. You are all thoroughly familiar with the approach that has been adopted by the administration in this regard.

I would only point out that the announced amounts allocated for military assistance represent just 16 percent of our total program for the Caribbean Basin.

### EAST ASIA

Requests in support of our Pacific interests represent a modest fraction, only 6 percent, but nevertheless a vital part of our fiscal

1983 security assistance program. This region is of major political, strategic, and economic importance to the United States.

We have significant treaty relationships with Japan, Korea, the Philippines, Thailand, and our Anzus partners. U.S. trade with the area now surpasses that with Western Europe. We have in Northeast Asia a strong and economically vital South Korea that is able to deter its northern neighbor from military adventures.

A Soviet-supported 200,000-man Vietnamese army remains in Kampuchea and threatens Thailand's security.

The Philippines provide the United States with a central military facility and Indonesia and Malaysia straddle important sealanes.

## AFRICA

Our proposed $177 million security assistance program for Southern Africa is designed to advance the peaceful establishment of an independent Namibia, to help ensure continued Western access to key strategic minerals, and to support the development process from Zaire south.

We must fulfill our undertaking to assist the economic development of the frontline states of Southern Africa whose participation is essential to the stability of a region rich in minerals essential to our economic well-being.

In West Africa modest levels of security assistance are essential if we are to help maintain economic and political resilience and discourage further Libyan attempts to exploit the financial difficulties faced by several nations.

To support these essential goals, the President is requesting and is committed to defending a total of $8.7 billion of security assistance programs. Of this, $4.8 billion requires budget authority, the balance of $3.9 billion being in the form of off-budget FMS guarantees.

The foreign policy objectives I have just outlined are those we strive to attain with those resources. As never before, the President's program has been carefully structured to address only our most critical needs.

We again seek authority to provide concessional assistance to key countries, in order to make it possible for them to purchase defense equipment and services that we believe is in our interest for them to have.

We are asking this because we believe that concessional rates provide us with maximum flexibility in meeting the specific needs of security assistance recipients. In contrast with grants, over the longer term they also lower the net cost to the U.S. taxpayer.

## FISCAL YEAR 1982 SUPPLEMENTAL REQUEST

I would now like to take this opportunity, Mr. Chairman, to address the administration's fiscal year 1982 security assistance supplemental request.

Last fall the Congress authorized the absolute minimum needed for fiscal year 1982 security assistance. Despite this committee's recommendation, Congress ultimately appropriated $301 million less. At the appropriated levels——

Senator **Kasten**. We will both have to leave to vote, and we will come back shortly, if you will just excuse us.

Mr. **Buckley**. Yes.

[Recess to permit a vote by subcommittee members.]

Senator **Kasten**. The subcommittee will come to order.

Please continue.

Mr. **Buckley**. I started addressing the 1982 supplemental.

Last fall Congress authorized the absolute minimum needed for fiscal year 1982 security assistance. Despite this committee's recommendation, Congress ultimately appropriated $301 million less than was authorized.

At the appropriated levels we have had to make damaging choices between which of our foreign policy objectives to support adequately and which to neglect. Our request would restore the amounts appropriated for fiscal year 1982 to the authorized levels.

This supplemental request would provide $115.5 million in budget authority and $186 million in off-budget FMS loan guarantees to support critical American interests in four strategic areas:

First, the gateway to the Mediterranean, which is NATO's southwestern flank and the access region for the Middle East. An effective presence in the Middle East requires that our 6th Fleet and rapid deployment forces have assured access to bases enroute.

The supplemental increases off-budget FMS guarantees to Spain, Portugal, Tunisia, and Morocco. Adequate aid to Spain is critical to the success of our base negotiations, and similar negotiatons will soon be undertaken with Portugal.

The second category is Southeastern Europe and the Horn of Africa. The supplemental would add off-budget FMS guarantees for Turkey and provide grants to Somalia and Sudan. Turkey and Somalia offer access to critical facilities, and Sudan's territorial integrity is an important factor in the Middle East.

The third area is Central America. As you know, Cuba and Nicaragua have coupled an unprecedented military buildup with increased support for subversive groups. The supplemental fulfills the President's pledge to complement the Caribbean Basin Initiative with adequate military assistance grants to El Salvador and Honduras.

Fourth is the Far East. Despite North Korea's continuing military advantage, we have consistently cut appropriations to South Korea below our initial planning levels. In Southeast Asia the Vietnamese directly threaten Thailand. The supplemental provides off-budget guarantees to help South Korea and Thailand modernize their forces.

On another subject, Mr. Chairman, I understand that this subcommittee has assumed jurisdiction over the administration's request for fiscal year 1982 supplemental action to permit operation of the Special Defense Acquisition Fund.

I hope we can once again count on your support for this important initiative which will enable us to respond in a timely manner to the military needs of our allies and friends without degrading our own defense readiness. This is added since 72 hours ago.

Senator **Kasten**. I would say that is different from the statement we received.

### SECURITY ASSISTANCE FUNDS

Mr. Buckley. In conclusion, I want to assure you that in these most difficult years the President would not ask for additional security assistance if he were not absolutely convinced that these resources are essential to the prospects for peace and for the defense of essential American interests throughout the globe.

Without them the President would be forced to decide which objectives of our foreign policy to pursue and which to abandon or neglect.

For example, he would be forced to face such damaging choices as scaling back our Spanish bases in order to finance our Caribbean Initiative, or of shifting resources away from Turkey to address our needs in Sudan, Korea, and Somalia, or abandoning our undertakings and initiatives in such important areas as Southern Africa and Southest Asia in order to meet our commitments in the Middle East.

Unless we are willing to make these investments in peace and security today, we risk far greater costs to both our safety and national treasure tomorrow.

### PREPARED STATEMENTS

[The statements of Mr. James L. Buckley and Dr. Henry H. Gaffney follows:]

# PREPARED STATEMENT OF HON. JAMES L. BUCKLEY

UNDER SECRETARY OF STATE
FOR SECURITY ASSISTANCE, SCIENCE AND TECHNOLOGY

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE,

TRADITION CALLS FOR ME TO SAY HOW DELIGHTED I AM TO BE HERE TODAY TO PRESENT THE ADMINISTRATION'S 1983 FOREIGN ASSISTANCE PROGRAM. THE ADMINISTRATION IS VERY MINDFUL OF THIS COMMITTEE'S APPROVAL OF OUR FULL REQUEST LAST YEAR, AND WE ARE GRATEFUL FOR YOUR EFFORTS. BUT FRANKLY, I FIND THE NECESSITY TO SUBMIT REQUESTS FOR EXPENDITURES THAT ARE HIGHER THAN CURRENT LEVELS AS PAINFUL AS YOU WILL NO DOUBT FIND THE NECESSITY TO CONSIDER THEM.

WE ARE AS CONCERNED AS YOU ABOUT THE NEED TO KEEP FEDERAL SPENDING AT THE LOWEST FEASIBLE LEVELS, YET WE HAVE NO RESPONSIBLECHOICE BUT TO URGE YOUR APPROVAL FOR THE SECURITY ASSISTANCE PROGRAM THE PRESIDENT HAS PROPOSED FOR FISCAL YEAR 1983. THESE LEVELS ARE THE MINIMUM NECESSARY TO SUPPORT THE HIGHEST PRIORITIES OF U.S. FOREIGN POLICY. THEY REFLECT THE HARD NECESSITY IMPOSED BY EVENTS OUTSIDE OUR BORDERS WHICH HAVE DIRECT IMPACT ON OUR ULTIMATE SAFETY AND WELL-BEING.

CLOSE TO HOME AND IN DISTANT LANDS, OUR NATION'S MOST IMPORTANT MILITARY, POLITICAL AND ECONOMIC INTERESTS ARE BEING CHALLENGED. SECURITY ASSISTANCE IS THE MOST COST-EFFECTIVE INVESTMENT WE CAN MAKE BOTH TO MEET TODAY'S CHALLENGES AND TO ENHANCE THE PROSPECTS FOR A SAFER FUTURE IN WHICH ALL NATIONS OBSERVE THE MAXIM OF "LIVE AND LET LIVE". AT THE PRESENT TIME, HOWEVER, STRATEGICALLY-LOCATED FRIENDS AND ALLIES ARE UNDER CONTINUING PRESSURE FROM THE SOVIETS AND THEIR PROXIES. SOVIET OCCUPATION FORCES IN AFGHANISTAN HAVE STEPPED UP THEIR OPERATIONS. THE BID FOR GREATER FREEDOM HAS BEEN CRUSHED IN POLAND. WITH SOVIET ARMS AND SUPPORT, VIETNAMESE TROOPS CONTINUE TO OCCUPY KAMPUCHEA AND THREATEN THAILAND. IN AFRICA AND IN THE CARIBBEAN BASIN CUBAN TROOPS OR CUBAN-SUPPORTED GUERILLA FORCES POSE A DIRECT THREAT TO OUR MOST VITAL INTERESTS. IN EACH OF THESE REGIONS WE FACE THE CHOICE OF STRENGTHENING KEY FRIENDS AND ALLIES TODAY, OR TRYING TO DEFEND OUR INTERESTS OURSELVES TOMORROW.

WEAKNESS ATTRACTS THE PREDATOR. HENCE IT IS UNDERSTANDABLE THAT THE ARENA OF GLOBAL CHALLENGE HAS INCREASINGLY SHIFTED FROM THE INDUSTRIALIZED STATES OF EUROPE AND ASIA TO THE LESS-DEVELOPED NATIONS OF ASIA, THE MIDDLE EAST, AFRICA

AND, CLOSER TO HOME, THE CARIBBEAN. A FAILURE TO ACHIEVE VIABLE ECONOMIES, CREDIBLE DEFENSES, AND STABLE POLITICAL INSTITUTIONS MAKES THESE LESS-DEVELOPED NATIONS INVITING TARGETS FOR SUBVERSION.

TO MEET THESE URGENT CHALLENGES ABROAD AND TO MINIMIZE THE COST TO TAXPAYERS AT HOME, THIS ADMINISTRATION HAS ADOPTED A FUNDAMENTALLY NEW APPROACH IN ARRIVING AT OUR SECURITY ASSISTANCE PROGRAM FOR FISCAL YEAR 1983. WE HAVE EXPLICITLY DEFINED OUR NATION'S VITAL FOREIGN POLICY OBJECTIVES AND PAINSTAKINGLY ALLOCATED ALL FOREIGN ASSISTANCE RESOURCES AGAINST THESE PRIORITY GOALS. AS MANY OF YOU CAN APPRECIATE, THIS HAS NECESSARILY PROLONGED THE PROCESS AND DELAYED THE SUBMISSION OF SOME CONGRESSIONAL PRESENTATION MATERIALS. HOWEVER, WE BELIEVE THE RESULTING PROGRAM CONTAINS THE MINIMUM REQUIRED RESOURCES TO:

-- PROMOTE PEACEFUL SOLUTIONS TO REGIONAL RIVALRIES;

-- ASSURE U.S. ACCESS TO CRITICAL MILITARY FACILITIES AND BASIC RAW MATERIALS;

-- CONFRONT GROWING MILITARY THREATS FROM, AND SUBVERSIVE EFFORTS BY, THE SOVIETS; AND

-- REDUCE THE ECONOMIC AND SOCIAL TURMOIL THAT BREEDS DOMESTIC VIOLENCE AND INVITES EXTERNAL INTERVENTION.

THE ENTIRE PROGRAM HAS BEEN CAREFULLY SCRUTINIZED BY THE PRESIDENT TO ENSURE THAT OUR RESOURCES ARE IN FACT DIRECTED TOWARD OUR MOST IMPORTANT GOALS. THE FINAL SCRUTINY, OF COURSE, WILL BE YOURS. BUT GIVEN THE CARE WITH WHICH THIS REQUEST HAS BEEN CONSTRUCTED AND THE PRESSING NEEDS IT HAS BEEN DESIGNED TO MEET, I URGE YOUR COMMITTEE AND THE CONGRESS TO APPROVE IT IN FULL.

I WOULD INVITE YOUR ATTENTION TO THE DEPARTMENT'S BOOKLET, "INTERNATIONAL SECURITY AND ECONOMIC COOPERATION PROGRAM, FISCAL YEAR 1983," WHICH HAS BEEN MADE AVAILABLE TO THE CONGRESS. SINCE THE DETAILS OF OUR FY 1983 PROGRAM ARE SET FORTH IN THIS DOCUMENT, I WILL FOREGO LISTING ALL OF THE SPECIFIC LEVELS AND INSTEAD SUMMARIZE THE MAJOR REGIONAL ELEMENTS. I WOULD NOW LIKE TO REVIEW BRIEFLY THE MAJOR FOREIGN POLICY OBJECTIVES TOWARD WHICH OUR PROPOSED PROGRAM HAS BEEN TAILORED AND EXPLAIN WHY THE REQUESTED SECURITY ASSISTANCE IS NECESSARY TO ATTAIN THE GOALS WE SEEK.

OVER 53 PERCENT OF THE ENTIRE FY 1983 SECURITY ASSISTANCE PROGRAM WILL BE DIRECTED IN SUPPORT OF OUR MIDDLE EAST OBJECTIVES, NAMELY THE SEARCH FOR A JUST AND LASTING PEACE AND THE URGENT REQUIREMENT THAT FRIENDS IN THE REGION BE SECURE AGAINST EXTERNAL THREATS. THESE OBJECTIVES ARE

MUTUALLY REINFORCING. NO PEACE IS POSSIBLE UNLESS THE NATIONS OF THE REGION ARE SECURE FROM OUTSIDE COERCION, AND SECURITY WILL NOT BE ACHIEVED IF WE FAIL TO ADDRESS THE UNDERLYING SOURCES OF CONFLICT AND INSTABILITY.

OUR SECURITY ASSISTANCE SERVES BOTH OF THESE OBJECTIVES. IT SEEKS TO ADVANCE ECONOMIC WELL-BEING AND POLITICAL STABILITY IN THE REGION. THE SECURITY AND ECONOMIC HEALTH OF ISRAEL AND EGYPT ARE REQUISITES FOR FURTHER BROADENING THE PEACE IN THE MIDDLE EAST. U.S. ASSISTANCE PROGRAMS TANGIBLY REFLECT OUR SUPPORT AND HELP GIVE THESE NATIONS THE CONFIDENCE TO CONTINUE ON THE PATH TOWARD PEACE BEGUN AT CAMP DAVID. OUR ASSISTANCE TO ISRAEL AND EGYPT, ALONG WITH OUR AID TO JORDAN, LEBANON AND THE SMALL REGIONAL PROGRAM, PROVIDES A SECURITY AND ECONOMIC BASE ESSENTIAL TO ULTIMATE STABILITY AND PEACE WITHIN THE REGION.

THE PRESIDENT IS ALLOCATING 19 PERCENT OF THE PROGRAM, $1.6 BILLION, TO SUPPORT OUR INTERESTS IN EUROPE. THE STRATEGIC IMPORTANCE TO NATO OF EUROPE'S SOUTHERN FLANK HAS BEEN DRAMATICALLY UNDERSCORED BY EVENTS THIS PAST YEAR. WITH NEIGHBORING REGIONS FACING A GROWING CHALLENGE, OUR EFFORTS TO ASSIST GREECE, TURKEY, SPAIN, AND PORTUGAL HAVE ASSUMED INCREASING IMPORTANCE. HELPING THESE NATIONS, THROUGH OUR SECURITY ASSISTANCE PROGRAMS, IS AN IMPORTANT CONTRIBUTION TO OUR COMMON DEFENSE, NOT ONLY AGAINST THREATS TO EUROPE BUT AGAINST CHALLENGES TO OUR COMMON INTERESTS BEYOND THE GEOGRAPHIC BOUNDS OF THE ALLIANCE. TURKEY, FOR EXAMPLE, LIES AT THE INTERSECTION OF OUR NATO, MIDDLE EAST, AND PERSIAN GULF SECURITY CONCERNS. A MILITARILY AND ECONOMICALLY STRONGER TURKEY CAN NOT ONLY CONTRIBUTE SIGNIFICANTLY MORE TO A STRENGTHENED NATO DETERRENT, BUT CAN MOVE MORE RAPIDLY TO THE FULL RETURN OF CIVILIAN GOVERNMENT. SPAIN AND PORTUGAL, THE OTHER MAJOR SECURITY ASSISTANCE RECIPIENTS, ARE SIMILARLY IMPORTANT TO OUR NATO POSTURE AND TO OUR CAPABILITIES TO PROJECT MILITARY FORCES FROM THE UNITED STATES TO AFRICA AND THE MIDDLE EAST.

TEN PERCENT OF THE FY 1983 SECURITY ASSISTANCE PROGRAM IS DIRECTED SPECIFICALLY TO ENSURING OUR CONTINUED ACCESS TO SOUTHWEST ASIA AND THE PERSIAN GULF, AND TO THEIR CRITICALLY IMPORTANT RESOURCES, ALTHOUGH OF COURSE OUR SOUTHERN EUROPEAN AND OTHER MIDDLE EASTERN ALLIES ALSO PLAY AN IMPORTANT ROLE IN THIS RESPECT.

ALMOST ALL NATIONS IN THE AREA STRETCHING FROM PAKISTAN IN THE EAST TO MOROCCO IN THE WEST FACE SERIOUS ECONOMIC PROBLEMS AND POTENTIAL OR ACTUAL SUBVERSION AS WELL AS

DIRECT REGIONAL MILITARY THREATS, IN MANY CASES SUPPORTED BY THE SOVIETS OR THEIR PROXIES. OUR PROPOSAL FOR MILITARY MODERNIZATION AND ECONOMIC ASSISTANCE WILL HELP PAKISTAN TO MEET THE SOVIET THREAT FROM AFGHANISTAN AND FACILITATE THE ECONOMIC DEVELOPMENT ESSENTIAL TO INTERNAL STABILITY. SUDAN, MOROCCO AND TUNISIA ALL FACE, TO ONE DEGREE OR ANOTHER, THREATS OF SUBVERSION OR AGGRESSION EMANATING FROM LIBYA. ALL ARE IMPORTANT NOT ONLY TO OUR STRATEGY FOR THE SECURITY OF THE PERSIAN GULF, BUT, POTENTIALLY, TO THE PROSPECTS FOR PEACE IN THE MIDDLE EAST AS WELL.

TO HELP ASSURE STABILITY AND ACCESS IN THE INDIAN OCEAN AND PERSIAN GULF AREA, WE MUST PROVIDE ECONOMIC AND MILITARY ASSISTANCE TO KENYA, SOMALIA, DJIBOUTI, MAURITIUS AND THE SEYCHELLES. MOST OF THESE NATIONS ARE EXPERIENCING SEVERE ECONOMIC DIFFICULTIES, AND SEVERAL FACE SERIOUS THREATS FROM ETHIOPIA OR SOUTH YEMEN.

BOTH KENYA AND SOMALIA REQUIRE HELP IN ACHIEVING ECONOMIC SELF-RELIANCE AND IMPROVED DEFENSE CAPABILITIES. IN TURN, BOTH NATIONS PROVIDE U.S. FORCES WITH ACCESS TO FACILITIES, THUS CONTRIBUTING SIGNIFICANTLY TO OUR ABILITY TO SUSTAIN A CREDIBLE DETERRENT POSTURE IN THE REGION.

OUR PLAN FOR RESTORING STABILITY AND IMPROVING ECONOMIC PROSPECTS IN THE CARIBBEAN BASIN WILL REQUIRE $433 MILLION IN SECURITY ASSISTANCE FOR 1983. HERE WE FACE A MAJOR CHALLENGE FROM CUBA'S EFFORTS (AGAIN WITH SOVIET FINANCING AND SUPPORT) TO EXPLOIT ECONOMIC, SOCIAL AND MILITARY VULNERABILITIES. OUR ASSISTANCE PROGRAMS ARE DESIGNED TO ADDRESS THE UNDERLYING CAUSES OF SOCIO-POLITICAL INSTABILITY AND RESTORE STABILITY WITHIN THE REGION AS A WHOLE. WE MUST HELP PROVIDE THE CONCESSIONAL RESOURCES ESSENTIAL TO THE TASK UNTIL INCREASED INVESTMENT, A STRENGTHENED PRIVATE SECTOR, AND EXPANDED EXPORT MARKETS ENABLE THESE COUNTRIES TO ACHIEVE SELF-SUSTAINING ECONOMIC GROWTH.

OF THIS AMOUNT, EL SALVADOR WILL NEED $166 MILLION IN ECONOMIC SUPPORT FUND AND MILITARY ASSISTANCE TO THWART THE OUTRIGHT DRIVE BY INSURGENTS TO DESTROY THE ECONOMY AND PUBLIC ORDER. JAMAICA WILL CONTINUE TO NEED SUBSTANTIAL ASSISTANCE IN ORDER TO RESTORE THE VITALITY OF ITS SHATTERED PRIVATE SECTOR. COSTA RICA'S RAPIDLY DETERIORATING ECONOMY WILL REQUIRE SUBSTANTIAL ASSISTANCE WHILE FUNDAMENTAL REFORMS ARE EFFECTED. HONDURAS FACES AN ECONOMIC DECLINE AND A POLITICAL-MILITARY CRISIS ON ITS BORDERS. DETERIORATING

CONDITIONS IN OTHER COUNTRIES IN THE REGION MAY WELL REQUIRE EMERGENCY ASSISTANCE DURING THE YEAR, HENCE THE CRITICAL IMPORTANCE OF AT LEAST THE MODEST CONTINGENCY FUNDS WE ARE PROPOSING. I SHOULD LIKE TO NOTE THAT THE AMOUNTS ALLOCATED FOR MILITARY ASSISTANCE REPRESENT JUST 16 PERCENT OF OUR TOTAL PROGRAM FOR THE CARIBBEAN BASIN.

REQUESTS IN SUPPORT OF OUR IMPORTANT PACIFIC INTERESTS REPRESENT A MODEST FRACTION, ONLY 6 PERCENT, BUT NEVERTHELESS A VITAL PART, OF OUR FY 1983 SECURITY ASSISTANCE PROGRAM. THIS REGION IS OF MAJOR POLITICAL, STRATEGIC, AND ECONOMIC IMPORTANCE TO THE UNITED STATES. WE HAVE SIGNIFICANT TREATY RELATIONSHIPS WITH JAPAN, KOREA, THE PHILIPPINES, THAILAND AND OUR ANZUS PARTNERS. WE ALSO HAVE A GROWING ECONOMIC AND COMMERCIAL STAKE IN THE AREA, WITH PETROLEUM BOTH ORIGINATING IN AND PASSING THROUGH THE REGION. U.S. TRADE WITH THE AREA NOW SURPASSES THAT WITH WESTERN EUROPE.

THE PHILIPPINES, INDONESIA AND MALAYSIA ARE LOCATED ASTRIDE STRATEGIC SEA LANES THAT ARE VITAL TO UNITED STATES AND WESTERN INTERESTS. INDONESIA IS AN IMPORTANT SOURCE OF PETROLEUM. THE PHILIPPINES PROVIDE THE UNITED STATES WITH ESSENTIAL MILITARY FACILITIES. OUR SECURITY AND ECONOMIC ASSISTANCE CONTRIBUTES TO THE STABILITY OF THESE NATIONS, THEIR ECONOMIC PROGRESS AND POLITICAL DEVELOPMENT, AND TO OUR OWN DEFENSE AND ECONOMIC WELL-BEING.

IN NORTHEAST ASIA, A STRONG AND ECONOMICALLY VITAL SOUTH KOREA IS ESSENTIAL TO DETER ITS NORTHERN NEIGHBOR FROM MILITARY ADVENTURES. A SOVIET-SUPPORTED 200,000-MAN VIETNAMESE ARMY REMAINS IN KAMPUCHEA AND THREATENS THAILAND'S SECURITY.

THE IMPORTANCE OF OUR INTERESTS IN THE WESTERN PACIFIC IS BEYOND DISPUTE, AND THE ONLY REASON OUR PROPOSAL IS NOT LARGER, IS THAT OUR PARTNERS IN THE FAR EAST ARE SOMEWHAT BETTER OFF ECONOMICALLY AND IN SECURITY TERMS THAN ARE MANY OF OUR FRIENDS AND ALLIES ELSEWHERE.

OUR PROPOSED $177 MILLION SECURITY ASSISTANCE PROGRAM FOR SOUTHERN AFRICA IS DESIGNED TO ADVANCE THE PEACEFUL ESTABLISHMENT OF AN INDEPENDENT NAMIBIA, TO HELP ENSURE CONTINUED WESTERN ACCESS TO KEY STRATEGIC MINERALS, AND TO SUPPORT THE DEVELOPMENT PROCESS FROM ZAIRE TO THE CAPE. WE MUST FULFILL OUR UNDERTAKING TO ASSIST THE ECONOMIC DEVELOPMENT OF THE FRONTLINE STATES OF SOUTHERN AFRICA, WHOSE PARTICIPATION IS ESSENTIAL TO THE STABILITY OF A REGION RICH IN MINERALS ESSENTIAL TO OUR ECONOMIC WELL-BEING. THE ALTERNATIVE, A NEW ESCALATION OF CONFLICT, WOULD ONLY

PROVIDE IRRESISTIBLE OPPORTUNITIES FOR THE CUBANS AND SOVIETS.

IN WEST AFRICA, MODEST LEVELS OF SECURITY ASSISTANCE ARE ESSENTIAL TO MAINTAIN ECONOMIC AND POLITICAL RESILIENCE AND TO DISCOURAGE FURTHER LIBYAN ATTEMPTS TO EXPLOIT THE FINANCIAL DIFFICULTIES FACED BY SEVERAL NATIONS. IN ADDITION, OUR AID TO LIBERIA IS DESIGNED TO ENSURE CONTINUED U.S. ACCESS TO KEY TRANSPORTATION AND COMMUNICATIONS FACILITIES.

IN SUM, THE PRESIDENT IS REQUESTING AND IS COMMITTED TO DEFENDING A TOTAL $8.7 BILLION SECURITY ASSISTANCE PROGRAM FOR FISCAL YEAR 1983. ONLY $4.8 BILLION REQUIRES BUDGET AUTHORITY; $3.9 BILLION IS IN THE FORM OF OFF-BUDGET FMS GUARANTEES, BUT REQUIRES YOUR APPROVAL. THE FOREIGN POLICY OBJECTIVES I HAVE JUST OUTLINED ARE THOSE WE STRIVE TO ATTAIN WITH THOSE RESOURCES. THE PRESIDENT'S PROGRAM HAS, AS NEVER BEFORE, BEEN CAREFULLY STRUCTURED TO ADDRESS ONLY OUR MOST CRITICAL NEEDS. NEARLY 90 PERCENT OF THE ENTIRE FISCAL YEAR 1983 FMS GUARANTEE PROGRAM IS ALLOCATED TO ONLY SEVEN COUNTRIES: EGYPT, GREECE, ISRAEL, KOREA, PAKISTAN, SPAIN, AND TURKEY. NEARLY 80 PERCENT OF THE FY 1983 ESF PROGRAM IS FOR SIX VITAL COUNTRIES: EGYPT, EL SALVADOR, ISRAEL, PAKISTAN, SUDAN, AND TURKEY. ALMOST 80 PERCENT OF THE FMS DIRECT CREDIT PROGRAM WILL GO TO ISRAEL, EGYPT, PORTUGAL, SUDAN AND TURKEY.

WE AGAIN SEEK AUTHORITY TO PROVIDE CONCESSIONAL ASSISTANCE TO KEY COUNTRIES IN ORDER TO MAKE IT POSSIBLE FOR THEM TO PURCHASE DEFENSE EQUIPMENT AND SERVICES THAT WE BELIEVE IT IS IN OUR INTERESTS FOR THEM TO HAVE. WE ARE ASKING THIS BECAUSE WE BELIEVE THAT CONCESSIONAL RATES PROVIDE US WITH MAXIMUM FLEXIBILITY IN MEETING THE SPECIFIC NEEDS OF SECURITY ASSISTANCE RECIPIENTS. OVER THE LONG-TERM, THEY ALSO LOWER THE NET COST TO THE U.S. TAXPAYER. THE TWO ADVERSE TRENDS OF INCREASING DEBT BURDENS AMONG RECIPIENT COUNTRIES AND HIGH FFB INTEREST RATES HAVE CREATED A SITUATION IN WHICH MANY COUNTRIES WITH PARTICULARLY WEAK ECONOMIES ARE FACING SERIOUS DIFFICULTIES IN FINANCING THEIR PURCHASES THROUGH FMS GUARANTEED LOANS. UNDER OUR PROPOSAL, WE WILL PLAN TO OFFER $950 MILLION IN THE FORM OF FORGIVEN CREDITS TO THREE COUNTRIES ONLY -- $500 MILLION FOR ISRAEL, $400 MILLION FOR EGYPT AND $50 MILLION FOR SUDAN. IN ADDITION, WE PROPOSE TO FURNISH $789 MILLION OF CONCESSIONAL CREDITS TO 19 POORER COUNTRIES (INCLUDING AN ADDED $50 MILLION FOR SUDAN) AT A RATE OF INTEREST AS LOW AS THREE PERCENT. THE COUNTRIES

SELECTED ARE THOSE FACING PARTICULARLY DIFFICULT ECONOMIC SITUATIONS AND IN WHICH WE HAVE IMPORTANT SECURITY AND FOREIGN POLICY INTERESTS. FOR EXAMPLE, WE ARE PLANNING TO PROVIDE $300 MILLION AT CONCESSIONAL RATES TO TURKEY FOR ITS MILITARY MODERNIZATION PROGRAM SO CRITICAL TO OUR NATO POSTURE. SEVENTY PERCENT OF THE REMAINING $489 MILLION WOULD GO TO BUT SIX COUNTRIES: THAILAND, TUNISIA, SUDAN, MOROCCO, PORTUGAL, AND EL SALVADOR.

MR. CHAIRMAN, COMMITTEE MEMBERS, THE PROGRAMS WE ARE SUBMITTING HAVE BEEN CAREFULLY WEIGHED, DEBATED AND MADE TO ANSWER THE QUESTION, "IS THE NEED CRITICAL?" WE HAVE HAD TO MAKE DIFFICULT DECISIONS AND TRADEOFFS. BUT WE HAVE CONCLUDED THAT THERE IS SIMPLY NO ALTERNATIVE BUT TO SEEK THESE ADDITIONAL RESOURCES IF WE ARE TO SUPPORT OUR WORLDWIDE INTERESTS. WITHOUT THE INCREASES OVER THE LEVELS APPROPRIATED FOR THE CURRENT YEAR,

-- WE WOULD BE UNABLE TO PROVIDE SUFFICIENT FMS GUARANTEED FINANCING TO LAUNCH THE PAKISTAN PROGRAM WE DISCUSSED IN SUCH DETAIL LAST YEAR, INCREASE THE EGYPT AND ISRAEL PROGRAMS, OR SUPPORT OUR NEGOTIATIONS FOR THE SPANISH BASES.

-- WE WOULD BE UNABLE TO PROVIDE THE CONCESSIONAL CREDIT TERMS REQUIRED TO ENABLE EGYPT, SUDAN, TURKEY, THAILAND, MORROCCO, TUNISIA, EL SALVADOR AND PORTUGAL TO UPGRADE THEIR DEFENSES.

-- THE ESF LEVEL WOULD FALL FAR SHORT OF THE NEEDS OF TURKEY AND COUNTRIES IN THE CARIBBEAN BASIN.

I WOULD ALSO LIKE TO TAKE THIS OPPORTUNITY TO ADDRESS THE ADMINISTRATION'S FY 1982 MILITARY ASSISTANCE SUPPLEMENTAL REQUEST.

LAST FALL CONGRESS AUTHORIZED THE ABSOLUTE MINIMAL AMOUNT NEEDED FOR FY 82 SECURITY ASSISTANCE. DESPITE THIS COMMITTEE'S RECOMMENDATION, CONGRESS ULTIMATELY APPROPRIATED $301 MILLION LESS. AT THE APPROPRIATED LEVELS WE HAVE HAD TO MAKE DAMAGING CHOICES BETWEEN WHICH OF OUR FOREIGN POLICY OBJECTIVES TO SUPPORT ADEQUATELY AND WHICH TO NEGLECT. OUR REQUEST WOULD RESTORE THE AMOUNTS APPROPRIATED FOR FY 82 TO THE AUTHORIZED LEVELS.

THE SUPPLEMENTAL REQUESTS $115.5 MILLION IN BUDGET AUTHORITY AS FOLLOWS:

-- MAP - $62 MILLION;

-- FMS CREDITS - $50 MILLION;

-- IMET - $3.5 MILLION.

THE SUPPLEMENTAL ALSO REQUESTS AN ADDITIONAL $186 MILLION IN OFF-BUDGET FMS LOAN GUARANTEES.

THIS SUPPLEMENTAL REQUEST WOULD PROVIDE URGENTLY NEEDED FUNDS TO SUPPORT CRITICAL AMERICAN INTERESTS IN FOUR STRATEGIC AREAS:

-- GATEWAY TO THE MEDITERRANEAN: NATO'S SOUTHWESTERN FLANK AND ACCESS REGION FOR THE MIDDLE EAST. AN EFFECTIVE PRESENCE IN THE MIDDLE EAST REQUIRES THAT OUR 6TH FLEET AND OUR RAPID DEPLOYMENT FORCES HAVE ASSURED ACCESS TO BASES ENROUTE. THE SUPPLEMENTAL INCREASES OFF-BUDGET FMS GUARANTEES TO SPAIN ($25 MILLION), PORTUGAL ($20 MILLION), TUNISIA ($10 MILLION) AND MOROCCO ($20 MILLION), WHICH STRADDLE THE GATEWAY TO THE REGION. ADEQUATE AID TO SPAIN IS CRITICAL TO THE SUCCESS OF OUR BASE NEGOTIATIONS. SIMILAR NEGOTIATIONS WILL SOON START WITH PORTUGAL.

-- SOUTHEASTERN EUROPE AND THE HORN OF AFRICA: THE SUPPLEMENTAL WOULD ADD OFF-BUDGET FMS GUARANTEES FOR TURKEY ($82 MILLION) AND PROVIDE GRANTS TO SOMALIA ($10 MILLION) AND SUDAN ($25 MILLION). TURKEY, SOMALIA AND SUDAN BRACKET THE MIDDLE EAST. TURKEY AND SOMALIA OFFER US ACCESS TO CRITICAL FACILITIES, AND SUDAN'S TERRITORIAL INTEGRITY IS CRITICAL TO STABILITY IN THE MIDDLE EAST. BOTH SOMALIA

AND SUDAN ARE PRIME TARGETS OF THE RECENT ALLIANCE BETWEEN SOUTH YEMEN, ETHIOPIA AND LIBYA, WHICH SUPPORTS SUBVERSIVE GROUPS IN SOMALIA AND SENDS SUBVERSIVES INTO SUDAN. THE SUPPLEMENTAL WOULD HELP MODERNIZE TURKEY'S FORCES, ACCELERATE DELIVERY OF RADAR AND TRANSPORTATION EQUIPMENT TO SOMALIA, AND PROVIDE SUDAN WITH MODEST NUMBERS OF TANKS, ARTILLERY, AIRCRAFT AND IMPROVED AIR DEFENSE SYSTEMS.

-- CENTRAL AMERICA: CUBA AND NICARAGUA HAVE COUPLED AN UNPRECEDENTED MILITARY BUILDUP WITH INCREASED SUPPORT FOR SUBVERSIVE GROUPS. THE SUPPLEMENTAL FULFILLS THE PRESIDENT'S PLEDGE TO COMPLEMENT THE CARIBBEAN BASIN INITIATIVE WITH ADEQUATE MILITARY ASSISTANCE GRANTS TO EL SALVADOR ($35 MILLION) AND HONDURAS ($17 MILLION). THE SUPPLEMENTAL WILL ENABLE EL SALVADOR'S NEWLY-ELECTED GOVERNMENT TO TRAIN ADDITIONAL FORCES FOR RAPID DEPLOYMENT AND OBTAIN NAVAL PATROL VESSELS, GROUND SUPPORT FOR AIRCRAFT, AND COMMUNICATIONS EQUIPMENT ESSENTIAL FOR A SUCCESSFUL AND CONTROLLED ANTI-GUERRILLA CAMPAIGN. THE SUPPLEMENTAL WILL PERMIT HONDURAS' NEW DEMOCRATIC GOVERNMENT TO PURCHASE TRANSPORT, NAVAL PATROL AND GROUND SUPPORT AIRCRAFT, ARMS AND AMMUNITION, AND COMMUNICATIONS EQUIPMENT NEEDED TO COUNTER INSURGENT MOVEMENTS.

-- FAR EAST: DESPITE NORTH KOREA'S CONTINUING MILITARY ADVANTAGE, WE HAVE CONSISTENTLY CUT APPROPRIATIONS TO SOUTH KOREA BELOW OUR INITIAL PLANNING LEVELS. IN SOUTHEAST ASIA, VIETNAMESE RUTHLESSNESS, AMPLY DEMONSTRATED BY THE USE OF CHEMICAL WARFARE IN CAMBODIA AND LAOS, THREATENS THAILAND. THE SUPPLEMENTAL PROVIDES OFF-BUDGET GUARANTEES TO HELP SOUTH KOREA ($29 MILLION) AND THAILAND ($25 MILLION) MODERNIZE THEIR FORCES.

IN CONCLUSION, I ASSURE YOU, GENTLEMEN, THAT IN THIS MOST DIFFICULT YEAR THE PRESIDENT WOULD NOT ASK FOR ADDITIONAL SECURITY ASSISTANCE IF HE AND WE WERE NOT ABSOLUTELY CONVINCED THAT THESE RESOURCES ARE ESSENTIAL TO THE PROSPECTS FOR PEACE AND FOR THE DEFENSE OF ESSENTIAL AMERICAN INTERESTS AROUND THE GLOBE. WITHOUT THEM, THE PRESIDENT WOULD BE FORCED TO DECIDE WHICH OBJECTIVES OF OUR FOREIGN POLICY TO PURSUE AND WHICH TO ABANDON OR NEGLECT. FOR EXAMPLE, HE WOULD BE FORCED TO FACE SUCH DAMAGING CHOICES AS SCALING BACK OUR SPANISH BASES IN ORDER TO FINANCE OUR CARIBBEAN INITIATIVE, OR OF SHIFTING RESOURCES AWAY FROM TURKEY TO ADDRESS OUR NEEDS IN SUDAN, KENYA AND SOMALIA, OR ABANDONING OUR UNDERTAKINGS AND INITIATIVES IN

SUCH IMPORTANT AREAS AS SOUTHERN AFRICA AND SOUTHEAST ASIA IN ORDER TO MEET OUR COMMITMENTS IN THE MIDDLE EAST.

UNLESS WE ARE WILLING TO MAKE THESE INVESTMENTS FOR PEACE AND SECURITY TODAY, WE RISK FAR GREATER COSTS TO BOTH OUR SAFETY AND NATIONAL TREASURE TOMORROW.

## Prepared Statement of Dr. Henry H. Gaffney

DIRECTOR FOR PLANS, DEFENSE SECURITY ASSISTANCE AGENCY

THANK YOU MR. CHAIRMAN.

MY REMARKS TODAY WILL BE BRIEF. SECRETARY BUCKLEY HAS JUST PROVIDED THIS COMMITTEE WITH A DETAILED STATEMENT ON THE PRESIDENT'S FY 1983 SECURITY ASSISTANCE PROPOSAL. HE ALSO DESCRIBED THE CRITICAL ROLE SECURITY ASSISTANCE PLAYS IN THE SUCCESSFUL CONDUCT OF OUR FOREIGN POLICY AND IN THE FULFILLMENT OF OUR OVERSEAS DEFENSE MISSION. NEEDLESS TO SAY, WE IN DEFENSE STRONGLY AGREE THAT THE SECURITY ASSISTANCE PROGRAM IS, AND ALWAYS HAS BEEN, AN INDISPENSABLE INSTRUMENT FOR PROMOTING, PRESERVING AND PROTECTING OUR INTERESTS AND THE INTERESTS OF FRIENDLY AND ALLIED NATIONS AROUND THE WORLD. I WILL CONFINE MY COMMENTS TO A NUMBER OF AREAS WHICH I BELIEVE TO BE OF PARTICULAR INTEREST TO THIS COMMITTEE.

BEFORE MAKING THESE COMMENTS, HOWEVER, I WOULD LIKE TO RE-EMPHASIZE, FOR THE COMMITTEE, THAT SECURITY ASSISTANCE, IN ITS MANY FORMS, HAS ALWAYS BEEN AT THE CUTTING EDGE OF OUR FOREIGN POLICY AND NATIONAL SECURITY STRATEGY. VIRTUALLY EVERY SIGNIFICANT INTERNATIONAL POLICY INITIATIVE OR ACTUAL ENGAGEMENT OF U.S. FORCES SINCE WORLD WAR II WAS EITHER INFLUENCED BY OR AFFECTED THE CONDUCT AND CONTENT OF U.S. MILITARY ASSISTANCE POLICY. IN THE IMMEDIATE POST-WAR PERIOD UP TO THE PRESENT TIME, U.S. SECURITY ASSISTANCE HAS BEEN IN THE FOREFRONT OF U.S. FOREIGN POLICY. GRANT AID SECURITY ASSISTANCE IN THE EARLY 1950'S, FOR EXAMPLE, WAS THE KEY INGREDIENT IN BUILDING UP THE MILITARY CAPABILITIES OF NATO AND IN HELPING TO DETER WAR IN

EUROPE OVER THE NEXT 30 YEARS. DURING THE YEARS OF THE KOREAN CONFLICT, EMERGENCY SECURITY ASSISTANCE ALLOWED THE BUILDING OF REPUBLIC OF KOREA ARMED FORCES WHICH TOGETHER WITH OUR CONTINUED COMMITMENT HAS DETERRED WAR IN NORTHEAST ASIA FOR THE PAST TWO DECADES. TODAY, AND TOMORROW, OUR SECURITY ASSISTANCE IS NEEDED TO HELP DETER CONFLICT IN OTHER PARTS OF THE WORLD WHERE CRITICAL U.S. INTERESTS ARE AT STAKE--IN THE VOLATILE MIDDLE EAST, IN SOUTHWEST ASIA, IN THE CARIBBEAN AND CENTRAL AMERICA SUB-REGIONS AND, IN FACT, IN VIRTUALLY EVERY REGION OF AN INCREASINGLY SMALLER AND INTERDEPENDENT WORLD. IN SHORT, MR. CHAIRMAN, I WANT TO STRESS THIS ELEMENTAL POINT--SECURITY ASSISTANCE IS NOT A GIVE-AWAY PROGRAM; IT IS NOT WITHOUT SPECIFIC AIMS; IT FULLY COMPLEMENTS THE U.S. DEFENSE PROGRAM AND BUDGET, IT CONTRIBUTES SIGNIFICANTLY TO OUR NATIONAL SECURITY AND REQUIRES A RELATIVELY SMALL COST TO THE AMERICAN TAXPAYER. WHEN COMPARED TO THE SUBSTANTIAL BENEFITS DERIVED FROM THE PROGRAM, THE COSTS OF SECURITY ASSISTANCE TODAY ARE VERY SMALL.

SECRETARY BUCKLEY SPOKE EARLIER OF THE PRESIDENT'S APPRECIATION FOR CONGRESSIONAL PASSAGE OF THE FY 82 FOREIGN ASSISTANCE BILL, THE FIRST IN SEVERAL YEARS INDICATING CONGRESSIONAL CONCERN WITH SECURITY ASSISTANCE. I WANT TO REINFORCE THAT JUDGEMENT. HOWEVER, OVERLOOKED IN THE ACT WAS THE SPECIAL DEFENSE ACQUISITION FUND (SDAF) WHICH WAS AUTHORIZED BY THE CONGRESS LAST YEAR BUT WITHOUT OBLIGATIONAL AUTHORITY. IT IS A HIGH PRIORITY THAT THE REMAINING OBSTACLES TO OBLIGATING THESE FUNDS BE REMOVED. THIS ACTION WOULD GIVE THE PRESIDENT THE FLEXIBILITY HE NEEDS TO RESPOND QUICKLY AND DECISIVELY TO UNFORESEEN INTERNATIONAL CIRCUMSTANCES WITHOUT NEGATIVELY EFFECTING THE COMBAT READINESS OF OUR OWN ARMED FORCES AND, IN ADDITION, WILL ALLOW US TO USE SECURITY ASSISTANCE PROCUREMENT TO INCREASE THE VIABILITY OF OUR DEFENSE INDUSTRIAL MOBILIZATION BASE.

UNFORTUNATELY, EVENTS DO NOT REMAIN STATIC AND THE SECURITY ASSISTANCE REQUIREMENTS OF OUR FRIENDS AND ALLIES DO NOT ALWAYS CONFORM TO OUR BUDGETARY CYCLES--OR TO OUR PROGRAM LEVELS. THE CHALLENGES WE FACE TODAY, THEREFORE, HAVE FORCED US TO REQUEST AN INCREASE TO THE FY 1982 SECURITY ASSISTANCE BUDGET. IF FUNDING LEVELS REMAIN CONSTANT IN FY 1983, WE WOULD NOT BE ABLE TO ADEQUATELY MEET IDENTIFIABLE GLOBAL AND REGIONAL REQUIREMENTS OR TO CARRY OUT COMMITMENTS WE HAVE MADE TO OTHER GOVERNMENTS. WE NEED TO CONTINUE TO ENHANCE THE PEACE PROCESS BETWEEN ISRAEL AND EGYPT, TO SECURE ACCESS TO FACILITIES IN THE INDIAN OCEAN/PERSIAN GULF AREA, TO ASSIST COUNTRIES TO COPE WITH INTERNAL OR CROSS-BORDER CONFLICTS--SUCH AS PAKISTAN, SUDAN, MOROCCO, EL SALVADOR, THAILAND AND HONDURAS--AND WE ALSO NEED TO PROVIDE ADEQUATE ASSISTANCE TO THOSE OTHER NATIONS WHO SHARE OUR

STRATEGIC AND SECURITY CONCERNS--COUNTRIES SUCH AS TURKEY AND PORTUGAL IN NATO, KOREA IN THE FAR EAST AND OTHER STRATEGICALLY POSITIONED COUNTRIES IN AFRICA AND THE MIDDLE EAST.

THE ADMINISTRATION'S FY 1983 REQUEST BUILDS UPON THE FY 1982 BASE BUT ADDS URGENT AND ONLY URGENT REQUIREMENTS TO IT.

THE LARGEST FMS CREDIT ADDITIONS ARE FOR MEETING THE NEW AND ESSENTIAL PROGRAM FOR PAKISTAN AND TO IMPROVE THE PROGRAMS IN ISRAEL EGYPT, AND SPAIN. WE ARE ALSO EXPANDING THE SMALLER PROGRAMS IN NORTH AFRICAN COUNTRIES WHICH FACE CRITICAL THREATS FROM SOVIET-SUPPORTED REGIMES AND ALSO PROVIDE FACILITIES EN ROUTE TO SOUTH WEST ASIA.

THE ADMINISTRATION'S REQUEST FOR $950 MILLION IN FORGIVEN CREDITS FOR ISRAEL, EGYPT, AND THE SUDAN AND $789 MILLION FOR THE CONCESSIONAL LOAN PROGRAM IS PARTICULARLY SIGNIFICANT. THE OTHER MAJOR RECIPIENT OF THE CONCESSIONAL LOAN PROGRAM IS TURKEY. LESSER SUMS ARE EARMARKED FOR THAILAND, MOROCCO, TUNISIA, KENYA AND EL SALVADOR. THESE SOFTER CREDITS WOULD BE PROVIDED TO OTHER COUNTRIES IN ALL REGIONS OF THE WORLD. WE BELIEVE THESE ADDITIONAL DIRECT CREDITS ARE ABSOLUTELY ESSENTIAL IF FINANCIALLY HARD-PRESSED COUNTRIES ARE TO MEET THEIR LEGITIMATE SECURITY REQUIREMENTS--MOST CANNOT AFFORD THE STIFF TERMS OF OUR GUARANTEED LOAN PROGRAM.

THE INCREASE IN IMET IS NECESSARY BECAUSE WE HAVE ADDED TEN COUNTRIES, AND BECAUSE WE WILL FEEL THE INCREASING COSTS OF INFLATION IN THIS PROGRAM. THE FY 83 REQUEST IS ALMOST $12 MILLION ABOVE THE FY 82 AUTHORIZATION LEVEL.

IN THE NEAR-TERM, THE PRESIDENT BELIEVES THAT PRESSING SECURITY PROBLEMS REQUIRE A QUICK AND DECISIVE RESPONSE, PARTICULARLY IN THE CENTRAL AMERICA AND THE CARIBBEAN SUB-REGIONS. AS YOU KNOW, THE PRESIDENT HAS ASKED FOR A $350 MILLION SUPPLEMENTAL APPROPRIATION FOR FY 1982 TO TACKLE THE CRIPPLING PROBLEMS OF ECONOMIC GROWTH AND POLITICAL VIOLENCE UNDER THE CARIBBEAN BASIN INITIATIVE. HE ALSO INDICATED HIS INTENTION TO SEEK ADDITIONAL MILITARY ASSISTANCE FOR REGIONAL STATES TO ENABLE THEM TO COPE WITH INTERNAL AND EXTERNALLY-SUPPORTED THREATS TO THEIR SECURITY.

SECRETARY BUCKLEY HAS DISCUSSED IN DETAIL THE ADMINISTRATION'S FY 1982 SUPPLEMENTAL REQUEST FOR MILITARY ASSISTANCE. I WOULD LIKE TO REINFORCE THE VIEW THAT WE WOULD BE COMPELLED TO SCALE DOWN MANY PRIORITY SECURITY OBJECTIVES IF SUPPLEMENTAL FUNDS ARE NOT APPROPRIATED IN FY 1982. WE ARE SUBMITTING THIS UNUSUAL REQUEST BECAUSE ACTION IS REQUIRED NOW AND THE SOONER WE ACT, THE SOONER

OUR ACTIONS WILL HAVE THE INTENDED IMPACT OF PROVIDING NEEDED SUPPORT FOR OUR FRIENDS AND ALLIES AND IMPROVING OUR OVERALL DEFENSE GOALS, SUCH AS REGIONAL STRATEGY IMPLEMENTATION.

THE SUPPLEMENTAL REQUESTS A TOTAL OF $301 MILLION WHICH IS THE DIFFERENCE BETWEEN WHAT THE CONGRESS AUTHORIZED AND WHAT IT APPROPRIATED IN THE FY 1982 BILL. LESS THAN 40% OF THIS REQUEST, OR $115.5M, IS FOR ON-BUDGET FUNDS--$62M FOR MAP, $50M FOR FMS CREDITS AND $3.5M FOR IMET; THE REMAINING PROTION IS FOR $186M IN OFF-BUDGET FMS GUARANTEED LOANS.

THE FUNDS WOLD BE UTILIZED TO ENSURE AND ENHANCE OUR EN ROUTE ACCESS TO THE MIDDLE EAST AND SOUTHWEST ASIA BY PROVIDING FMS GUARANTEED LOANS TO SPAIN ($25M) AND PORTUGAL ($20M) IN EUROPE AND TO MOROCCO ($20M) AND TUNISIA ($10M) IN NORTH AFRICA. ALONG THE PERIMETER OF THE MIDDLE EAST, WE ARE RECOMMENDING GUARANTEED FMS CREDITS FOR TURKEY ($82M) WHICH FACES STAGGERING MODERNIZATION REQUIREMENTS AND GRANTS TO SOMALIA ($10M) AND THE SUDAN ($25M) BOTH OF WHICH FACE SERIOUS AND CONTINUOUS THREATS TO THEIR SECURITY. ALL THREE COUNTRIES ARE STRATEGICALLY LOCATED AND ALL THREE ARE IN DESPARATE NEED OF ADDITIONAL SECURITY ASSISTANCE RESOURCES.

OTHER FMS GUARANTEED CREDITS ARE PLANNED FOR THAILAND ($25M) AND SOUTH KOREA ($29M) IN EAST ASIA TO IMPROVE THE ABILITY OF THAI ARMED FORCES TO RESIST THE SPILL-OVER FROM THE KAMPUCHEAN CIVIL WAR AND TO ENABLE SOUTH KOREA TO MAINTAIN A CREDIBLE MILITARY BALANCE ON THE KOREAN PENINSULA.

IN CENTRAL AMERICA, WE ARE ASKING FOR GRANT MILITARY ASSISTANCE TO EL SALVADOR ($35M) AND HONDURAS ($17M), THE TWO KEY COUNTRIES IN THE EYE OF THE POLITICAL AND MILITARY STORM IN THAT HIGHLY VOLATILE AND HIGHLY IMPORTANT REGION.

EACH OF THESE REQUESTS IS BEING MADE TO MEET REAL AND PRESSING NEEDS AND WE RISK LOSING THE ADVANTAGE WE CAN DERIVE FROM THESE COMPARATIVELY LIMITED RESOURCES IF WE FAIL TO TAKE CONCRETE AND DECISIVE STEPS IN FY 1982.

MR. CHAIRMAN, WE ARE PAINFULLY AWARE THAT OUR REQUEST COMES AT A TIME WHEN THERE ARE MANY COMPETING NATIONAL PRIORITIES AND A NEED FOR ADDITIONAL BELT TIGHTENING AT HOME. I CAN ONLY SAY THAT IN MY OPINION FAILURE TO BE RESPONSIVE IN THE PRESENT TIME FRAME WILL VERY POSSIBLY REQUIRE GREATER SACRIFICE IN THE FORM OF BUDGET OUTLAYS AND AN INCREASED PROBABILITY OF REQUIRED U.S. PARTICIPATION IN CONFLICTS IN THE FUTURE. THE INCREASES WE ARE ASKING FOR ARE SUBSTANTIAL IF COMPARED TO MOST OTHER PROGRAM

AREAS, BUT IT MUST BE REMEMBERED THAT THE PROPOSED INCREASE WOULD COME ON TOP OF A VERY SMALL FUNDING BASE.

I HAVE APPENDED SEVERAL GRAPHICS TO MY STATEMENT SHOWING A STEADY EROSION OF THE SECURITY ASSISTANCE PROGRAM OVER THE PAST THREE DECADES. THE SECURITY ASSISTANCE GRANT ELEMENT PEAKED IN 1952 BUT BY 1981 DROPPED TO ABOUT ONE-TWENTIETH THE 1952 LEVELS IF MEASURED IN CONSTANT DOLLAR TERMS. THE PORTION OF TODAY'S SECURITY ASSISTANCE THAT IS FUNDED BY THE AMERICAN TAXPAYER AND TREASURY BORROWING IS ONLY ABOUT A QUARTER OF WHAT WE PAID TO RE-ARM OUR ALLIES IN WESTERN EUROPE IN THE EARLY 1950'S. THEN, AS NOW, WE WERE RESPONDING TO THE THREAT POSED BY THE SOVIET UNION--AS INDICATED BY THE INCREASED ADVENTURISM OF THE SOVIETS AND THEIR PROXIES IN ANGOLA, ETHIOPIA, AFGHANISTAN, NICARAGUA, EL SALVADOR, CAMBODIA AND LAOS. TODAY THE THREAT EMANATING FROM THIS ADVENTURISM IS GREATER AND MORE GLOBAL THAN EVER. DURING THIS PERIOD, THERE HAS BEEN A GRADUAL IMPROVEMENT IN THE ECONOMIC QUALITY OF LIFE FOR THE AMERICAN PEOPLE AND LITTLE REAL CHANGE IN THE PER CAPITA BURDEN OF SUPPORTING THE DEFENSE BUDGET. YET, BY THE EARLY 1980'S THE COST TO THE TAXPAYER FOR THE SECURITY ASSISTANCE PROGRAM, IN REAL TERMS, IS AT ITS LOWEST LEVEL IN THIRTY YEARS. HISTORICALLY, THEN, MR. CHAIRMAN, THE SIZE OF OUR PROPOSED INCREASE IN THE FY 1983 SECURITY ASSISTANCE REQUEST IS DUE NOT ONLY TO REAL SECURITY REQUIREMENTS OVERSEAS BUT ALSO TO THE LONG-OVERDUE EFFORT TO REVERSE THE STEADY EROSION IN THE PROGRAM OVER THE YEARS.

I MIGHT ADD THAT DURING THE PAST DECADE, THE SOVIET UNION LAUNCHED A SUCCESSFUL DRIVE TO EXPAND THE SCOPE AND ATTRACTIVENESS OF ITS SECURITY ASSISTANCE PROGRAM. MEASURED IN WEAPONS TRANSFERRED, THE SOVIET PROGRAM FAR SURPASSES OURS. FOR EXAMPLE, BETWEEN 1978 AND MID-1981:

| | USSR | US |
|---|---|---|
| - TANKS AND SP GUNS | 5,031 | 2,388 |
| - COMBAT AIRCRAFT | 1,792 | 616 |
| - ARTILLERY | 5,594 | 2,733 |

IT IS IMPORTANT TO NOTE THAT SOVIET MILITARY AID CONSISTS OF ABOUT 75% LETHAL EQUIPMENT WHILE, IN FY 81, OURS RAN AT LESS THAN THIRTY PERCENT. THEIR ASSISTANCE TO CUBA, LIBYA AND OTHER SOVIET-CLIENT STATES DISRUPTS STABILITY AND HEIGHTENS OUR NEED TO BE RESPONSIVE TO FRIENDLY NATIONS THREATENED BY THIS SOVIET MILITARY SUPPLY LINE.

IN CONCLUSION, I WANT TO RETURN TO THE THEME HIGHLIGHTED BY SECRETARY BUCKLEY AND AT THE BEGINNING OF MY STATEMENT. SECURITY ASSISTANCE IS A COMPLEMENT TO OUR DEFENSE BUDGET AND, WHEN ADEQUATELY FUNDED AND FULLY-MANNED, DIRECTLY CONTRIBUTES TO THE SUCCESSFUL IMPLEMENTATION OF OUR DEFENSE POLICY. THERE WAS THE CLOSEST COLLABORATION POSSIBLE BETWEEN THE DEPARTMENT OF STATE AND DEPARTMENT OF DEFENSE IN DEVELOPING THE RECOMMENDATIONS FOR THE PROPOSED FY 1983 SECURITY ASSISTANCE AMENDMENT. I KNOW THAT I REFLECT THE VIEWS OF THE SECRETARY OF DEFENSE WHEN I URGE THE COMMITTEE TO GIVE FAVORABLE CONSIDERATION TO THE ADMINISTRATION'S SECURITY ASSISTANCE PROPOSALS. SECURITY ASSISTANCE IS A GOOD INVESTMENT FOR THE UNITED STATES--AN INVESTMENT IN IMPROVED SECURITY, AN INVESTMENT IN THE U.S. ECONOMY, AND AN INVESTMENT IN THE IMPROVEMENT OF OUR FOREIGN POLICY AND DEFENSE POSTURE.

THAT CONCLUDES MY REMARKS. I WOULD BE PLEASED TO ANSWER ANY QUESTIONS. THANK YOU.

FISCAL YEAR

## SPECIAL DEFENSE ACQUISITION FUND

Senator **KASTEN**. Thank you.

The first question I have deals with the Special Defense Acquisition Fund, because as you know, it was in our fiscal year 1982 bill, but was lost in conference.

Now, was there a question as to whether you are trying to fund this through the Defense subcommittee, and why did you switch it back and, why did you add it now at the last minute?

Mr. **BUCKLEY**. It was our understanding that given the fact that the Defense Department has the main responsibility for deciding what goes into that pipeline, although we retain our authority over any sales from that pipeline, it was our understanding that the jurisdiction had been placed with the Armed Services Committee for this special fund.

Senator **KASTEN**. And it was changed from last year to this year?

Mr. **BUCKLEY**. Last year we asked for it, but we understood this was an arrangement within the Congress. Then we learned subsequently that the Appropriations Committee, that your subcommittee had decided to retain authority over the appropriations, although it is our understanding that the Armed Services Committee will be looking or overseeing what is put into it.

So in effect we had mixed signals on who was doing what.

Senator **KASTEN**. It is charged against our function, in the budget also. I do not understand what changed between last year and this year. Last year you came to us with it, and I understand also that the House has told you that it would be under the jurisdiction of their Foreign Operations Subcommittee, although in the House you also tried at one point to fund it through the Defense subcommittee.

Mr. **BUCKLEY**. No, we didn't. That is erroneous. It is up to the Congress to decide what committee is overseeing what functions, and this is just a case of mixed signals. We are happy to have you in charge.

Senator **KASTEN**. I hope we can be more successful.

The committee was concerned with this supplemental because, in a sense, what you are doing is requesting funding which was turned down by the conference in the 1982 bill. Basically it was part of an overall compromise which we were able to meet with the House.

## AFRICAN DEVELOPMENT FOUNDATION

You sent up a rescission request for $2 million eliminating the African Development Foundation. I don't have strong feelings about the African Development Foundation, but the approval of that was an element in the compromise that we put together for fiscal year 1982.

I think it is important that you recognize that it is going to be very, very difficult for us to accept $300 million of security assistance which essentially we could not get through the conference, and while eliminating $2 million for something that at least some members of the conference thought very, very strongly about.

Mr. **BUCKLEY**. In the light of that we have rescinded the rescission.

Senator KASTEN. When was that done?

Mr. BUCKLEY. Very, very recently. I think it was Friday.

Senator KASTEN. That is good. It is too bad that you went through that drill because the compromise and the kind of block-building that was done would have been jeopardized. I think that we need to at least keep that central compromise in place and build from it.

### GREECE AND TURKEY

I was in Greece recently. In my visit with Prime Minister Papandreou, I did not sense a lot of concern about the 1983 request insofar as the ratio between Greece and Turkey is concerned.

There is a concern, but he didn't force that issue as strongly as some other issues that we discussed. However, a great many Greek-Americans are letting us know of their concern over increased aid to Turkey, especially because they view Turkish inaction on the Cyprus situation as a reason not to provide increased aid.

What are we doing to try to get a settlement on the Cypriot issue and perhaps you would also like to justify that increased aid to Turkey.

Mr. BUCKLEY. In the first instance, we are urging that there be cooperation on both sides with the negotiations in Cyprus, within the two factions in Cyprus to see if we can get some progress. We understand the needs.

With respect to justifying the increased request for Turkey, the fact is that if you look at a map, Turkey occupies critically important pieces of landscape from the perspective of being the southeastern flank of NATO, in terms of being a buffer against any attempt to drive south on the Eastern Mediterranean, plus the fact especially with the fall of the Shah and the warfare going on between Iran and Iraq, Turkey assumes a large potential importance vis-a-vis the stability in the area at the top of the Persian Gulf.

Now the Turkish state has extremely capable manpower, half a million men, but they are dealing with equipment that is eroding at a dangerous rate.

There was, of course, that large hiatus that followed the problems in Cyprus in which military assistance was cut off entirely.

Now there is a tremendous catch up need in order to restore the capability of this force of manpower to hold and execute their functions within the NATO scheme of things. Deterioration has been massive, and the needs are massive and the amount of assistance that we are recommending really doesn't begin to do the job, but it is necessary to keep things from getting worse and start on the road toward improvement.

This is I believe a very studied and considered judgment of the military who have looked at it.

### CYPRIOT PROGRAM

Senator KASTEN. Along the same lines, we are seeing a number of complaints and questions about the decision to eliminate the funding for Cyprus.

First of all, do you know what the size of the pipeline for the Cypriot program is and specifically why did you cut out new requests for Cyprus for this year?

Mr. Buckley. Well, as I explained, we instituted a very rigorous process which was designed to filter out the most pressing needs and to compare one country against another in a very complex equation.

This meant curtailing or cutting programs in a number of countries where one would have liked to do things, but we couldn't come in good conscience before this committee and this Congress in this particular year and support things which were "druthers" rather than necessities.

The fact is that the Cypriot economy is such that it is simply not in as hard-up a position as a number of other potential claimants. So it was a judgment based on that.

As far as the pipeline is concerned, since 1974, the United States has furnished a tremendous amount of economic assistance, over $130 million, through fiscal 1981, and we were scheduling another $15 million for 1982.

The result of all of this assistance, plus the contributions from other nations, and we keep on forgetting that we are not the only contributor in many, many instances, as well as international organizations, plus the entrepreneured assistance of the people of Cyprus, has had remarkable effects.

So we find that per capita income in the area of the island controlled by the Government of Cyprus is over $4,000 per capita, with a very low inflation and unemployment figure. It is within this context when you see needs elsewhere, that we drew the judgment that the continuing funding simply was not justified.

Obviously if the Congress wants to increase the——

Senator Kasten. Maybe for the record you can supply information regarding the pipeline. That is what I was interested in.

[The information follows:]

### Cyprus Pipeline

As of September 30, 1981, the UNHCR reported that there was an undisbursed balance of $248,472 for prior years and $9,278,616 undisbursed of the $12.5 million obligated in fiscal year 1981 for a total pipeline of $9.5 million for the UNHCR. In addition, the $1.5 million obligated for the Scholarship Program very late in fiscal year 1982 had not had time to disburse.

The $15 million available for fiscal year 1982 is in the process of being obligated and therefore not counted in the pipeline.

## ISRAEL

Senator Inouye. Mr. Chairman, listening to the statement, I note that over 53 percent of the security assistance program is spent for Middle East objectives. Keeping that in mind, I have a few questions relating to that part of the world; the remainder I would like to submit for the record and request that the Secretary respond to them.

My first question is a bit sensitive, so, if I may, I would like to just read it out, sir.

It is widely recognized that the administration's decision to sell AWACS and the F-15 enhancement package to Saudia Arabia increased the threat to Israel's security. In fact, in our hearing last year, you told the subcommittee that your office believed the "additional threat could be met through the purchase of additional F-15's or F-16's or other mixes that the Israel military may believed to be necessary or desirable."

Now this year the administration has proposed a $300 million increase in foreign military sales credits to assist Israel in meeting the increased threat. However, the administration has also proposed a decrease in the forgiven portion, or the grant portion, of assistance to Israel.

How can the administration justify this decrease in the forgiven portion when the announced intent of the program add-on is to meet the increased threat?

Mr. BUCKLEY. In the first instance, that $50 million that we did not carry forward is $50 million more than we thought appropriate last year. We recognized that the Congress had a different judgment.

By the same token, again repeating what I said to the chairman, in this exercise for 1983 it started out from scratch, and we tried to build a block that we could justify to you as being in fact as tight a budget as we could submit consistent with our needs.

We believe that as hard-pressed as Israel is, and as large as its debt burden is, that nevertheless it has the capacity, given the half-billion dollar loans, forgiveness, and given the close to $800 million ESF grants, to handle this kind of burden, additional burden through a continuation of its austerity programs.

Senator INOUYE. When the United States sells advanced military equipment to the Saudis, and then attempts to redress the balance by providing Israel loans which, as you pointed out, increases Israel's debt burden, does Israel not find itself in a war of economic attrition with Saudi Arabia, and in that type of war can Israel hope to win?

Mr. BUCKLEY. I am not sure that anyone wants to go to war, win or lose.

Senator INOUYE. I am talking about the economic attrition war.

Mr. BUCKLEY. The fact is that the Israelis are hard working, and they are productive, and they are making advances in exports, so that as I say, it was the conclusion of our economists in their best judgment that this was something that was supportable.

The fact is, of course, that Saudi Arabia has security problems that have nothing to do with Israel and having to do with the resources they must protect and the increased challenges and instability in the region around the Persian Gulf.

So that you are familiar with the arguments last year in support of the package for Saudi Arabia. Yes, that created extra pressure for which the Israelis had to cope, and we believe that is an appropriate figure.

Senator INOUYE. Last year on this subject you told the subcommittee, "We are working closely with their economic and treasury people. When the time comes for formal presentation to the Congress it will be one within the capacity of the Israelis to handle."

From all I can gather, the economic and treasury people of the Government of Israel have indicated that this program is not one which is within the capacity of the Israelis to handle.

In this respect, if such be the case, can it not be said that the administration's proposed reduction of forgiveness would represent a breach of faith with the Israeli Goverment?

Mr. **Buckley**. No, because we disagree with the Israeli analysis. Most of the Israeli debt is long term, and we believe that it can be handled in the pursuit of economic policies.

Now I might add, Senator, that there are other ways in which we are working with the Israelis to try to handle these things, but purchases, Israeli services, and sales of equipment——

Senator **Kasten**. You will have to speak up.

Mr. **Buckley** [continuing]. These all have to be added in the equation.

Senator **Inouye**. I just noticed in your response you said the economic support program was all grants, and you meant two-thirds grant?

Mr. **Buckley**. Two-thirds grant; yes.

Senator **Inouye**. So you think it is within the capacity of the Israelis to handle this add-on with the reduction in the forgiveness?

Mr. **Buckley**. Yes.

Senator **Inouye**. Can you tell the subcommittee as a result of your analysis of this program what amount of this $1.7 billion Israel must use to make fiscal 1983 payments on equipment ordered in prior years?

We somehow suspect that some of this will be used not to purchase new equipment as you suggested, but it will be used merely to ease the financial burden of their previously ordered equipment.

Is that what we are doing?

Mr. **Buckley**. Well, I am sure that the economic support fund which goes into the pot, if you will, contributes toward debt service, but I wonder if we could turn to you for a more precise answer, Dr. Gaffney.

Dr. **Gaffney**. We have that figure. It is the way we do business with Israel. It is the cash flow, but I don't have the figures with me.

A portion would go toward prior year programs, not necessarily prior year bills, but the progress payments due in this coming year for programs which had already been started.

Senator **Inouye**. Which should indicate that this is adding to their financial burden.

Mr. **Buckley**. Not if you are making down payments on equipment. Any borrowing is an addition to the financial burden. The question is whether it is one that can be supported by the economy or not.

Senator **Inouye**. I would like to ask a few questions relating to the Camp David process, the autonomy negotiations and security assistance.

Under the direction of the civil administrator for the West Bank and Gaza, Mr. Menahem Milson, the Begin government has fired the mayors of three West Bank cities and advanced proposals for the creation of village leagues.

What is your position on the firing of these mayors?

Mr. **Buckley**. Senator, my jurisdiction within the State Department and responsibilities are rather explicit, and I am not involved in the determination of matters in response to happenings of the kind you state.

If you want to have the State Department position on that, I would be glad to get it for you.

Senator INOUYE. I would appreciate that, and also on, I believe, Bir Zeit University on the Israeli occupied West Bank has been closed.

I would like to know your position on that also.

Mr. BUCKLEY. All right.

[The information follows:]

### FIRING OF WEST BANK MAYORS

It is always unfortunate when elected officials are no longer able to serve their constituents. We remain convinced that the best way to assure the politically responsive representation of the inhabitants of the West Bank and Gaza is through the free election of a self-governing authority to replace the existing military government. Such elections are a central element of the autonomy agreement called for by the Camp David Framework.

### THE CLOSING OF BIR ZEIT UNIVERSITY

After being closed for two months—the second such closure this academic year—Bir Zeit recently was permitted to reopen. This second closure followed an incident in which an Israeli education official attached to the military government was apparently roughed up by students while visiting the campus during a period of high tension. It is a source of regret to us that the educational process at Bir Zeit and several other West Bank schools has been so often interrupted. The biggest losers are the students, who seek and need an education.

## ISRAELI SETTLEMENTS

Senator INOUYE. Today the Washington Post reported the establishment of six new Israeli settlements on the West Bank, and Prime Minister Begin is reported to have vowed that the Government of Israel will not dismantle settlements on the West Bank even in the event of a peace agreement covering that area.

How does the administration view the establishment of these settlements?

Mr. BUCKLEY. That we can get.

[The information follows:]

### ISRAELI SETTLEMENTS

As you know, the Camp David Accords stipulate that negotiations to determine the final status of the West Bank and Gaza are to begin as soon as possible and no later than three years after establishment of the SGA. These negotiations will be based on Security Council Resolution 242 which is the basis of the Camp David Accords. The future of Israeli settlements is one of the many issues which will have to be resolved during these negotiations.

## EGYPT

Senator INOUYE. I have a few others which I hope you can submit to the State Department. I have also a question on the cash flow which your assistant referred to.

The final question I would like to ask at this stage is this: Since the peace treaty with Israel, Egypt has become the second largest recipient of U.S. military assistance and Egypt has ordered some of the most modern and sophisticated equipment in the U.S. arsenal including F-4's, F-16's, and tanks, and improved air defense batteries and armored personnel carriers.

Are you satisfied that Egypt can effectively maintain and operate this equipment?

I ask that because the GAO just recently suggested that it will not be possible to have more than 40 percent of the aircraft flying at any one time.

Mr. BUCKLEY. I would like to turn that over to Dr. Gaffney.

Dr. GAFFNEY. Yes, sir, we believe that over time Egypt will be able to maintain and effectively operate this equipment. It will take a little time.

Senator INOUYE. How long will it take?

Dr. GAFFNEY. It is hard to say. Right now we plan 2- or 3-year turnovers of equipment which is installed. But we will extend it as necessary. Basically they hadn't had to maintain a lot of these systems before. The Russians did it all for them, so there is a learning process going on.

We think they will be able to learn what is a very complicated American system, but once operating, they will do so very effectively.

Senator INOUYE. I gather when we provided this sophisticated and complicated equipment, we were aware that the Egyptians were not capable of maintaining such equipment at the time?

Dr. GAFFNEY. We knew they didn't have the facilities or a lot of the trained mechanics and the administrative systems to handle this, but we thought that they had the basic capability to institute these systems over time.

Senator INOUYE. So would you say at the time of the transfer, it was more of a political move than a military one?

Dr. GAFFNEY. No, sir; because we knew what it would take with our assistance to make these systems operative very early on, and indeed we think the in-service rate for those F-4's are considerable considering the circumstances.

### USE OF EQUIPMENT

Senator INOUYE. What sort of restrictions or constraints do we have upon equipment that we sell to Egypt or Israel or El Salvador or wherever it may be? Do we have any restrictions on its use or constraints?

Mr. BUCKLEY. Self-defense is part of the arrangement, and if you are talking about security of sophisticated technology, there are special arrangements and agreements which are entered into regarding these.

Senator INOUYE. Are you satisfied that these conditions are being met?

Mr. BUCKLEY. Yes.

Senator INOUYE. I am not just picking on Israel or Egypt, but I am speaking throughout the world.

Mr. BUCKLEY. Yes, once in a while we have problems as we have in our own country, but as to the safeguards, first of all we are careful as to what technology is transferred in the first instance. It has been especially true in the last couple of years. There has been insistence upon basic safeguards that some of my friends in Defense feel have been effective.

### AWACS SECURITY SAFEGUARDS

Senator INOUYE. What safeguards have been instituted in providing security for AWACS?

Mr. BUCKLEY. Right now you will recall the President in a letter to the Congress stated that before the first AWACS were delivered there would be in place a series of protections. These are currently involving not only agreements, but also procedures and installations where appropriate. These are currently being worked out with the Saudis, and we are getting satisfactory cooperation.

Well before that delivery date, the President will be in a position to certify, or there won't be any delivery. But I would point out that we have had a long history with the Saudis, and I believe in the case of the F-15's and some of the systems associated with the F-15's, there are elaborate precautions, including who can have access to the buildings and so on which satisfied our military that they were pretty reliable.

### FISCAL YEAR 1982 SUPPLEMENTAL

Senator INOUYE. Finally, on a subject outside the Middle East, in your supplemental we have sums that have been set aside for use in Spain and Portugal and Morocco.

Would you say if these sums were not appropriated, what would the effect be on our negotiations with these countries?

Mr. BUCKLEY. It would have a very, very dampening effect, a very dampening effect. I can't calculate what might be the absolute amount.

Senator INOUYE. Wouldn't it be a bit more correct if I used the word rent instead of assistance?

Mr. BUCKLEY. Well, either way it is contributing to the capacity of an ally. Spain is entering the NATO Alliance, and it is quid pro quo, however described, for our ability to continue basing facilities and access which are very important to our planning.

Senator INOUYE. Thank you very much, Mr. Chairman.

### ECONOMIC EFFECT OF MILITARY ASSISTANCE

Senator LEAHY. I have a couple of comments I would like to make at the beginning, and I appreciate this.

I have read through Secretary Buckley's testimony, and as you acknowledge, you have a tough task ahead in this Congress. I want you to know that I agree with you totally, for whatever that is worth, but I would like to understand the testimony a little bit better.

I would like to comment on a couple of the assumptions behind some of the statements. For example, you state that this request for increased military/security assistance will "reduce the economic and social turmoil that breeds domestic violence and invites external intervention."

I suspect that less innocent people than myself, people who tend to be skeptical, and I understand we do have some, might have a little trouble with how the increased military assistance will reduce the economic and social turmoil.

Mr. BUCKLEY. Is that military assistance or security assistance?

Senator LEAHY. I am referring to military assistance. Also in the testimony it says "a failure to achieve viable economies and stable political institutions makes less developed nations inviting targets."

I happen to agree completely with that, but then I wonder about the explanation of how our military assistance will contribute to the viability of economies that are going bankrupt that they can hardly feed their people, let alone field a sophisticated army full of technical equipment.

I raise these questions because I am concerned about the problems of hunger and poverty that afflict so many in the Third World. But I also see these questions in the light of our own national interest.

I do share your goals of seeing economic development around the world, but I question the fact that we should be relying on military assistance to achieve that end.

There was a recent econometric study commissioned by the U.N., and this study, and let me make sure I have the numbers right, says that in 69 countries it was found that while military spending does not necessarily lead to lower levels of economic growth in developed countries, higher defense spending resulted in lower economic growth in all 54 developing countries.

The study also found defense spending in developing countries resulted in a shift of resources from the agricultural sector to heavy industry to support a military establishment. The study found that each dollar spent in defense reduced agricultural output by 20 cents.

So I question whether this bill as reflective of administration policies, is in our long-term security interests.

There is a statement that says "Security assistance is the most cost-effective payment we can make to meet fiscal challenges."

Later in your statement it says that this military aid package "will promote peaceful solutions to regional rivalries."

Again, more sophisticated Vermonters than myself might ask questions about these statements, and I wanted to be sure I am representing my constituency in raising the questions for them. It is possible, some may say, that building up everybody's war machine may possibly increase tensions and the threat of war.

I wonder if we keep on emphasizing foreign aid as being basically sending sophisticated equipment and weapons to the Third World, are we encouraging military solutions to economic problem? I note that over 95 percent of the 125 conflicts since World War II have taken place in the developing world.

Let me ask a couple of specific questions.

### HONDURAS

You are asking in your statement for $17 million for Honduras to counter insurgent movements. Yet, I didn't see anything in the official program justification that makes mention of insurgents or have I overlooked that?

Is there an insurgent problem in Honduras now?

Mr. BUCKLEY. We hope there won't be, but there are problems of people poaching on their territory from Guatemala and Nicaragua. They are in tremendous need for enhancing their capability of policing their own landscape and keeping troubles aside.

It seems to me that is self-evident from what we have seen in Central America in the past year and a half.

Senator LEAHY. But it says they are needed to counter insurgent movements. Those are anticipated insurgent movements?

Mr. BUCKLEY. Or other people's insurgents that are trespassing upon their territory.

Senator LEAHY. There is an insurgent problem in Honduras now, and I want to make sure I understand you. We are not hearing the same thing up in the Intelligence Committee.

Mr. BUCKLEY. There is traffic over and through Honduras, so they have borders that they have to protect, not necessarily insurgents trying to topple the Honduras Government, but people that are free and easy with their territory.

Senator LEAHY. Well the supplemental program request says the Honduras military has had "impressive successes" in intercepting illegal arms flow.

What are some examples of that, those impressive successes?

I am delighted to hear it. This is the first I heard about it.

Mr. BUCKLEY. This is what I have been told by our intelligence people.

Senator LEAHY. I would like at least one example. You know, I asked the same question of our intelligence people and maybe I misunderstood their answer. That is why I am asking the question here.

Mr. BUCKLEY. It is not stuff that is being used against Honduras.

Senator LEAHY. I understand what we are speaking about. But I am not aware of the impressive successes in interrupting the illegal arms flow. I have asked our intelligence sources, and I am asking you in your justification, what are those impressive successes?

Mr. BUCKLEY. I am advised that there have been some, and I can't recite chapter and verse.

Senator LEAHY. Do you have a copy of your supplemental program justification which is footnoted which might tell us what they are?

Mr. BUCKLEY. Senator, we will get you the citations on which that statement is based.

[The information follows:]

### HONDURAN MILITARY SUCCESSES

The efforts of Honduran security forces (FUSEP) in interdicting arms from Nicaragua to the Salvadoran insurgents are continuing. Arms routes are multifaceted and involve not only Salvadoran guerrillas but also sympathetic Honduran leftists. Because of the ongoing nature of the resupply operations, Honduran FUSEP authorities have kept information on most successful interdiction operations out of public view in order to better monitor and neutralize these logistics networks. Therefore, a classified briefing on FUSEP interdiction efforts is the appropriate vehicle for addressing your concerns and at the same time safeguarding the sensitive nature of the information.

The CIA has been notified of your interest in the matter and has agreed to provide such a briefing to you. Please contact Mr. Jerry Prehn at 351-6136 to arrange a mutually agreeable time. Mr. Prehn works in the Agency's Office of External Affairs, Legislative Liaison Division.

Senator LEAHY. I would like to go back in the other committee and check on this information.

Mr. BUCKLEY. All right.

Senator LEAHY. I certainly want to see the document showing these examples.

Mr. BUCKLEY. Undoubtedly it will be marked "Secret" all over the place.

Senator LEAHY. We have been even allowed access to secret material in the intelligence committee in the past. It varies from day to day, and in fact there have been times, you will be impressed by this, that the material has come to us so quickly that on one occasion I recall we got it before it was on the front page of either the New York Times or the Washington Post.

Mr. BUCKLEY. That must be some kind of record.

Senator LEAHY. It was. We have been able to keep almost current with monthly publications, but dailies have been more difficult.

Back to your presentation.

It says that these funds are needed to help the buildup of Nicaraguan Forces.

What is the size of the Honduran Army now?

Dr. GAFFNEY. I don't have that answer immediately available.

Senator LEAHY. Do you know what the size of the Nicaraguan Army is?

Dr. GAFFNEY. No, sir. That is not my immediate job to track those particular figures.

Senator LEAHY. One cabinet member told us it was 300,000. We went back to his 300,000 figure, and it went down to 21,000, but I didn't know if that was still current. According to this official 300,000 was a ball park figure, but 21,000 was more exact. That was not an official member from the State Department, however.

How much money would it take to build up the Honduran forces to an acceptable level? Again I am trying to understand the $17 million which is to help Honduras handle the Nicaraguan forces. What are we talking about?

I don't ask these questions in a frivolous fashion because we are going to have supplemental appropriations and more and more.

You know, I am trying to justify voting for cuts in virtually every single program that the State of Vermont relies on, and I am going to have to try to justify voting for money for other parts of the world I am going to be asked questions. Every one of us will be asked these specific questions.

Can I get an answer to that for the record then on these questions:

What is the size of the Honduran Army, the Nicaraguan Army, and how much it would take, in your opinion, to build up Honduran Forces to what you would find an acceptable level?

Mr. BUCKLEY. We will give you that, but I think the problems that are faced by Honduras are self-evident.

[The information follows:]

### NICARAGUAN ARMED FORCES

The Nicaraguan active duty forces number 20,000-25,000, while reservists and militia exceed 50,000. These forces are trained by over 2,000 Cuban military and security advisors. The Sandinista active duty forces are at least twice the size of Somoza's National Guard.

### HONDURAN ARMED FORCES

There are 12,000 military personnel in the Honduran Armed Forces. The Army is the largest branch with 10,800 men, while the Air Force has 1,000 and the Navy only 200. Until recently, Honduras had a very credible military force in the region. However, the massive military buildup in Nicaragua and the use of Honduran territory for arms trafficking to Guatemalan and Salvadoran guerrillas changed the situation. The fiscal year 1982 supplemental and the fiscal year 1983 request aim to correct in an adequate and appropriate fashion these developments. It is very difficult at this time to determine what Honduras will need beyond this period to maintain a credible military force in the future. Regional developments will at that time dictate new Honduran needs.

Senator **LEAHY**. Honduras is the poorest country in the hemisphere outside of Haiti, and the current government is almost bankrupt. Yesterday there was an article in the "Wall Street Journal" which reports that Honduran business executives have sent out at least 3.4 billion from the country, mostly to U.S. banks. The current President of Honduras remarked about economic aid component of the Caribbean Basin Initiative, that it is lamentable we find so little to solve the short-term problems in this region, belated economic aid would be like no aid."

Mr. **BUCKLEY**. If we get the Caribbean supplemental, that is $350 million.

Senator **LEAHY**. It is $17 million in military aid to Honduras and what is that going to do, really?

Mr. **BUCKLEY**. One can't attend to the economic problems and social problems without certain elementary feelings of safety. This is congenital in the human system, and it has always been that way.

One of the reasons we are urging this is because you have to have safety in order to have a stable society, in order to concentrate on economic development and on social development and political reform.

We believe that it is particularly important that we are allowed this kind of concessional aid.

Senator **LEAHY**. I am sorry, I am not familiar with the word that you used, "concessionality."

Mr. **BUCKLEY**. I mean less than market rates of money to help people get the weapons in order to keep people from poaching across their borders. That is an essential part of our ability to help other countries help themselves.

A significant part of what we are asking for in our supplemental is to restore the ability to help countries afford the weapons they need.

### EL SALVADOR

Senator **LEAHY**. Do you feel, for example, that a sense of security would come in El Salvador from trying to bring about a military solution?

Mr. **Buckley**. I believe their sense of security will come about if you can keep people from sabotaging your economy, as has been the consistent efforts of the guerrilla forces in El Salvador.

Senator **Leahy**. Do you think that that is going to stop simply by pouring more military aid in there? We could stop them perhaps by putting in a substantial amount of American ground forces, but we are not about to.

Are we going to bring that to a halt by talking with the government and saying "We will give you all of the military aid you want and that will stop the economic damage, and bring about security?"

Mr. **Buckley**. I don't think anyone is proposing that, but there are examples elsewhere in Latin America, as well as a specific example where judicious military power has been able to contain guerrilla type assault while economic and political reforms have gone forward that have brought stability and democracy.

Senator **Leahy**. To which country?

Mr. **Buckley**. Venezuela, as an example, and I believe one would hope to have a repeat of that in El Salvador.

Senator **Leahy**. Venezuela is in a little different situation, they do have some oil.

Mr. **Buckley**. Therefore, they were able to afford what they did, but nevertheless the problem was the same, and the techniques are continuing of the guerrilla efforts which would be the same.

Senator **Leahy**. Do you see the guerrilla effort in El Salvador being contained through military efforts or political efforts?

What is a military application or a political application?

Mr. **Buckley**. It is to keep your economy from being destroyed while, No. 2, you proceed with political reforms. That extraordinary election is an example of what can be achieved to build a representative institution to solve your problems politically.

Senator **Leahy**. Is it a representative institution when the party that received plurality has no say in the government?

Mr. **Buckley**. Each country organizes in its own way, and it is not unusual to have coalitions in other countries end up in charge of the government.

Senator **Leahy**. To the total exclusion of the one that got the plurality?

Dr. **Gaffney**. That is true in the Federal Republic of Germany today, sir.

Mr. **Buckley**. One shouldn't prejudge what the results are going to be, but observe what happens.

Senator **Leahy**. I am observing. By the amount of mail each one is receiving, I suspect a lot of our constituents are, too.

Thank you.

Senator **Kasten**. Thank you, Senator.

Senator Inouye brought up the questions regarding Israel, and I think it is fair to say that a number of people in Congress are concerned whether or not Israel can afford additional debt or if this $300 million should be in the form of direct credits.

You answered that question, but it is of concern to a number of people on this committee and in the Congress that we continue to put them deeper in debt.

Senator **Leahy**. Mr. Chairman, I forgot to mention, I may have additional questions for the record, and I ask to submit those.

Also, I will state my earlier request that at some time it may be helpful if we could have a meeting on the question of El Salvador. I know that so far this year we haven't had one.

### ISRAELI DISBURSEMENT

Senator KASTEN. Surely.

The Congress last year in our bill and in the House bill and in the conference report put in language regarding the disbursement of economic support funds for Israel. The administration so far has ignored this direction.

Is the administration now willing to comply with our instructions on the disbursement of the economic support funds for Israel?

Mr. BUCKLEY. As I wrote you, I believe, as well as Senator Inouye, almost coincident with the time that the Congress was issuing its report and recommendations which, believe me, we take very seriously, there was the annexation of the Golan Heights, and this caused the President to conclude that it would not be appropriate in those circumstances to do more than business as usual, lest the wrong signals be given.

But I did point out that business as usual which we had been adopting was more favorable in terms of advanced payment than is true of any other country in the world.

Senator KASTEN. The situation with Israel has changed somewhat since that time, and we are working with them in a number of different areas, especially now with Secretary Stoessel coming back after the completion of the Sinai withdrawal.

Do you think under the circumstances that you would now be able to comply with the committee's direction regarding the disbursement of economic support funds for Israel?

Mr. BUCKLEY. With respect to that last payment, I certainly will look into it.

Senator KASTEN. Your statement does not include nor does it touch on the peacekeeping request, including the request for the MFO. That is part of your responsibility, is it not, the peacekeeping?

Mr. BUCKLEY. I don't superintend it, but I do have to see that the document we introduce covers that contingency and the need.

Senator KASTEN. Who is in charge of that, and who would be able, for example, to provide us with a report on how the MFO is working?

I know it has only been in operation since Monday, but that was a subject of some controversy last year. I think it is an unnecessary controversy. Who is it that justifies that request or will be reporting on it?

Mr. BUCKLEY. I was requested to find funds for it through reprograming. Of course, it comes under Assistant Secretary Veliotes, and he would be the appropriate person to ask how that is operating and any other questions you might want to ask.

But it was because of that experience and because of the difficulties we had in quickly finding funds in Chad that we are requesting this year for special authority for peacekeeping forces, against the contingency of future needs of that kind.

As you will recall, under the Camp David accord, it was anticipated this would be a U.N. force. That fell apart, and it became not available, and then we had to patch together the present arrangement.

Senator **Kasten**. It is my understanding that in previous peacekeeping operations this subcommittee and your Department have dealt with these issues. So we are evidently changing that procedure if we are going to switch it to someone else.

### RAPID DEPLOYMENT FORCE BASE

On April 9 I visited Ras Banas, the airbase we will be modernizing for use as a forward position for the rapid deployment force. It seems to me that it could be an excellent location in many respects.

What funding role will this subcommittee play, and what role will you be playing, if any, with respect to that base and to the rapid deployment force positioning?

Mr. **Buckley**. That is in your military part.

Dr. **Gaffney**. That is in the military construction budget of the defense budget, and it is being reviewed by those committees here on the Hill.

Senator **Kasten**. There will be nothing in foreign operations having to do with that, or with any of that operation?

Dr. **Gaffney**. It is certainly not involved in these kinds of security assistance budgets that you are reviewing here.

### EGYPTIAN PIPELINE

Senator **Kasten**. The continuing and main problem with respect to the economic program in Egypt is the huge pipeline. I am told it is now over $2.2 billion, representing almost half of AID's entire pipeline.

How do you view this problem, and why do we allow it to continue, and what are you doing to try to deal with the problem?

Mr. **Buckley**. It is gradually being digested. It started out in a decision a few years back, and it was that Egypt has an enormous infrastructure problem. When you are dealing with those kinds of projects, by their very nature they take a lot of time to plan and construct and fund.

But my understanding is that these are beginning to shrink and the future emphasis that is being developed now is for far greater stability and speedier programs and programs that are centrally directed, so that as time goes on we expect you will find a significant shift.

Senator **Kasten**. What is your view of possibly shifting the Egyptian program from funding on a project-by-project basis to loans or grants based on sectors of their economy; or what is your view of treating Egypt as we treat Israel, simply funding programs which they then operate and manage on their own?

When I was in Egypt I spoke to a number of officials there, and I feel that one of the problems we have is that we have an Egyptian bureaucracy and a huge AID bureaucracy; by the time it goes through all of these bureaucracies, the two bureaucracies don't always agree and we have too many people involved.

If we could give them more latitude, it seems to me that it would begin to solve part of this problem of the pipeline. Frankly, I strongly feel that we could move in this direction.

Mr. BUCKLEY. That is what I intended to suggest when I said we are moving toward greater flexibility, toward the sectoral thinking as you recommend. In fact, there is in effect an agreement in principle with the Egyptian Government that this is the way our assistance should be proceeding.

The details have not been worked out, but nevertheless I believe you correctly describe in terms of the flexibility and the quickness and getting rid of the red tape and so on, the direction that AID is now pursuing.

Senator KASTEN. In other words, this direction has been essentially agreed to by AID, and this is the way we are going to start?

Mr. BUCKLEY. That is my understanding, right.

Senator KASTEN. While I was in Egypt I heard expressions of need for assistance in providing them with modern avionics for some of their other aircraft, and also for *Tacoma* class ships for their Navy.

What is your view of the priority of these particular needs, and do you expect any action on either of these items in the future?

Mr. BUCKLEY. We know that people are looking at the *Tacoma* ships and there are various people looking at ways of extending the life and utility of the Mig's.

But I would need to point out that the funds that we are discussing here are totally committed, and not only for items previously ordered, but for the F-16's and M60 tanks, and there simply is no room prior to 1984 to consider these other items. We have received no request at this point from Egypt for avionics.

Senator KASTEN. Last year the Administrator of AID talked to us about the possibility of Congress, and it wasn't in a hearing, but we talked about the possibility of Congress providing AID with reobligation and deobligation authority. I indicated to him at that time I felt the subcommittee would do so. We have not, however, received such a request, and frankly I am thinking about going ahead and providing you with that kind of authority anyway.

What is your view of the necessity of deobligation and reobligation authority, especially as it relates to Egypt.

Mr. BUCKLEY. If I may, I would like to defer that question to AID. I think you can get a more precise answer that way.

[The information follows:]

### EGYPTIAN ESF PROGRAM

We appreciate the Subcommittee's interest in and support for such a provision. AID is now in the process of consulting with Egyptian Government officials to determine how and whether deobligation-reobligation might be applied to the Egypt program, and at the same time, we are examining how this proposal might affect the AID program worldwide. We would hope to be sending you a specific proposal shortly.

## SECURITY ASSISTANCE AND MULTILATERAL ASSISTANCE

Senator LEAHY. Mr. Secretary, you stated that security assistance is the most cost-effective method to meet today's challenges and hence the prospect of a safe future which all nations wish. I join with you that all nations are trying to reach that point.

I think both you and I may not live quite that long, but I don't question the sincerity of everybody in this room on that.

But is there any evidence really to back up the statement that security assistnce is the most cost-effective method?

Mr. BUCKLEY. If you think it is better to have Egyptians looking after Egyptian security than Americans stationed there, or to have Pakistanis able to deter attack out of Afghanistan than trying to build an American rapid deployment capability, if we think that such an attack would threaten vital interest of ours, I think mainly, yes.

Senator LEAHY. But we are building the rapid deployment force anyway.

Mr. BUCKLEY. We are, but it depends for its effectiveness and in terms of Defense Department planning, very heavily on the enactment of these kinds of programs that we are asking the Congress to authorize and fund. That is because it anticipates that there are forces in place that have certain capabilities, that anticipates that we have access rights, and it anticipates that there are runways of certain dimensions and spare parts, and that there are warehouses and communication systems and this whole complex that enables our rapid deployment forces to move and reach a safe haven that is still there and reasonably protected.

Senator LEAHY. But that is only one part of U.S. interests. Do you feel, for example, it is more cost effective than the multilateral development banks where we have an awful lot of leverage on dollars that are spent? You would feel that the security assistance is more cost effective than that?

Mr. BUCKLEY. In terms of the U.S. security aspects, yes.

Incidentally, in terms of your earlier reference——

Senator LEAHY. The security aspects, that can involve an awful lot. If we are talking about the overall security of the United States, it is a major part. If we are unable to compete economically around the world, it is part of our security aspects; if our schools are not turning out people who can compete worldwide and can't speak languages and don't have scientific skills and so on, it affects our security interests if we are seen as a collapsing economy.

These are all parts of our security interests, are they not?

Mr. BUCKLEY. In the broadest possible sense, which is why we continue to make a very major contribution to multilateral funds, the account where we have asked more from the Congress than the Congress has authorized.

Yes, but in terms of a sharper focus, in terms of strategic interests, the role of Turkey in relation to its being the eastern anchor of NATO and the protection of the southern flank of Europe, we believe that security assistance to Turkey is a very cost-effective way of seeing to it that that portion of an area important to the United States is in fact adequately protected.

It costs the Turks about $6,000 to have a man in the field, and it costs us about $90,000.

Senator LEAHY. Isn't it also important to have their economy built up?

Mr. BUCKLEY. Which is why over half of our assistance program involves economic support, yes.

Senator LEAHY. Economic support of the military?

Mr. BUCKLEY. No, that is why earlier when you were talking about my statement——

Senator LEAHY. Half of the security assistance has nothing to do with military?

Mr. BUCKLEY. That is why I asked you whether you meant military or security assistance. I believe from what I have been able to glance at I was talking about security assistance, which is a blend.

Senator LEAHY. To make sure I understand, when you are talking about security assistance, 50 percent of it has absolutely nothing to do with military?

Mr. BUCKLEY. Fifty percent of the cash outlay, and you are talking about the FMS grants and the off-budget, as well as the others, it is about one-third.

Senator LEAHY. What kind of leverage do we get out of that? We talked about the MDB's earlier and obviously there is a great deal of leverage there.

What do we get out of this 50 percent, what kind of leverage?

Mr. BUCKLEY. First of all, we get tremendous political leverage which is an important objective of this kind of exercise.

Senator LEAHY. Can you give me an example of that, where we have gotten a great deal of political leverage out of this?

Mr. BUCKLEY. I believe we have it in Turkey, an example of where our economic support has been very important. We have another one which is Jamaica, where our security assistance is 99.9 percent economic. The Caribbean Basin assistance will be five-sixths economic.

### PAKISTAN

Senator LEAHY. You mentioned Pakistan, and has it given us any leverage over there?

Mr. BUCKLEY. I think so. I think very definitely if we had not had this relationship you would have had an explosion. I believe that that has been muted, and it is less likely that there will be a nuclear detonation by virtue of the fact that we have this relationship.

Senator LEAHY. Could they develop a bomb without exploding one?

Mr. BUCKLEY. They could develop something and put it on a shelf.

Senator LEAHY. Can they develop a nuclear weapon?

Mr. BUCKLEY. You will have to ask more sophisticated people than I am.

Senator LEAHY. The answer is "Yes," at least from the Hill experts.

Dr. GAFFNEY. What is the answer?

Senator LEAHY. I have asked that question of Hill experts, our own arms control people, who tell us that the state of the art is such now that you can develop—given any kind of a technological background, you can develop a weapon without having to detonate it first.

Dr. **Gaffney**. I worked on this subject for some 12 years, and I am not the expert myself, but I did have a guy working for me who knew very much about the inside of these things. He said you really never would know whether you have a fizzle or not without testing, and you are never quite sure you have a working bomb.

Senator **Leahy**. That could be said of a lot of our own strategic weapons. Can you fire over the Polar Cap? We don't know the answers to that, which could be said of us and the Soviets.

But let me ask one last question, and I know the chairman has to leave.

### PEACE CORPS

You are the coordinator of assistance, proposing a $1.8 billion increase proposed for military assistance. Do you believe the administration can't find even $8 million to fund the Peace Corps at last year's level?

Mr. **Buckley**. This is all a question of trying to cut to the barest minimum required to meet objectives. It is a judgment call.

Senator **Leahy**. The Peace Corps may feel that they have been cut to a barest of the barest minimum even to get the $8.1 million increase.

Mr. **Buckley**. These are judgment calls.

Senator **Leahy**. Thank you. I should mention that I had the privilege, and I do consider it a privilege, to have served in the Senate with Secretary Buckley when I first came here and, as always, I am glad to see him.

Senator **Kasten**. Thank you, Secretary Buckley.

This concludes our hearing for this afternoon. Thank you for being so patient, and we are sorry about the votes.

### SUBMITTED QUESTIONS

The hearing record will remain open for 2 weeks for the submission of questions, and we hope you can get back to us in 2 weeks.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### REASON FOR SUPPLEMENTAL

Senator Kasten: It is traditional -- a normal practice for supplemental requests to be considered only if they are a result of something which has occurred between the time the regular Bill has passed and the supplemental is requested. In other words, supplementals normally are not requested or considered simply because Congress didn't provide them in the regular Bill, except, of course, because of oversight or lateness of budget requests.

Isn't your fiscal year 1982 security assistance request simply a re-asking of that portion which Congress did not provide you in the regular fiscal year 1982 Bill?

Mr. Buckley: Supplemental requests generally result from the reasons you cite. The circumstances surrounding this year's request are extraordinary. Congress chose not to appropriate the FMS direct credits which were central to our security assistance planning. Instead, a far smaller amount of MAP was provided, necessitating extensive reallocations which coincided with new demands discussed in detail elsewhere.

### MR. BUCKLEY'S ROLE WITH RESPECT TO FOREIGN ASSISTANCE

Senator Kasten: Would you describe for us your overall role with respect to foreign assistance, not just security assistance?

Mr. Buckley: As you know, under various sections of the Foreign Assistance Act, including Section 622, the Secretary of State is responsible for providing policy guidance, general direction and continuous supervision for all U.S. assistance programs. He has asked me to coordinate the allocation of all types of foreign assistance in which the Department of State is involved, and to assure that U.S. assistance programs reflect the foreign policy objectives of this Administration.

### PARTNERSHIP OF THE EXECUTIVE AND LEGISLATIVE BRANCHES

Senator Kasten: It is my belief that this subcommittee has worked hard to develop a good working relationship with the Administration. That we have made an effort to give the Administration the flexibility needed to conduct its foreign policy.

However, if the Administration continues to ignore specific directives by the subcommittee--and, of course, by Congress--it will be more difficult to continue this policy of flexibility.

It has even been suggested that Congress must again legislate--rather than direct--in the foreign aid bill.

Would you care to comment on this?

Mr. Buckley: We appreciate the assistance and cooperation provided by the Senate Appropriations Subcommittee on Foreign Operations. We hope that this partnership will thrive and expand.

We gave the subcommittee's recommendations in the FY-82 Foreign Assistance Appropriations Bill careful consideration in the formulation of our policy decisions. You may be assured that the concerns of you and the other members of your subcommittee have been brought to the highest levels of the Executive Branch.

The protection and promotion of America's international goals and objectives require maximum flexibility in the conduct of our foreign policy. Events not foreseen when resource allocations were made months earlier, need to be dealt with in a timely, efficient manner by policymakers. For example, none of us foresaw the awesome tragedy of Lebanon and the need for relief assistance it would entail.

Accordingly, we do not believe that a specific set of legislative earmarkings or directives would necessarily produce a more efficient foreign policy or even a more efficient utilization of foreign assistance resources. We would rather continue the practice of frequent, informal consultations on matters of mutual interest to the subcommittee and the Administration.

## NEGEV AIRBASE CONSTRUCTION PROGRAM

Senator Kasten: On April 6th I spent some time at the airbase which is under construction at Ramon in the Negev. Israeli officials involved in the construction of the airbase very strongly pointed out that they felt this airbase was costing more funds than necessary because of bad decisions and rules and regulations by some of the American agencies involved in the building of the airbase. Are you aware of these complaints?

Mr. Buckley: We are aware of these general allegations which have surfaced on and off over the past year.

Senator Kasten: Have you investigated them?

Mr. Buckley: The Army Corps of Engineers has closely monitored the entire airbase construction project, including those decisions which have resulted in additional project costs.

Senator Kasten: Do you at this time, have any comment?

Mr. Buckley: The airbase construction project was put on a "fast track" to ensure construction was completed by April 25, 1982. By its very nature, any "fast track" project of this type is not as efficient in terms of cost and quality as a project which follows a normal construction schedule. We will be referring this question to the Corps of Engineers for a more comprehensive answer.

## TRANSFER OF BUILDINGS FROM ISRAELI AIRBASE AT EITAM TO MFO

Senator Kasten: On the same day I was at Ramon, I visited with General Bull-Hansen of the Multinational Force and Observers at Eitam. While I was there, I learned that many of the buildings which were left by the Israelis had been sold to the MFO by the Israelis -- had they not been sold, Israel would have destroyed them.

Didn't we make any effort to try to get Israel to contribute these buildings, rather than making the MFO purchase them?

Mr. Buckley: With respect to the buildings at the former Israeli base of Eitam, the Israelis agreed and did leave behind free of charge to the MFO all permanent structures with one exception. Security buildings, i.e., plane enplacements, ammunition storage bunkers, communications facilities, etc., were destroyed by the Israelis. In addition to the permanent structures, there were also prefabricated buildings which, of course, had a value and could be used elsewhere. A few of those structures which met MFO's needs and whose price was less than the cost of importing the same structure were bought by the MFO. The remainder were removed by the Israelis for use elsewhere.

## REPORT ON MFO OPERATIONS

Senator Kasten: With respect to the MFO, a report on how it is working might be worthwhile, although I do understand it has only been in operation since Monday.

Mr. Buckley: The MFO has been in operation only since April 25 and consequently there is little to report on its operations as yet. However, Public Law 97-132, which authorized U.S. participation in the MFO, requires a report on MFO's activities up through April 16, 1982. Such a report is being prepared by the Department of State and will be sent in the near future to the Speaker of the House of Representatives and the Chairman of the Senate Foreign Relations Committee.

## EGYPT: APPROPRIATIONS FOR RAS BANAS

Senator Kasten: On April 9th, I visited Ras Banas, the airbase we will be modernizing for use as a forward positioning post for a rapid deployment force. It seemed to me to be an excellent location in most respects. What funding role will this subcommittee play, if any, with respect to that base?

Mr. Buckley: As you know the President has included in his FY-83 budget proposal a request for military construction funding to be utilized in the upgrading of Ras Banas. The Congress will, of course, review and act on this request in accordance with its own procedures. Exactly how responsibility will be allocated within the Senate Appropriations Committee is a matter entirely within the purview of that Committee.

## EGYPT: POSSIBLE USE OF CAIRO WEST

Senator Kasten: Also in regard to Ras Banas -- it is my understanding that the West Cairo facility is being suggested as a site for the Rapid Deployment Force. What is your view of that suggestion?

Mr. Buckley: Egypt's offer to consider the possibility of U.S. contingency access to facilities has never been limited to Ras Banas. We have used the Egyptian airbase at Cairo West in connection with three different joint exercises conducted in Egypt, and it has been mentioned as a possible site for staging in agreed emergency situations. Under certain circumstances, this might prove advantageous, but it is our overall judgment that Ras Banas, once necessary construction is completed, would better serve most anticipated contingencies.

Senator Kasten: Isn't Cairo West already a full-fledged Egyptian military base? If so, would we have as easy access to it as Ras Banas?

Mr. Buckley: Yes, it is a functioning airbase, the installation at which Egypt has based its two F-4 fighter squadrons. That would not necessarily preclude U.S. access, particularly in that we are not speaking of a permanent presence but only of our use in agreed contingencies. Moreover, being currently operational, Cairo West offers near-term availability which does not exist at Ras Banas. Upgrading would, however, also be required at Cairo West, and it is clear that the need to plan for extensive potential use by both U.S. and Egyptian forces could be a complicating factor.

Senator Kasten: Isn't Cairo West in a heavily populated area?

Mr. Buckley: While Cairo West airbase is located in open desert terrain, it is correct, as its name suggests, that this facility is just outside Egypt's capital city, no more than an hour from the center of Cairo.

Senator Kasten: How important are port facilities to the Rapid Deployment Force base? I understand there are no port facilities at Cairo West.

Mr. Buckley: Clearly a major advantage of Ras Banas as a facility for contingency use by U.S. forces in an agreed emergency is the fact that it offers access by both air and sea, once required upgrading is completed. In terms of offering maximum flexibility in planning support for a range of contingencies, this is a major plus not offered by Cairo West. The latter is exclusively an air facility; the nearest port is Alexandria, roughly 100 miles to the north.

## EGYPT: SIZE OF PIPELINE

Senator Kasten: The continuing and main problem with the economic program to Egypt is the huge pipeline -- now nearly $2.2 billion, and representing nearly one-half of the A.I.D.'s entire pipeline.

How do you view this pipeline problem?

Mr. Buckley: We have also been concerned about the Egypt pipeline and have been devoting considerable attention to program implementation. As a consequence, disbursements reached $723 million in FY 1981 and this year are projected to exceed new commitments for the first time. Thus the pipeline level has plateaued and will begin to fall this year.

As of the end of FY 1981, the Egypt pipeline totaled $2.5 billion. Of this total, about $500 million was for the Commodity Import Program (CIP) and $2.0 billion represented the project pipeline. Most of the project pipeline is for fully funded projects. That is, funds have been obligated to cover the full cost of A.I.D. inputs over the planned four to five year project construction period. Thus the sheer size of a pipeline does not necessarily indicate a problem, as a "normal" pipeline would tend to equal three to four times the annual program level.

FY 1981 disbursements of $723 million represented an increase of 20 percent over the level achieved in FY 1980. Project disbursements of $350 million were 75 percent higher than in the previous year, reflecting the full scale implementation of many large capital projects which have moved from the final design phase to the construction phase.

The Egyptian Government has requested that we make greater use of incremental funding and sectoral forms of assistance in an effort to reduce further the pipeline. Our FY 1982 program will incorporate these concepts to a larger degree than in the past.

## EGYPT: PROGRAM CHANGES

Senator Kasten: What is your view of possibly shifting the Egyptian program from one of funding individual projects, to at least sectoral loans or grants; but better yet with some balance of payments or budget type financing as we do with Israel?

Mr. Buckley: The Administration has agreed to shift to the more flexible forms of assistance sought by President Mubarak during his February visit to support Egypt's efforts to institute reforms in the economy. It should be noted, however, that over half of our total assistance to Egypt already is provided in quick disbursing forms (CIP and PL 480 Title I programs) which support balance of payments objectives.

This fiscal year we are moving, where appropriate, to sectoral loans and grants for new obligations. For example, rather than providing additional funding in FY 1982 to individual projects within our decentralization portfolio, e.g., Basic Village Services 263-0103, or Decentralization Support Fund 263-0143, we are clustering all such projects in a single program called the Decentralization Sector Support Program. This not only responds to Egyptian concerns, but will also provide a forum in which the larger policy issues related to decentralization can be pursued.

Additional sectoral loans and grants are being developed for technical assistance in energy and production credit. We also are considering broader sector activities or budget financing in support of economic reform actions the Egyptian government has indicated it expects to adopt.

## EGYPT: NEED FOR NEW ASSISTANCE

Senator Kasten: While I was in Egypt, I heard expressions of need for our assistance in providing them with modern avionics for some of their Soviet aircraft, and for Tacoma class ships for their Navy. What is our view of the priority of these needs, and do you expect any action on either of these items in the near future?

Mr. Buckley: The Government of Egypt has expressed interest in patrol boats for sometime and has explored possibilities on the commercial market, including a potential sale of over $300 million with Tacoma. We have not received a specific request to approve any sale, but would have no policy objection to doing so. There is no FMS available for Egypt until 1984 since Egypt has recently earmarked the balance of its FY-82 and FY-83 FMS credits for the purchase of 40 F-16 aircraft and M60A3 tanks in addition to scheduled progress payments for other equipment already ordered.

We have received no request from the Government of Egypt for assistance on the avionics for MIG aircraft. We understand that a number of U.S. and other contractors have discussed a number of programs to extend the life of Egyptian MIG assets and that Rolls Royce is reengining a number of MIGs. Our impression is that the Government of Egypt has more of an interest in extending the life of its SU-7 fighter, a program which would exceed $100 million for structural and engine changes. Again Egypt is limited by lack of FMS availability until FY-84.

## EGYPT: DEOB/REOB AUTHORITY

Senator Kasten: Last year the Administrator of the Agency for International Development, in my office, talked to me about the possibility of Congress providing A.I.D. with deob/reob authority. I indicated to him at that time that I felt the subcommittee would do so. We have not, however, received such a request, and we are now thinking about going ahead and providing you with such authority.

What is your view of the necessity for deob/reob authority, especially as it relates to Egypt?

Mr. Buckley: The Administration is very interested in mechanisms such as deob/reob authority to enhance its ability to manage assistance programs. A.I.D. discussed deob/reob authority with this committee last year, and has had continuing discussions with members and staff since then. The principal problem is that funds made available through deob/reob are considered to be new budget authority by the Congressional Budget Office and OMB and count against the relevant fiscal year's appropriation request. This being so there appears to be little value in obtaining deob/reob authority per se, since it would require an offsetting reduction of new funding to maintain overall budget levels.

A major objective behind the deob/reob authority request, however, could be accomplished if, in the future, the Committee approved the Administration's request, particularly for Egypt, that ESF funds appropriated for Fiscal Year 1983 remain available until expended. Such "no year" authority would permit A.I.D. to deobligate projects funded with no-year money in future years with the assurance that such funds would be available for reobligation for similar projects. The President's request that ESF funds for FY 1983 be made available on a no year basis is set forth on page I-D5 of the Appendix to the fiscal year 1983 budget.

We would strongly recommend that the committee consider enactment of this authority, particularly for Egypt.

## U.S. - IRAQ RELATIONS

Senator Kasten: There are a number of people, both here and in the Middle East, who believe the time is right for the United States to make some kind of a goodwill gesture -- perhaps through other channels -- toward Iraq. The belief is that an Iranian victory in the Iraq/Iran war would be disastrous to all of our friends in that area, and because of Iraq's disgust with the Soviet Union, some kind of gesture on our part would bear fruit.

What are your views on this?

Mr. Buckley: Our policy throughout the war has been to avoid taking sides in the dispute, to encourage a prompt end to the fighting, and to urge the combatants to negotiate a solution which maintains the independence and territorial integrity of both states. As part of our policy of neutrality in the conflict, we have not approved the supply of U.S. military equipment to either side. We have no plans to abandon this policy now, nor do we believe that it would be in our interest to do so.

From the start of hostilities twenty months ago, we have sought to meet the security needs of our friends in the region who may be threatened by the conflict or its outcome. The deployment of U.S. AWACS to Saudi Arabia early on in the conflict was but one such measure toward that objective. We continue to look at, and hopefully provide for adequately, the needs of our friends in the

Persian Gulf to help insure their security as well as that of Gulf oil supplies which are, of course, essential to the economies of the free world.

Over the past few years, the U.S. has indicated its readiness to re-establish full diplomatic ties with Iraq, in addition to our desire to improve relations in general. While commercial relations have expanded and our political dialogue with Iraq has improved, the Iraqis have stated that normal relations with the U.S. are not possible until we adopt what they call "a more neutral" policy toward the Arab-Israeli dispute.

Iraq began the process of reducing its dependence on the Soviet Union well before the conflict with Iran. Although the Soviets may well have given Iraq further cause during the conflict to reduce its dependence, we believe that Iraq's objective is to develop a policy more consistent with its role as chairman of the Non-Aligned Movement, a position it is scheduled to assume in September, rather than substituting the U.S. for the U.S.S.R.

## JORDAN'S ROLE IN MIDDLE EAST PEACE PROCESS

Senator Kasten: It is obvious that Jordan is a key to future progress in Middle East peace plans. Do you think we are doing everything we can to encourage Jordan, politically and otherwise, to join in this process?

Mr. Buckley: Jordan has a crucial role to play in peace-making in the Middle East. That is why Jordan is invited to be a partner in Camp David.

We never miss an opportunity with the Jordanians to urge them to join Camp David, and we never fail to recommend that they continue to play their moderating role in the region. Jordan has taken risks for peace in the past, and King Hussein has shown himself willing to deal positively with the related problems of peace and security in the region. This is why our positive dialogue with the Jordanians is so important to us.

## SUDAN'S ECONOMIC REFORMS

Senator Kasten: The Administration's request reflects a growing relationship with Sudan, largely because of that country's strong leadership in the Middle East peace effort, and, of course, because of its great need for economic assistance. Two questions: First, is Sudan making the necessary adjustments for IMF assistance and other multilateral assistance? And, second, what is the situation with respect to Libyan harassment of that country?

Mr. Buckley: Prior to approval of the International Monetary Fund's standby arrangement, Sudan implemented a broad range of reforms including an 80 percent devaluation, elimination of most consumer subsidies, and tax measures designed to reduce consumption of luxury goods and stimulate exports. In addition, in conjunction with World Bank projects, Sudan has reallocated the production costs in the cotton sector to restore incentives to individual efficient producers. Implementation of these measures enabled the IMF's Executive Board to approve a $220 million, one year standby arrangement which the United States supported and believes will begin to revive the Sudanese economy. World Bank loans have also been disbursed in conjunction with reforms, particularly in the agricultural sector. Additional macro and micro economic reforms will be necessary to ensure continued economic recovery and additional international assistance.

## LIBYAN HARASSMENT OF SUDAN

In response to your second question, there is strong evidence that Qadhafi remains committed to trying to overthrow the Sudanese Government. Though the threat of a direct military attack has greatly subsided since the Libyan withdrawal from Chad last fall, Libya continues to promote subversive efforts directed against Sudan. Libya's new ties to Ethiopia have enhanced the danger to Sudan, which shares a 1,000 mile border with Ethiopia.

## U.S. ASSISTANCE TO KENYA

Senator Kasten: We have received reports of worsening economic conditions in Kenya. Do you believe your request for that country is sufficient in light of those reports?

Mr. Buckley: Our request for Kenya was carefully reviewed and took into account the economic difficulties facing Kenya. The Kenyan Government has adopted a number of measures recently in conjunction with multilateral institutions and bilateral donors to improve domestic economic performance. We believe that the increase in U.S. assistance that we have already requested, along with assistance from other donors, will provide sufficient support to the Kenyan Government's effort to reverse the pessimistic trends in Kenya's economy.

## THAILAND

Senator Kasten: Last year the subcommittee included report language recommending "that the Administration consider extending repayment terms on military assistance to Thailand." It recommended this because of Thailand's key position as a front-line state facing 200,000 Soviet backed Vietnamese troops along its Cambodian border. Moreover, the Thai Government faces serious debt servicing problems. What has been your response to this recommendation? Are you going to provide them with better terms?

Mr. Buckley: In this year of budget stringency we have not been able to extend the repayment terms on FMS credits to Thailand beyond the five-year grace period and seven-year repayment period authorized for FY 1981. However, because of Thailand's special situation, we are apportioning $4.5 million in MAP grant funds to Thailand for FY 1982, which will have the effect of lowering the overall impact of the standard interest rates on the $62.5 million of FMS credits this year.

## PHILIPPINES - ESF

Senator Kasten: It has been brought to our attention by staff of the Senate Foreign Relations Committee that Economic Support Funds (ESF) which were provided to the Philippines in either fiscal year 1980 or 1981 may not have been properly used, in that some $18 million were put into an interest bearing account, accruing only to the benefit of the Philippines.

Do you know anything of this problem, and what the status is?

Mr. Buckley: The $18 million in FY 1980 ESF funds provided to the Philippines for elementary school construction is being properly used. As of April 30, 1982, virtually all the project school buildings had been constructed.

As you know, President Carter pledged, at the time of 1979 Amendment to the Military Bases Agreement with the Philippines, and subject to appropriation, that the United States would provide $200 million of ESF during the period FY 80 - FY 84. Under procedures that have been used since then, development projects have been jointly designed and approved by the two governments. The United States annually transfers dollars to the Philippine Government in the amount of the estimated peso costs of that year's projects, and the Philippine Government in turn appropriates an equivalent amount of pesos which is provided to those projects.

Through this process the United States accomplishes two objectives: satisfying the Presidential commitment made in 1979 and funding mutually agreed upon development projects. The United States required the Philippine Government to place its pesos in a special account to ensure that the pesos would be available as needed for the agreed projects. While in the special account, the government's pesos earned interest. Since the funds involved did not belong to the United States, it has no claim to the interest.

Perhaps it would be helpful to provide more detailed background information. As an adjunct to the 1979 Amendment to the Military Bases Agreement with the Philippines, the United States undertook, interalia and subject to Congressional appropriation, to provide $200 Million of ESF assistance over a period of 5 years.

In July 1980, the United States Government and the Republic of the Philippines entered into an agreement under which the United States transferred $18 million of ESF funds to the Philippine Government which in turn agreed to use an equivalent amount of its own pesos to finance the construction of approximately 850 three-rooom elementary schools and 12 ten to eighteen room elementary schools in the Philippines. The purpose of this agreement was to satisfy partially the United States commitment made at the time of the 1979 Amendment to the Military Bases Agreement, and to ensure support for the Philippine Government's school construction program. As of April 30, 1982, all three-room schools were completed and 11 to 12 larger schools were completed. In fact, 25 to 35 additional three-room units may be financed out of savings realized during construction. Furnishings had been provided to 400 of the schools. Satisfactory progress toward project completion is being achieved.

In response to a draft A.I.D. audit recommendation, the A.I.D. General Counsel's office ruled that "no interest was earned on the funds owned by the United States and paid to the Grantee. The A.I.D. grant was made in dollars. The interest at issue was earned on pesos owned by the GOP prior to transfer of the dollars by the United States, and the pesos continued to be owned by the GOP after the pesos were transferred into the special account. The United States did not purchase or acquire those pesos. Rather, the United States required the GOP to use its own pesos for mutually agreed purposes.....In conclusion, A.I.D.'s sole purpose with respect to the GOP-owned pesos was that pesos be available at the appropriate time to finance elementary school construction. I understand that this purpose has been substantially accomplished. The GOP's earning interest on its own money in the interim was not, nor should it have been, precluded by A.I.D. The critical point is that the pesos always were part of the GOP's revenues and not currencies appropriated by the United States or currencies purchased with United States dollars."[1]

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### ISRAELI POLICY ON FUTURE OF WEST BANK

Senator Inouye: Mr. Secretary, I would like to ask a few questions relating to the Camp David process, autonomy negotiations, and security assistance. In a May 1981 article which appeared in Commentary, Menahem Milson, who has subsequently been appointed by the Begin government as Civil Administrator for the West Bank and Gaza, wrote "The separation between the West Bank and the East Bank is artificial and potentially explosive." Can this be regarded as the Begin government's position with regard to the destiny of the West Bank?
Does it imply a federation of the West Bank and Jordan in a single political entity? Has the Government of Israel advanced this position in the autonomy negotiations?

Mr. Buckley: Under the Camp David Accords the final status of the West Bank and Gaza is to be determined through negotiations between Israel, Egypt, Jordan and representatives of the inhabitants of those territories. The final status negotiations are to begin not later than the third year of a five-year transition period that is to start with the inauguration of self-governing authority in the West Bank and Gaza. We are presently engaged with Israel and Egypt in negotiations to determine the arrangements that will obtain during that transitional period. Israel is committed to the Camp David process, and therefore to negotiations concerning the future status of the West Bank. The policy of the present Government of Israel, as set forth in its coalition agreement, is that "at the end of the transition period, set down in the Camp David Agreements, Israel will raise its claim, and act to realize its right of sovereignty" over the West Bank and Gaza.

### FIRING OF WEST BANK MAYORS

Senator Inouye: Under the direction of Menahem Milson, the Begin government has fired the mayors of three West Bank cities and has advanced proposals for the creation of "village leagues."

Does the Administration approve of these actions? Does the Administration view these mayors as having been duly elected?

Mr. Buckley: Municipal elections were held in the West Bank in 1976. We have always regarded the Israeli decision to permit free municipal elections at that time as reflecting a progressive policy. Consistent with this position, we regret the removal of elected municipal officials on the West Bank. We remain convinced that the best way to assure the politically responsive representation of the inhabitants of the West Bank and Gaza is through the free election of a self-governing authority to replace the existing military government. Such elections are a central element in the autonomy agreement called for by the Camp David framework.

## LEGAL AUTHORITY TO DEPOSE MAYORS

Senator Inouye: Does the Administration believe that the Government of Israel has the legal authority to remove these mayors from office?

Mr. Buckley: The Fourth Geneva Convention (Article 54) recognizes the right of an occupying power to remove public officials from their posts. As I have noted above, we regarded Israel's decision to permit municipal elections in 1976 as helpful, and regret the removal of the mayors from office.

## CLOSING OF BIR ZEIT UNIVERSITY

Senator Inouye: An American citizen teaching in the English Department of Bir Zeit University in the Israeli-occupied West Bank has written to inform me that Bir Zeit has been closed by the Israeli authorities.

How does the Administration view this action?

Does this action raise tensions and complicate the atmosphere in which the autonomy negotiations are taking place?

Mr. Buckley: Bir Zeit was closed by the Israeli authorities in November following demonstrations at the school protesting the inauguration of a civilian administrator for the occupied territories. The university was permitted to reopen in January amid hope expressed by the university administration that the academic year could be completed without further disruption. In mid-February, however, an Israeli education official was injured in a melee on the university campus and Israeli authorities again ordered the school closed for a period of two months. It reopened in April and is functioning at present.

It hardly needs to be expressed that the U. S. supports the principle of academic freedom everywhere. In our view, politicization of the education process can only harm the interests of those who genuinely seek educational opportunities. It is unfortunate that in recent years the educational process at Bir Zeit and several other West Bank schools has so often been interrupted. Bir Zeit's reputation as a focus of nationalist activity and protest for West Bank youth and the determination of the Israeli authorities to deal firmly with such challenges has led to these cyclical confrontations. Such problems are likely to continue so long as the status quo prevails.

The tensions that create this situation can only be finally relieved in the context of a comprehensive resolution of the Arab-Israeli conflict that determines the ultimate status of the West Bank and Gaza Strip. We have urged all concerned in the present situation to exercise restraint and to avoid any actions that might elevate tensions.

## NEW ISRAELI SETTLEMENTS IN THE WEST BANK

Senator Inouye: Today The Washington Post reported the establishment of six new Israeli settlements in the West Bank. Prime Minister Begin is reported to have vowed that the Government of Israel will not dismantle settlements on the West Bank even in the event of a peace agreement covering that area.

How does the Administration view the establishment of these settlements? It appears that the Begin government has taken an action which is prejudicial to the oucome of the autonomy negotiations. Do you agree?

Mr. Buckley: The Administration's position on Israeli settlement activity in the occupied territories is well known. We regard such settlements as unhelpful to the peace process.

## EFFECT OF ISRAELI ACTIONS ON THE PEACE PROCESS

Senator Inouye: U. S. security assistance to Israel is designed to give Israel the "confidence to continue on the path toward peace begun at Camp David."

Does the Administration regard the actions I have cited--the discharge of the three mayors, the closing of Bir Zeit University and the establishment of new settlements as being on the "path toward peace begun at Camp David?"

Mr. Buckley: Clearly we regret any actions that raise tensions in the West Bank while the autonomy negotiations are in progress. For that reason we have urged all parties to exercise restraint.

It is only fair to point out, however, that Israel has demonstrated considerable flexibility in the negotiations leading to the Camp David Accords themselves and the Egypt-Israel Peace Treaty. Indeed, Israel has made significant sacrifices in the cause of peace, including the relinquishment of the occupied Sinai with its oil facilities and air bases and the evacuation, at a time of deep national anxiety, of the Sinai settlements. There is little question that steadfast U. S. support for Israel and our commitment to its security were major factors in helping Israel reach these difficult decisions.

## EXPRESSING U. S. VIEWS TO ISRAEL

Senator Inouye: Clearly, no one wants the U. S. to take any action which would directly threaten the security of Israel.

Is there not, however, some way the Administration can make it clear to the Begin government that we regard these actions as harmful to the Camp David process and to the prospects for peace? What would you propose?

Mr. Buckley: The U. S. government has followed with concern recent events on the West Bank and particularly the overall climate of violence which has developed in the occupied territories. We deeply regret the deaths and injuries which have occurred as the result of clashes between Palestinian demonstrators and Israeli troops and civilians there. We have publicly expressed these views and called upon all those with influence on the situation to exert their best efforts to prevent recurrence of these tragic incidents.

We have been particularly concerned by the use of lethal force to disperse demonstrators and the Israeli government is well aware of our views on this matter. Recently we have noted public statements by Israeli officials that indicate that serious consideration is being given to handling such disturbances in a manner that is less likely to cause serious injury to demonstrators.

## EGYPT: IMPLICATIONS OF CASHFLOW FINANCING

Senator Inouye: On April 22, the General Accounting Office reported to the subcommittee that Egypt, which had received $2 billion in FMS loan guarantees and credits through fiscal year 1981, had placed orders for U. S. equipment valued at over $3.5 billion. According to the GAO, this was possible because of the so-called "cash flow" authorization given to Egypt by the Administration.

Under what authority did the Administration provide this "cash flow" financing to Egypt?

Mr. Buckley: The decision to offer cash flow financing in the implementation of our FMS program for Egypt was one taken by the previous Administration under the provisions of the Foreign Assistance Act.

Senator Inouye: Is there any statutory requirement that the Administration inform the Congress or seek Congressional approval for any such cash flow financing arrangements?

Mr. Buckley: No, there is no such statutory requirement. However, the record indicates that the previous Administration did inform the Congress early in 1980, in connection with the FY 1981 budget request, of its intention to authorize cash flow financing for Egypt, just as had previously been done in the case of Israel. Subsequent consultations between the past and present Administrations and the Congress have included continuing discussion of the cash flow program and its implications.

Senator Inouye: Did you notify or consult with the Senate Committee on Appropriations before authorizing cash flow financing?

Mr. Buckley: As mentioned previously, at the time the previous Administration concluded that cash flow financing was an essential element in an effective military assistance program for Egypt, the Congress was immediately informed. Cash flow financing was not included as an element of the so-called peace package program approved by the Congress in FY 1979. Therefore, that notification first occurred in February 1980 when the Administration testified on the proposed FY 1981 budget. The FY 1981 Congressional Presentation Document on security assistance programs, while not using the word "cash flow", referred to the cash flow concept in stating that FMS funds would be used to meet "start-up payments" for new programs. This Administration likewise concluded that cash flow financing is a key element of our Egyptian military assistance program and has so informed the Congress in connection with both the FY 1982 and the current FY 1983 budget proposals.

Senator Inouye: If the Congress were to suspend all assistance to Egypt, would the Egyptian government be able to pay its contracted debt?

Mr. Buckley: Clearly, such an action would impose a heavy burden on Egypt which remains a poor country. However, Egypt's foreign exchange earnings are sufficient to meet its obligations. Moreover, the payment schedule under the cash flow financing program includes on a continuing basis funds to meet all anticipated termination costs should the program be cancelled for any reason. As a result there would be no loss to U. S. manufacturers if, in the hypothetical situation you have outlined, Egypt concluded that it must allocate its foreign exchange resources to non-military priorities.

Senator Inouye: Would you agree that this method of financing "places considerable pressure on the Congress to continue providing substantial levels of credit" to Egypt?

Mr. Buckley: As had been stated in earlier testimony, we have made it very clear to the Egyptian government that authorization of cash flow financing does not include any commitment to out-year funding levels. We have stated specifically that such levels are subject to authorization and appropriation by the Congress, on an annual or other basis as the Congress may decide.

To the extent that "pressure" exists, it stems not from the cash flow system but from the importance of the relationship which the United States enjoys with Egypt, the vital support which Egypt offers in pursuit of our key objectives of regional peace and security in the Middle East and Southwest Asia. The major support which we have provided over the past several years, both for Egypt's economic development and its military modernization, reflects not only the reality of Egypt's needs but the special nature of that relationship. Any action on our part to curtail that support could only be interpreted by Egypt as reflecting a reassessment on our part of the basic relationship.

## EGYPT: EQUIPMENT CHOICES

Senator Inouye: Since its peace treaty with Israel, Egypt has become the second largest recipient of U. S. military assistance.

Egypt has ordered some of the most modern and sophisticated equipment in the U. S. arsenal, including F-4 and F-16 fighter aircraft, M-60A3 tanks, Improved Hawk air defense batteries, and armored personnel carriers.

Can Egypt effectively maintain and operate this equipment?

Mr. Buckley: With appropriate training and experience, we believe Egypt will be fully capable of absorbing and utilizing this equipment. Its performance in maintaining much of its current Soviet hardware despite the cutoff of support and spare parts has been remarkable. There have been problems with our F-4 program, reflecting the speed with which these aircraft were delivered in 1979/80, a pace which precluded the full range of parallel training and development of support capabilities. Subsequent programs--e.g., the F-16 sale--have been carefully structured to match training and support with deliveries. This is not to say that there will not be initial problems with the new equipment. Every military establishment experiences such difficulties. But we believe that the Egyptian military will be able to overcome these problems and work effectively with the items we are providing.

Senator Inouye: Is it fair to say that some of this equipment has served more of a political purpose than a military one?

Mr. Buckley: No, I believe that is a distortion of the record. Clearly political factors have on occasion played a role in equipment choices. As an example, both we and Egypt believed it important to demonstrate in the immediate wake of the Egyptian-Israeli Peace Treaty our readiness to help Egypt meet its urgent military modernization requirements. First among these was the need for high performance aircraft. The F-4 met that need and had the additional benefit that it could be made available in the very near term from U. S. Air Force active units, in the process of transition to new aircraft. Other options involved either a lesser performance aircraft or long lead times, in either case failing to demonsrate our immediate support for Egypt's real needs.

Overall, Egypt's equipment choices--choices made from a long list of competing priorities beyond the scope of our immediate assistance--have made sense militarily and are contributing to the gradual modernization effort.

Senator Inouye: How do you view the concern that this equipment could have unintended political effects?

Mr. Buckley: We have certainly done our best to anticipate the impact of our military assistance program both militarily and politically within Egypt and in the region. We have done this in close consultation with the Egyptian authorities. To date, in our view, that effort has been successful.

Senator Inouye: What safeguards does the U. S. have on the use of this equipment?

Mr. Buckley: The same safeguards apply in the case of Egypt as they do with all sales under the FMS program. The equipment is intended for Egypt's use in its own defense. It cannot be used for offensive purposes outside of Egypt or transferred to other nations without our specific approval. Above and beyond these legal safeguards, we enjoy the closest consultations with Egypt and largely shared perceptions of problems and concerns in the Middle East region. We have every confidence that U. S.-Egyptian policy will remain in close harmony.

Senator Inouye: Once Egypt becomes militarily powerful, what is to prevent it from abandoning the Camp David process?

Mr. Buckley: Egypt's commitment to the Camp David process, which has survived bitter attacks from the Arab world and the assassination of President Sadat, rests on that nation's own assessment of its basic national interests. The Egyptian people have clearly supported the conclusion of their leaders that these interests demand not only peace with Israel--the end to thirty years of war--but an on-going effort to achieve a broader peace. Only thus can Egypt turn its attention to the needs of its own people and to meeting effectively the prevailing outside threats to the region. Egypt has demonstrated its willingness to pay a substantial price in pursuit of these objectives. We have every confidence in its continuing commitment to them.

Our military assistance program is intended to modernize and replace only a portion of Fgypt's military equipment. While the objective is clearly to enable Egypt to have an effective military establishment, capable of its own defense and bolstering its role as the strongest moderate state in the region, the end result will be a leaner, trimmer, less powerful establishment than existed in 1973.

## ROLE OF PALESTINIANS

Senator Inouye: As you have noted, over 53 percent of the entire FY 1983 security assistance program will be directed in support of our Middle East objectives.

You have also stated that, "No peace is possible unless the nations of the region are secure from outside coercion, and security will not be achieved if we fail to address the underlying sources of conflict and instability."

I could not be in greater agreement with you. However, it appears that the Administration, while dramatically increasing the levels of assistance to countries in the Middle East, has failed to address one of the underlying sources of conflict and instability. I refer, of course, to the legitimate aspirations of the Palestinian people.

How will this Administration address this underlying source of conflict and instability?

Mr. Buckley: Our efforts to address the Palestinian issue are centered on fulfilling the provisions of the Camp David Accords. The Camp David Accords directly address the issue of Palestinian aspirations. They provide for the resolution of the Palestinian issue "in all its aspects" and make clear that the solution from the negotiations regarding the West Bank and Gaza must "recognize the legitimate rights of the Palestinian people and their just requirements."

As a full partner with Egypt and Israel, we now intend to pursue the autonomy negotiations with the same vigor and commitment which brought peace between Israel and Egypt. Israel's withdrawal from Sinai marked a milestone in the search for a comprehensive settlement of the Arab-Israel conflict and the fulfillment of one element of the Camp David Accords.

We are aware that, for the next stage to succeed, it must produce results which fulfill the promise the Accords hold for the Palestinian people. The Camp David Accords are based upon UNSC Resolutions 242 and 338 and upon Israeli and Egyptian agreement that the Palestinian issue has both a political and a territorial dimension. We believe they address the issue of the Palestinian aspirations in a meaningful and just manner and offer Palestinians an opportunity that they should not forego.

## TURKEY AND CYPRUS

Senator Inouye: You have stated that, "A militarily and economically stronger Turkey cannot only contribute significantly more to a strengthened NATO deterrent, but can move more rapidly to the full return of civilian government."

Does the Department of State have an estimate of the cost to the Government of Turkey of maintaining troops on Cyprus?

Mr. Buckley: The cost to the government of Turkey of maintaining about 20,000 troops in the northern area of Cyprus is minimal. There may be some transport costs beyond what would be incurred if the troops were based in Turkey, but apart from that, the added expense is negligible.

Senator Inouye: Would the withdrawal of Turkish troops from Cyprus not be a significant contribution to a strengthened NATO deterrent?

Mr. Buckley: Turkey maintains a force of about 20,000 troops in northern Cyprus, out of its total armed forces of about 600,000. In view of the small percentage of its armed forces stationed on Cyprus, we do not see their return to Turkey as significantly strengthening the NATO deterrent.

Will you elaborate on the statement that, "The Administration believes the security assistance requested for Turkey for FY 1983 is fully compatible with the goal of a prompt and peaceful settlement of the situation in Cyprus?"

Mr. Buckley: The UN-sponsored intercommunal talks on Cyprus are closer to being real negotiations than they have been in the past. The introduction of the UN "evaluation" of the intercommunal negotiations in November 1981 provides an historic opportunity for the negotiators to focus on the important issues which divide them.

We believe that these steps towards resolving the Cyprus problem are at least partly attributable to the excellent relations between Turkey and the United States. The Turkish government has displayed considerable interest in promoting a settlement and has spoken frankly to the Turkish Cypriots to stimulate the intercommunal dialogue. We believe the Turkish government will continue to encourage flexibility by the Turkish Cypriots. Thus we believe our FY 1983 security assistance request for Turkey is fully compatible with our goal of a just and lasting solution to the Cyprus problem.

## TERMS FOR TURKEY

Senator Inouye: I believe that Turkey is a prime example of a country which could not meet its repayment obligations, if additional FMS loans were provided at market interest rates. I would note that Turkey's foreign debts were rescheduled in 1980 to keep it from defaulting.

What terms does the Administration propose to offer Turkey in fiscal year 1983, both on FMS and Economic Support Fund programs?

Mr. Buckley: For FY 1983 FMS loans we plan to offer Turkey ten years grace period and twenty years for repayment of principal, the longer periods specifically provided for in security assistance legislation. In addition we plan to provide $300 million out of $465 million FMS as low interest direct credit loans, which constitute an important element of concessionality in the total security assistance program. More than two-thirds of the Economic Support Funds provided will also be in the form of grants. The terms for the remaining loans are five percent interest with five years grace and fifteen years for repayment of principal.

## TURKEY: FMS

Senator Inouye: By 1984, Turkey will owe over $200 million per year for interest and premium payments on existing U. S. FMS loans. What assurance does the Administration have that Turkey will be able to meet these debts when they come due (even if additional loans are provided at concessional rates)?

Mr. Buckley: Turkey has made significant progress towards economic recovery as a result of the stabilization program it established in 1980 in close coordination with the IMF, World Bank, and OECD: exports increased about 60 percent in 1981; inflation has fallen from over 100 percent in 1980 to around 30 percent. While Turkey will continue to require external assistance and concessionary terms for FMS purchases for the next few years, the outlook for recovery from the economic crisis of the late 1970's is now encouraging.

We believe that U. S. and other Western support for Turkey's efforts to maintain momentum towards self-sustaining economic growth constitutes the best assurance that Turkey will have the resources to meet its debt service payments in the years to come.

Senator Inouye: Will Turkey find it necessary to use Economic Support Fund monies to meet its FMS debts? Does this not become a shell game, where we pay Turkey to pay us?

Mr. Buckley: Our Economic Support Funds are provided to Turkey in support of current economic and financial requirements. We and other OECD nations have pledged a total of over $3 billion since 1979 in grants, loans, and trade credits in support of Turkey's overall economic recovery program. Turkey meets its debt service payments from export and other external foreign exchange earnings, which we expect will continue to increase as Turkey's economic stabilization progress gains momentum.

## PAKISTAN -- NUCLEAR PROBLEM

Senator Inouye: The Department of State overview entitled "International Security and Economic Cooperation Program -- Fiscal Year 1983" declares, "One of the most critical challenges our nation faces is the need to prevent nuclear weapons proliferation." Furthermore it states, "U.S. assistance can contribute to preventing the spread of nuclear weapons by helping establish U.S. influence..."

In view of the Administration's proposed assistance to Pakistan, can you now report to the subcommittee that Pakistan is no longer seeking to develop a nuclear explosive capability?

Mr. Buckley: The Administration's non-proliferation strategy is based on addressing over time the basic security concerns which have motivated Pakistan's nuclear program. We are still in the very beginnings of developing a new relationship. (The first project agreement under the economic assistance program was signed only last month, and the military sales credits will not become available until next fiscal year.) It is obviously too early to draw any definitive conclusions as to how our new security relationship is impacting on Pakistan's nuclear program.

President Zia has assured us that Pakistan does not intend to make nuclear weapons. Although we have no such assurance in regard to a so-called "peaceful" nuclear explosion, Pakistan understands fully that we do not make a distinction between nuclear weapons and "PNEs". Senior Pakistani officials are also entirely aware that any nuclear explosion by Pakistan would have the most serious consequences for our relationship.

## U.S. INFLUENCE IN PAKISTAN

Senator Inouye: The Administration is proposing to provide some $450 million in economic and military assistance to Pakistan in fiscal year 1983. (As an aside, I would note that this is more than the entire amount proposed by the President for assistance under the Caribbean Basin Initiative.)

What influence has the U.S. derived in Pakistan as a result of its agreement to provide assistance?

Mr. Buckley: The rationale for providing assistance to Pakistan is not simply to acquire influence. We already share with Pakistan an overriding policy interest: resistance to Soviet adventurism through strengthening the security and stability of Southwest Asia. Our primary goal is a stable, economically strong and militarily self-reliant Pakistan which will not be prey to external coercion or subversion from the Soviet Union.

While we remain in the initial stage of our new, more cooperative relationship with Pakistan, we believe that a more constructive environment is being created for our continuing dialogue with Pakistan on important issues such as non-proliferation, narcotics and Pakistan's economic development policies. We are particularly gratified by increasing evidence of greater awareness by Pakistan of the need for more vigorous enforcement against production and trafficking in narcotics within Pakistan.

## PRIORITY OF PAKISTAN PROGRAM

Senator Inouye: The overview I mentioned a moment ago also states that the fiscal year 1983 program "represents a significant step forward in the fundamental reassessment of our foreign assistance priorities which the Administration is taking."

From this statement, am I to understand that the Administration regards U.S. interests in Pakistan as having a higher priority than our interests in the Caribbean? Why?

Mr. Buckley: Such an assumption would be incorrect. The United States has very important interests in both areas which are seriously threatened at this time. It is for this reason the Administration has requested substantially increased funds for both Pakistan and the Caribbean Basin.

## ARMS TRANSFER POLICY

Senator Inouye: Mr. Secretary, in our hearing last year, you said you were "not yet prepared to discuss with the committee in detail our policy approach to conventional arms transfers..." Are you now in a position to do so?

Mr. Buckley: Indeed, I was pleased to appear before the Senate Foreign Relations Committee this last February 5 to discuss in depth the Administration's arms transfer policy. I pointed then to the steady increase in Soviet arms transfers to the Third World over the last decade. As I stated then, in recent years the Soviets have been the largest source of arms for Third World countries, exceeding U. S. arms deliveries in virtually every major arms category, sometimes by two or threefold and more. We have seen that Soviet arms are the life's blood of Soviet aggression by proxy. In recent years again, the Soviets and their proxies have repeatedly used force or the threat of force to expand their influence and frustrate peaceful change. It is within this strategic context that the Administration has seen fit to devise a new conventional arms transfer policy to supplement our own defense buildup and our foreign assistance efforts.

We appreciate the fact that arms are only a small part of any solution. Underlying economic and political problems will not disappear because a country has arms. Nonetheless, there is a constructive role for a sound and well-considered arms transfer policy.

Carefully crafted decisions on arms transfers promote our national interests in three general ways. First, by helping others to help themselves, we allow them to undertake responsibilities in strategic areas that our forces might otherwise have to assume alone. Second, by supplying others with modern equipment and compatible facilities, we complement the capabilities of our forces, should they have to act. Three, by proving ourselves a sensitive and reliable supporter, we strengthen our ties with allies and nations that share our concerns.

President Reagan's flexible, case-by-case arms transfer policy would look favorably on a sale that furthers our security in these ways. At the same time, however, our policy requires that we take into account other conditions which would argue against a particular transfer. For example, we would question any transfer which might disrupt relations within a region, overburden a nation's economy, strain the capacity of its military, compromise critical technology, or support violations of basic human rights.

Senator Inouye: I am very concerned with this issue, because it appears that arms transfers have become the primary instrument of U. S. diplomacy.

What is the Administration's policy with regard to the initiation of arms sales to countries which were not receiving arms when the Administration took office? Which countries have received arms under this policy?

Mr. Buckley: The Administration's policy with respect to all requests for arms purchases, which is the necessary first step in any initiation of arms sales, is simply this: We will review all such requests for arms transfers on a case-by-case basis, in accordance with the factors listed in the President's directive on conventional arms transfers. Among the factors we consider are the threat facing the proposed recipient, U. S. interests in the sale and the ability of the country to finance, operate and maintain the weapons system transferred. We believe these factors represent a coherent body of directional indicators of where we want to go and what we want to do to assist friends and allies. All transfers approved since inception of the policy--even those deemed somewhat controversial have conformed to the policy's guidelines. Even the decision to sell AWACs aircraft to Saudi Arabia, consideration of which antedated establishment of the policy, was consistent with our perception of U. S. interests.

Senator Inouye: Has the volume of arms sales increased under the Reagan Administration? How much has the volume increased?

Mr. Buckley: There has not been a significant real increase in volume. The largest single sale actually signed this year is the $2 billion sale of F-18 aircraft to Australia; that was in early December. Since the beginning of January, there have been only fourteen "major" cases accepted by foreign customers valued at about $1.4 billion. One of those cases was, for example, an $800,000 case for artillery ammunition for a NATO ally. With the year over half gone, we are at less than half of the projected $25 billion for FY 1982. What we are seeing is an increase in the number of sales--particularly in the first quarter of FY 1982--that were, in effect, holdovers from the extraordinarily low sales total of the first year of the Administration, which was only $8.5 billion.

Senator Inouye: Has the Administration placed any new restraints on the sale or transfer of arms? Do you think any additional restraints are called for? Has the Administration denied any specific requests for arms?

Mr. Buckley: The Administration has not placed additional restraints governing the sale or transfer of arms nor does it believe that limitations beyond those outlined in the President's directive on arms transfer are called for. This Administration has stated it views arms transfers very simply: they are for the purpose of advancing U. S. national security and foreign policy interests. They are to be used to help friends and allies to defend themselves and, in this manner, they complement and supplement our efforts to strengthen our own defense.

We are satisfied that our arms transfer policy provides the kind of framework within which we can make decisions on arms transfers furthering our interests.

## COSTA RICA: SUPPLEMENTAL ASSISTANCE AND THE IMF

Senator Inouye: As part of the Caribbean Basin Initiative, the Administration has proposed $70 million in economic assistance for Costa Rica. We have been informed that this assistance will be provided only in the context of an International Monetary Fund stabilization program.

Has Costa Rica agreed to an IMF stabilization program?

What are the prospects for early agreement?

Mr. Buckley: A three-year Extended Fund Facility was negotiated in June, 1981 for $305 million (276.75 million SDR). Costa Rica is out of compliance with that agreement. The new Government which took office May 8 is initiating new negotiations and an IMF team is scheduled to visit Costa Rica in June. We are hopeful that the IMF and Costa Rica can negotiate a stabilization agreement within the next two to three months.

## COSTA RICA: DISBURSEMENT OF EARMARKED $20 MILLION

Senator Inouye: Has the Administration disbursed any of the $20 million provided by the Congress to Costa Rica under the fiscal year 1982 appropriations bill?

Does disbursement of these funds also await an IMF stabilization program?

Mr. Buckley: No funds have yet been disbursed. It has been our position that it is necessary to ensure that effective stabilization policies are being put in place before disbursing our funds. Those policies are now being worked out by the new Government's economic team and are key elements in the negotiations between the IMF and the Government of Costa Rica. Therefore, we are moving ahead to use the $20 million in an economic stabilization and recovery loan to provide urgently needed foreign exchange and credit to the private sector. We would hope to be in a position to disburse the money shortly.

## COSTA RICA: FY-83 ASSISTANCE AND THE IMF

Senator Inouye: The Administration has also proposed $60 million in economic assistance for Costa Rica in fiscal year 1983.

I assume this funding, if appropriate, will not go forward in the absence of an IMF agreement. Is that correct?

Mr. Buckley: Yes, that is correct. We continue to believe that only in the context of an internationally accepted stablilization program can our financial assistance help Costa Rica to achieve lasting economic recovery.

## COSTA RICA: REPROGRAMMING IF ASSISTANCE

Senator Inouye: Can you assure the Committee that funding justified for Costa Rica will be held in reserve until there is an IMF agreement and not reprogrammed elsewhere -- say, to El Salvador?

Mr. Buckley: We believe it is very important for Costa Rica and the IMF to agree on an economic stabilization program, which is crucial in order for Costa Rica to regain the confidence of the international financial community. We have no intention of using this funding elsewhere, because the need in Costa Rica is so great.

## COSTA RICA: MILITARY ASSISTANCE

Senator Inouye: Yesterday's Washington Post carried an article describing the deteriorating economic situation in Costa Rica--a situation which could lead to political turmoil.

Is the Administration contemplating the provision of military assistance to Costa Rica?

Has the Administration held discussions regarding the supply of military assistance or small arms with the Government of Costa Rica?

Mr. Buckley: As you know, Costa Rica has no military forces. The defense responsibility is vested in the civil guard, a 4,000 man force that, with one exception, has changed personnel every four years with each incoming Administration.

In 1981, a small ($30,000) IMET program was begun to assist Costa Rica upgrade its search and rescue and border patrol capabilities. The proposed 1982 assistance level was increased to $50,000, with the idea of providing similar training to additional personnel. In our FY 1983 budget request we are seeking $150,000 for training.

Costa Rica is facing a difficult period of economic adjustment. It also faces for the first time a small terrorist movement, and encroachments into its territory from neighboring Nicaragua. The new Administration in Costa Rica will obviously have to assess its defense requirements in light of these developments.

## SUBCOMMITTEE RECESS

The subcommittee will stand in recess until Tuesday, May 4.

[Whereupon, at 5:05 p.m., Thursday, April 29, the subcommittee was recessed to reconvene Tuesday, May 4.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

TUESDAY, MAY 4, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 10:30 a.m., in room 1223, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senator Kasten.

## DEPARTMENT OF THE TREASURY

### SECRETARY OF THE TREASURY

### MULTILATERAL DEVELOPMENT BANKS

### STATEMENT OF HON. DONALD T. REGAN, SECRETARY OF THE TREASURY

### ACCOMPANIED BY HON. MARC E. LELAND, ASSISTANT SECRETARY OF THE TREASURY FOR INTERNATIONAL AFFAIRS

### OUTLOOK FOR FOREIGN ASSISTANCE APPROPRIATIONS

Senator KASTEN. The subcommittee will come to order.

This morning we will receive testimony from the Secretary of the Treasury, Hon. Donald T. Regan, in support of the administration's budget request for the multilateral development banks.

Mr. Secretary, I don't think I need to tell you that this is a particularly difficult year for the budget generally, and I am afraid it is going to be specifically difficult for foreign assistance and even more particularly the programs we are going to discuss this morning.

Surely, many will expect under these circumstances that we have to hold the line on foreign assistance; and, as you know, foreign assistance for multilateral institutions is particularly difficult—the administration is requesting appropriations which are nearly $300 million above the current fiscal year—a task which is going to be all the more trying given the fact that the administration is seeking reductions in a number of domestic programs.

We will work with you and try to get levels which will insure a sound and adequate foreign assistance program, but you must be willing and ready to make some hard choices on a number of items when the time comes.

Mr. Secretary, we understand your prepared statement will be submitted for the record. I also understand that you have an abbreviated form of the statement you would like to present orally.

I want to say that we are happy to have you here. I look forward to your statement.

## OPENING REMARKS BY SECRETARY REGAN

Secretary **REGAN**. Thank you, Mr. Chairman. I welcome this opportunity to appear before you to discuss the administration's fiscal year 1983 budget proposals for the multilateral development banks.

As you know, last year's foreign assistance appropriations bill was the first enacted in 3 years. The administration attached considerable importance to this legislation, and we recognize and very much appreciate the constructive role played by you, Mr. Chairman, and by the members of this committee, throughout the process leading up to its enactment.

We also value highly the frank and informative, bipartisan dialog we established with Members and staff of the Congress during the preparation of our recently released report assessing future U.S. participation in the MDB's.

Mr. Chairman, I will, with your permission, limit my opening remarks to an abbreviated version of the statement I am submitting for the record.

## FISCAL YEAR 1983 APPROPRIATION REQUEST

For fiscal year 1983 the administration proposes $1,537 million in budget authority and $2,361 million under program limitations for subscriptions and contributions to the MDB's.

I would like to assure you that this proposal has been carefully scrutinized to fully reflect the administration's firm commitment to fiscal responsibility.

The total request represents an increase of $275,300,000 in budget authority and $20,700,000 under program limitations over the fiscal year 1982 appropriation.

With regard to the increase in MDB funding we are requesting, I would like to stress three points:

One, with the sole exception of the $50 million proposed for the African Development Fund, the fiscal year 1983 request is based on international arrangements negotiated by the previous administration. President Reagan has stressed the importance of the United States living up to these arrangements.

The U.S. contribution to the African Development Fund reflects our commitment to continue to support multilateral efforts to assist in the development of the world's poorest region.

Two, the main reason for the increase over the fiscal year 1983 appropriation is the proposed addition of $245 million for IDA, an increase which is directly traceable to this administration's decision to reduce contributions in the early part of the sixth replenishment and to make up the amounts later in the replenishment and to appropriation ceilings established by the Congress.

Three, in the longer term, the trend of U.S. contributions is clearly down. By fiscal year 1985 when the replenishments will have been largely negotiated by this administration, we plan total appropriation request levels of about $200,000,000 annually and accompanying amounts for callable capital subscriptions. This will entail a significant reduction in real terms in U.S. contributions to new, soft-loan window replenishments.

### ALLIED COOPERATION IN THE MDB'S

Since becoming Secretary, I have met regularly with my counterparts from key industrial countries. Our common long-term goal is to build and maintain an international economic system that is open, growing and characterized by increased efficiency and output. We hope and expect that such a system will encourage the development of democratic, pluralistic and free-market societies.

The MDB's represent one of the most visible and concrete examples of allied cooperation toward this end, not just cooperation for cooperation's sake but also because these institutions serve our common interests.

### THE ADMINISTRATION'S ASSESSMENT OF THE MDB'S

As you know, the Treasury Department has over the past year conducted an assessment designed to establish the necessary framework for future U.S. participation in the MDB's and to outline policy goals to be pursued.

Our conclusions underscore the role the MDB's can play as catalysts in the international economic system and as providers of sound economic advice.

### MDB'S COMPLEMENT BILATERAL ASSISTANCE

We can see an example of the catalytic role the MDB's can play close to home and in strong support of U.S. foreign policy goals.

The World Bank and the Inter-American Development Bank chair consultative groups for the Caribbean and Central America, respectively, which will complement the President's Caribbean Basin Initiative. In addition to providing a forum for donor coordiation, the MDB's are also expected to provide development assistance in the range of $700,000,000 to $800,000,000 annually to the region.

The fundamental decision in our assessment is to continue U.S. leadership in these programs and is based on our conclusion that U.S. foreign policy interests can be well served by the MDB's. Cost sharing and financial leveraging mean that the MDB's can provide significant resources at a relatively small direct budgetary cost to the U.S. Government.

The region adjacent to the Persian Gulf is of critical importance to U.S. interests. In 1981 seven key countries—Kenya, Pakistan, Mauritius, Seychelles, Somalia, Sudan and Oman—received $345,400,000 from U.S. bilateral programs. The MDB's more than matched that amount with $700,500,000.

The United States maintains basing arrangements in Kenya, Oman, Somalia, Thailand, and the Philippines. These five countries accounted for a total of $1,456.6 million in MDB lending in 1981. Our total bilateral program provided $396,000,000 to these same countries.

In seven countries of strategic importance to the United States in Africa—Botswana, Djibouti, Liberia, Sudan, Tunisia, Zambia, and Zimbabwe—U.S. bilateral economic and military assistance programs provided $247,000,000 in 1981, while the MDB's provided $426,100,000 in the same year.

For all 27 countries in the table that I have attached to my statement, all U.S. bilateral economic and military assistance programs provided $5,600,000,000 in 1981. If the MDB graduates—Israel, Oman and Spain—are omitted, the bilateral total is $3,300,000,000. The MDB's provided $3,800,000,000 to these countries.

The point that these statistics establish is that the MDB's—where the United States provides a fraction of the resources—are important complements to our bilateral assistance program.

## MDB EFFECTIVENESS

We are also convinced that the MDB's can use their resources more effectively. To this end, U.S. support for the MDB's will be designed to encourage adherence to free and open markets, emphasis on the private sector as a vehicle for growth, minimal government involvement, and assistance to the needy countries who demonstrate an ability to make good use of available resources by adopting appropriate domestic economic policies.

With regard to specific recommendations for improving MDB effectiveness, we will seek three primary goals:

The first is to have MDB lending programs increasingly emphasize attention to market signals and incentives, to private sector development, and to greater financial particiation by commercial banks, private investors and other sources of private financing. A critically important goal of the MDB's in the future will be to encourage the private sector to invest its own capital and expertise in sound projects.

A second goal is more selectivity and policy conditionality in MDB operations, in effect linking MDB lending to a recipient's pursuit of appropriate micro- and macro-economic policies. Financing for countries pursuing ineffective policies should be curtailed and, if circumstances dictate, terminated. The importance of efficient loan allocations is underscored by the fact that our assessment found indication that past MDB emphasis on lending targets had eroded MDB effectiveness in encouraging sound economic policies.

A third goal is to encourage the MDB's to adopt effective policies to "graduate" countries from the hard-loan windows when these countries have advanced to the point that they can rely fully on private capital flows. Similarly, countries that have achieved a requisite level of creditworthiness should "mature" from the soft-loan windows and borrow from the hard-loan windows as rapidly as their debt servicing capacity permits.

We are convinced that these policies which the United States is pursuing in the MDB's constitute a sound foundation from which economic development can be most efficiently promoted. I am also hopeful that they form an excellent basis for strong bipartisan congressional support for U.S. participation in these important institutions.

### CURRENT REPLENISHMENT NEGOTIATIONS

During the course of this year the administration will be negotiating replenishments for the hard- and soft-loan windows of the Inter-American Development Bank and the Asian Development Bank. We plan to participate fully in these replenishments, but we will insist on realism and restraint in future lending programs. Before this administration enters into any understandings, there will be thorough consultations with members of this committee and other interested members.

### PAID-IN CAPITAL SUBSCRIPTIONS

In replenishment negotiations for the Asian Development Bank and for the Inter-American Development Bank, we are suggesting the elimination of paid-in capital which would reduce the budgetary cost of U.S. participation in the MDB's.

Our analysis indicates that the impact on the financial integrity of the MDB's would be minimal and would be offset by relatively modest increases in financial charges.

The Congress would retain full control over callable capital subscriptions to the MDB's. No U.S. subscriptions to callable capital could be made without approval by the Congress in authorizing and appropriations legislation. Callable capital subscriptions could be made only to the extent that the Congress provides for program limitations in appropriations acts.

### U.S. INFLUENCE IN THE MDB'S

Some have asked how can we maintain sufficient influence to implement our policies when we are limiting our contributions to the MDB's.

The United States remains the largest contributor to the MDB's and our leadership position ensures that our views will be given serious consideration. We believe that our recommendations are sound, and that they reflect not only our national interests but also the common interests of the democratic, largely free-market-oriented countries who provide the major share of resources to these institutions.

These factors provide solid foundations for anticipating continued strong U.S. influence in these institutions. At the same time, the views and policy objectives of other countries must clearly be considered. However, we have generally been encouraged by the international reaction to our report.

While there have been significant expressions of disappointment at the proposed reduction in U.S. contributions to the soft-loan windows, members and MDB management have emphasized their willingness to work with us to improve MDB effectiveness. We are thus optimistic that we can, over time and with the cooperation of our partners, bring about many of the changes that we have recommended; and, in fact, we can already see some progress, especially in the World Bank.

## CONCLUSION

In conclusion, the fiscal year 1983 budget proposals are a crucial element in our comprehensive long-term program to improve MDB effectiveness over the remainder of the decade. We believe that our request achieves the proper balance among our international and domestic requirements and fully reflects the real budgetary constraints upon the U.S. Government. At the same time, it safeguards our considerable interests in the developing world and in the Banks.

Enactment of the legislation will affirm U.S. determination to exercise responsible economic and political leadership. It will also demonstrate the seriousness of our commitment to work to induce those changes in MDB policies which we have concluded are necessary to improve the effectiveness of these institutions.

I hope that we can count on your support.

Thank you, Mr. Chairman.

[The prepared statement of Secretary Regan follows:]

# PREPARED STATEMENT OF HON. DONALD T. REGAN

## SECRETARY OF THE TREASURY

Mr. Chairman, and Members of the Committee, I welcome this opportunity to appear before you to discuss the Administration's fiscal year 1983 budget proposals for the multilateral development banks.

As you know, last year's foreign assistance appropriations bill was the first enacted in three years. The Administration attached considerable importance to this legislation and we recognize and very much appreciate the constructive role played by you, Mr. Chairman, and by the Members of this Committee, throughout the process leading up to its enactment. We also value highly the frank and informative bipartisan dialogue we established with members and staff of the Congress during the preparation of our recently released report assessing future U.S. participation in the MDBs.

For fiscal year 1983, the Administration proposes $1,537 million in budget authority and $2,361 million under program limitations for subscriptions and contributions to the MDBs.

I would like to assure you that this proposal has been carefully scrutinized to fully reflect the Administration's firm commitment to fiscal responsibility.

For the International Bank for Reconstruction and Development (IBRD), we propose $109,720,549 in budget authority and $1,353,220,096 under program limitations for the second of six installments toward the U.S. share of the 1981 General Capital Increase (GCI).

To subscribe to the U.S. share of the 1981 "companion" increase, we propose $30,158,750 under program limitations. This increase is designed to prevent dilution of member voting power by providing each member with 250 additional votes. The increase has no paid-in component and requires no budget authority.

To complete the U.S. subscription to the 1977 Selective Capital Increase, we propose $16,321,004 in budget authority and $146,897,067 under program limitations.

The total request for the IBRD is $126,041,533 in budget authority and $1,530,275,913 under program limitations.

For the International Development Association (IDA), the Administration is proposing a third installment of our contribution to the sixth replenishment in the amount of $945,000,000. This level of funding is consistent with the ceiling placed on fiscal year 1983 appropriations for IDA in the Omnibus Budget Reconciliation Act of 1981. The proposed level is also a reduction of $945 million from the amount originally envisioned by the Administration in March 1981 and entails a significant reduction in the IDA lending program.

For the Inter-American Development Bank (IDB), we propose $62,423,437 in budget authority for paid-in capital and $828,137,742 under program limitations for callable capital to complete our subscription to the fifth replenishment.

For the Fund for Special Operations (FSO), we propose $175,000,000 for the fourth installment to the current replenishment and $46,677,000 for the unfunded portion of the previous replenishment -- a total of $221,677,000.

For the Asian Development Bank (ADB), we propose $248,097 in budget authority and $2,243,811 under program limitations to complete the U.S. subscription to the most recent capital increase.

For the Asian Development Fund (ADF), we propose $111,250,000 for the fourth installment to the current replenishment and $20,384,478 for the unfunded portion of the previous replenishment, a total of $131,634,478.

For the African Development Fund (AFDF), we propose $50,000,000 for the first of three installments for the new replenishment. The Administration will propose legislation in the coming weeks to authorize a U.S. contribution of $150,000,000 over the three years of this replenishment, which totals a little more than $1 billion. While the proposed U.S. contribution over three years is 20 percent higher than the $125 million negotiated in 1978 for the previous three year replenishment, it is likely to represent a decline in real terms.

The total request represents an increase of $275.3 million in budget authority and $20.7 million under program limitations over the fiscal year 1982 appropriation.

With regard to the increase in MDB funding we are requesting, I would like to stress three points:

-- With the sole exception of the $50 million proposed for the African Development Fund, the FY 1983 request is based on international arrangements negotiated by the previous Administration. President Reagan has stressed the importance of the United States living up to these arrangements. The U.S. contribution to the African Development Fund reflects our commitment to continue to support multilateral efforts to assist in the development of the world's poorest region.

-- The main reason for the increase over the FY 1982 appropriations is the proposed addition of $245 million for IDA -- an increase which is directly traceable to this Administration's decision to reduce contributions in the early part of the sixth replenishment and to make up the amounts later in the replenishment and to appropriations ceilings established by the Congress.

-- In the longer term, the trend of U.S. contributions is clearly down. By FY 1985, when the replenishments will have been largely negotiated by this Administration, we plan total appropriation request levels of about $1.2 billion annually and accompanying amounts for callable capital subscriptions. This will entail a significant reduction in real terms in U.S. contributions to new soft loan window replenishments.

Since becoming Secretary, I have met regularly with my counterparts from key industrial countries. Our common long term goal is to build and maintain an international economic system that is open, growing, and characterized by increased efficiency and output. We hope and expect that such a system will encourage the development of democratic, pluralistic and free market societies. The MDBs represent one of the most visible and concrete examples of allied cooperation towards this end -- not just cooperation for cooperation's sake, but because these institutions serve our common interests.

As you know, the Treasury Department has over the past year conducted an assessment designed to establish the necessary framework for future U.S. participation in the

MDBs and to outline policy goals to be pursued. This was the most thorough U.S. examination of the institutions since they were established.

The Administration is convinced that continued U.S. participation in the MDBs is justified by a fundamental national interest in a more stable and secure world, which we believe can be best achieved in an open, market-oriented international system. To the extent that the MDBs encourage the participation of developing countries in that international system on a permanent and self-sustaining basis, the MDBs can serve to advance important U.S. economic, strategic and humanitarian interests.

Our conclusions underscore the role the MDBs can play as catalysts in the international economic system and as providers of sound economic advice.

We can see an example of the catalytic role the MDBs can play close to home and in strong support of U.S. foreign policy goals. The World Bank and Inter-American Development Bank chair consultative groups for the Caribbean and Central America, respectively, which will complement the President's Caribbean Basin Initiative. In addition to providing a forum for donor coordination, the MDBs are also expected to provide development assistance in the range of $700 to $800 million annually to the region.

The fundamental decision in our assessment is to continue U.S. leadership in these programs and is based on our conclusion that U.S. foreign policy interests can be well-served by the MDBs. Cost sharing and financial leveraging mean that the MDBs can provide significant resources at a relatively small direct budgetary cost to the U.S. Government.

In the Caribbean Basin, the MDBs provided $234.3

million to Costa Rica, El Salvador and Jamaica in 1981, while U.S. bilateral economic and military assistance was $165.9 million.

The region adjacent to the Persian Gulf is of critical importance to U.S. interests. In 1981, seven key countries -- Kenya, Pakistan, Mauritius, Seychelles, Somalia, Sudan and Oman -- received $345.4 million from U.S. bilateral programs. The MDBs more than matched that amount with $700.5 million.

The United States maintains basing arrangements in Kenya, Oman, Somalia, Thailand and the Philippines. These five countries accounted for a total of $1,456.6 million in MDB lending in 1981. Our total bilateral program provided $396 million to these same countries.

In seven countries of strategic importance to the United States in Africa -- Botswana, Djibouti, Liberia, Sudan, Tunisia, Zambia and Zimbabwe -- U.S. bilateral economic and military assistance programs provided $247 million in 1981, while the MDBs provided $426.1 million in the same year.

For all 27 countries in the table I have attached to my statement, all U.S. bilateral economic and military assistance programs provided $5.6 billion in 1981. If the MDB graduates, Israel, Oman and Spain, are omitted, the bilateral total is $3.3 billion. The MDBs provided $3.8 billion to these countries.

The point that these statistics establish is that the MDBs -- where the United States provides a fraction of the resources -- are important complements to our bilateral assistance program.

We are also convinced that the MDBs can use their resources more effectively. To this end, U.S. support for the MDBs will be designed to encourage:

- adherence to free and open markets,
- emphasis on the private sector as a vehicle for growth,
- minimal government involvement, and
- assistance to the needy countries who demonstrate an ability to make good use of available resources by adopting appropriate domestic economic policies.

With regard to specific recommendations for improving MDB effectiveness, we will seek three primary goals.

(1) The first is to have MDB lending programs increasingly emphasize attention to market signals and incentives, to private sector development, and to greater financial participation by commercial banks, private investors and other sources of private financing. A critically important goal of the MDBs in the future will be to encourage the private sector to invest its own capital and expertise in sound projects. It is in this role, as a catalytic agent in the enhancement of entrepreneurship, investment capital and production, that the MDBs can make a particularly significant contribution to economic development.

-- The International Finance Corporation knows the private sector and understands how to attract outside investors. We will be working closely with the IFC and other governments to develop additional ways to strengthen the private sector role in programs of the World Bank Group and the regional MDBs.

-- At the request of Venezuela, the IDB is working with the United States and other interested members to fashion a program targeted on the private sector.

-- The Administration has encouraged the MDBs to extend project cofinancing with private financial institutions. We believe there are opportunities for U.S. financial corporations in the cofinancing field, and we are currently examining whether some U.S. regulations may unreasonably limit possibilities in this area.

(2) A second goal is more selectivity and policy conditionality in MDB operations, in effect linking MDB lending to a recipient's pursuit of appropriate micro and macro economic policies. Financing for countries pursuing ineffective policies should be curtailed, and, if circumstances dictate, terminated. The importance of efficient loan allocations is underscored by the fact that our assessment found indications that past MDB emphasis on lending targets had eroded MDB effectiveness in encouraging sound economic policies.

(3) A third goal is to encourage the MDBs to adopt effective policies to "graduate" countries from the hard loan windows, when these countries have advanced to the point that they can rely fully on private capital flows. Similarly, countries that have achieved a requisite level of creditworthiness should "mature" from the soft loan windows and borrow from the hard loan windows as rapidly as their debt serving capacity permits.

By pursuing more selectivity in lending within a framework of effective graduation and maturation policies, we can ensure that scarce resources are concentrated on those countries which can best employ them and which are in the greatest need. And we can obtain more cost-effective development financing from the MDBs, while limiting budgetary outlays.

We are convinced that these policies which the United States is pursuing in the MDBs constitute a sound foundation from which economic development can be most efficiently promoted. I am also hopeful that they form an excellent basis for strong bipartisan Congressional support for U.S. participation in these important institutions.

In the past, U.S. relations with the MDBs and other donors have frequently been clouded by uncertainties regarding U.S. implementation of internationally negotiated arrangements. It is important that U.S. efforts to improve the effectiveness of MDB operations not be undermined by such uncertainties. This underscores the importance of consultations between the Executive and Legislative Branches on funding arrangements prior to and during the course of international negotiations, as well as prompt Congressional consideration of the U.S. contributions and subscriptions which follow from such international negotiations.

During the course of this year, the Administration will be negotiating replenishments for the hard and soft loan windows of the Inter-American Development Bank and the Asian Development Bank. We plan to participate fully in these replenishments, but we will insist on realism and restraint in future lending programs. Before this Administration enters into any understandings there will be thorough consultations with Members of this Committee and other interested Members.

-- The negotiations for an FSO replenishment have recently begun. We would expect to phase down the FSO, in light of the relatively high income levels which exist in Latin America.

-- In replenishment negotiations for the Asian Development Bank and for the Inter-American Development Bank, we are suggesting the elimination of paid-in capital which would reduce the budgetary cost of U.S. participation in the MDBs.

Reduced levels of paid-in capital would have the effect of bringing MDB lending interest rates closer to market levels and of shifting the program cost from non-borrowing shareholders to borrowers, since interest-free paid-in capital would be replaced by borrowing from capital markets to support lending programs.

Our analysis indicates that the impact on the financial integrity of the MDBs would be minimal and would be offset by relatively modest increases in financial charges.

The Congress would retain full control over callable capital subscriptions to the MDBs. No U.S. subscriptions to callable capital could be made without approval by the Congress in authorizing and appropriations legislation. Callable capital subscriptions could only be made to the extent that the Congress provides for program limitations in appropriations acts.

However, other donors have reacted negatively to the idea of eliminating all paid-in capital. Some members of Congress also have reservations, and we are prepared to consider the views of others on this issue.

Some have asked how can we maintain sufficient influence to implement our policies when we are limiting our contributions to the MDBs.

The United States remains the largest contributor to the MDBs, and our leadership position ensures that our views will be given serious consideration. We believe our recommendations are sound and that they reflect not only our national interests, but the common interests of the democratic, largely free market oriented countries, who provide the major share of resources to these institutions. We are committed to pursuing actively recommendations in our assessment and to continuing to be a reliable financial supporter of the MDBs.

These factors provide solid foundations for anticipating continued strong U.S. influence in these institutions.

At the same time, there will obviously be difficulties in carrying out all our policy objectives because of the multilateral character of the institutions. The views and policy objectives of other countries must clearly be considered. We have, however, generally been encouraged by the international reaction to our report. While there have been significant expressions of disappointment at the proposed reduction in U.S. contributions to the soft loan windows, members and MDB management have emphasized their willingness to work with us to improve MDB effectiveness. We are thus optimistic that we can, over time and with the cooperation of our partners, bring about many of the changes that we have recommended. And, in fact, we can already see some progress, especially in the World Bank.

-- In December, the Congress mandated that the Administration undertake negotiations to reduce the share of IDA credits provided to any given country. The World Bank has firmly indicated to India the need to shift its borrowing from the IDA to the IBRD. We expect that in the World Bank fiscal year 1982, India's traditional 40 percent share of IDA will decline to about 34 percent and forsee a continuing decline in subsequent years.

-- In the Asian Development Bank we have proposed -- and other donors have supported our position --

that relatively creditworthy countries, such as Thailand, Philippines, Indonesia and Papua-New Guinea, cease to borrow from the bank's soft window, the Asian Development Fund. This position has generally been adopted, and the last ADF loans for these countries are being processed this year.

-- In January, the World Bank Executive Directors reviewed the IBRD graduation policy and accepted new, more specific procedures for limiting and eventually phasing out lending to higher income countries. While we welcomed these steps, we would prefer a lower trigger point than the proposed $2,650 per capita income level and are continuing to explore this issue with other Executive Directors and Bank management.

-- The United States has worked hard in the IDB to encourage minimum standards for realistic user charges in power and transport projects. These user charges will be designed to cover operating and capital costs of these services.

## CONCLUSION

The fiscal year 1983 budget proposals are a crucial element in our comprehensive long-term program to improve MDB effectiveness over the remainder of the decade. We believe that our request achieves the proper balance among our international and domestic requirements and fully reflects the real budgetary constraints upon the United States Government. At the same time it safeguards our considerable interests in the developing world and in the Banks.

Enactment of the legislation will affirm U.S. determination to exercise responsible economic and political leadership. It will also demonstrate the seriousness of our commitment to work to induce those changes in MDB policies which we have concluded are necessary to improve the effectiveness of these institutions. I hope we can count on your support.

1/ The countries are those which received an allocation of Economic Support Funds in fiscal year 1982.

2/ The lending levels include commitments of the International Bank for Reconstruction and Development and the International Development Association in World Bank fiscal year 1981, and commitments from the Inter-American Development Bank (and its Fund for Special Operations), the Asian Development Bank and Fund and the African Development Fund during calendar year 1981.

3/ USAID 1982 Congressional Presentation.

U.S. Treasury
February 24, 1982

Senator **Kasten**. Mr. Secretary, thank you.

I am also pleased that we were able to pass a foreign assistance bill last year. Frankly, it was in large part due to your help and the administration's support, and also the help and support of your associates and your staff. You have a fine group of people that we were able to work with last year.

I want to thank you for the help and thank them for their help as we struggle through these complicated and difficult issues.

Secretary **Regan**. I am glad to hear you say that, Mr. Chairman.

### REACTION TO THE ADMINISTRATION'S REPORT ON THE MDB'S

Senator **Kasten**. I would like to talk about the Department of the Treasury's report on the MDB's.

First, I would like to compliment you on what is surely the most ambitious and wide-ranging report on the banks on this subject that has come out in some time. It is also, I think, a valuable addition to the whole discussion of U.S. policy toward these institutions.

One of the recommendations that the report makes is that the lending policies and programs of these institutions should inceasingly emphasize attention to market signals and incentives. You mentioned this in your statement.

How has this recommendation been received by the institutions and has there been any difference, institution by institution, in terms of the response that they have had? Are there certain institutions that have been more willing and able and forthcoming in terms of adopting some of these initiatives, and are there certain places where you have seen people digging in their heels and not refusing to cooperate but where you have seen a less than enthusiastic response?

Secretary **Regan**. Mr. Chairman, I think overall most institutions have recognized the validity of what we are saying. While perhaps many of the staff in these institutions don't necessarily agree with our economic philosophy, at least I think they understand that other systems have not worked this well and know that what has been tried in the past and failed no longer is a valid premise on which to operate.

I think they are beginning to see that our system can work and should work. As we constantly point out to them, when they look at such countries as Singapore, Japan, and other nations, that have tried the free economic system and compare them with other systems that have not done as well, they get the point that we are trying to make.

Senator **Kasten**. Are you implying then that the Asian Development Bank has been more receptive?

Secretary **Regan**. I would say they were probably a little bit ahead of us, actually. By the time we got there, they were already starting down this road. We literally encouraged them to do this. With our encouragement, they are really taking hold in the Asian Development Bank.

The African Development Bank so far has been a little laggard but that is understandable, considering that is the poorest of all the continents. We are somewhere in between these two institutions with the IDA, I would say.

The World Bank itself recognized the validity of this. I think under the able leadership of Mr. Clausen they will be pursuing a lot more of these market policies.

Senator KASTEN. I sensed there were some rough edges with that group. I hope that you are right.

Secretary REGAN. They aren't entirely happy.

Again, I do think they recognize that our points are worth considering, because absent anything else, what are they going to do?

Senator KASTEN. I think it is important that they understand that the Congress is increasingly concerned about going in that direction, the kind of support and help they are going to get from the Congress, both the Senate and the House, Republicans and Democrats.

Secretary REGAN. That is particularly true of this body, in light of your insistence on the limited amount of funds that are available for these programs and the importance of getting the most out of these funds. I think they also recognize that point.

## PRIVATE SECTOR PARTICIPATION

Senator KASTEN. You also made recommendations to place greater emphasis on private sector participation in order to improve the effectiveness of the multilateral development banks. You said that you intend to use the expertise of the International Finance Corp., and other governments to strengthen the private sector role in these programs. You also mentioned cofinancing as another way to go.

Could you give us more details on other avenues that you are exploring in order to encourage more private sector participation?

Secretary REGAN. I would say when you look at it and consider what is the main problem that banks, investment bankers, or others might have in investing in some of these foreign nations, what they are worried about is whether or not their loans are going to be made good at a time in the future when they come due, and whether in the meantime the interest is going to be paid on those loans.

Now, there has never been a default to the World Bank. So speaking as a former investment banker, if you go in partnership with someone to whom there has never been a default and the likelihood of a default is very slim or nonexistent, then you feel a lot safer about your own loan.

So, I think this is the way to leverage the funds that the World Bank has, by having them take along partners in their deals, rather than doing it all by themselves, particularly in deals where there would be sufficient return to warrant the risk that a partner might be taking.

## GRADUATION POLICY

Senator KASTEN. You also talked in the report about the fact that this administration has also pushed a graduation policy. You also mentioned that in your statement, encouraging MDB's to graduate countries based on economic considerations.

How is that being received? Are people accepting that?

Secretary REGAN. Unfortunately, no one likes to be kicked out or forced off something they have been used to over a period of time and where, particularly in these days of high interest rates, they are able to get lower rates of interest than elsewhere and not have to go through the hassle of going to the private markets. So there aren't too many countries that are really anxious to do it.

Nonetheless, sooner or later, to use a bird analogy, one is kicked out of the nest. I think we are doing more or less the same thing in the World Bank and encouraging these nations to stand on their own feet and get out of the way because we have a lot of other nations coming along who are more in need than they.

Senator KASTEN. We have heard more on that particular subject than any of the other recommendations, but I share your view that this is clearly the direction we have to go as we try to work with the scarce resources that we have.

Secretary REGAN. That is it. There are limited resources. If we are going to use those wisely, we have to use them in those nations that most need them.

### INTER-AMERICAN FOUNDATION ACCESS TO SOCIAL PROGRESS TRUST FUND REFLOWS

Senator KASTEN. The Social Progress Trust Fund was set up to receive reflows which are made on all U.S. loans in foreign countries. It has been a longstanding policy that the Inter-American Foundation has first rights as to the use of this foreign currency. I am concerned that this policy continue, number one, but, second, I am concerned that these currencies be available to the IAF in the first instance on a country-by-country basis.

The Inter-American Foundation testified last week. Can we have your assurance that you will continue the strong policy that the Inter-American Foundation be given the first crack at these funds, and also that they be given the first crack on a country-by-country basis?

Secretary REGAN. Yes, we can give you assurance on that, because we think that, by providing the funds this way, it furthers our own international policies of the United States to do it this way. So, accordingly, we have no desire or idea of changing anything from what it was.

### INDIA'S HOLDINGS OF U.S. SECURITIES

Senator KASTEN. The World Bank decision to reduce India's share of the soft-loan window in the World Bank program, I think, is a step in the right direction, but still some wonder if they have gone far enough, based on India's creditworthiness and ability to pay its debts. We have received reports, for example, that while India continues to receive substantial multilateral and bilateral low-interest loans, it still holds a tremendous amount of U.S. securities.

Do you know how much in U.S. securities is held by India?

Secretary REGAN. I am sorry we don't have that.

Senator KASTEN. It would be helpful if you could provide that to us for the record.

Secretary **REGAN**. We will provide that for the record.

[The information follows:]

### TREASURY SECURITIES HELD BY INDIA

At the end of February 1982, India held $171 million of short-term (one year or less) U.S. Treasury securities, which are the holdings of India's official institutions or banks unaffiliated with U.S. banks. In addition, residents of India held $20 million in long-term marketable U.S. securities (with maturities exceeding one year), including Treasury bonds and notes, bonds of federally sponsored agencies, corporate bonds and corporate stocks.

### INDIA BORROWING FROM THE ASIAN DEVELOPMENT BANK

Senator **KASTEN**. Also, there is some concern that one of the results of India's receiving a smaller share of IDA funds would be for her to turn for assistance to the Asian Development Bank from both hard- and soft-loan windows. Is that happening?

Secretary **REGAN**. It is not happening as yet. They have talked about it. At the present time it is merely in the discussion stage and, frankly, the Asian Development Bank does not have enough money to accommodate India and to make up whatever they would not be receiving from IDA.

Senator **KASTEN**. We would hope that would not happen, anyway.

### CHINESE MEMBERSHIP IN THE WORLD BANK

What is the status of the People's Republic of China's membership in the bank, both as a donor and also as a borrower?

Secretary **REGAN**. Again, that is still in the early stages. I think that it is getting closer.

There have been active discussions on projects.

Mr. **LELAND**. There was one loan from the World Bank which has been approved.

Senator **KASTEN**. There is a loan with the World Bank?

Mr. **LELAND**. There is one loan with the World Bank. Originally, I think, as you know, China was not part of IDA and there were no funds allocated for them in IDA VI. There was an understanding that if there were money available, they would be able to do some borrowing. There have been some plans for them to do more substantial borrowing.

Recently, because of certain cutbacks in the IDA funding, the amounts planned for China are not large; they have received one loan; they are not in the Asian Bank.

Senator **KASTEN**. What about their status as a donor to either organization?

Secretary **REGAN**. They are not a donor to either the Asian Development Bank or IDA.

Senator **KASTEN**. Is there any negotiation going on in that way?

Secretary **REGAN**. Not that I know of.

### PLO OBSERVER IN THE IMF/IBRD ANNUAL MEETINGS

Senator **KASTEN**. Mr. Secretary, do you expect the PLO question to be an issue again at the upcoming meeting of the IMF and the World Bank?

Secretary **Regan**. Yes, I do. I am not sure it will be discussed in detail at this interim committee meeting that will be held in Helsinki next week. I do suspect that it will come up before the next regular meeting of the IMF and the World Bank, which will be on Labor Day in Canada.

I suspect prior to that this issue will be raised.

### EXCLUSION OF ISRAEL

Senator **Kasten**. Some people have expressed concern—I have not seen it in the press—that another issue of the upcoming annual meeting, maybe the one in Canada, will be an attempt to exclude Israel from the World Bank. Do you have any knowledge of such an effort?

Secretary **Regan**. I have not heard about it. At least it has not risen in any formal or even informal conversations we have had with members of the World Bank.

Mr. **Leland**. We had to try to arrange it so that the meeting does not fall on the Ramadan holiday or the Jewish holiday. They changed the date of the meeting to Labor Day because of this.

Senator **Kasten**. If, in fact, the membership of the World Bank excludes Israel, what would the U.S. response be?

Secretary **Regan**. I think we would have to oppose in its entirety any attempt to exclude Israel from the World Bank. There is no need for that. We would take vigorous action.

### BRAZIL AND TURKEY

Senator **Kasten**. Last year you talked about bank lending practices to developing countries, specifically Brazil and Turkey, countries whose debt service costs were over 100 percent of their export earnings. You told the subcommittee that the United States was making an effort to encourage these countries to live within their means and to establish fiscal and monetary responsibility.

I wonder if you could tell us how successful in those two cases your efforts have been?

Secretary **Regan**. In the case of Brazil, they have done rather well. In fact, Brazil is one of the biggest beneficiaries of the drop in oil prices because they are major importers of oil. It was oil that was keeping their import expenditures up.

As far as Turkey is concerned, I think they, too, have been doing very well at keeping their house in order. They are struggling, but nonetheless they are attempting to get their house in order, and we are working with them on that.

### AFRICAN DEVELOPMENT BANK

Senator **Kasten**. We have had reports about deficiencies in the management of the African Development Bank and the possibility that some of these deficiencies could adversely affect the U.S. decision to join that institution, even if we were invited to join that institution.

First of all, are these reports true?

Secretary **Regan**. We have noticed similar reports. I think this has been something that is probably due to the fact that they are newer than some of the other institutions. They have a learning curve, but we have been working on that with members of the bank in order to improve the situation.

Senator KASTEN. Specifically, if the reports are true—and you say they are—does that mean that that will adversely affect the U.S. decision to join that institution if, in fact, we are invited?

Secretary REGAN. No; that will not. If we are invited we will join.

Senator KASTEN. In spite of all the problems?

Secretary REGAN. I think working from the inside we can probably do more than we can working from the outside to improve the situation within the bank.

Senator KASTEN. I don't know the degree that we are being helpful. As you know, we have already spent a substantial sum of money on technical assistance through the Agency for International Development.

Is the money in last year's appropriation going down the rathole?

Secretary REGAN. No, it is not going down the rathole. I think it is doing some good. There is no doubt that management there can be improved, and we will attempt to do that, because we are trying to safeguard the taxpayers' money. We are not going to waste it or let it be wasted by others.

Senator KASTEN. You are suggesting that if we were a member that we would do more than we can through technical assistance?

Secretary REGAN. I mean the assistance is improving management, not just throwing money at the problem, but improving management.

## CARIBBEAN BASIN INITIATIVE

Senator KASTEN. You said in your statement that the World Bank and Inter-American Development Bank chair consultative groups for the Caribbean and Central America that will complement the President's proposed Caribbean Basin Initiative. Can you explain how you expect the $700,000,000 to $800,000,000 development assistance will be used in cooperation with the Caribbean Basin Initiative?

Also, if you could, give us more details on what kind of controls you expect the United States to have over this development assistance.

Secretary REGAN. First of all, there are many projects down there in various countries that are long range; they will take quite a few years to spend out before they reach their finality and before their MDB economic assistance to the individual country ends.

Our Caribbean Basin Initiative is a rather fast spend-out type of program, trying to provide immediate help and trying to get immediate assistance through the private sector for these nations in order to help them right away, rather than long term.

The MDB's assistance will come mainly in the form of longer-term programs. We are trying to put the two together; in other words, we will try to get the countries ready for the longer-term programs when they come in.

Through our directors, in the MDB's we are working on what type of program is best for each of these individual nations and then work to see that that type of program is the one that is put in, rather than one that is duplicative of what we are doing or one that is nonessential to what we think is going down there and what they really need.

So, I think we can assure you, Mr. Chairman, that we are not again trying here to duplicate in our bilateral arrangement with these individual nations what the MDB's can do on a broader scale. We literally don't have the funds to do it all on our own, short term and long term. We are getting up a short-term phase, letting the banks do the long-term phase.

Senator KASTEN. We will be able to continue to monitor and control even the long term?

Secretary REGAN. I am not sure of control; I think we will be able to monitor and guide these projects.

### MDB LENDING TO ARGENTINA

Senator KASTEN. What instructions have you given to our representatives to the World Bank and the Inter-American Development Bank with respect to the U.S. position on any new loans for financing extended to Argentina?

Secretary REGAN. At the present moment there are no such applications that I know of, so accordingly we have had no specific discussions on this, except that I have alerted them that if anything of this nature does come up that they should come back to me for consultation before doing anything within these institutions.

### IBRD MEMBERSHIP FOR POLAND

Senator KASTEN. What is the status of Poland's effort to become a member of the World Bank group?

Secretary REGAN. As far as I know, that is still in the talking stage. There has been a group from the IMF, I believe, that was in Poland earlier this year, but there are no active considerations at this moment for Poland to join the World Bank.

### RESCHEDULING POLAND'S DEBTS

Senator KASTEN. A couple of weeks ago, in testimony before our committee, Assistant Secretary Leland said that there was a very great chance that our allies will refuse to reschedule Poland's 1982 debts because Poland will not be able to make its interest payments. As you know, the international banking community is eager to reschedule the debt, and Poland has stated that it cannot make its interest payments unless we extend new credit very soon.

I am afraid it is only a matter of time until our allies begin to grant Poland these new credits, in part to protect the loans they have already made.

I do not share Mr. Leland's optimism about the chance for a unanimous decision among our allies not to reschedule simply because they are bankers—as you once were—and once you get started you want to protect the debts you already have.

Isn't it more likely we will be the only country that will refuse to reschedule, or do you think that our allies will, in fact, act together?

Secretary **Regan**. This is an ongoing situation and any forecast as to what is going to happen, obviously, is going to be very imprecise.

Take, for example, what happened in Poland yesterday with the outbreak again of violence and the like; we don't know what the economic situation in that country is going to be 3, 4 or 5 months, let alone 3, 4, 5 years from now.

At the current moment there are no new credits being extended to Poland by anyone, private or public, government or nongovernment sources. There is no doubt also, though, that sooner or later the Poles have to come to grips with the 1982 debt, and I suspect that, as you suggest, they will be looking for additional sums.

At the current moment I know of nobody who is inclined to want to put additional moneys into Poland. So, I think this is going to be, as we term it on Wall Street, a workout situation.

Mr. **Leland**. I would like to add that what I said was that I felt there would be a better chance of getting our allies to go along with us in refusing to reschedule than there would be of getting our allies to go along with us in precipitating a default.

### ALLIED CREDITS TO THE SOVIET UNION

Senator **Kasten**. Mr. Secretary, we have been talking with our allies for several months now about a united response toward martial law. As you point out, it got worse in the last 48 hours. Secretary Buckley recently led a high level mission to Europe to try to convince our allies to limit future credits to the Soviet Union. The State Department believes some of our allies, or all of our allies, will go along with limiting future credits to the Soviet Union. At the same time, we see them supplying credits to build the natural gas pipeline which is going to supply the Soviets with hard currency, $8,000,000,000 a year in hard currency, once completed.

One of our NATO allies, West Germany, has approved $517,000,000 in new Soviet export credit since January alone.

What makes you think that the allies will agree to any kind of meaningful limitations on Soviet credit at all?

Secretary **Regan**. This is not a situation that we can quickly turn on or off. It has to be a matter of negotiation with our allies. This has to be a matter of their getting public support in their own countries. They also have to look at the effects on their own economies of suddenly reducing a trade that has been going on since the end of World War II.

So, we recognize that statecraft is a slow process and many of us are impatient, but I suspect that as we talk more and more to them, and point out to them what they are actually doing in extending credits to the Soviets, we probably will be able to get them gradually to go along with us.

Now, in the meantime, as far as the pipeline itself is concerned, this is something that they think is necessary for their own well-being, that if deprived of the natural gas in the future, their countries wouldn't be nearly as strong as they would be otherwise, because they need alternate sources of energy.

Senator **Kasten**. They could have had that alternate source from Norway or other places.

Secretary REGAN. Unfortunately, the previous government in Norway was adamant about not wanting to sell the natural gas right away, but wanting to keep it as a national treasure, something for the future. The current government seems to have changed its mind or, at least, changed position from the previous government, and now seems more willing to sell their gas. Whether or not it is feasible and viable and financeable, if you want to use that term, to get this gas from the Norwegian Sea into West Germany and then other parts of Western Europe remains to be seen; but it will take time to accomplish that. It is not something that can be done overnight.

On the one hand, we are looking at the Norwegian situation. On the other hand, we know that the Western European countries have committed themselves to that Soviet pipeline, and I am not sure that anything short of a real emergency, a national emergency, would persuade them to break off their involvement in the pipeline at this point.

As to the second pipeline and others, I think we are going to encourage them to use the Norwegian gas rather than the second pipeline.

Senator KASTEN. You said the process of statecraft is a slow one. You said that you believe there is an opportunity to move forward toward some kind of limitations. In everything I have seen and everything we have gotten in testimony, I have not seen one solid indication that our allies, particualrly West Germany, are willing to work toward any kind of credit limitations or slowdown in East-West trade.

Can you give me a specific example of where they have demonstrated this publicly? It seems like we are whistling in the wind and in every single bit of news that I read, whether it is Italy or France or Germany, it is more credits, more financing.

Can you give me one specific example in the last few months where we have seen the allies move away?

Secretary REGAN. While it may be difficult to give you examples, I don't think that we see any rate of increase. I think we are in a sort of neutral stage at this point.

Most of the financial flows are more in the short term, to finance actual trade. Mr. Chairman, many of our partners also ask us, rightly or wrongly, why we are asking them to cut back on their trade, while we are still selling grain to Russia. As you know, our farm interests protest violently whenever we decide we are going to shut off the grain sales.

It is difficult, on the one hand, to encourage our partners to cut back their trade at the same time we are selling. Although grain is one thing and manufactured products are something else, nonetheless the two are equated in the minds of many of our allies.

We have to come to grips with our own problem here as well. In the meantime, this is one of the subjects that will be discussed at the forthcoming summit which is a month from now. It is an ongoing concern with us.

Again, I suspect that we are going to have to do an awful lot more talking before we finally convince them.

## ALLIED COOPERATION IN EXTENDING CREDITS

Senator **KASTEN**. One of the things that we have discussed in the committee and also discussed privately with some people in the administration is the possibility of putting together some kind of organization along the lines of the technology transfer group that we have with this COCOM, in which we review the technology before we decide to go forward with it.

What I am suggesting is that we do the same thing with some kind of credit, with financing, in which we as a group of countries, NATO countries, our allies, review whether or not this particular project ought to be financed for the Soviet Union or Soviet satellites, whether it is in our overall best interests to do so, whether or not there might be a chance of working within the Alliance.

For example, on the energy question, could we have used this money to finance or encourage Norwegian gas? I want you to react to that whole idea of a COCOM-like group for financing loans to the Soviet Union or to the Soviet satellites.

Secretary **REGAN**. That is an interesting thought, Mr. Chairman. We now have somewhat informal groups stemming from the Buckley mission, in which we have periodic discussions with our allies at various levels about these subjects.

Also, next week, I will be at an OECD meeting and later an Interim Committee meeting of the IMF and World Bank. I will be meeting with my opposite numbers, finance ministers, of many nations, particularly from the European Community, and that is one of the subjects that will to come up.

Now, without having a formal type of organization, we will be having these informal, private discussions. These will continue during the times that meetings are not formally held.

I think we will have exchanges with them when we get into such questions as the Polish debt and things of that nature. We know that there the topic broadens. Our discussions are not limited to Poland; we take up issues relating to all Eastern bloc countries and to the Soviets. In all of these discussions we are leading the charge, trying to get them to cut back on the amount of credit and the amount of subsidization of that credit through lower interest rates that they are extending to the Soviets.

## SCOPE OF ALLIED COOPERATION

Senator **KASTEN**. One of the things that concerned me about Secretary Buckley's report before this committee, in a very abbreviated form, was that he said that they were addressing only credits to the Soveit Union and not credits in financing to the Soviet satellite countries. Is that your understanding, and if it is your understanding, through what mechanisms are we discussing with our allies credit and financing to the Soviet bloc countries as you just mentioned?

Secretary **REGAN**. That is going on in a little different area than the main Buckley mission which was on the Soviet Union.

What we are talking about now in the administration and trying to come to some type of policy on is, to use the current byword or catch phrase, differentiation. Do you indeed differentiate among the nations that make up the Eastern bloc? For statecraft reasons or for financial reasons, should there be a difference among them?

Some say yes; some say no. Some say indirectly if you help them you are helping the Soviets. Others say no, but if you don't help them you will drive them further into the Soviet orbit.

So, we are having discussions as to exactly how we should treat these individual members of the Eastern bloc.

As you know, Hungary has been up for membership in the IMF and its membership will be coming very soon. Romania is already a member. Do they in turn differ from Bulgaria, from the East German Government? Many of us think that there are differences among them, but to what extent they have different creditworthiness is a matter of judgment.

Senator KASTEN. But there is no question about the link back to the Soviet Union; in other words, that by aiding the satellite countries with financial support for their infrastructure, we are relieving the Soviet Union of the responsibility to do some of that, thereby freeing up Soviet assets for their unprecedented offensive military buildup.

Secretary REGAN. A good case can be made that when you help them you are indirectly helping the Soviets; and a case can be made also that if you don't help them there is no chance that they would ever join the Western orbit, that they will be lost forever. Therein lies our problem as to just how far we should go in dealing with those particular nations.

Is freedom dead, for example, in Hungary? Is there any other chance for that nation to get outside the Soviet orbit, or any one of the other nations? Poland has tried it with unfortunate results. Nonetheless, that spark is there. Do we want to continue to fan that spark, or do we want to forever shut it off by saying, "No credit. Go to the Soviets. We will have no dealings with you"? That is a judgment we have to make but one that will affect the lives and the political history of all of these nations for years to come.

We don't want to just jump to conclusions on these matters. We are trying to think it through very carefully.

Senator KASTEN. I don't want to beat this to death, but in testimony before our committee a representative of Solidarity, a number of leading Polish analysts, the former Polish ambassador to Japan who defected, appeared here and said the way we can best help the people of Poland, and the way we can best help Solidarity, help those fighting for freedom, would be to declare the debt in default and cut off our aid to Poland, and thereby force the Soviets to preempt those resources.

They were unanimous in their feeling that this whole idea of fanning the flames that you are talking about did not work and, in fact, bound us in, and we no longer have that flexibility.

I know there are two sides to that. I appreciate your response.

## QUESTIONS FOR THE RECORD

Senator Inouye had wanted to be here this morning. He sent a message down that he cannot be here. He particularly sent his apologies to you. He will submit a number of questions for the record. I have some additional questions that I will also submit for the record.

[The following questions were not asked at the hearing, but were submitted for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### EXPORT-IMPORT BANK POLICY

Senator Kasten: Mr. Secretary, on another subject, and I realize this is a bit unfair in that you have not been asked to testify on this particular subject--I would like to have your general views on the necessity, or not, of a strong, well-financed Export-Import Bank in order to have a sound U.S. export policy.

As you know, there is a great deal of criticism presently being aimed at the Export-Import Bank because of what is perceived to be very low numbers and a disinterest on the part of this Administration, as reflected in their ability to get people nominated and to get those nominated confirmed for the Board of the Bank.

Secretary Regan: The Administration opposes export credit subsidies in principle, but feels that an efficient and prudently used Eximbank is needed to support U.S. exporters against the predatory financing practices of other governments.

The Administration hopes for the rapid confirmation of the people we have nominated for the Board of the Eximbank. Quick Congressional action would facilitate Bank operations in the coming year.

We also continue to press for Congressional approval of our FY 83 budget requests for the Eximbank, which amount to the following:

-- $3.830 billion for direct loan obligations, which include $3.730 billion for regular loans and $100 million for discount loans.

-- $8.0 billion for guarantees and insurance.

-- $16.253 million for administrative expenses.

Although the amounts requested by the Administration are slightly lower than those authorized in recent years, we feel that the resources will remain adequate for the demand placed upon them.

We may have to reassess this position, however, if proposed amendments to the Arrangement on Export Credits are not accepted by all Organization for Economic Cooperation and Development (OECD) countries. These amendments, through a combination of reclassification and modest increases in interest rates, would essentially equalize the terms of foreign export credits and those of the Eximbank.

We have also implemented a number of policies in the past year designed to conserve the Bank's resources without undermining its competitiveness. First, we negotiated higher minimum rates in the Export Credit Arrangement last November which significantly decreased foreign export credit subsidization. Secondly, the understanding on commercial jet aircraft now limits direct credit support, with an estimated savings of about $500 million annually.

Thirdly, a recent understanding with the Ministry of Finance in Japan now enables the Eximbank to guarantee commercial bank credits in yen. Finally, the Eximbank can also guarantee loans in Swiss francs, Deutsche marks, and other major Special Drawing Rights (SDR) currencies.

In addition, the Bank itself has adopted policies which result in the more efficient use of its resources. The Bank no longer supports sales to relatively rich countries and limits its assistance for aircraft cases to financial guarantees except for wide-body, medium-range and new generation aircraft. General purpose lines of credit have been discontinued for the most part, since we could never determine whether they added to U.S. exports. Finally, the Bank has developed a targeted approach to enable it to provide the minimum financing needed for a U.S. supplier to compete.

Thus, the Administration believes that the Bank will have sufficient budgetary authority and program flexibility to meet specific challenges from foreign official competitors.

## PAID-IN CAPITAL

Senator Kasten: Mr. Secretary, thus far you have run into basically a negative reaction to your proposal to eliminate all paid-in capital. You know our reservations, which I understand parallel many such reservations in Congress. Despite these reservations, some kind of a compromise could be struck, and I wonder if you have approached a modified position with respect to this issue. And, if you have, what is it?

Secretary Regan: Initially, I should stress that the position we have adopted with regard to paid-in capital is a reflection of the long-term historical trend to lower the proportion of paid-in capital in Multilateral Development Banks (MDBs) and is based on solid financial and budgetary grounds. Our analysis leads to the conclusion that most of the multilateral development banks have sufficient financial strength, so that paid-in capital is not needed. We felt that this point needed to be examined particularly by the management of the respective banks and by other donors. Secondly, we believe that on the basis of callable capital subscriptions, most of the MDBs can fully rely on private market borrowings to finance their hard window lending programs with no significant additional cost to the borrowers. This is particularly important given current budgetary constraints in donor countries.

I believe that the discussions we have had thus far with other members and with the officials of the banks have amply made these points.

I have appreciated from the first the importance that Members of the Congress placed on continuing to include paid-in capital in future replenishments. In view of this Congressional sentiment, and since our primary objective of having the issue seriously examined has been achieved, I expect that our negotiators for the various replenishment agreements will be given instructions to agree to some paid-in capital in their negotiations. However, we continue to believe that the share of paid-in capital can be prudently and substantially reduced in both the IDB and the ADB.

In sum, I think at the conclusion of negotiations you will be satisfied with the outcome on this issue, although I am inclined to believe that the historical trend will continue and that future replenishments will see continued declines and eventual elimination of paid-in capital.

## EXECUTIVE DIRECTOR APPOINTMENTS

Senator Kasten: Mr. Secretary, this Administration has now been in office for 15 months. And yet not all of the Executive Director and Alternate Executive Director positions have been filled at the MDBs.

When can we expect everyone to be on Board?

Secretary Regan: The Administration has nominated James Burnham to be Executive Director at the World Bank. He has already had his Senate confirmation hearings and we hope to have him in place by the end of June. In accordance with the procedures of the World Bank, Mr. Burnham will then appoint his Alternate. We have identified a qualified candidate for that position and will be submitting his nomination to the Senate once Mr. Burnham has been confirmed.

The only remaining vacant Executive Director position is at the African Development Fund. Over the past year we have identified a number of candidates; unfortunately, for a variety of reasons none of those candidates chose to accept the position. Consequently, we are actively seeking a qualified candidate.

## MDB REACTION TO SELECTIVITY AND CONDITIONALITY

Senator Kasten: Mr. Secretary, another recommendation of your report encourages the institutions to use more selectivity and policy conditionality in the provision of their loans, much like, I suppose, the International Monetary Fund.

How has that been received by the individual MDBs?

Secretary Regan: Officials of the MDBs, to a large extent, are in accord with our general views on selectivity and policy conditionality.

We anticipate that there may be greater resistance -- particularly by borrowing countries -- when we express our views in the context of individual loans. Our stress on greater selectivity in lending programs will be translated into insistence on improved loan quality and avoidance of processing loans to meet lending targets. We will press for strengthened conditionality, particularly in individual MDB projects that appear to be in an economic policy framework which is not conducive to successful project implementation.

## INTER-AMERICAN DEVELOPMENT BANK

Senator Kasten: Mr. Secretary, while the Inter-American Development Bank ranks high in terms of United States political and strategic interests, it above the rest has suffered from management difficulties. As you know, there have been continuing complaints of cozy, personal type deals being made, and generally concerns that it is the most politicized of the MDBs.

What, if anything, are you doing to correct this situation in the IDB?

Secretary Regan: Our Executive Director and Alternate at the Inter-American Development Bank (IDB) are fully aware of the criticisms concerning politicization of the IDB, and they are working with other Executive Directors and with management to correct this image. Recently, for example, the position of Auditor General at the IDB was strengthened, and the functions of his office expanded in order to ensure that the internal audit function be performed independently and responsibly. Other changes in Bank procedures, including strengthening of the role of the Board of Directors in its relationship with the external auditors, are under review.

## IDA APPROPRIATIONS

Senator Kasten: Mr. Secretary, your statement seems to imply that if you were not subject to the ceiling placed upon you by the reconciliation legislation, you would be requesting more for IDA. Have you requested that that ceiling be increased or lifted?

If that ceiling did not exist, what would your request be?

Secretary Regan: The Administration has not requested any change in the $945 million ceiling on fiscal year 1983 appropriations for the Sixth Replenishment of the International Development Association (IDA VI) established in the Omnibus Budget Reconciliation Act of 1981.

It is difficult to speculate what our request level would be in the absence of a ceiling, since the issue has not been reviewed within the Administration. I think it is important to stress the high value that the President places on living up to international agreements, including the IDA VI replenishment agreement.

## REDUCED PROGRAM FUNDING

Senator Inouye: Mr. Secretary, with reference to the conclusions of the Treasury Department assessment, you have said,

"The Administration is convinced that continued U.S. participation in the MDBs is justified by a fundamental national interest in a more stable and secure world .... the MDBs can serve to advance important U.S. economic, strategic, and humanitarian interests."

You have also said, "U.S. foreign policy interests can be well-served by the MDBs. Cost sharing and financial leveraging mean that the MDBs can provide significant resources at a relatively small direct budgetary cost to the U.S. Government."

The Assessment itself concludes:

- The MDBs, by and large, have been most effective in contributing to the achievement of our global economic and financial objectives;

- The MDBs have served U.S. commercial interests well;

-- The MDBs, particularly the hard-loan windows, are particularly effective in serving the budgetary objective because of cost-sharing with other donors and the financial leverage derived by MDB borrowing against callable capital guarantees;

-- The MDBs have served the U.S. institutional efficiency objective reasonably well through operational and administrative efficiency and the generation of generally high-quality loans.

With this record of achievement, why is the Administration proposing a reduction in U.S. participation in the MDBs over the next several years?

In proposing such sweeping changes in the operations of the MDBs, can it not be said that the Administration is placing the success of these institutions at risk?

You have noted that other donors have reacted negatively to certain U.S. proposals. Can you assure the Committee that the Administration is working to maintain the collaborative nature of these institutions and is not imposing its views simply because the United States is the largest contributor?

Secretary Regan: In proposing reduced U.S. financial participation in the MDBs, we are reflecting our emphasis on more effective use of existing MDB resources, as well as our real budgetary constraints. Through improved loan quality, strengthened maturation and graduation policies and more attention to policy conditionality, we believe resources can be stretched to provide support for development programs, at a relatively smaller budgetary cost.

The reduction envisioned relates to U.S. outyear contributions to the MDB soft-loan windows. It does not indicate any diminution of our overall commitment to continue strong U.S. support for the MDBs. The fact is that the Administration fully intends to play a major role in each of the MDBs, and our ability to do so should not be severely hindered by the overall reduction in MDB appropriations which are envisioned in the mid-1980s. In the hard-loan windows, we will seek to maintain the U.S. share of capital increases. (We have the largest share of any country in the Inter-American Development Bank, the International Bank for Reconstruction and Development and, with Japan, in the Asian Development Bank.) We also expect to remain the largest overall donor of soft window contributions. Thus in spite of reduced financial participation in absolute terms, the United States will remain in the same relative position in the banks.

We, of course, recognize that the MDBs are cooperative multilateral institutions, and that the views and policy objectives of other members must clearly be considered. We are nonetheless encouraged by the international reaction to our MDB report. While there have been significant expressions of disappointment at the proposed outyear reductions in U.S. contributions to the soft-loan windows, members and MDB management have emphasized their willingness to work with us to improve MDB effectiveness with regard to many of the other policy recommendations. We are thus optimistic that we can, over time, and with the cooperation of our partners, bring about many of the changes we are seeking.

## INTERNATIONAL DEVELOPMENT ASSOCIATION

Senator Inouye: Mr. Secretary, does the Reagan Administration fully support the $945 million appropriation request for a contribution to the Sixth Replenishment of the International Development Association?

The amount requested is considerably less than the Administration projected in March of 1981 as the FY 1983 request, is it not?

You note that this request "entails a significant reduction in the IDA lending program."

In practical terms, what does this mean?

How does it affect our relations with other donors?

Are there approved projects which will not be funded?

How will the significant reduction in the IDA lending program affect the less developed countries?

As approved projects are deferred because of a lack of funds, does that not increase their cost at a later date?

Does the Administration fully recognize that those of us who supported the FY 1982 bill did so because we had carefully crafted a bill which had an acceptable balance between development assistance and security assistance?

Does the Administration fully recognize that the fate of its security assistance initiatives hinges on the fate of IDA and on economic assistance in general?

Secretary Regan: The Administration strongly and fully supports the $945 million FY 1983 appropriations request for IDA, and will make every effort to obtain the full request. The $945 million is less than we initially envisioned as our FY 1983 contribution to IDA VI, but is the maximum permitted under the appropriations ceiling which was established by the Congress for FY 1983.

The original IDA VI lending program projected IDA commitments of $3.5 billion in FY 1981, $4.1 billion in FY 1982 and $4.7 billion in FY 1983. On the basis of a four year program -- with U.S. contributions of $500 million (FY 1981), $700 million (FY 1982), $945 million (FY 1983) and $1095 million (FY 1984) -- Bank management has projected FY 1982 commitments of $2.6 billion and FY 1983 commitments of $3.3 billion. The extent to which this program reduction will impact on IDA recipients will depend on a number of factors, i.e. the Bank's ability to improve the quality of lending, the position of other donors, and the progress which is made in "maturing" the more creditworthy IDA recipients into more hard-loan window borrowing.

Some donors intend to pay their remaining IDA VI contributions in FY 1983 as planned, but others wish to adopt the U.S. pace so as not to disrupt the agreed cost-sharing formula. To help compensate for the U.S. shortfall, some donors want to create a "special account" without the United States.

Although the level of U.S. funding has affected the level of IDA loan commitments, there should not be any significant impact on the implementation of projects which have already been approved since loan disbursements are spread out over several years. Projects in the IDA pipeline, however, could be deferred or their implementation modified given current IDA funding constraints. While deferral may raise project costs somewhat, the rate of inflation in the industrialized countries is declining, which should mitigate the problem of inflating project costs.

The Administration is well aware of Congressional views regarding the appropriate balance between development assistance and security supporting assistance. I can assure you that we do not intend to downplay development assistance, and believe that our FY 1983 appropriations request is concrete evidence of the importance which this Administration attaches to an effective, development assistance program, based on the multilateral cost-sharing advantages of the MDBs.

## GRADUATION AND MATURATION

Senator Inouye: Mr. Secretary, the Treasury Department assessment (United States Participation in the Multilateral Development Banks in the 1980s) discusses at length the terms "graduation" and "maturation." What do these terms mean to you?

I believe these are laudable goals, but I wonder how effective the U.S. can be in advancing them when it is also proposed that we reduce our participation in the Multilateral Banks.

What do you think? Is this not, or does it not at least appear to be, inconsistent?

Would you agree that, for the Administration to have credibility in future negotiations which propose to advance "graduation" and "maturation," it must demonstrate to other donors that it can secure the appropriation it requests?

What would be the consequences, if the Congress did not provide the $945 million requested for IDA? Would anyone believe what you have said regarding "graduation" and "maturation"?

Secretary Regan: As you know, development is an evolutionary process. It is our view that as recipient country creditworthiness improves, adjustments should be made in the nature and extent of countries' access to available MDB resources. There are two basic transitional stages for MDB recipients: (1) "maturation" from the status of borrowing only from the soft-loan windows, to the intermediate step of borrowing a "blend" of soft-loan and hard-loan window funds, and eventually to the status of borrowing only from the hard-loan windows, and (2) "graduation" from the status of borrowing from the hard windows to full reliance on other sources of external capital, primarily from the private capital markets. The "graduation" concept, in some cases, also implies accepting a larger role as a donor to the MDBs.

Neither maturation nor graduation is a new concept, although past MDB policies in these areas have sometimes been somewhat vague and not uniformly implemented. In the past, such countries as Greece, Singapore and Iceland have graduated from IBRD lending. Similarly, such countries as Turkey, Morocco and Nigeria have matured from IDA lending.

As I have noted earlier, I do think that we will maintain our influence in the MDBs. I also believe that over time we can work successfully with the respective MDB managements and with other MDB members to secure equitable implementation of maturation and graduation policies. While the Administration attaches considerable importance to obtaining our $945 million FY 1983 request for IDA VI appropriations, I do not think this issue in itself will affect our ability to encourage more effective maturation/graduation policies.

At the same time, it is clear that our partners in the World Bank are very concerned about the disruptions which the U.S. "stretchout" of IDA VI contributions has caused in IDA's lending program. If the United States were not able to complete our full IDA VI contribution in FY 1984 as now envisioned, this concern would clearly increase and the seriousness of the U.S. commitment to maintain a leadership role in the MDBs could be called into question.

## FUTURE U.S. CONTRIBUTIONS; CHINA

Senator Inouye: Mr Secretary, you have said that, by fiscal year 1985, when the replenishments will have been largely negotiated by this Administration, there will be a "significant reduction in real terms in U.S. contributions to new soft-loan window replenishments."

How have other donors and members of the MDBs responded to this proposition?

Does this "significant reduction" presume a significant improvement in the economies of the world's poorest countries?

Do you believe it is realistic to assume that there will be a "significant reduction in real terms in U.S. contributions?"

Is it not probable that China, with a population of more than one billion and a per capita income of only $260, will draw heavily on IDA resources?

When do you expect China to begin borrowing from IDA?

How much do you expect China to borrow on an annual basis?

Secretary Regan: Other donors and MDB members have generally been disappointed by the envisioned reductions in U.S. outyear contributions to the soft-loan windows. Some other donors, however, also have budgetary constraints which are expected to impact on their future soft-loan window contributions.

While we do not expect a dramatic improvement in the economies of the world's poorest countries over the next few years, we do think that a number of soft-loan recipients can meet an increasing proportion of their MDB requirements from the hard-loan windows. For example, several countries in southeast Asia are expected to cease borrowing from the Asian Development Fund this year and shift fully to the hard window to finance their ADB-supported programs. As such "maturation" is more effectively implemented by the banks, there could still be increases in the amount of soft-window resources going to the less creditworthy of the world's poorest countries.

We believe it is realistic to expect that there will be a significant reduction in real terms in U.S. contributions to the soft-loan windows as compared to current replenishments as negotiated.

With regard to China, in FY 1981, the World Bank approved a $100 million IDA credit and $100 million IBRD loan to the People's Republic of China to strengthen higher education and research activities in science and engineering. A $60 million IDA credit for agricultural development was approved in June 1982. There are eight other proposed projects in the IBRD/IDA pipeline. Two of these projects, totalling $197 million, could be considered by the Board this summer.

The United States supports the World Bank working over time towards an appropriate level of lending on appropriate terms to China. The blend of the lending program between IBRD and IDA resources should refect the availability of IDA commitment authority and its equitable distribution among IDA borrowers, many of whom are much poorer than China. The blend should also take into account China's relatively creditworthy financial status, as reflected by its access to large amounts of external credits on relatively hard terms. On purely financial grounds, it seems reasonable to conclude that China should borrow relatively little from IDA.

## CONTRIBUTIONS TO SOFT-LOAN WINDOWS

Senator Inouye: Mr. Secretary, the Treasury Department study of United States participation in the Multilateral Development Banks has recommended a reduction of 30 to 45 percent in real terms in total U.S. contributions to all soft-loan windows.

What is the basis for the recommendation? Are the economies of the world's poorest nations expected to improve that significantly? Does the Administration believe that the need for concessional assistance will be reduced, or does it propose that the need go unmet?

I note that proposed U.S. contributions to the Asian and African Development Funds do not provide for such large real reductions.

Does this not mean that the Inter-American Development Bank's (IDB) Fund for Special Operations and the International Development Association will bear a disproportionate burden for the reduction?

On what basis has Treasury decided to allocate the recommended reduction in this manner?

Secretary Regan: In reviewing the soft-loan window programs of the Multilateral Development Banks, the Administration considered the effectiveness of these programs, and the efficacy with which borrowers use the financial resources, as well as the financial need of the borrowing countries. In some cases, while there may be an apparent need for financial resources, economic policies of a borrowing country may undercut the viability of a project for soft-loan funding.

By contrast, in other cases, the relatively successful development efforts of a country -- usually measured in terms of strengthened capacity to service debt -- may allow a country to fund a larger portion of its borrowing program through the hard-loan windows.

It was the combination of these two factors -- the need for more effective programs and policies and the reality of strengthened debt service capability among some borrowers -- which led to the conclusion in our assessment that the soft-loan programs could be reduced substantially in real terms in future replenishments.

These underlying factors also explain, to a great extent, the distribution of reductions among the various soft-loan programs. The absence of significant reductions in the Asian and African Development Funds is a result of the evident need, based on low per capita incomes, and -- in the case of Asia -- on the efficiency of the institution and the relative effectiveness of recipient government policies. By contrast, most countries borrowing from the FSO have relatively higher per capita incomes than the soft window borrowers in Africa and Asia and should be able to carry the relatively heavier debt servicing associated with borrowing from the hard window.

In the case of IDA, our conclusion on future replenishment levels will probably be heavily influenced by the large share of the lending program going to India. It has become increasingly apparent that India -- despite its relatively low per capita income of $240 per year -- can manage a debt structure associated with borrowing a harder blend from the World Bank Group.

I would also acknowledge that our overall conclusions with regard to funding for the soft-loan windows were based, in part, on the need to restrain U.S. budgetary commitments.

## SELECTIVITY AND CONDITIONALITY

Senator Inouye: Mr. Secretary, in reading over your statement, I was intrigued by your enumeration of the three primary goals of the Administration regarding specific recommendations for improving MDB effectiveness.

In particular, I was struck by the goal of "more selectivity and policy conditionality in MDB operations, in effect linking MDB lending to a recipient's pursuit of appropriate micro and macro economic policies."

Can you elaborate on what you mean by appropriate economic policies?

If the United States were to seek a loan from an MDB -- with the deficit we will experience this year, with our current tax policies, with our trade balance what it is -- would the United States be judged as pursuing "appropriate economic policies"?

Should we hold less developed countries to standards we ourselves could not meet?

Secretary Regan: We believe firmly, and there is considerable supporting evidence, that those countries which have benefitted most from foreign assistance have primarily benefitted because they pursued sound market oriented domestic policies. We thus consider it important to strengthen the relationship between loan programs and the framework of micro and/or macro economic policies within which the loan is expected to be implemented. Such policies should facilitate rather than hinder the effective implementation of MDB loans, and it accomplishes little to lend in situations where inefficient or restrictive domestic policies are likely to preclude effective project implementation. Policies which emphasize attention to market signals and incentives, to private sector development, and to the encouragement of greater financial participation by banks, private investors, and other sources of private finance, would be in line with the type of domestic policy environment we wish to encourage.

Like most industrial countries, the United States does confront some very serious economic and financial problems. These should not be underestimated. However, the policies we have proposed are geared to successfully overcoming the problems we face and setting the United States firmly on the road to steady and sustainable growth. Thus, we view the policies we are pursuing to be very appropriate, and indeed there are a number of very positive indications, such as the lower inflation rate, that progress is being made.

## AFRICAN DEVELOPMENT BANK

Senator Inouye: Mr. Secretary, I have recently become aware of the precarious financial condition of the African Development Bank. Before I get to my questions, would you confirm my understanding of this situation?

(1) Almost 50 percent of the interest and principal repayments that should have been collected last year were not. Nonetheless, the Bank continues to make new loans to countries in arrears. Is that correct?

(2) Arrearages of principal and interest almost doubled last year to over 24 million Special Drawing Rights. Is that correct?

What is the dollar equivalent of 24 million Special Drawing Rights?

Fifty percent of these arrearages are more than 12 months overdue. Correct?

(3) The Bank is committed to lend 804 million SDR at 7-1/2 percent interest, while it costs the Bank nearly 18% to borrow these funds. Is that correct?

Now, as I recall, the Congress has appropriated $17.9 million as an initial U.S. contribution to the African Development Bank. These funds have not been disbursed because the U.S. has not yet joined the Bank. Is that correct?

To what do you attribute the continued deterioration of the Bank's condition?

Is the Administration presently providing, or does it propose, technical assistance to strengthen the African Development Bank?

Does the revitalization of the Bank depend upon strengthened management or a basic political decision on the part of its members to see the institution succeed?

Are the countries which are in arrears to African Development Bank current on their World Bank and IDA loans?

Given the Bank's condition, why should the U.S. join the Bank? Why has the Administration not proposed a rescission of the $17.9 million the Congress has appropriated? Could it not be used more effectively elsewhere?

Secretary Regan: As of the end of 1981, the African Bank was owed some SDR 24.5 million, approximately $28.5 million, in principal and interest payments, of which SDR 12.3 million was over 12 months past due. Because of this poor repayment record, African Development Bank (AFDB) Management, with the approval of the Board of Directors, is strictly enforcing the sanctions contained in the loan agreements. Consequently, in February, management notified all countries that any arrearages must be paid by May or all disbursements on outstanding loans will cease and no new loans will be considered.

As of December 31, 1981, the Bank had a balance of SDR 804 million in undisbursed loans for which it is committed to charge between 7 and 7.5 percent interest in addition to a 1 percent per year commission fee, or a total of 8 to 8.5 percent. The Bank has since increased its lending rate and is now charging approximately 10.5 percent per year for its new loans while its average borrowing cost has been 11.5 percent. In effect, the African borrowers have been subsidizing their costs of borrowing from the AFDB by using their paid-in capital subscriptions as a cost-free resource. This is not the practice in the other MDBs. Over time, we feel that this practice must be discouraged in the African Bank.

Currently, neither the United States, nor any other non-African country, is a member of the Bank. Consequently, the $17.99 million which was appropriated for subscription to AFDB paid-in capital has not been disbursed. However, the changes in the Bank Charter to allow non-regional membership in the AFDB have now been approved. It is expected that the Bank will have non-regional members by late this year or early 1983.

The primary cause of the deterioration in the Bank's financial condition has been the negative spread between their lending rates and costs of borrowing. The financial condition has been further eroded by loan and subscription arrearages. Bank Management and the Board of Directors have indicated actions to deal with these problems.

The Agency for International Development has a technical assistance program with the African Development Bank under which consultants are paid to work on the staff of the Bank and provide training both formally and informally to other staff members. Other countries have also provided the Bank with the services of technical experts in such fields as agronomy, engineering, economics and project analysis.

Although the management efficiency and effectiveness of the African Development Bank Group have been steadily improving over the past few years, significant further improvement in the Bank's overall performance will be necessary for the Bank Group to reach its full potential as a development institution. In this regard, we expect that non-regional membership in the Bank and the addition of experts from non-regional countries to the staff of the Bank will have a very positive effect on the Bank Group.

The African Development Bank is making a major effort to collect the loan payments due to them. Countries that are still in arrears are not receiving new loans from the Bank nor are they receiving disbursements under existing loans.

As far as IDA and the World Bank are concerned, our understanding is that the African member countries are generally current in their loan and credit repayments. However, as of June 14, 1982, the World Bank suspended most disbursements on outstanding loans and credits to Tanzania because of payment arrearages totalling $2.8 million.

The financial situation of the AFDB is serious but it is not beyond redemption. Management and the Board have already started to take the steps necessary to improve the Bank's financial condition and non-regional membership can only have a beneficial effect. The budgetary costs of membership are not particularly onerous. From an international perspective, a decision not to join the Bank would only serve to engender ill will among our allies and key African countries. I believe that as a member the United States could help the institution to reach its full potential.

As far as a rescission is concerned, the Administration has not proposed one because there has not been a decision that the African Development Bank would not be opened for non-regional membership.

## AFRICAN DEVELOPMENT FUND

Senator Inouye: Mr. Secretary, the Administration has requested $50 million as the first of three equal installments for the new replenishment of the African Development Fund.

This represents a 20 percent increase above the U.S. share of the previous replenishment.

Is the African Development Fund separate and distinct from the African Development Bank?

Is it, too, plagued by managerial ineffectiveness?

How do you account for the difference?

Secretary Regan: Although the proposed $150 million U.S. share of the third replenishment to the African Development Fund is a 20 percent nominal increase in our contribution, it constitutes little, if any, increase in real terms when considering the rate of inflation in the years between the last replenishment and this one.

The African Development Fund is a separate and distinct legal entity from the African Development Bank with separate Boards of Directors. However, the Management and staff are the same for both institutions.

The African Development Bank Group, that is the Bank and the Fund together, is probably less effective and efficient from an administrative and operational viewpoint than the other Multilateral Development Banks. However, the Bank Group Management has recognized the problems it has in these two areas and is taking a number of steps to improve the situation. They have, for example, made a concerted effort to recruit more highly qualified staff and to increase training opportunities for staff members who are already on board. Upgrading of staff has been carried out through overseas training assignments with the World Bank and the Asian Development Bank as well as through on-the-job training which is supervised by technical experts from developed countries. We will continue to monitor the progress made by the Bank Group in these areas, as well as in the area of operations and encourage them to make further improvements.

The basic difference between the two institutions is that we can affect the policies followed in the Fund but we do not yet have any say on Bank policy because we are not a member.

## ASIAN DEVELOPMENT FUND

Senator Inouye: Mr. Secretary, a letter to me, dated April 26, 1982, outlines Treasury Department plans for U.S. participation in the proposed replenishment of the Asian Development Fund.

Why does the Administration propose to reduce the U.S. contribution from 22.25 percent down to 16.25 percent of the proposed replenishment?

The Treasury study on United States participation in the Multilateral Development Banks rates the ADB as the most efficient Multilateral Development Bank.

Is this proposed reduction not inconsistent with Treasury's finding?

Does this reduction not reduce U.S. influence in the Asian Development Bank and Fund?

How would you respond, if the Congress were to propose holding the U.S. contribution at its present percentage level?

Secretary Regan: It was not the objective of the Administration to reduce the U.S. share in the Asian Development Fund (ADF) from 22.25 percent to 16.25 percent. The reduction in our ADF share results from other donors' desire to support an ADF replenishment significantly larger ($3.2 billion) than the one suggested by the United States ($2.3 billion). We had not asked nor implied that other donors should increase their ADF share.

In view of the relative need for concessional assistance in the region and the institutional capabilities of the Asian Development Bank (ADB), we have proposed a U.S. contribution of $520 million to the ADF, which is $75 million more than our current replenishment figure of $445 million. This increase comes at a time when we are planning to reduce the level of our contributions to the IDB's Fund for Special Operations and the next International Development Association replenishment. We therefore believe that our proposed ADF contribution is consistent with the findings of the Assessment.

The reduction in our ADF share has led some donor countries to request increases in their respective ADB capital shares. If their requests are granted, there may be some marginal reduction in our capital share. However, even if all the requested selective capital increases are implemented, the U.S. and Japan would still share the role of being the largest capital subscribers. We therefore do not believe U.S. influence will be reduced in the Bank and Fund.

Regarding your last question, we could not agree to a Congressional proposal that would hold the U.S. contribution at its present percentage level. Such a proposal would require the U.S. to provide an additional $180 million (over four years) to the ADF. Given the budgetary limitations we are facing, any increase for the ADF would have to come at the expense of one of the other concessional windows -- the International Development Association, the Fund for Special Operations or the African Development Fund. Provision of additional funds for the ADF might make it more difficult to negotiate reduced FSO and IDA VII contributions.

Further, we are convinced that the MDBs -- including the ADB -- should concentrate on more efficient and effective use of their resources and should desist from continuing to seek rapid growth in their lending programs as a major objective. Any increase beyond the level that the Administration proposes risks undermining these objectives in the MDBs.

## PAID-IN CAPITAL

Senator Inouye: The Administration's negotiating position in replenishments of the Inter-American Development Bank and the Asian Development Bank calls for the elimination of paid-in capital.

How would this reduce the budgetary cost of U.S. participation in the MDBs?

The reduction in budgetary cost would be modest. Is this savings worth the political costs we would incur in our relations with other donors?

Have other donors expressed their view on this proposal? Do they favor or oppose it?

What would happen to MDB lending interest rates, if this proposal is accepted?

If the lending rates move closer to market rates, does that not, at least in part, negate the purpose of the MDBs?

If borrowings from private capital markets increase, what effect will that have on U.S. interest rates?

Will this not have a dampening effect on the U.S. economy? Would the envisioned reduction in budgetary costs offset the cost of higher interest rates to our economy?

Secretary Regan: Reduction in paid-in capital in the MDBs would lead to a direct dollar-for-dollar reduction in budgetary outlays. In the most recent capital increases, the annual appropriations for paid-in capital are over $50 million and $20 million in the IDB and ADB, respectively.

Other donors generally agree that the level of paid-in capital should be reduced from past levels, but they also believe that some further paid-in is advisable. Accordingly, I do not believe that we will incur any significant political costs in seeking a reduction in paid-in capital.

MDB lending rates may have to be adjusted upwards modestly, if paid-in capital is reduced. However, this adjustment would be relatively small compared to the present overall level of interest rates. MDB rates and maturities will still remain well below those that even the best risks among the LDCs could obtain on their own, because the MDBs borrow on the basis of the callable capital of the developed members. This is the main advantage accruing to the LDCs as borrowers from the MDBs. I would also note that a reduction in the subsidy element associated with interest-free, paid-in capital should assist in a more rational allocation of scarce capital.

The increased market borrowings resulting from a reduction in paid-in capital will have no effect on U.S. interest rates, since the increase on borrowings only substitute for paid-in capital that the U.S. itself would have to borrow from the capital markets in the first place. Consequently, its effects should be neutral on the U.S. economy and interest rates.

## COMMERCIAL BANKS IN DEVELOPING COUNTRIES

Senator Inouye: Mr. Secretary, when you appeared here last year, one of the matters we discussed was the exposure of U.S. commercial banks in the developing world. I noted at that time that the nine largest American Banks had, at the end of 1979, $38.6 billion on loan to developing countries. I also noted that the total capital of these banks was only $21.9 billion.

What is the situation now? What is the exposure of the nine largest banks, and how does that compare to their capital?

What of the dangers of insolvency? Have U.S. banks suffered increased losses on their foreign claims?

Secretary Regan: The total claims of the nine "money center" banks[1] rose from $38.6 billion at the end of 1979 to $49.0 billion at the end of 1980 and to $52.0 billion at the end of June 1981 (the most recent date for which we have published "exposure" data). The total capital of those banks rose from $21.9 billion to $24.0 billion and $26.0 billion, respectively. The ratio of these claims to capital rose accordingly from 1.76 at the end of 1979 to 2.04 at the end of 1980 and 2.08 at the end of June 1981. (The comparable ratios for all banks reporting on the country exposure lending survey were: 1.22; 1.35; and 1.39.)

The increase in exposure relative to capital is substantial but not startling. It reflects the sharp increase in the current account deficits of the developing countries during this period. The increase in bank lending to developing countries is expected to decelerate this year.

There has been little or no increase during this period in the proportion of international loans written off. (Virtually all such write-offs reflect losses from "commercial risk" rather than "country risk".) The ratio of losses on international loans (all foreign countries) to the total of such loans outstanding at year end for the nine money center banks was .09 percent at the end of 1979, .07 percent at the end of 1980, and .09 percent at the end of 1981. However, losses generally are recorded only with some delay after the loans in question become non-performing (since debtors are often able to work out their difficulties and ultimately to service their debt). Thus, recent developments may not be reflected in the ratios cited above.

## U.S. FINANCIAL EXPOSURE IN ARGENTINA

Senator Inouye: Mr. Secretary, Argentina is reported to owe $30 billion in foreign debts, with some $8.6 billion owed to U.S. banks.

What is your assessment of Argentina's debt repayment prospects?

How much of the $8.6 billion owed to U.S. Banks is secured by U.S. Government guarantees?

What is the total of U.S. Government contingent liabilities on Argentina's debt?

Secretary Regan: We expect that Argentina will keep its debt service payments current. Argentina wants to make certain that all its debts are paid and all its financial obligations are met in order to protect its credit rating and assure continued access to external finance.

Some payments abroad have been delayed due to a decree by the Government of Argentina on April 30 that requires prior Central Bank approval for all payments abroad. We have been assured that these delays are essentially administrative in nature and do not reflect either an unwillingness or inability to pay.

---

[1] Cross-border, non-local currency claims on non-oil developing countries. Adjusted for guarantees so as to reflect risk by country of guarantor. Excludes claims on LDC "financial centers" (e.g., Bahamas, Cayman Islands, Panama as well as claims on Eastern Europe).

Despite the adverse impact of the crisis in the South Atlantic, Argentina's basic balance of payments position is fairly strong. Argentina registered a trade surplus of $1.1 billion during the first four months of the year with agricultural exports reaching near-record levels in April and May.

The U.S. Government has contingent liabilities of about $450 million in connection with guarantees and insurance provided to private U.S. residents, including $299.3 million under Export-Import Bank programs (as of December 31, 1981). Of this amount, $169.6 million was Export-Import Bank guarantees of commercial bank loans to Argentina. U.S. government direct lending to Argentina was $266 million at the end of 1981, including $178 million owed the Export-Import Bank.

## TREASURY DEPARTMENT TRAVEL POLICY

Senator Inouye: Mr. Secretary, in the public mind, one of the hallmarks of the Reagan Administration is a sustained effort to reduce the costs of the Federal Government. Over the years, this Subcommittee tried very hard to send that same message to international organizations. For example, we were strongly critical of first-class travel by World Bank employees and, especially, their use of the Concorde. You can understand, then, the disappointment I felt when I read that one of your close associates -- the Assistant Secretary of the Treasury for International Affairs -- has used the Concorde. Is it, in fact, true that Mr. Leland used the Concorde for official travel?

What is the Treasury Department's policy regarding first-class travel or use of the Concorde?

Do you think it is important for high-ranking government officials to set an example?

One of the complaints we frequently hear is that many agencies have cut transportation outlays so severely for lower-level officials that they are unable to perform their duties adequately. Has the Treasury Department cut its budget for travel?

Has the World Bank maintained its restrictions on first-class travel?

Secretary Regan: Consistent with a government-wide policy, the Treasury Department has a general policy that government personnel should travel at coach rates -- or, where practical, under GSA's program of contracts with certified air carriers for reduced fares.

The exceptions to this general policy -- which, in appropriate circumstances, would allow travel at first class rates or in the Concorde -- are (a) for medical reasons, (b) in very limited circumstances, when officials must complete a great deal of work on board airplanes in preparation for immediate negotiations, or

(c) when speed is essential for the conduct of official business and coach class facilities are not available.

Assistant Secretary Leland flew between Paris and Washington and New York by use of the Concorde on three occasions in exceptional, but justifiable circumstances, which were fully consistent with Treasury travel policies. On July 9, 1981, at the conclusion of international meetings in Paris, he returned to Washington by the Concorde in order to attend a meeting with me the following morning. Any alternative flight arrangements would have precluded his presence, which was essential.

On October 2, 1981, Assistant Secretary Leland flew from New York to Paris by the Concorde in order to fulfill early morning meeting commitments that had already been rescheduled once. Pressing business had precluded the possiblity of an earlier flight. There was no reasonable alternative in this situation.

Assistant Secretary Leland's return flight during this same trip was on October 7 and was also on the Concorde. This was necessary in order to have him attend key negotiating sessions in Paris on the afternoon of October 7 and still have him return in time to attend meetings in Washington the same afternoon. Again, this arrangement was essential, and there was no reasonable alternative.

Senator, I thoroughly agree with the thrust of your question. It is important that government officials set an example. We make every practical effort to limit use of first class travel, as well as use of the Concorde.

While we have greatly reduced nonessential travel, we have not cut travel necessary for carrying out our basic missions and operations. In fact, the Treasury Department's overall travel request for fiscal year 1983 is $139 million, an increase of $24 million above the 1982 level. This overall increase primarily reflects our strengthening of enforcement activities in the Internal Revenue Service and increased costs associated with the protective functions of the Secret Service.

The more restrictive access to first class travel implemented by the World Bank in 1978 remains in effect and unchanged. A staff member can travel first class on World Bank business for three reasons only: (a) reasons of health, (b) where speed is essential and only first class is available, or (c) if the staff member has been involved in recent, frequent and arduous work-related travel.

## FSO REPLENISHMENT AND CARIBBEAN BASIN INITIATIVE

Senator Leahy: Mr. Secretary, The Administration's Caribbean Basin Initiative would provide $350 million in Economic Support Fund assistance to countries in the Caribbean and Central America. The Administration has indicated, however, that it plans to reduce U.S. contributions by one half or more to the next replenishment of the Inter-American Development Bank's Fund for Special Operations. In view of the fact that 63 percent of FSO funding goes to those countries included in the CBI, isn't this "robbing Peter to pay Paul?" Because U.S. contributions to the FSO generate contributions from other countries, wouldn't continued strong U.S. support of the FSO advance the objectives of the CBI?

More specifically, I believe that $700-$800 million in IDB funds are going to countries in the Caribbean region for activities which the Administration has called "complementary" to U.S. bilateral efforts under the CBI. Why are plans underway to phase out paid-in capital to the IDB, if it and the FSO are advancing objectives compatible with and supportive of those of the U.S. in the region?

Secretary Regan: Although we are proposing significant reductions in the level of the next replenishment of the IDB's Fund for Special Operations, we are proposing an increase in the capital of the IDB sufficient to fund 12% - 15% growth in the lending program to all but the wealthiest IDB borrowers. Because we have proposed a cap on the amount of resources to be lent to the Group A countries (Argentina, Mexico, and Brazil), Caribbean Basin countries would actually receive a greater proportion (34%) of the total lending program than previously (20%).

The purposes of the CBI and the FSO are also different. The CBI is designed to provide short term, quick disbursing balance of payments assistance, whereas the FSO provides long term project financing which can be disbursed over a six to eight year period. The CBI is designed to provide a type of assistance which is not within the current expertise of the IDB, and in which we do not want the IDB to become involved.

We have proposed a reduction in the level of paid-in capital not in order to keep the replenishment small, but rather because the healthy financial condition of the IDB warrants such a reduction. Regardless of the size of the replenishment, we believe the percentage of paid-in capital to that replenishment can and should be reduced.

## CENTRAL AMERICA CONSULTATIVE GROUP

Senator Leahy: Mr. Secretary, it has been reported that the governments of Central American asked the IDB last January to help them develop proposals to resolve their short, medium, and long-term economic problems and to coordinate the inputs of outside aid donors, both bilateral and multilateral. One of the purposes of the CBI is to help solve the short-term balance of payments problems of those and other countries in the Caribbean region. Since this is the case, are efforts being made to coordinate the CBI with other bilateral and multilateral donors under the auspices of the IDB? To what extent does the CBI take into account what other bilateral donors or potential donors -- Mexico, Venezuela, Canada, or European countries -- either are doing or might do to help the region?

Secretary Regan: The IDB will chair a Consultative Group for the countries of Central America. The Consultative Group will provide an opportunity for the donors to exchange views on the overall economic framework in these countries, as well as the operations of their individual programs.

The borrowing countries of Central America will have an opportunity to explain in detail their needs and plans to relatively senior officials of donor governments during Consultative Group meetings.

Apart from its direct lending program, The direct role of the IDB in aiding the governments of Central America will be to assist these countries in bringing forward effective programs to cope with their urgent problems and to accelerate their economic and social development. To this end, the IDB is providing technical assistance and consultants to the countries concerned and is coordinating the efforts of other donors, including the United States.

For our part, in analyzing the economic situation in the Caribbean Basin area and in projecting the financial needs of the area, including potential U.S. bilateral assistance, the United States has taken into account all past, projected, and potential bilateral and multilateral flows to the region. We have had extensive bilateral and multilateral discussions with other donors on their assistance plans.

## RELATIONSHIP BETWEEN BILATERAL AND MULTILATERAL AID

Senator Leahy: Mr. Secretary, while Treasury's recent assessment of the multilateral development banks concludes that those institutions on the whole served U.S. interests well, it nonetheless proposes cuts in future U.S. contributions particularly to the soft-loan windows. This would seem to suggest that the results of the assessment may be less important than the policy position stated by the Administration early on: namely, that greater emphasis should be given to bilateral aid. Is this the case? Can we expect to see a gradual and continuing shift of U.S. aid resources from multilateral channels to bilateral? Is there any concern that U.S. influence in these institutions may be weakened if U.S. contributions are cut?

Secretary Regan: You are quite right, the assessment does conclude that on the whole the MDBs have served U.S. interests well. However, the study also concluded that U.S. bilateral and multilateral aid have different comparative advantages, depending upon the particular objective sought, and complement rather than substitute for each other.

Bilateral assistance mechanisms (particularly PL 480 and ESF programs) can provide quick support for U.S. short-term political interests and priority countries, and are particularly effective in providing U.S. experts to advise on key development constraints in recipient countries.

Multilateral assistance primarily serves long-term U.S. interests and promotes a stable international economic environment, in addition to being cost effective.

Thus, rather than a gradual and continuing shift of U.S. aid resources from multilateral to bilateral channels, it is more a matter of occasionally modifying the relative balance between the two instruments to reflect the particular needs of U.S. foreign policy in advancing our economic and political interests.

Regarding U.S. influence in the MDBs, our ability to continue playing a major role in these institutions should not be severely hindered by the overall reduction in MDB appropriations which are envisioned. In the hard windows, we will seek to maintain our share of future capital increases. (We have the largest share of any country in the IDB and World Bank, and, with Japan, in the ADB). We also expect to remain the largest overall donor of soft window contributions. Thus, in spite of reduced financial participation in absolute terms, the United State will remain nearly in the same relative position.

## IDA VI REPLENISHMENT

Senator Leahy: Mr. Secretary, the U.S. contribution to IDA VI has already been stretched from three to four years, and even then can be completed in FY 84 only if Congress approved appropriations of $945 million for FY 83 and $1.1 billion in FY 84. Given the climate of budget stringency, and Congressional reluctance in some quarters in recent years to approve IDA funding at requested levels, what steps do you plan to take to try to ensure that the full request will be approved this year and the replenishment completed next year?

Secretary Regan: The Administration has asked Congress for $945 million in FY 1983 for IDA VI. This is the maximum allowed under existing legislation. We also intend to request $1,095 million in FY 1984 to complete our IDA VI contribution.

We believe the U.S. contribution to IDA VI is important. Our allies also consider it important, as do the world's poorest countries which would be most directly effected by our inability to complete this contribution in the envisioned timeframe.

I would like to assure you that this Administration will make every effort to secure Congressional approval of the amounts we have requested.

## CONCLUSION

Senator KASTEN. I appreciate your testimony here this morning. Once more, I thank you for the help and cooperation that you have provided to us as we struggle along with these programs.

The record for today's hearing will remain open for 2 weeks, during which time members may submit questions to you in writing. We very much appreciate your testimony this morning.

Secretary REGAN. Thank you, Mr. Chairman. I appreciate the chance to appear before the committee. I want to thank you personally also for accommodating my schedule in rescheduling these hearings several times. I have been very embarrassed by it. I am glad that we finally were able to get together on these matters.

I will be more than happy to answer any questions you or Senator Inouye or anyone else might have for the record.

Senator KASTEN. Thank you.

## SUBCOMMITTEE RECESS

The subcommittee stands in recess until Thursday, May 6th.

[Whereupon, at 11:20 a.m., Tuesday, May 4, the subcommittee was recessed, to reconvene at the call of the Chair.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

TUESDAY, MAY 11, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 2 p.m., in room 1223, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senator Kasten.

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### LATIN AMERICA AND THE CARIBBEAN

### STATEMENT OF OTTO J. REICH, ASSISTANT ADMINISTRATOR FOR LATIN AMERICA AND THE CARIBBEAN

#### INTRODUCTION OF WITNESSES

Senator KASTEN. The subcommittee will come to order.

This afternoon we will continue our budgetary hearings on the request by the Agency for International Development for three of the bureaus for fiscal year 1983—Latin America, Asia, and Africa—as well as receive testimony on the Sahel development program which comes under the Africa Bureau.

Our first witness will be Mr. Otto J. Reich, Assistant Administrator for Latin America and the Caribbean, Agency for International Development.

Mr. Reich, your entire statement will be made a part of the record. If you will summarize it for us, then we will ask you questions. It is a pleasure working with you.

Mr. REICH. Thank you, Mr. Chairman.

We are all aware of the importance of Latin America and the Caribbean to the United States. It is a region which has become increasingly important to our political and economic security in the last few years. The Agency's fiscal year 1983 budget request for this region reflects the increased attention that the administration is giving to the area.

The Agency remains committed to its traditional roles in the areas of small farm agriculture, health, population, education, and human resource development. At the same time, we remain sensitive to the need to counter the persistent and deep-rooted economic problems which have often resulted in political turmoil. Therefore, our mix of programs includes quick disbursing mechanisms that accelerate production and create jobs in the private sector, as well as activities that address longer-term concerns.

We realize that the resources available for our task are not sufficient; therefore, we have assumed the additional role of catalyst and risk-taker, attracting complementary public and private resources. Our efforts will continue to be directed to those countries which demonstrate a willingness to implement appropriate policies under which sound development programs can be carried out.

### PREPARED STATEMENT

Our national interest can best be served by working toward a goal of sustained broadly based growth within a framework of economic and political freedom.

[The statement follows:]

# PREPARED STATEMENT OF OTTO J. REICH

## ASSISTANT ADMINISTRATOR, LATIN AMERICA AND THE CARIBBEAN

## AGENCY FOR INTERNATIONAL DEVELOPMENT

Mr. Chairman, and Members of the Senate Appropriations Subcommittee on Foreign Operations, I am pleased to have this opportunity to present the fiscal year 1983 program of the Latin America and Caribbean Bureau of the Agency for International Development.

## U.S. Interests in Latin America and the Caribbean

The countries of Latin America and the Caribbean are of fundamental importance to our national security. Recent developments in the region which could threaten that security call for stronger efforts on our part to assist in insuring economic and political stability within the countries of the region.

Latin America and the Caribbean accounted for $39 billion of U.S. exports in 1980, making it second to Western Europe as a market for our products. The region also accounts for 73 percent of all U.S. foreign direct and financial investment in the developing world. Ten million acres of U.S. cropland produce exports to our neighbors to the south, while we, in turn, depend on them as significant sources of several important raw materials and other commodities.

The flow of this commerce and finance is essential to our own economy's ability to increase export earnings and create new jobs for U.S. workers. Exports account for one out of every nine manufacturing jobs in the United States, and the importance of foreign sales to our income and employment is likely to be even greater in the future. Our trading partners to the south, however, are faced with growing economic problems. Worldwide economic stagnation, high petroleum import bills for most, lower prices for major export commodities, a decline in tourism and high debt-service obligations have put severe strains on the balance-of-payments positions of many of these partners and their ability to carry out programs designed to bring about economic growth and development. Some face serious stresses arising from population pressures, resource scarcities, and environmental degradation. Persistent, deep-rooted economic problems, in turn, have given rise to political strains and mounting terrorist activities.

Our national interest requires the unimpeded use of the sea lanes adjacent to North American and the Panama Canal. Half of U.S. trade, including oil, passes through the Panama Canal or the Gulf of Mexico. As our neighbors and friends, they play a major role in our efforts to gain support for U.S. policies in hemispheric and international fora. Twenty-five of the 27 member countries in the region voted for the United Nations resolution condemning Soviet forces in Afghanistan. Increasingly, these countries are important intermediaries between the industrial countries of the north and the developing countries of the south. Mexico co-hosted the summit in Cancun in November 1981, and a Peruvian was elected Secretary General of the United Nations in December 1981.

Geographic proximity to Latin America and the Caribbean affects us in other ways. We are challenged, for example, by the increased flow of illegal immigrants and narcotics across our borders. To meet these problems we need to cooperate justly and generously with the countries involved, not only to interdict these flows but also to assist in finding remedies that address their underlying causes such as poverty and unmet personal aspirations.

Economic problems and interrelated social and political tensions have been growing in the region, particulary in the countries of the Caribbean Basin, since at least the mid-1970s and are of profound concern to the United States. The weakness of the international economy is making it difficult to implement the recovery programs sorely needed. In many cases, a legacy of unbalanced development and misguided economic policies has made domestic political conditions more volatile. The tensions so created contributed to the violence in El Salvador and threaten to do so also in neighboring countries. President Reagan's initiative in the Caribbean Basin has grown out of our concern for the political and economic deterioration of the area.

El Salvador is beleaguered by the efforts of guerrilla subversives to destroy the economy. No reasonable political solution can be attained on the economic ruins of the country. There is no political victory if the country is destroyed.

In Costa Rica, our immediate interest is to assist the country to recover from its most serious economic crisis since the 1930s. Costa Rica has traditionally been an example of democracy at work, demonstrating over most of the last two decades that an open society and free market economy can achieve high rates of growth while spreading the benefits of growth widely. Costa Rica's continued well-being is vital as a stabilizing influence in the region and is critical to our long-term interests.

In Panama, progress continues in efforts to foster a democratic political system and an economic and social environment conducive to improvement in the economy and in the successful operation of the Canal. Modest gains have been experienced in all sectors of the economy except agriculture.

In the Caribbean, it is essential that we bolster the economies of the area with self-sustaining productive activity and more job opportunities in order to avert greater frustration and a turn to radical solutions antithetical to traditional values.

Jamaica, after the crucial elections of October 1980, has designed an ambitious economic recovery program, begun the structural adjustment process, and assembled substantial support for its efforts from the international donor community and the private sector. Progress toward economic recovery has been hurt by a softening of the international market for bauxite and by carryover efforts of the years of economic decline.

Jamaica did register, however, its first year of positive growth in 1981 after seven consecutive years of steady economic decline.

The Eastern Caribbean Islands of St. Kitts-Nevis, Antigua, Montserrat, Dominica, St. Lucia and St. Vincent differ considerably in their stages of development, but through the provision of common government services and other means these islands seek to work together to minimize the inherent difficulties that their small island economies face. Because investment has been stagnant, unemployment approaches 50 percent among young adults in some islands. Private sector production is hampered by small domestic markets, expensive and irregular cargo transport, the emigration of skilled workers, and a paucity of medium-to-long-term financing for new productive enterprises. The Barbadian economy has been a strong performer, together with that of Trinidad and Tobago. Grenada remains troublesome due to its political orientation, a situation that could repeat itself in other countries unless their economies recover and a sense of frustration is overcome.

The island of Hispaniola, shared by Haiti and the Dominican Republic, contains most of the population of the Caribbean outside of Cuba. Haiti remains by far the poorest and least developed country of the Western Hemisphere. Years of isolation and neglect have left its social, economic, educational, and legal institutions moribund or in ruins. Haiti is heavily dependent on U.S. trade, but an increasing number of U.S. businesses are beginning to invest there. A major effort is needed to alleviate poverty in Haiti, but it will be difficult to set in motion and will not bear fruit quickly. Recently, the Government of Haiti announced policy and personnel changes which appear to improve its management of the economy.

The Dominican Republic has been severely affected by a plunge in world prices for all of its major exports--sugar coffee, cacao, ferro-nickel and bauxite. The democratically elected government is attempting to deal with the country's problems by tightening imports, credit and public sector spending. In the meantime, preparations are continuing for the presidential elections scheduled in May.

Guyana reported a slight rise in 1980 in its per capita gross domestic product, which had been on the decline for three consecutive years. However, severe economic problems persist due to low productivity and falling prices of its export products, such as bauxite, sugar and rice.

In Nicaragua, where revolutionary change has already occurred, our interests lie in support of a pluralistic society the achievement of which is a stated aim of the country's government but which appears increasingly unlikely as that situation unfolds.

South America, on the whole, is more developed than Central America and the Caribbean. Except for three countries--Bolivia, Ecuador and Peru--A.I.D. programs have been terminated or are in the final phases of termination. Bolivia, the poorest country of South America, has been plagued by political and economic instability. The most recent government, which assumed power on September 4, 1981, has given some indication of its recognition of the need for changes but has yet to implement fully the political and socioeconomic reforms which are sorely called for. A.I.D. is monitoring very closely Bolivia's efforts to improve human rights and narcotics problems.

Ecuador, despite being a modest exporter of petroleum, remains one of the least developed countries in South America. Declining real exports and growing resource gaps are limiting the country's ability to meet the basic human needs of large segments of its population. In Peru, the government elected in July 1980 has taken bold initiatives to stabilize the economy and to promote long-term, broadly based growth. The focus is on the creation of jobs and increasing real incomes of the poor. These are difficult tasks, especially for a government which faces rising expectations generated by the return to democracy.

## The Dimensions and Significance of Lack of Development

Mr. Chairman, the worsening situations faced by many of the countries of Latin America and the Caribbean, particularly in the Caribbean Basin, call for increased efforts on our part to help restore economic and political stability and to promote equitable economic development in the region.

Poverty still affects one-third of the region's population and an average of 40 to 50 percent of the people in A.I.D.-assisted countries. In rural areas, the figures are even higher. Open unemployment rates have risen to 20 or 30 percent of the economically active population in much of the Caribbean and Central

America, and many of those who do have jobs are underemployed.

Prospects for the rapid alleviation of poverty and unemployment are limited. Likewise, there are no quick fixes to the problems of resource scarcities and environmental degradation. It will also take time to correct the inefficiencies engendered by misguided economic policies. As the region's population expands by 60 to 70 percent over the next two decades, the United States must improve its ability to identify emerging problems and assess alternative responses. Most importantly, it must be willing to support these responses with definite courses of action.

## A.I.D. Strategy

A.I.D.'s strategy in the region is to collaborate with those forces seeking the alleviation of poverty, the achievement of self-sustaining growth, the enhancement and respect for individual civil and economic rights, an improvement in the socioeconomic status of women, and the integration of the countries of Latin America and the Caribbean into an open and equitable international economic system. Central to this strategy will be a stronger effort to encourage and foster private enterprise as a major component of the development process. Our help to the private sector will consist primarily of encouraging the allocation of adequate resources toward private-sector credit and foreign exchange needs, particularly the imports of raw materials and intermediate goods, thus facilitating domestic production and employment without a further deterioration in the balance of payments. We also will work closely with institutions that are needed to support the expanded efforts of the private sector.

Not only does this strategy spring from our traditional humanitarian point of view but it also is the most effective way of furthering U.S. interests. We will continue to work closely with other instruments of U.S. international economic policy and harmonize our approaches to the acceleration of economic growth and developmemt.

Our efforts, however, must be predicated on the wholehearted cooperation of the governments and citizens of the recipient countries, especially those strongly committed to equitable development and sound economic policies. This collaborative approach will also be used in securing the continued assistance of other bilateral and multilateral donors, since the needed changes go far beyond the capability and responsibility of this or any other single nation. We will discuss, for example, with other donors, including the International Monetary Fund, the World Bank, and the Inter-American Development Bank, policy measures to ensure that external assistance is utilized effectively so as to have the greatest possible impact on increased production and employment generation.

A major focus of the A.I.D. effort is on the nations of the Caribbean Basin. This new initiative combines trade, investment, and aid measures designed to assist these countries in coping with an unfavorable international economic environment and in implementing more effective domestic economic policies that stimulate private investment in productive activities. Our efforts in the Caribbean Basin are only part of a larger, coordinated international response to ease and ultimately to reverse the economic crises resulting from sizeable balance-of-payments deficits, high unemployment, lagging agriculture sectors and recurrent natural disasters. A.I.D. is a participant in the consultative mechanism provided by the Caribbean Group for Cooperation in Economic Development, which includes 31 donor and recipient countries and 16 international institutions. The Caribbean Group has been encouraging sound economic policies while providing recipient countries the resources they need to finance priority development projects. In addition to the Caribbean Group, a multilateral arrangement for Central American countries was formed in September 1981. These two groups will provide fora where country policies can be discussed, studied, and coordinated.

In addition to Development Assistance funds, full use will be made of Economic Support Funds, P.L. 480 assistance and Housing Guaranties. All of these resources, and the local currencies they generate, will be programmed to achieve maximum economic impact by expanding credit to the private sector, generating employment and financing counterpart contributions to external loans, thus accelerating their disbursement and further helping the balance of payments and the countries' development efforts.

## FY 1983 Program

The proposed program for FY 1983 totals $600.6 million, which is composed of $326 million from the Economic Support Fund (ESF) and $274.6 million of functional Development Assistance. Of the combined total, $305.4 million would be provided as loans and $295.2 million as grants. Other proposed U.S. assistance to Latin America and the Caribbean includes $185.2 million in P.L. 480 assistance and $118 million in Housing Guaranties.

Thirteen bilateral programs and three regional programs will be the vehicles for the implementation of the program. Of the Development Assistance and ESF resources programmed, some $297.0 million, or 49%, will be provided to Central America; $196.6 million, or 33%, to the Caribbean; $40.0 million, or 7%, to South America; and $67.0 million, or 11%, for the LAC Regional program, which may be used for emergency ESF assistance when the need arises, and which supports such programs as those of the American Institute for Free Labor Development and the Partners of the Americas. The proposed Development Asssistance program is divided among A.I.D.'s functional sectors as follows:

| | |
|---|---|
| Agriculture, Rural Development, Nutrition | $127 million |
| Population Planning | $ 13 million |
| Health | $ 23 million |
| Education and Human Resources Development | $ 40 million |
| Selected Development Activities | $ 71 million |

The details of our Development Assistance and ESF activities for FY 1983 are provided in the Congressional Presentation document which we submitted on March 8.

Let me just briefly summarize what we will be doing in each of our functional sectors and with the Economic Support Funds:

Agriculture, Rural Development and Nutrition: Emphasis in this key sector continues to be on agricultural research, extension, and supporting activities that will result in greater food production, higher incomes, and increased employment for small farmers and other poor people in rural areas. In Peru, a new watershed management project will introduce irrigation systems, soil conservation, forestation and crop improvement programs in the sierra and high jungle areas. This is particularly important since only three percent of Peru's land base is considered suitable for intensive agriculture. Other new projects include agricultural education in Jamaica and agricultural planning in Panama. Ongoing projects in several other countries will continue to stress conservation of natural resources, forestry, fish ponds and promotion of agroindustrial activities.

Population Planning: These funds provide support for voluntary family planning services and contraceptives for the rural poor through paramedical workers and the private sector, as well as other activities designed to reduce the rapid population growth rate in the region.

Much of this program is carried out by local private groups.

Health: Funding in the health sector provides for continuation of existing programs, especially low-cost delivery systems, as well as a new project in Peru to improve rural water systems and sanitation.

Education and Human Resource Development: Activities financed under this account will continue to focus primarily on relieving critical shortages of managers, administrators, technicians, and subprofessionals in both the public and private sectors. A new project in this area will be initiated in Jamaica. At the same time, we will continue our support for rural primary education and for non-formal vocational and adult education.

Special Development Activities: This sector will continue funding for a variety of activities, such as new initiatives in the private sector, alternative energy programs, small community-initiated projects and numerous projects undertaken through private and voluntary organizations. In addition, we will be assisting the private sector by transferring modern technology and management practices (Ecuador), furnishing loans and technical assistance to small businesses that normally cannot borrow from commercial financial institutions (Haiti and Peru), and supporting other programs. An innovative program in the Caribbean region will establish an interisland shipping and marketing system with private-sector participation.

Economic Support Fund: These funds will be utilized in support of stabilization and recovery programs in the Caribbean Basin. Balance-of-payments support will be provided to Costa Rica, El Salvador, Honduras, Jamaica, and the Eastern Caribbean. Other assistance will be targeted largely in support of private-sector activities in industry and agriculture. The Private Sector Promotion project in Honduras will revitalize the private sector's role in production and employment, while a small grant to Jamaica will provide for technical consultancies and training.

## Concluding Remarks

The countries included in the Latin American and Caribbean region face growing economic problems, sometimes combined with political instability. These problems are often exacerbated by rapid population growth, high unemployment, rising balance-of-payments deficits, and restrictive national policies which aggravate rather than ameliorate the conditions affecting the individual countries.

The Agency for International Development remains committed to its traditional roles in the areas of small-farm agriculture, health, population, education and human resource development. At the same time, we remain sensitive to the need to counter persistent and deep-rooted economic problems which have often resulted in varying degrees of political turmoil. Thus our mix of projects must include quick-disbursing mechanisms that accelerate production and create jobs in the private sector, as well as activities that address longer-term concerns. We realized long ago that the resources available to our task are not sufficient. Therefore, we have assumed the additional role of catalyst and risk taker, attracting complementary public and private resources. Our efforts will continue to be directed to those countries which have demonstrated a willingness to implement appropriate policies upon which sound development programs can be carried out. Our national interests can best be served by working toward the goal of sustained, broadly based growth within a framework of economic and political freedom.

### HOUSE ACTION ON CBI

Senator KASTEN. I appreciate your summary. As you know, your entire statement will be made a part of the record.

You highlight the importance the administration places on this area in general, and specifically cite the major focus on the nations of the Caribbean. We have been ready to mark up our portion of the Caribbean Basin Initiative since we had a hearing on the subject on March 17 with Mr. Enders. I think you were there at that time. That was about 2 months ago.

Do you have any idea where we are in terms of the House proceeding on this legislation; are you aware of their action or inaction? We are prepared to mark this up. When can we receive it in our subcommittee?

Mr. REICH. There is a markup by the House Foreign Affairs Committee this afternoon at 3:30.

Senator KASTEN. So we might be looking forward to having full House action?

Mr. REICH. That is correct. They have been delayed by the markup on the fiscal year 1983 legislation.

### PVO SHARE OF CBI REQUEST

Senator KASTEN. One of the reports we have received with reference to the Caribbean Basin Initiative concerns efforts by the private voluntary organizations to get a certain amount of the CBI request earmarked for their own use. We have heard everything from 25 percent of the $350 million to $15 million.

First of all, what is the dollar amount likely to be, and what is your view of these efforts by the private voluntary organizations to get a certain amount of money earmarked?

Mr. REICH. We are aware of those efforts. We have also heard similar figures or proportions. What is very important to remember about the President's proposed CBI legislation is that the supplemental request for fiscal year 1982 constitutes an emergency infusion of fast disbursing economic support funds to provide the much-needed balance-of-payments support that these countries lack. They lack the hard currency that the factories and the farms need to import raw materials, intermediate goods and, in fact, all the inputs to production, the lack of which is causing the closing down of factories and shutting down of plants and farms throughout the Caribbean Basin. Therefore, the allocation of even a small part of the $350 million supplemental request to other uses would not be helpful, from our standpoint.

We have additional resources, development assistance funds, that are allocated to private and voluntary organizations for so-called people-to-people programs. They are useful; there is a role for them. In developing the CBI supplemental request, we conducted a thorough analysis to determine exactly what kinds of U.S. assistance and how much would be necessary for which country.

The proposal that the President sent to the Congress on March 17 is the proposal that I hope the Congress will approve.

Senator KASTEN. You are hopeful that a portion of this money will not be earmarked or allocated to the PVO's at this time?

Mr. REICH. Not in the Caribbean Basin Initiative supplemental request. We have other funds for that purpose. We have the regular fiscal year 1982 request which includes $20,600,000 for PVO's, and the fiscal year 1983 request which includes $16,700,000 for PVO's and also is part of the CBI initiative.

## AID PROGRAM IN EL SALVADOR

Senator KASTEN. The country which will garner the most attention in the region is El Salvador. The fiscal year 1983 budget is substantially above the current year. This subcommittee has asked numerous questions of a number of previous witnesses on U.S. interests and objectives in El Salvador. I think we need to know how you envision the AID program itself.

First of all, can you broadly characterize the program as it affects El Salvador? I think it is fair to say that of primary importance to us will be the issue of control. I do not know how many people we have there, how well the programs are administered, what kind of control we have.

Also, I would be interested in getting a sense of what kind of input the Salvadoran Government will have in this type of program. To what degree are they running their programs or how is their input provided?

Can you broadly characterize the program, talk about control, talk about your AID people there, and talk about the relationship with the government?

Mr. REICH. The AID program in El Salvador, as you correctly stated, certainly has the highest profile. The requested funding levels are the largest amounts that we will be requesting in the foreseeable future.

We have four basic targets in El Salvador: the reactivation of the economy, employment generation, support for the reforms that the government of El Salvador has been carrying out, and other special developmental activities.

As you know, El Salvador has been the target of an insurgency supported by countries beyond the immediate borders of El Salvador.

In addition, of course, El Salvador is a less developed country, one of the countries that probably would have required U.S. assistance even if it had not been suffering this attack from within and without its borders. It has the highest population density in Latin America, and one of the highest in the world.

We are trying to keep El Salvador's economy which has now, in fact, become the principal target of the insurgency, afloat. In our opinion, because the guerrillas have failed to elicit the support of the people, as indicated by the consistent failures of their so-called final offensives, and other failures as exhibited by the election, where over 80 percent of the eligible voters of El Salvador braved threats and in many cases actual death to support the democratic process, the guerrillas have turned to the destruction of the economic base of the country in order to create the kind of conditions that would perhaps lead them to victory.

We are trying to assist the government of El Salvador, first and foremost, in maintaining the economic infrastructure as solidly as possible. That is where a lot of our money in fiscal year 1983 will be going.

Since the destruction of the economic base is causing severe unemployment, we are targeting an additional amount of assistance for the creation of new employment, small producer development—for example, community programs, housing investment guarantees, et cetera.

## CONTROL OF AID FUNDS

The subject of control has come up, as you know, a number of times before. The AID mission in El Salvador has taken measures, in cooperation with the government of El Salvador to prevent what is called capital flight; that is, to prevent AID money from joining that which has been leaving the country.

Obviously, the best way to prevent capital flight is to succeed in stabilizing the country economically and politically so that the people who have the money, instead of fleeing and sending their money overseas, will at least refrain from sending their money overseas. We would like to see the return of the money that has fled from El Salvador.

We have established the following controls particularly for AID money, in order to prevent any U.S. money from flowing out of the country, which, of course, is not the easiest thing to do. First, there is a recently enacted Salvadoran law for the control of international exchange transactions which declares blackmarketing, overinvoicing, and other methods of taking hard currency out of the country, other than through the central bank, to be illegal.

Second, the central bank maintains strict review of all applications for purchase of exchange.

Third, all importers must certify they are using foreign exchange obtained from the central bank to purchase imports at normal market prices.

And, finally, the central bank is establishing price checking units to compare invoices of goods against prices normally charged for such items.

For import transactions which are attributable to the U.S. Government supplied economic support funds, AID has additional control requirements. All such transactions must fit eligibility criteria, which include raw materials and intermediate goods vital to the economy, and imports must be from the United States.

The El Salvador Government provides us with regular reports on the status of all import transactions designated for attribution to the program and certifies when transactions are completed.

We have a very capable, in our opinion, and adequately sized mission in El Salvador. The staff works very hard. Under normal circumstances, we probably would have more people there, but we believe—and this is substantiated by a number of audits that we have had—and I will be happy to give you the list of audits on El Salvador by the Inspector General—that we are doing everything possible. We are satisfied that our money is being watched over very carefully.

We are working closely as well with the government of El Salvador.
[The information follows:]

### IG AUDITS ON EL SALVADOR

The following is a list of audits by the Office of the Inspector General concerning AID programs in El Salvador during this fiscal year: Audit 82-2, transportation restoration project, dated October 30, 1981; audit 82-4, agrarian reform credit, dated December 17, 1981; and audit 82-5, private sector support program, dated January 20, 1982.

### INPUT FROM SALVADORAN GOVERNMENT

Senator KASTEN. What kind of input do they have?

Mr. REICH. Do you mean the government of El Salvador?

Senator KASTEN. Yes.

Mr. REICH. There are consultations constantly between the AID mission and the Ministry of Planning, the Ministry of Economy, two land reform institutes, the Ministry of Agriculture, and all of the institutes and agencies of the Salvadoran Government with which we have relations and cooperative agreements.

There is a whole range of cooperative programs. The AID program in El Salvador is a significant one in relation to the country's economy, so the Salvadoran Government makes sure there is good communication.

### OTHER DONORS TO EL SALVADOR

Senator KASTEN. What other countries in the region, are contributing foreign assistance in any form to El Salvador; are any other countries contributing?

Mr. REICH. Both Mexico and Venezuela have contributed to El Salvador through their oil facilities. This is perhaps one item that has been overlooked in the political debate. Mexico, to the best of my knowledge, has not suspended the assistance which it has provided to El Salvador under the oil facilities. Most countries in Latin America are not aid donors for the most part, so it would not be typical for them to provide assistance to another.

Mexico and Venezuela, who are well on their way to being advanced development countries, have provided assistance.

Senator KASTEN. What about the World Bank or the Inter-American Development Bank, are there loans in their portfolios going to El Salvador?

Mr. REICH. Yes; the IDB, the World Bank, and the IMF have been working in El Salvador. Obviously, there have been problems in El Salvador which do not exist in other countries because of the security situation. Perhaps the loans have not moved as quickly as they might have under other circumstances.

These three major international financial institutions have been active in El Salvador.

### NICARAGUA

Senator KASTEN. Let me switch to Nicaragua for a second. There is no program for Nicaragua in fiscal year 1983; is that correct?

Mr. REICH. We have not allocated any money in our fiscal year 1983 budget request. The authorization committee did earmark $20 million of ESF assistance for fiscal year 1983, but not the Appropriations Committee.

Senator KASTEN. When I was visited by State and AID officials a couple of months ago, they indicated a reprograming for Nicaragua would be coming up. We have not received it. Is there going to be a reprograming request for Nicaragua, or has that been delayed indefinitely?

Mr. REICH. You may be referring to fiscal year 1982 funding. There was an authorization by the authorizing committees to obligate an amount up to $20 million of ESF. We are considering $5,100,000 of that $20 million for Nicaragua if the waiver, which is required, is signed. There are no plans to give any money to the government of Nicaragua, but we do plan to use $5,100,000 of economic support funds and $1,800,000 of development assistance already in the budget for the private sector.

Senator KASTEN. You are still planning on the waiver?

Mr. REICH. It is a waiver.

Senator KASTEN. We have a differing opinion of whether it is a waiver or not.

Mr. REICH. A waiver is required because of the Brooke-Alexander amendment. The government of Nicaragua has been in arrears for more than 1 year in repayment to the United States of loans. The waiver is required.

Senator KASTEN. Whether or not a reprograming is required is a judgment that we have to make.

Mr. REICH. We intend to consult with the Congress at every step when it comes to this very important subject.

Senator KASTEN. Have the Miskito Indians been able to move back into their native area along the east coast and the western corner of Nicaragua?

Mr. REICH. Not to our knowledge. I understand they are living in something like concentration camps in areas away from their traditional locations.

## NICARAGUA AND THE SOVIET UNION

Senator KASTEN. A week or so ago the Washington Post carried an article concerning a top mission by the Nicaraguan government to Moscow. How do you view that mission? Do you know yet anything about the results? My understanding is that there was tentative agreement made for both economic and possibly military assistance.

Mr. REICH. All I know is what has been reported in the papers, which really has not been very definitive. I do not know what concrete assistance the Soviets are planning to send to Nicaragua.

Senator KASTEN. If that goes forward, under any circumstances it further solidifies the Nicaraguan ties essentially as a Cuban or Soviet proxy, or we can also say a Cuban or Soviet satellite. The relationship seems to be getting closer.

Do you have any more information as to direct ties with Moscow rather than the indirect ties we have seen before with Cuba?

Mr. REICH. We don't have any more information, but I think your assessment is probably correct. If there were any official agreement of a military assistance nature, the indications would be very clear that this is contrary to what would be in our best interests and contrary to what the Nicaraguans have been saying—which is that they would like to have good relations with the U.S.

### IG REPORTS

Senator KASTEN. As the Assistant Administrator for Latin America, do you make a point of trying to review all the reports issued by the AID Inspector General on programs under your jurisdiction, and specifically can I get your assurance that you will act on the Inspector General's semiannual report and on those recommendations issued on March 31 as soon as possible, so as to get these recommendations closed?

They testified before this committee and the committee is concerned that the recommendations of the Inspector General be implemented as quickly as possible.

Mr. REICH. Yes, sir, I make it a point to review the IG reports. I don't know specifically which ones you are referring to, but I assure you I will work with you to make sure that we do comply with them.

### SUBMITTED QUESTIONS

Senator KASTEN. Fine.

I would like to thank you for your testimony and response to questions. There may be additional questions by the committee. We hope you can get them back to us within an appropriate period of time.

[The following questions were not asked at the hearing but were submitted to the Agency for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### NICARAGUA

Senator Kasten: We have been informed by the State Department that they had agreed that a formal reprogramming would eventually be sent up to us on the $5 million Nicaragua private sector proposal. Your oral testimony was not clear in this regard.

Do you have a different understanding.

Mr. Reich: The Administration intends to furnish approximately $5.1 million in Economic Support Funds to private and voluntary organizations and cooperatives operating within Nicaragua. This assistance is permitted under section 123 (e) of the Foreign Assistance Act and has previously been justified to the Congress in the FY 1982 Congressional Presentation. Because of your expressed interest, we will advise both appropriations committees of our plans to utilize this section, and we will not obligate any of the funds until 15 days after we have so advised the committees.

### AMERICAN SCHOOLS AND HOSPITALS ABROAD

Senator Kasten: Part of this PVO proposal would make more money available for the American Schools and Hospitals Abroad program (Congress provided $13,400,000 more than was requested).

To your knowledge, does ASHA support this, and do they need still more money?

Mr. Reich: The American Schools and Hospitals Abroad (ASHA) program does not support an earmark of funds for American-sponsored institutions in the Caribbean Basin. For fiscal year 1983, seven applicants have requested $6.7 million in ASHA assistance for projects in the Caribbean Basin. These applicants should compete for funds appropriated specifically for the ASHA program under Section 214 of the Foreign Assistance Act.

### INTER-AMERICAN FOUNDATION

Senator Kasten: I also understand that the PVO proposal would make more money available to the Inter-American Foundation.

Do they support this increase?

Mr. Reich: The PVO proposal would make available an additional $3,000,000 for use by the Inter-American Foundation (IAF) to support indigenous Caribbean Basin organizations. This would represent a substantial increase over the $4,700,000 obligated by the IAF in the Caribbean Basin in FY 1981. It is our understanding that the IAF supports the President's budget which does not include this proposed increase.

### EL SALVADOR

Senator Kasten: What role will D'Aubuisson as leader of the constituent assembly have over the A.I.D. program vs. the president and executive branch of El Salvador?

Mr. Reich: Under the country's 1962 constitution, which is now once again in effect, the assembly ratified loans which the government proposed to sign, a fairly common procedure for developing countries in this hemisphere. We assume that, as leader of the assembly, Mr. D'Aubuisson will be involved in advice and consent on the A.I.D. program as provided for by the constitution. The assembly presumably will also ratify the government's budget and other major measures which affect the country's economy.

The great part of planning and implementation of A.I.D.'s program will be done with the executive branch and certain autonomous government agencies, such as the Central Bank. Our program is designed through collaboration with Salvadoran economists and technicians, and most implementation responsibilities rest with these same government representatives. We do not expect this process to change.

Senator Kasten: Is the Caribbean Development Bank or Facility contributing in any way to El Salvador?

Mr. Reich: No, El Salvador is not a member and receives no assistance from that source. The donors and developmental organizations which El Salvador presently deals with include the International Monetary Fund, the Inter-American Development Bank, the World Bank, the United Nations system, Canadian International Development Agency, and the Mexican/Venezuelan oil facility.

Senator Kasten: According to your justification material, one of the pressing needs in El Salvador is land reform.

Are you making use of the Land Tenure Center for work in this area?

Mr. Reich: During the early stages of the agrarian reform, the Land Tenure Center did send two staff members to El Salvador. However, the Center did not find that a continuing role in El Salvador was appropriate.

Most of the technical assistance which A.I.D. is providing to the reform program is supplied by Servicios Tecnicos del Caribe, a consulting firm located in Puerto Rico.

## JAMAICA

Senator Kasten: The success story in the Caribbean has been Jamaica. After over one dozen years that nation was nearly wrecked by the previous government, we now see signs of improvement.

Can you give us an update on the situation there, especially with respect to bauxite production, which does remain a problem.

Mr. Reich: Seven years of continuous economic deterioration in Jamaica ended in 1981. Real GDP growth in 1981 was 1.5%. This was the result of strong performance in construction, domestic agriculture and services. Tourism improved steadily during the year, and visitor arrivals were very strong at year's end. The inflation rate for 1981 measured by the consumer price index was close to 5%, the lowest rate of inflation Jamaica has experienced in a decade. (The last four years averaged over 25%.) The government sector decreased in absolute size. The balance of payments registered a small surplus--$9 million as compared with a $150 million deficit in the immediately preceding Jamaican fiscal year. Unemployment, however, still remains a problem. The year 1982 should be another positive one for the Jamaican economy with excellent performance from the tourism and construction sectors, modest increases in the real output of the manufacturing and agriculture sectors, and declines in the government and mining sectors.

Mining will be the only sector to show a significant decline in 1982. The industrial economies remain in recession, at least through the first half of the year, and world demand for aluminum remains low. Even with economic recovery in the major world economies, the Jamaican mining sector will not immediately benefit as recovery of aluminum sales historically lags behind overall economic recovery. The reduced production rates, which the Jamaican bauxite companies introduced after mid-year 1981, likely will be continued throughout 1982.

Senator Kasten: The subcommittee has received some interest by private concerns wanting to get involved in the private sector programs in Jamaica.

How is that particular program coming along vis-a-vis Jamaica?

Mr. Reich: As you may know, the U.S. Business Committee on Jamaica was organized in 1981 under the chairmanship of David Rockefeller to promote and assist private investment in Jamaica and strengthen the Jamaican private sector. Subcommittees are functioning for travel and tourism, banking and finance, small/medium business, agriculture, and energy and mining.

A Jamaican counterpart organization, the Prime Minister's Committee on Investment and Employment, has been established under the chairmanship of Carlton Alexander, a leading Jamaican businesman. Business committees have also been organized in Great Britain, Venezuela, West Germany and Canada. The U.S. Business Committee has played an active role in facilitating a number of investments, including ones in textiles, electrical equipment, and cigar manufacturing, and its work at the subsector level is expected to result in further investments over the next several years.

Jamaica National Investment Promotion, Inc. was established in 1981 and reports directly to the office of Prime Minister Seaga. Its mandate is to provide a centralized source of information and assistance to potential investors, both Jamaican and foreign. During the period January 1, 1981 to March 30, 1982, 50 new investment projects worth $43 million had been brought into production. Thirty of these projects were in manufacturing, fourteen were in agriculture, three in tourism and three miscellaneous.

With respect to A.I.D. support to the Jamaican private sector, in FY 1982, $62,5 million will be provided in balance-of-payments assistance, which will help in the financing of essential private sector imports of raw materials and spare parts. The proposed Caribbean Basin Initiative supplemental would allocate an additional $50 million in balance-of-payments assistance. In addition, under the FY 1982 development assistance program, a private agribusiness development project ($2.3 million) will strengthen existing agribusiness firms and stimulate the development of new, privately owned firms. A small business development loan ($2.1 million) will be carried out as an integrated approach to development of the small business sector of Jamaica. A basic skills training project ($1 million) will be initiated to provide marketable skills for unemployed youth. The agricultural marketing project ($4 million) will address serious inadequacies in the marketing system which create disincentives to domestic and export crop production.

In FY 1983, $77 million is proposed in balance-of-payments assistance. A major new initiative to support economic recovery would provide $3.8 million in investment funds for equity and debt financing for medium-sized Jamaican enterprises. The financing would enable the enterprises to improve their productive facilities. Additional funding is proposed for the small business, agribusiness, and skills training projects begun in FY 1982.

A.I.D. Private Enterprise Bureau has also singled out Jamaica for special attention to strengthen its private sector institutions. Among the several individual activities in support of the private sector revitalization, this Bureau is presently considering three or four investments, including a venture capital firm to stimulate new business formation and expansion.

## HAITI

Senator Kasten: Haiti continues to be the poorest country in the region, and yet we continue to have a relatively small program there.

Do I assume correctly that the small program is due primarily to the difficult time the U.S. has dealing with the Haitian Government?

Mr. Reich: The A.I.D. program in Haiti is one of our most intensively managed, not only because of institutional weaknesses within institutions of the Haitian Government, but because of the complex and interrelated development problems which this resource-poor country faces.

The A.I.D. program to Haiti in FY 1981 totalled $34 million. In FY 1982, A.I.D. is planning $36.5 million. For FY 1983, $44.7 million is proposed. These are not insignificant assistance levels when compared to Haiti's population or when compared to A.I.D. programs in other countries that are at a similar level of development as Haiti. In addition, U.S. financial contributions to international development agencies, such as the World Bank, Inter-American Development Bank, and the numerous United Nations development agencies, must also be noted when totalling U.S. financial assistance that goes to Haiti. In all, U.S. assistance to Haiti is considerable.

Senator Kasten: Is there any reason to be more hopeful with respect to Haiti?

Mr. Reich: While the difficulties of working in Haiti are very real, there is reason to be optimistic that development can take place. Since August 1981 and again in September 1981, President Duvalier announced a number of far reaching and quite significant reforms in the fiscal management system that respond to earlier management recommendations made by the International Monetary Fund (IMF). In February 1982, in part to accelerate the implementation of the reforms the Government of Haiti named a new Minister of Finance, new directors of the National Bank, and other key officials in the fiscal area. Since then, substantive reforms and changes have been set in motion which are generating higher levels of revenues and reducing expenditures and which rationalize operations of the National Bank and of customs operations. At the same time, the Government of Haiti is attempting to stabilize its financial situation and reduce public borrowing per the recommendations of the IMF. At the development project level, the Government of Haiti, with the assistance of A.I.D., is improving the implementation of its projects through closer forward planning, establishing agreed upon targets, and taking necessary corrective actions where called for.

## COSTA RICA

Senator Kasten: Assistance to Costa Rica is up two and one half times over current levels.

What has happened in that country which requires such dramatic increases in assistance?

Mr. Reich: Prior to the recent turmoil in Central America it seemed that Costa Rica, due to its successful development efforts, would be phased out as a recipient of concessional assistance. The program was small and declining. However, in 1980, Costa Rica entered its worst economic crisis in 50 years. For the past three years the current account deficit has been averaging about $500 million, or 12 percent of GDP. At the same time, public sector deficits have been running 10 to 12 percent of GDP. This crisis results from increasing costs of imported oil, a high level public and private debt which has been increasingly difficult to refinance at high interests rates, a decline in export prices, a withdrawal of working capital by foreign commercial banks, political turmoil in the region, and overexpansion of consumption and public sector expenditures. These problems create an overwhelming need for major structural adjustments before the new government will be able to stabilize Costa Rica's economy and provide the basis for a new path to economic growth. Our increased A.I.D. program assists Costa Rica in this effort by providing balance-of-payments support coupled with working capital to maintain private sector activity and employment, as well as support for an export promotion program. Our goal is to ease Costa Rica's adjustment to a viable open market economy while preserving the country's traditional democracy.

## GUATEMALA

Senator Kasten: Can you bring us up to date on the current situation in Guatemala?

Mr. Reich: The new military junta took power in a coup on March 23. It has publicly committed itself to improve the human rights situation, and violence attributed to the security forces has been drastically reduced below that prevalent under the previous government. The most notorious element of the security force, Commando Seis, has been disbanded. Regrettably, the insurgents have continued their attacks on innocent people. However, an amnesty has been declared for the period June 1 - 30, 1982, but it is too soon to elaborate on its success. We want to encourage these efforts and are hopeful that continued progress in the area of human rights will lead to an improved relationship between Guatemala and the United States.

To date our assistance has been directed at helping the government to develop the institutional capacity to deliver social services and outreach programs, to increase productivity in the poorest, most densely populated highland areas of the country, and in encouraging the private sector toward greater involvement in the country's development efforts. As the new Government of Guatemala develops its policies, we will be reviewing this strategy and desired levels of assistance for FY 1983 and beyond. However, as we see opportunities to reinforce the positive forces of change in Guatemala, we should be open to developing new and expanded programs.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### DEVELOPMENT AND ECONOMIC POLICIES

Senator Inouye: Mr. Reich, with reference to current conditions in Latin America and the Caribbean, you have stated, "In many cases, a legacy of unbalanced development and misguided economic policies has made political conditions more volatile."

Would you elaborate on this statement, having particular reference to one country and explaining what you mean by the term "balanced development"?

Mr. Reich: "Balanced development" has both economic and non-economic implications. It does not mean that all sectors or regions should be growing at the same rate. Examples of what it does mean are that countries should (1) avoid concentrating too many resources in one sector at the expense of others, (2) pay attention to the distribution of benefits among the population, and (3) take action to reduce extreme regional or urban-rural disparities. Extreme inequalities in the distribution of land, income, and political power were major factors leading to the overthrow of the Government of El Salvador in 1979, and these problems must be dealt with if the present crisis in that country is to be overcome.

Senator Inouye: What specific examples of "misguided economic policies" can you cite?

Mr. Reich: A number of misguided policies are common to many Latin American countries. A classic example over the last few decades is that many countries have stimulated their industrial sectors -- often through high-cost, import-intensive policies of import substitution -- while neglecting their agricultural sectors.

Ironically, this has often led to slower industrial growth than otherwise would have occurred because agriculture was unable to provide sufficient foreign exchange to purchase imported inputs needed by industry. Sluggish agricultural growth has also required more outlays of scarce foreign exchange for imported food and agricultural products. Nationalization or the creation and expansion of public sector enterprises has often discouraged private investment, and the performance of public enterprises has been inhibited by lack of entrepreneurial incentives. Other policies have attempted genuinely to improve the distribution of income and wealth but often have had precisely the opposite effect because their impact has been incompletely understood. For example, low interest rates for agricultural loans have tended to benefit large farmers more than the intended beneficiaries, the small farmers. Subsidization of petroleum products and public utilities tends to benefit middle- and upper-income groups much more than the poor. Agricultural price controls act as disincentives to production.

Senator Inouye: Do A.I.D. programs promote balanced development?

Mr. Reich: A.I.D. programs promote balanced development in a number of ways. Programs in education, health, and family planning provide more people an opportunity to develop their skills and talents, improve their capacity to provide for themselves and their families, and lead richer and healthier lives. In supporting directly productive activities in agriculture and industry, our programs are designed to alleviate bottlenecks and eliminate distortions that inhibit production, while at the same time ensuring that the benefits of increased production are equitably shared among the population.

Senator Inouye: How does A.I.D. influence the choice of appropriate economic policies in, for example, Haiti?

Mr. Reich: Our projects and programs in Haiti and other countries have been tied to significant policy changes as appropriate to the sector or activity being assisted. While we cannot dictate policy changes to sovereign nations, we can and have made clear that the amount of assistance will be directly related to a country's willingness to help itself through appropriate policy measures. We believe that the establishment of a broad-based policy dialogue in A.I.D.-assisted countries is the most effective way to induce policy changes. This is necessarily a long-term strategy, but it is important that governments themselves come to recognize that policy changes are in their interests. Once this recognition occurs, commitment to policy changes follows naturally.

## PRIVATE SECTOR

Senator Inouye: It is frequently alleged that U.S. private businesses, because of the strong role they have played in Central America, have encouraged unbalanced growth.

What are your thoughts on this subject?

Mr. Reich: In some Latin American countries, a few very large multinational corporations undertook investments in products which eventually became major foreign exchange earners for those countries. As a result, these corporations often became an important economic and political force in countries where they operated. Also, they were frequently a major employer. Naturally when corporations dominate the economies in communities or countries where they operate, problems can arise. In the case of some of these corporations, problems have stemmed from low prices for the products which they sell, prices over which the firms themselves may have had no control.

I don't believe U.S. private businesses directly contributed to unbalanced growth. Rather, unbalanced growth may have occurred as a result of the lack of diversity in the economies of Central America. There are hundreds of U.S. firms with small- to medium-sized investments in Central America; many of these investments have been undertaken with local partners. The investments have led to more diversified economies and balanced growth.

Senator Inouye: How will A.I.D. ensure that private sector approaches contribute to balanced development?

Mr. Reich: The CBI will provide incentives aimed at diversifying and deepening the economies of the Basin countries. A.I.D. will focus on policy matters designed to establish favorable investment climates, and at the same time, we will work primarily with small and medium-sized enterprises owned by residents of the region. We will also seek to strengthen the non-profit associations of businessmen with the intention of utilizing these groups as vehicles through which to deliver training and technical advice and to introduce new technologies.

## HAITI

Senator Inouye: In November of 1977, former Senator Edward W. Brooke reported to the Committee the conclusions he formed as a result of a study mission to Haiti. Among his conclusions were the following:

"There are still recurring instances of government disregard for basic procedural safeguards for individuals guaranteed by the Haitian constitution. Too little attention has been given to the need to reduce opportunities and incentives for corruption. Press freedoms are still minimal. Failure to fiscalize a large percentage of governmental receipts makes it impossible to judge accurately the level of GOH commitment to the development needs of the country."

Do these findings accurately portray conditions in Haiti today?

Have there been any significant improvements in Haiti since Senator Brooke's visit?

Mr. Reich: There have been numerous improvements in Haiti since Senator Brooke's visit in 1977. Earlier in 1982, a major reorganization of fiscal controls was instituted by the Government of Haiti which has resulted in more stringent expenditure and revenue procedures. Also, certain government operations previously outside the fiscal control of the Haitian Government have been brought under the Ministry of Finance revenue controls. Press freedom, although expanded considerably in 1979, was subsequently reduced the following year. Basic procedural safeguards for individuals, although guaranteed by the Haitian constitution, are at times erratically respected. Since the beginning of 1982, however, there have been several positive developments in human rights. Prison reforms have been undertaken. In April of this year, President Duvalier pledged a new liberalization program and approved the establishment of an Institute for Democracy for Haiti. Since then, the Government of Haiti has announced its intentions to hold open and free elections for municipal councils in 1983. More recently, the Haitian Supreme Court ruled that previous convictions of certain political activists had been conducted improperly; retrials will be scheduled. While Haiti remains an authoritarian state, the government does not restrict the right to assemble peacefully or impede domestic movement of its citizens. The Department of State has certified to the Congress that there is no evidence of any mistreatment of illegal migrants returning to Haiti.

## CARIBBEAN GROUP FOR COOPERATION IN ECONOMIC DEVELOPMENT

Senator Inouye: I am interested in learning more about the Caribbean Group for Cooperation in Economic Development.

Which countries are donor members of this group? Which are recipients?

Mr. Reich: The Caribean Group comprises approximately 39 member countries and 26 international financial institutions. The donor members include the United States, the United Kingdom, Argentina, Austria, Brazil, Canada, Colombia, Finland, France, Germany, Japan, Mexico, Netherlands, Norway, Spain, Sweden, Trinidad and Tobago, and Venezuela. Recipient countries are designated as Antigua, Bahamas, Belize, Dominica, Dominican Republic, Grenada, Guyana, Haiti, Jamaica, St. Lucia, Suriname, the British dependencies of Montserrat, Turks and Caicos, and British Virgin Islands, the Cayman Islands, and the Netherlands Antilles. It is important to note also that donor countries in the region, such as Trinidad and Tobago, while not being a recipient of aid flows, may benefit from several of the Caribbean Group initiatives, particularly with regard to the private sector.

Senator Inouye: When was this group organized?

Mr. Reich: With strong U.S. support and encouragement, the Caribbean Group for Cooperation in Economic Development was officially formed in December 1977, with the World Bank as the Secretariat of the new organization. The first meeting of the Group was held in June 1978 and proved to be so successful that subsequent meetings of the full membership of the Caribbean Group have been held each year. In addition, special meetings are held by the donors, the recipients, and the steering committee throughout the year. The Group was established to help the Caribbean countries to meet their immediate financial needs and to improve their long-term development prospects. The group was expected to: (1) promote emergency balance-of-payments financing, (2) to promote project-related development assistance, (3) to coordinate external technical and financial assistance, and (4) to promote increased regional cooperation.

Senator Inouye: Do the donor member countries co-finance development projects?

Mr. Reich: In some instances, donor nations have collaborated on projects as a result of Caribbean Group efforts. An excellent example would be the recent formation of a consortium of donors to reconstruct and rehabilitate the road network on the small island of Dominica in the Eastern Caribbean. Following the massive destruction caused by Hurricane Allen, the third major hurricane to hit Dominica within a two-year period, the country's Prime Minister made a strong appeal at the annual Caribbean Group meeting to the donor community for assistance in rehabilitating the road network. Under World Bank auspices, several donors, including the Canadians, the British, the Caribbean Development Bank, with funds from West Germany, the European Development Fund, and the United States, have agreed to provide financing for repair of selected priority segments of the road system.

Senator Inouye: What mechanisms has the Group developed to ensure coordination of assistance?

Mr. Reich: The Group has established several techniques for coordination of economic assistance flows. Frequent meetings are held between donor nations and recipients to discuss proposed projects. The World Bank, in collaboration with the recipient country government, prepares an annual economic report on each of the Caribbean countries, including an investment program, and distributes copies to Caribbean Group members. The economic report identifies ongoing projects and their sources of funding and potential donors for the projects under the investment programs. For the Eastern Caribbean less developed countries, a World Bank-led field mission is being established in Antigua to better coordinate assistance efforts there.

## CONCLUDING REMARKS

Senator KASTEN. I would like to thank you. It has been a privilege and pleasure to work with you over the past year. I think we are making some real progress. I look forward to working with you over the next year.

Mr. REICH. Thank you. I would like to add that it has been a pleasure to work with you and Mr. Bond. We also look forward to continuing our cooperation with you.

Senator KASTEN. Thank you.

## BUREAU FOR ASIA

## STATEMENT OF EUGENE S. STAPLES, ACTING ASSISTANT ADMINISTRATOR

### INTRODUCTION OF WITNESS

Senator KASTEN. The next witness is Mr. Eugene S. Staples, Acting Assistant Administrator, Bureau for Asia, Agency for International Development.

Mr. Staples, welcome. We look forward to your statement. The entire text of your statement will be made a part of the record. We hope you can summarize briefly.

### SUMMARY OF STATEMENT

Mr. STAPLES. Thank you, Mr. Chairman.

The U.S. Government and the American people have a long and honorable history of involvement in the post-World War II economic, social, and humanitarian development of this very large and very different part of the world. I believe that we have a great deal to be proud of in the American contribution to development in Asia.

The request before you provides for a program which is roughly at the same level as fiscal year 1982, with the major exception of Pakistan, which is at a higher level in accordance with the multiyear development plan in regard to economic and security factors which have been discussed with the U.S. Congress in the past year.

Our statement notes that a considerable degree of economic progress has occurred, particularly in Southeast Asia, but that there remain severe problems of poverty in the subcontinent.

The programmatic emphasis reflects the major problems of agricultural and renewable natural resource development throughout the region. It addresses the large problem of continuing high rates of population growth, and reflects a concern for some relatively new issues, such as energy development in the region.

In our presentation we have tried to reflect the priorities of the administration in regard to private sector development, institution building, emphasis on science and technology, and a concern for the economic policies of the host countries with which we work.

That concludes my summary.

Senator KASTEN. Thank you.

[The statement follows:]

## PREPARED STATEMENT OF EUGENE S. STAPLES

Mr. Chairman and members of the subcommittee, I welcome the opportunity to appear before this subcommittee to discuss the administration's budget request for fiscal year 1983. The administration is requesting $407.6 million in development assistance funds, $335.7 million in Public Law 480 and $235 million in economic support funds for Asia. These levels compare with fiscal year 1982 levels of $398.7 million in development assistance funds, $346.2 million in Public Law 480 and $155 million in ecomomic support funds. This assistance will aid in the economic development of Burma, Bangladesh, India, Indonesia, Nepal, Pakistan, Philippines, Sri Lanka, Thailand, the island states of the South Pacific and the ASEAN community. The requested funding levels for the Asia region will provide resources to continue most country programs at approximately the same levels as fiscal year 1982 and to expand the high priortiy program in Pakistan from a level of $100 million (ESF) and $64 million in Public Law 480 in fiscal year 1982 to $175 million in economic support funds, $25 million in development assistance and $53.3 million in Public Law 480. These economic development assistance programs are essential elements of the President's integrated military and economic assistance program to promote U.S. security and economic interests abroad in fiscal year 1983.

The congressional presentation which we submitted in February contains detail on the proposed programs. I will briefly set forth the need for this assistance and then discuss our efforts to make effective use of the funds which you appropriate.

### IMPORTANCE OF ASIAN DEVELOPMENT

The development and modernization of Asia are policy matters of major importance to the American people and to the U.S. Government. Asia contains 51.8 percent of the world's population, possesses vast human and natural resources, and is the seat of two of the world's most remarkable civilizations.

The United States has fought three major wars during my lifetime in Asia. Today most of the Asian continent is relatively stable and at work for peaceful purposes, although one must deplore the unfortunate exception of the Indochinese peninsula and the bitter Soviet occupation of Afghanistan, the United States can take pride in its contributions to the process of stabilization and development which has characterized the post-Vietnam war period in Asia. Our economic assistance programs have been a major contributor to that process.

Both the United States and the Asian nations benefit directly from this continuing process of economic growth and political stabilization. United States-Asian (excluding Japan) trade has been growing over the past 10 yers at an annual rate of 20 percent. U.S. direct private investments in Asia (excluding Japan) now total $8.4 billion. The ASEAN states in particular are domonstrating extraordinary capacity for growth. The five states which comprise ASEAN are gowing at an average annual rate of 6.8 percent at a time when the economies of other countries are generally stagnant.

In spite of these positive trends in Asian development, poverty is pervasive. The basic social and economic indicators point to the developing countries of Asia as among the very poorest. According to the World Bank, the Asia region contains about 75 percent to 80 percent of the world's poor, that is, those living below a nationally defined income level needed to maintain minimum food and other basic consumption standards. The percentage of poor people in the region ranges from 30 percent in Thailand, equivalent to 14 million people; to 50 percent in India, equivalent to more than 310 million people; to 86 percent in Bangladesh or 87 million people. The average annual per capita GNP for the Asia region is only $224, compared to $278 for Africa, $769 for Latin America, and $970 for the Near East. Two countries—Bangladesh and Nepal—are included in the least developed category with yearly per capita incomes of $90 and $130 respectively, while India, Indonesia, Pakistan, and Sri Lanka are categorized as low income countries.

Even the extraordinary growth rates of the ASEAN nations as yet have not significantly altered the poverty of the rural majorities in such countries as Indonesia and the Philippines, populations living in isolated and usually resource-poor regions. Asian population growth continues at rates considered far too high by the governments of the region. Health, nutrition, and unemployment problems arising from an inadequate agricultural production base burden the populations.

## AID PROGRAMING

AID programing in fiscal year 1983 is designed to take into account successes and failures of the past—AID's own record, that of other donors and the record, of course, of the Asians themselves—and of demographic, economic, social, and institutional realities of the 1980's. AID arrives at its program decisions on the basis of macroeconomic analysis and through an intensive effort to learn from program evaluations. (This past year, AID conducted 40 program evaluations in Asia in addition to the numerous audits conducted by the Inspector General's Office and by the GAO.) We believe that AID's ability to improve, design, and implement projects on the basis of evaluation findings is improving.

Our planning for fiscal year 1983 provides a new initiative, private sector development, while continuing to emphasize programs for reducing population growth rates, improving agricultural production and protecting the natural resource base. With the addition of this important new emphasis on the private sector we believe that our assistance addresses Asia's basic problems in areas which offer the greatest potential returns for development.

The more salient of the Asian realities underlying our programing for fiscal year 1983 are:

First, an increasing recognition of the dynamism of the Asian private sector. One of the most timely new emphases in AID's program is private sector development. The objective is to encoursage the development of Asian private enterprise initiatives, with particular focus on small- to medium-scale enterprises, labor intensive rather than capital intensive methods and preferably with an agricultural connection. Although this program is in an early stage of planning, it is important to note that the Asian nations themselves, increasingly are sensitive to the potential contained in their own private sectors. There is wide disillusionment in Asia with the record of public sector solutions to development problems. Therefore, the new AID initiative is finding a receptive climate. Four of the ten nations chosen by AID worldwide for an intensive effort in private sector development are in Asia—Sri Lanka, Thailand, Indonesia, and Pakistan. We have sent reconnaissance missions composed of American business executives and AID officers to these countries for preliminary explorations. Some of the areas they are looking at include: Following up with potential U.S. investors on agro-industrial opportunities such as a potential sugar refinery in Sri Lanka; establishing training programs to overcome the general dearth of middle management talent; and facilitating the flow of information on the investment climate to potential United States and indigenous investors. Other possibilities include helping to establish capital and commodity markets and the creation of intermediate financial institutions for private sector investment.

A second salient reality is demographic. In spite of the highly encouraging record of some of the Asian societies in reducing population growth rates over the past decade, the Asian governments remain convinced, with few exceptions, that their populations are growing too fast and that this creates increasingly unacceptable pressures on limited natural resource systems. Generally, the problem is most serious in those countries which have the largest populations. India, Bangladesh, and Pakistan, for example, contain a total population of 873.9 million people. The annual population growth rate in India is estimated at 2.2 percent, in Bangladesh at 2.5 percent, and in Pakistan at 2.9 percent. In Indonesia, which has a remarkably successful family planning program in heavily populated Java, the growth rate has decreased from 2.7 percent in 1970 to an estimated 2.1 percent today. Thailand has succeeded in bringing its growth rate down to 2 percent in 1980 from 3.1 percent in 1965.

The point, of course, is that helping those societies which are dedicated to reducing population growth by methods culturally acceptable to the societies themselves continues to be an important objective of United States foreign assistance. Accordingly about 15 percent of the funds requested for Asia are to continue population planning projects. AID is working to improve upon past efforts. In Bangladesh, an evaluation of a family planning project in late 1980 resulted in changes in the design of a successor project. Evaluation of local family planning officers' training resulted in improvements in curriculum and logistic arrangements, and in the improved performance of these population officers.

In Thailand, a population project evaluation uncovered growing deficiencies in the Thai Government's supply of oral contraceptives. With this data, the mission was able to intercede successfully with the health ministry—and, perhaps even more importantly, with the planning board and budget bureau—to obtain a twelve-fold increase in the government budget for oral contraceptive procurement. This budgetary allocation combined with continuing AID assistance puts the national family planning program on a much sounder footing. The government's budget policy shift and reallocations would have been unlikely without the well-documented findings of this evaluation.

A third salient Asian reality is the continuing need to increase agricultural production: nearly 70 percent of the development assistance funds requested are for agriculture and rural development. The achievements of the 1970's in regard to rice and wheat are highly satisfying to those Asian nations we are assisting. This should also be a source of pride to the U.S. Government, which played an important part in the research and training efforts underlying the wheat and rice green revolutions. But to achieve and to go beyond self-sufficiency to that point where the agricultural sector becomes a genuine engine of development for the very large poverty stricken rural populations is as yet only an unfulfilled dream in most of Asia.

AID's concentration is on those factors of production which are likely to generate significant increases in productivity. In addition to its continuing support for Asian agricultural science, AID is an important partner in major, new Asian efforts to improve the productivity of vast irrigation systems which dominate the South Asian subcontinent and on a lesser scale the Southeast Asian nations. Improving water management is a complex, multidisciplinary, challenge that no one has really mastered in the Asian context. With the cooperation of the Asian nations our work in this field is likely to be one of the most important Asian development enterprises of the decade.

A relatively new element in AID programing also corresponds to the demographic and natural resource requirements of the Asian nations. Called social forestry, agroforestry or energy forestry, the objectives are to stop and to reverse the degradation of forests and uplands, and to bring to very poor villagers increased access to energy and income. The benefits are multiple, including downstream improvement of watershed, irrigation and power systems, and ultimately coastal fisheries. We are also working with a number of Asian governments on energy policies. These concern conventional as well as nonconventional energy sources.

All these programs involve institution building, development and transfer of science and technology, and genuine innovation and experimentation. In Indonesia, a consortium of American universities is at work in the outer islands creating a network of agricultural research and training institutions that will provide programs relevant to the distinctive agro-climatic conditions of these islands. In India, an imaginative cooperative program is using a highly successful dairy cooperative model developed earlier to create a system of oil seed cooperatives which are designed to overcome India's large imports of vegetable oil and improve the income of small farmers. AID's development assistance funding is channeled through the Cooperative League of America and is integrated with the use of Public Law 480 commodities.

AID's Asian programs also give wide support to both American and indigenous Asian private voluntary agencies, which are capable of reaching poor people at the village level. The small, innovative AID program in the South Pacific, for example, is carried out mostly through U.S. private voluntary agencies. In a number of other countries, AID provides cofinancing for self-contained PVO activities in AID priority development fields.

Although in relative terms, AID programs are smaller than they were in the previous two decades, their concentration on key problems and the presence of AID field mission staffs give us the ability to discuss constructively a number of host country economic development policies. In Bangladesh, for example, the government and the AID mission have worked together to use Public Law 480 commodity programs to increase private sector participation in fertilizer distribution—with notable increases in distribution and usage. In Thailand, the Ministry of Public Health decided to focus its health sector strategy on nutrition programs at the community level, as the result of a joint Thai-AID health program.

The administration's budget request for Asia is founded on sound developmental principles which address our vital interests in the region. An essential part of this endeavor is the close cooperation and consultation between the Congress and the executive branch. This subcommittee has traditionally played an extremely constructive role in this regard, and I look forward to continuing the relationship. Thank you.

### PHILIPPINE ESF PROGRAM

Senator KASTEN. Mr. Staples, the staff of the Senate Foreign Relations Committee called to our attention a problem with the Philippine program. It seems that $18 million of either fiscal 1980 or 1981 funds that were made available for school projects were wrongly deposited in an interest-bearing account, the advantage of which accrues only to the Philippine Government.

Do you know about the situation, and what has been done to correct the situation?

Mr. STAPLES. I am informed about the situation. This was part of the economic support fund, ESF, program in the Philippines, a program agreed to between the Philippine Government and the U.S. Government as part of the overall arrangements for the U.S. bases.

As I understand the problem, these funds were, in fact, transferred for these purposes to the Philippine Government, which was charged with carrying out the project. Interest has been earned on the funds. Our auditors have looked at the project and have reached the conclusion that the deposit of these funds representing interest gained was a legal and correct thing for the Philippine agency to do, and that these funds may be used for further construction of schools.

Senator KASTEN. In your opinion, they had the ability to divert them temporarily as long as the end result was for the use of the schools; is that what you are telling us?

Mr. STAPLES. We were not informed about this initially. We became aware of this through an audit of the project. This matter was then discussed and the conclusion reached which I described to you.

### REPORT ON ECONOMIC SUPPORT FUNDS

Senator KASTEN. By your auditors or general counsel? The subcommittee's understanding is that the conclusion you are referring to was reached by the general counsel, not by the auditors. We will follow up on this, if we can, with you. The subcommittee would like to have a full report for the purposes of the record. I am sure you are not familiar with all the details..

[The information follows:]

### PHILIPPINES—ECONOMIC SUPPORT FUNDS

The $18 million in fiscal year 1980 economic support funds (ESF) provided to the Philippines for elementary school construction is being properly used. As of April 30, 1982, virtually all the project school buildings had been constructed.

At the time of the 1979 amendment to the military bases agreement with the Philippines, and subject to appropriation, President Carter pledged that the United States would provide $200 million of ESF during the period fiscal years 1980–84. Under procedures that have been used since then, development projects have been jointly designed and approved by the two governments. The United States annually transfers dollars to the Philippine Government in the amount of the estimated peso costs of that year's projects, and the Philippine government in turn appropriates an equivalent amount of pesos which is provided for those projects.

Through this process the United States accomplished two objectives: satisfying the presidential commitment made in 1979 and funding mutually agreed upon development projects. The United States required the Philippine Government to place its pesos in a special account to insure that the pesos would be available as needed for the agreed projects. While in the special account, the government's pesos earned interest. Since the funds involved did not belong to the United States, it has no claim to the interest. Although the procedure established, that is, to mutually agree to disbursements from the special account, was not followed in that the pesos remained in the account, the Philippine Government made available on a timely basis other pesos as needed by the projects which now have been completed. In retrospect, we believe the special account was an unnecessary and confusing device to insure that the pesos would be available as needed for the agreed projects. The Philippine Government has an appropriation, budget and allotment process similar to our own, and we are confident that the Philippine Government will provide pesos as agreed without the special account.

## BACKGROUND

As an adjunct to the 1979 amendment to the military bases agreement with the Philippines, the United States undertook, inter alia and subject to congressional appropriation, to provide $200 million of ESF assistance over a period of 5 years.

In July 1980, the U.S. Government and the Republic of the Philippines entered into an agreement under which the United States transferred $18 million of ESF to the Philippine Government which in turn agreed to use an equivalent amount of its own pesos to finance the construction of approximately 850 three-room elementary schools and 12 ten to eighteen room elementary schools in the Philippines. The purpose of this agreement was to satisfy partially the U.S. commitment made at the time of the 1979 amendment to the military bases agreement, and to insure support for the Philippine Government's school construction program. As of April 30, 1982, all three-room schools were completed and 11 of the 12 larger schools were completed. In fact, 25 to 35 additional three-room units may be financed out of savings realized during construction. Furnishings have been provided to 400 of the schools. Satisfactory progress toward project completion is being achieved.

In response to a draft Agency for International Development (AID) audit recommendation, the AID General Counsel's office ruled that "no interest was earned on the funds owned by the United States and paid to the grantee. The AID grant was made in dollars. The interest at issue was earned on pesos owned by the government of the Philippines (GOP) prior to transfer of the dollars by the United States, and the pesos continued to be owned by the GOP after the pesos were transferred into the special account. The United States did not purchase or acquire those pesos. Rather, the United States required the GOP to use its own pesos for mutually agreed purposes. . . . In conclusion, AID's sole purpose with respect to the GOP-owned pesos was that pesos be available at the appropriate time to finance elementary school construction. I understand that this purpose has been substantially accomplished. The GOP's earning interest on its own money in the interim was not, nor should it have been precluded by AID. The critical point is that the pesos always were part of the GOP's revenues and not currencies appropriated by the United States or currencies purchased with U.S. dollars."[2]

## AID TO INDIA

Senator KASTEN. India is again slated to receive substantial funding from the AID program, one of the very highest programs. How can you justify such a huge program to a country which continuously opposes us in nearly every international forum, which continues to speak out against our interests and the interests of the free world and, frankly, evidently is wealthy enough, or close to being wealthy enough, to hold substantial amounts of U.S. securities in its own portfolio? How can you justify this?

Mr. STAPLES. I think that the general question of the economic and social development of India is a complex subject. India, in many respects, remains a very large and extremely poor country. I think the case which the U.S. Government has made for decades, that pervasive poverty is one of the factors that we look at in regard to development, is certainly there in the Indian case.

---

[2] Memorandum from AID's GC/ASIA to Inspector General Beckington, April 7, 1982.

The per capita GNP still remains at a very low level. It is true that there is also a well-developed private sector in the Indian economy and the Indians are capable of doing a great many things for themselves in terms of industrial development.

It is also true, in our opinion, that the overall relationship between the Indian people and the American people, and between their two governments, is an important one for the United States. India is by far the major power in Asia with the exception of Japan and China. It plays a very large role in the politics of the subcontinent. In our view, it has in the last year or so taken a number of steps which are encouraging from a developmental point of view.

The Government over the past year or so, for example, has taken a number of initiatives in regard to economic policy reform which look very encouraging to us. India-U.S. trade is at a high level and continues to increase, $3 billion a year both ways now.

We believe that the assistance which we are giving to the Indian Government is being well designed and very well targeted on problems of large significance in India—the improvement in management of the irrigation systems and in renewable natural resources. There is also some hope, I believe, that the overall relationship between the two countries may develop in a more positive direction over the next year or so.

Senator KASTEN. You said that you had seen some positive economic development. Have you seen any positive political development in any of the international forums or any statements made by representatives of the government?

Mr. STAPLES. I have not.

Senator KASTEN. I have not.

Is it true that India does in fact hold substantial amounts of U.S. securities in different forms?

Mr. STAPLES. I am not precisely informed about that. I have heard that that is so.

### INDIAN FOOD EXPORTS

Senator KASTEN. Is India still exporting food?

Mr. STAPLES. India from time to time exports food, either in the form of barter arrangements or to pay back debts, as was the case, I believe, in a shipment of wheat to the Soviet Union. On balance, it is very hard to say though that India has become a net exporter of food.

Senator KASTEN. I am sure they cannot be a net exporter. There is a concern that they have been exporting food, they have been exporting grain, to the Soviet Union. Are they still providing aid to Vietnam?

Mr. STAPLES. I believe they are.

Senator KASTEN. It seems to me that this is contrary to our best interests, to our national interests. Do you agree?

Mr. STAPLES. I think certainly that particular instance would be contrary to our U.S. interests. I would say on balance the maintenance of the best possible arrangements that we can work out with the Indian Government are very much in the U.S. interest, because I think that the long sweep of history will show that in fact the Indians and Americans have a great many things in common.

While there are a number of flaws, it still is a democratically elected constitutional government. In many respects it is committed to a western path of development, even though it chooses to follow its own light as far as its foreign policy is concerned.

Senator KASTEN. Have you or other representatives of the AID challenged the Indian Government on any of these points and protested formally or informally about exports of grain to the Soviet Union or about continuing aid to Vietnam? Have we brought these subjects up before the Indians in either a formal or informal way, and if so, to what degree of forcefulness have we been able to declare ourselves?

Mr. STAPLES. I believe that has happened. I have not, myself, done so. I would be surprised if this has not been done at the political level, probably by the State Department. I can certainly try to find out and answer that question.

[The information follows:]

### U.S. PROTESTS TO THE GOVERNMENT OF INDIA

The United States has not formally or informally protested India's export of grain to the Soviet Union or its assistance to Vietnam. There are many countries with whom we have friendly relations who have exported grain to the Soviet Union or provided assistance to Vietnam.

Senator KASTEN. It is a concern that the subcommittee has, that at a time when we are under a budgetary constraint in proceeding with all the domestic programs, it is difficult for working men and women throughout our country to understand the activities of a country like India under the present circumstances. We are sending huge amounts of money to that country. We will be following that up with the people at the State Department.

### POPULATION PROGRAMS

You mentioned the population programs. Some of the most successful population programs financed are in your areas of responsibility, your region. Specifically, we understand that is true particularly for Indonesia and Thailand. We are concerned, in view of the success of these programs and evidently the continuing need, why you are cutting back on these programs?

Mr. STAPLES. Overall, it is not our intention to cut back on the very major emphasis on population programs Asia-wide. I believe in the Indonesian case a major reason for the planned reduction in funds is the fact that the Indonesians are about to begin, first of all to buy their own contraceptives, and later on to produce them.

We have given them some technical assistance to help them get into the production business. I think we will find over the next several years in countries which have achieved a national capacity either to buy the supplies that are necessary or to manufacture them themselves, that a very large part of the AID funding in population that has gone into supplies will see a dropoff. That would seem to be desirable.

Senator KASTEN. You are suggesting overall the program is not necessarily being cut back; it is that our direct involvement is lessened, but indirectly the program will continue and might possibly expand?

Mr. STAPLES. That is correct.

In addition to that, I would add that we are active in two of the most important countries in regard to population—which are India and Pakistan—because they have enormous populations and quite high rates of population growth. In the case of India, Mrs. Gandhi's government, which was badly burned on the population issue some years ago, as you may recall, has recently decided to place a high domestic priority on population programs.

We are, I think, going to go up in population funding in India in the next couple of years.

In the case of Pakistan, which has an exceptionally high growth rate of about 3 percent, where we have been absent in the last several years from the family planning program, we are embarking on two major new enterprises in the population field in this coming year.

## IG OFFICE IN PAKISTAN

Senator KASTEN. Let me talk a little bit about Pakistan. In general, we would like more detail on the program there, exactly what the money will be spent on.

We see that you are asking for a significant increase in the Pakistan program. We are concerned that it comes at a time when the necessary auditing coverage, at least at this stage, has not yet been allowed back into that country.

Specifically, we have seen testimony that AID's Inspector General has not been able to restaff the office that he had in Karachi. I understand, also, that that office had—in addition to the Pakistani responsibility—other regional responsibilities, or at least at one time they did. Could you give us more detail on that program, how the funds will be spent?

I also would be interested in knowing if you would have objections, or if you believe it would be helpful, if we made a provision that any additional funds to Pakistan would be subject to reintroduction of that Karachi IG Office, in some way or other putting in the bill or in report language that we want to have the checks and balances in place before we start putting a large amount of money into that?

Mr. STAPLES. If I can tackle that in reverse order, I was not aware of the fact there had been a closing or reduction in the IG Office in Karachi. There is still staff there. It is a regional office.

Senator KASTEN. It was our understanding from testimony that they were evacuated when the embassy was burned.

Mr. STAPLES. But they are back there now in Karachi.

Senator KASTEN. That is what we wanted to know.

Mr. STAPLES. Yes, sir, there is a functioning office in Karachi.

Senator KASTEN. Roughly at the strength it was before?

Mr. STAPLES. I believe so. I will have to check, but it certainly is staffed.

Senator KASTEN. It does not match up with what we had for testimony a couple of weeks ago. Maybe there have been some changes in the meantime.

Mr. STAPLES. I know it is, because I have been in correspondence——

Senator KASTEN. You don't object if we subject any new funds to reintroduction of that office?

Mr. STAPLES. Well, you can put whatever language you wish in the bill. But in fact, the office is there. I will be very happy to inform you how many people are there. I think it is the same number as was there before.

[The information follows:]

### KARACHI: AID INSPECTOR GENERAL'S OFFICE

There are 5 people in the Office of the Regional Inspector General for Audit and 3 people in the Office of the Regional Inspector General for Inspections and Investigation. Prior to the evacuation, the number of staff was 10 and 4 respectively.

### PAKISTAN AID PROGRAM

Mr. STAPLES. The program itself, as you may recall, was part of a 6-year arrangement for economic and security support to Pakistan, is supposed to build up by a considerable amount in the next few years, to what will be the highest level in Asia. A major part of the program is to support the importation of agricultural equipment and fertilizer. A $60 million project was approved this year to begin that particular effort.

There will be a major effort in agricultural research and education. There will be, as I mentioned earlier, a significant program in health and family planning, and there will be an effort to work with the Pakistanis in energy planning and the development of both conventional and nonconventional energy sources in Pakistan.

There will be a number of innovative new projects; including an effort to work out with the Pakistani Government a tribal area development project at a level of $15 million, to try to test out development models in the northwest frontier area up toward Afghanistan, which is clearly an area of great strategic importance.

Finally, we are trying to think very hard about how we can work with the Pakistani Government on the general subject of narcotics. As you know, Pakistan is a major producer of opium poppies.

Senator KASTEN. If you can get back to us with the details, that will be helpful.

[The information follows:]

## THE ECONOMIC ASSISTANCE PROGRAM FOR PAKISTAN

The requested FY 1983 $200 million program ($175 million ESF and $25 million DA) for Pakistan is to a major degree the continuation of the ESF program initiated during FY 1982.

The emphasis of the FY 1982 program is on various aspects of support for continuing growth in Pakistan's key agricultural sector. Approximately 80% of the $100 million is being spent in this area, including programs for the import of fertilizer and agricultural equipment, irrigation system management and rural electrification. Support in the areas of population and health, including the control of malaria, has been resumed. New departures in our renewed overall strategy include programs to assist in Pakistan's development of indigenous energy resources and specifically targeted development activities in the less developed, opium poppy producing and politically sensitive regions of the Northwest Frontier Province and Baluchistan.

The FY 1983 program will essentially continue these efforts. A new initiative in agricultural research/extension, however, will initiate a long-term relationship with a U.S. land-grant university. Another initiative aimed at increased agricultural production will address low productivity in vegetable oil seeds. Assistance to improve energy policy formulation and expand the use of renewable energy technologies in rural areas will also be provided. In addition, a special effort will be made to address the mobilization of the private sector in Pakistan's development.

-- AGRICULTURAL RESEARCH - LOP $10.2 million & R143.4 million; FY 1969-82

This project is assisting the GOP to: (a) establish an adequate institutional base within the Pakistan Agricultural Research Council (PARC) to conduct research and (b) carry out specific applied agricultural research projects which implement policy guidelines and which are based on the needs of small farmers. As of 9/30/81, $2.6 million and R4.6 million had been spent on: 1,111 months of training for 77 Pakistanis; technical advisory assistance from the International Rice Research Institute; the International Maize and Wheat Improvement Center and the U.S. Department of Agriculture; laboratory equipment; and, the construction of the National Agricultural Research Center.

-- ON-FARM WATER MANAGEMENT - LOP $18.4 million & R20.0 million; FY 1977-83

This project is assisting the GOP to reduce irrigation water losses and to improve agricultural production on small to medium sized farms of less than 25 acres. As of 9/30/81, $5.6 million had been spent to improve 300 water courses covering approximately 900 miles and serving 90,000 acres; to level farm land; and to provide technical assistance. Additional assistance funded under a FY 1982 amendment will help establish public and private sector capabilities to plan and deliver on-farm water management services, including improvement of irrigation water courses as well as crop and water management practices targeted to small and medium farmers.

-- IRRIGATION SYSTEM MANAGEMENT - LOP $90.0 million & R150.0 million; FY 1982-84

Pakistan's irrigation distribution system is the largest continuous inter-linked system in the world consisting of some 40,000 miles of canals. Deferred maintenance of this canal network has resulted in serious flood hazards due to the increased liklihood of breaches. This project, to be co-financed with the World Bank, proposes to re-establish the technical and financial integrity of Pakistan's irrigation system to enable efficient water delivery in designed quantities through a properly maintained system.

-- AGRICULTURAL COMMODITIES & EQUIPMENT - LOP $300.0 million; FY 1982-86

In spite of a relatively generous resource endowment, Pakistan has had to rely on imports to meet its requirements for food staples. A major impediment to improved productivity in agriculture has been the low level of fertilizer use, inappropriate timing of its application, and an imbalance in the nutrients applied. This project proposes to increase the availability of yield-increasing fertilizer and agricultural equipment with emphasis on strengthening private sector service activities for increased agricultural production.

-- POPULATION WELFARE PLANNING - LOP $25.6 million; & R21.0 million; FY 1982-86

This project will assist the GOP's efforts to reduce the country's prevailing high population growth rate of three percent by supporting the establishment of an institutional framework designed to provide family planning education, motivation and services.

-- PROJECT DESIGN FUND - LOP $10.0 million & R29.7 million; FY 1982-84

This project will assist the GOP to develop, design and implement high priority development activities which will help to establish the basis for self-sustaining economic growth. This activity will finance the foreign exchange and local costs necessary to identify, design and provide initial support for projects.

-- TRIBAL AREA DEVELOPMENT - LOP $15.0 million & R50.0 million; FY 1982-84

The tribal areas in Pakistan which are contiguous to Afghanistan have been largely excluded from development activities. This project will assist the GOP to carry out a special program to accelerate the integration of the tribal regions into the socio-economic mainstream of Pakistan through focused area development programs. Illegal poppies are grown in many parts of the tribal areas. This activity will focus on integrated development activities designed to phase out the cultivation of this crop through the maximization of local employment opportunities.

-- MALARIA CONTROL II - LOP $41.0 million & R21.0 million; FY 1982-84

This project will assist the GOP to maintain, or reduce further, the incidence of malaria to a level where the disease assumes a minor role in Pakistan's overall health situation, and where effective maintenance will prevent resurgence.

-- RURAL ELECTRIFICATION - LOP $171.0 million & R200.0 million; FY 1982-86

Because it relies heavily on petroleum imports to satisfy its energy needs, Pakistan is suffering badly from the worldwide energy cost escalation. Especially hard-hit is the country's rural area where 72% of its approximately 84 million inhabitants live. This project will assist the GOP to expand reliable electrical services to greater numbers of Pakistan's rural population, improve the rural poor's access to that service, and assist the GOP to overcome a shortfall in electric power generating capacity.

-- DEVELOPMENT SUPPORT TRAINING - LOP $8.0 million & R62.0 million; FY 1982-84

This project will assist the GOP in upgrading managerial and technical expertise through long and short-term training of Pakistanis in the private sector as well as the federal and provincial governments involved in the planning and implementation of Pakistani priority social and economic development programs.

-- PRIMARY HEALTH CARE - LOP $20.0 million & R50.0 million; FY 1982-84

This project will assist the GOP to provide primary health care to the rural population through continued support for the development of a three-tiered primary health care delivery system involving physicians, mid-level para-medics and community health workers. This activity complements efforts undertaken under the previous Basic Health Services Project.

-- SOCIAL MARKETING - LOP $13.5 million; FY 1982-86

Only six percent of fertile couples make use of contraceptives in Pakistan. Contraceptives are available in retail shops but their prices are too high for the low income groups which need them most. This project will assist the GOP in the application of mass consumer goods marketing techniques to the provision of contraceptives for a target population at a highly subsidized price and at a minimum cost to the distributing organizations.

-- AGRICULTURAL PRODUCTION, DISTRIBUTION AND STORAGE - LOP $25.0 million; FY 1983-86

Low production levels, a weak distribution system and lack of adequate storage facilities are major obstacles to increased food supplies in Pakistan. Distribution suffers an inefficient transportation system and public sector domination, which serves as a production disincentive, impose financial burdens on the Government, and strains the 3.3 million metric ton public sector storage capacity. This project will assist in implementing a long-term integrated action plan to overcome constraints in agricultural production, processing and marketing; expand the role of the private sector in the distribution system; support the development of private transport companies; and encourage public and private sector expansion of storage capacity -- particularly on-farm storage capacity. A central thrust of this project will be increased production, improved processing, and efficient distribution of non-traditional oilseed crops.

-- AGRICULTURAL EDUCATION, RESEARCH AND EXTENSION - LOP $30.0 million; FY 1983-86

This project will assist the GOP in upgrading agricultural education, improving the methods of communicating with farmers, and strengthening provincial capability to carry out adaptive research. The primary focus on this project will be on upgrading the Peshawar Agricultural College to a university, capable of turning out well-trained personnel to contribute to a dynamic agricultural sector. Agricultural research will concentrate on developing non-traditional methods of delivering extension services to farmers, and shifting portions of adaptive research from experiment stations to a wide range of producers' farms, thereby shortening the time-lag between experimental trials and technology transfer.

-- ENERGY PLANNING AND DEVELOPMENT - LOP $20.0 million; FY 1983-85

Firewood, dung and agricultural residue meet practically all of the energy demand of the more than 60 million habitants of Pakistan's 45,000 villages and more than 40% of the country's total energy demand. Until the mid-1970s, the use of these traditional fuels was declining. Now, because of the high cost of imported petroleum, their use is once again increasing. This project will assist the Government of Pakistan to improve national energy policy formulation and planning and to improve and expand the use of renewable energy technologies in rural areas.

-- PRIVATE SECTOR MOBILIZATION - LOP $50.0 million; FY 1983-84

This project will promote economic development in Pakistan by expanding the private sector's involvement in economic activities which directly support development or help expand the economic base for development. This activity will finance the technical assistance, training and feasibility, marketing and other studies needed to expand the private sector's participation in programs which directly support development goals in Pakistan. Constraints to domestic and foreign investment in Pakistan will be identified. Support will be provided to mobilize domestic capital, support trade development efforts, possibly including the free trade zone in Baluchistan, and increase export promotion activities. Financing will be provided to support greater U.S. private sector activity in Pakistan, which may include resources to permit U.S. exports to compete with the credit terms offered by other countries.

### ASEAN

Senator KASTEN. The ASEAN countries are critical to our interests. A recent subcommittee staff trip to these countries reveals a number of concerns that these countries have about our relations with them.

I guess we could sum it up by saying there is a feeling that now some are becoming more successful and more self-sufficient economically, that we are graduating them, but they are without any kind of help.

It would seem to me that these countries would be the primary targets for private sector initiative programs.

I wonder what efforts your bureau is putting into such programs? First of all, do you agree with our assumption? Second, could you describe what other things we could do in order to make this graduation process less severe?

Mr. STAPLES. We are making a special effort in regard to the private sector in both Indonesia and Thailand. We have had high-level missions visit both countries and both of our missions are actively at work in trying to put together a reasonable program that would be concerned not only with actual investment opportunities but also would try to achieve a better understanding of some of the policies that are concerned with private sector development.

### PRIVATE SECTOR DEVELOPMENT

I think that will be a major area of our interest in the coming years. What we are trying to do is not just get involved with conventional management enterprise or industrial development, but to try to see if we cannot improve capital formation and managerial training as concerns the rural part of these economies.

In regard to the other part of the question, it has always seemed to me that as countries begin to move up the ladder of economic development, in GNP terms, the most important thing we can do is to be as supportive as we can of private sector development which, of course, as you know, means not simply investment capital, but trade policy and access to international markets. It is also important to maintain institutional ties between universities and research institutions and people who are actively concerned with increasing agricultural production because these have been important economic development factors in our aid program. That maintenance of relationships, I think, is a very important thing to do.

In my own view, the U.S. Government has not been very successful worldwide in coming up with the institutional framework within which to do that.

Senator KASTEN. In your statement you say that the AID private sector initiative is facing a receptive climate, suggesting that there is a degree of disillusionment in Asia with the public sector. I think we sensed this when our subcommittee staff was in that part of the world in January.

There were consistent and constant complaints voiced over what seemed to be a retrenchment of the Ex-Im Bank and their activities, with a corresponding position that all this talk about private sector initiative is just talk, because we weren't really going in with helpful financing, with the lower-rate financing, to encourage the sort of private sector development that you are talking about.

Are you aware of this feeling, and have you had any comments, particularly having to do with the lower rate of financing in the Ex-Im or the problem of getting it down to this part of the world?

Mr. STAPLES. If I may give you two answers instead of one, I think that as far as concessional, somewhat below market rate financing for internal private investment in a given Asian country is concerned, there are usually a number of financing sources available. The International Finance Corporation connected with the World Bank has programs in most Asian countries. Most Asian governments encourage private development. Access to capital is not a major restriction for domestic private capital formation and enterprise development.

But there is a very real problem when you come to American sales or American investment in these countries. My own impression is that because of the position the Ex-Im Bank finds itself in these days, American enterprise can find itself at a rather large disadvantage when it starts to compete. The usual competitors are the Japanese but sometimes they are competing against the Germans, the French, the Italians, and the British. It certainly is a problem area.

### JAPAN

Senator KASTEN. It is our impression in this part of the world in particular that Japan is just running over all of us, and part of that is due to the better financing arrangements which have been made available. Maybe it is simply less of a bureaucratic entanglement that the Japanese have when they are working with trade and financing arrangements.

In the last 6 or 8 months we have heard criticism over the fact not only that the dollars are not there, but also allocations of credit from the Ex-Im Bank. I wonder if you are hearing the same thing?

Mr. STAPLES. Yes; the Japanese case is a very interesting case in political terms because the relationship between the Japanese Government and private enterprise and Japanese overseas investment is very close.

### SUBMITTED QUESTIONS

Senator KASTEN. Mr. Staples, I thank you. There may be additional questions coming from the committee. We will give you 2 weeks for response to our questions.

Mr. STAPLES. Thank you.

[The following questions were not asked at the hearing, but were submitted to the Agency for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### ASSISTANT ADMINISTRATOR POSITION

Senator Kasten: You are up here as the Acting Assistant Administrator. Has someone been nominated for the permanent position? If so, when can we expect that the new Assistant Administrator will be sworn in?

Mr. Staples: From December 1980 to August 13, 1981, pending the confirmation of Mr. Jon D. Holstine as Assistant Administrator, Mr. Frederick W. Schieck served as Acting Assistant Administrator. In January 1982, Mr. Holstine resigned and I became Acting Assistant Administrator. In April 1982, during my absence on an official trip to Asia, Mr. Robert Halligan served as Acting Assistant Administrator.

Administrator McPherson has submitted to the White House the name of Mr. Charles W. Greenleaf, Jr., to be Assistant Administrator for Asia. The appointment papers are being processed and I understand that the various background checks are nearing completion.

Administrator McPherson has asked me to give you his personal assurance that he is committed to providing the highest quality of intellectual and personal leadership in the Asia Bureau. His nomination of Mr. Greenleaf reflects that commitment.

### BURMESE LOCAL CURRENCY

Senator Kasten: Is my understanding that the U.S. owns a significant amount of Burmese currency correct? Why don't you make some of that currency available for programs in that country now that we have re-introduced an aid program?

Mr. Staples: Your understanding of the Burmese currency situation is correct. The United States Government has two Burmese currency accounts: one PL 480 repayments, and the other Mutual Security Act loan repayments. The Burmese Government has recently pre-paid the PL 480 account, and there is now more than $16 million in Kyat available. In April 1982 the Burmese Government requested a local currency grant of approximately $1,250,000 for activities in support of an AID financed primary health care project. In addition, the AID/Burma office and the Burmese Government are presently holding discussions on possible additional local currency activities that would complement the present development program.

The present balance of the Mutual Security Act loan repayments is the equivalent of $11,500,000. There are no immediate plans for utilizing these funds in support of the U.S. development assistance program. These local currency funds are presently being used to finance the administrative expenses of AID, the U.S. Embassy, and other U.S. Government agencies in Burma.

### AUDIT RECOMMENDATIONS

Senator Kasten: Have you examined the most recent semi-annual report on audit recommendations issued by the office of the Inspector General? Can we expect that you will make sure that those recommendations which are still open are closed as soon as possible?

Mr. Staples: We have taken vigorous action to close the unresolved audit recommendations. There are two recommendations which are assigned to Asia Bureau alone; agreement has been reached on steps necessary to clear them, and we expect closure in the near future on both. Of the eight audit recommendations assigned jointly to the Asia and the Food for Peace and Voluntary Assistance Bureaus, a solution that should serve as the basis for closure has been worked out for one, recommendations for closure on three have been made to the Inspector General, two more are the subject of intensive but promising negotiations with the host government, and the last two are undergoing legal analysis on the basis of recently received documentation.

## RESOURCE TRANSFERS

Senator Kasten: One of the changes Peter McPherson indicated he was going to make in the A.I.D. program was that he was going to concentrate more on technology transfer and get away from resource transfers, such as commodity import programs.

Isn't it true that in three of your largest programs - India, Bangladesh, and Pakistan - a great deal of the program is resource transfers?

Mr. Staples: Our program in India is in the process of completing its actions to terminate pure resource transfers and shift planned funding to support more technology transfer and institution building activities. Fertilizer promotion, agricultural credit, rural electrification and malaria control have received their final A.I.D. funding. In one of these projects, A.I.D. is negotiating a reduction in funds which were already committed. For others, funds previously planned for commitment in FY's 82 and '83 will be now applied to other projects which add to India's institutional capability to develop and spread new technologies in areas of major A.I.D. program interest, such as surface irrigation, forestry and watershed management, and population/health/nutrition service delivery systems.

In the case of Bangladesh, which lacks the already strong institutional capacities of India, we will continue to use resource transfers in association with technology transfer and policy reform to build Bangladeshi capabilities for making effective use of the country's resources. The resource transfers are not simply commodity impact programs. For example, A.I.D. funding of fertilizer imports together with assistance for the construction of storage facilities and a fertilizer plant has led to policy reforms which have made fertilizer distribution more effective and increasingly under private control. Our assistance in rural electrification has transferred new technologies in this field and caused policy reforms which have strengthened the rural electric cooperatives and given priority for power usage to the development of privately owned rural industries and irrigation pumps. The PL 480 Title III commodities have been at the core of significant food policy reforms. The short-term food security provided by Title III wheat has led the government to support incentive production prices for farmers and for the introduction of high yielding seed technologies. Private sector involvement in food marketing is also growing significantly.

A similar linkage between planned resource transfers and technology transfer, institutional building and policy reform will be followed in Pakistan. The large-scale resource transfers planned for FY's 82 and '83 in agriculture will meet the priority need for balance of payments support to meet short and intermediate foreign exchange shortfalls. However, these resource transfers will also provide critically needed equipment and fertilizer inputs for crop production increases. This assistance will be linked to A.I.D. policy dialogues with the Pakistan Government on policy reforms needed to systematize technological improvements in irrigated water management, obtain more effective delivery of fertilizer and other agricultural inputs, and achieve an effective outreach, research and extension capability emmanating from strengthened agricultural universities. The PL 480 Title I transfers of vegetable oil are helping provide the basis for Pakistani development of a comprehensive program to increase oilseed production and small farmer income, a program with policy reform measures and technological innovations that we hope will be strengthened under the aegis of a Title III program. We expect technological advancements to be communicated also through the rural electrification project, which we see strengthening the rural electrification organizational structure and its policies to increase rural income and employment benefits through electrification. Technology transfer activities such as the agricultural research project are closely linked to the resource transfer activities aimed at the agriculture sector.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### REGIONAL ALLOCATIONS

Senator Inouye: Your statement cites the statistic that "the Asia region contains about seventy-five to eighty percent of the world's poor." Yet, I note that the Administration's request for the Asia region is less than that requested for Africa and only slightly more than that requested for Latin America and the Caribbean.

How do you explain this regional allocation?

Mr. Staples: Page 494 of the main volume of AID's FY 83 Congressional Presentation provides a regional breakdown for total economic assistance, as follows:

| | ($ millions) |
|---|---|
| Africa | 876.5 |
| Asia | 1,004.0 |
| Latin America | 825.6 |
| Near East | 2,396.5 |

These allocations, which show Asia ranking second among all regions, are for Development Assistance, ESF, PL 480, and the Peace Corps. For Development Assistance alone, Asia receives the highest regional allocation in the FY 83 request to Congress ($407.6 million). In addition, U.S. contributions to multilateral development banks benefit Asian countries, as do the centrally-funded programs of AID.

Senator Inouye: What criteria were applied in achieving this regional allocation? Were they primarily security related or primarily economic in nature?

Mr. Staples: The population of the Asian region is greater than that of the other regions receiving U.S. economic assistance. The population of a recipient country is clearly a factor in the size of our assistance programs, as evidenced in the fact that Asian country programs are among the largest. However, because U.S. assistance resources are finite and there are many urgent development requirements around the world, the allocation of U.S. assistance cannot be determined by population alone. Allocation criteria for the various U.S. assistance programs differ to some extent, but economic development criteria are among the most important. Our perception of a country's need -- according to various poverty criteria, institutional and technological weaknesses -- helps to guide the allocation process. Of course, foreign policy considerations play an important role, as does the development performance of recipient countries, especially in the area of economic policy.

Senator Inouye: If a strict determination of need for development assistance, based on per capita income, were to be made, what would the allocation be?

Mr. Staples: Based on Development Assistance recipient country populations of 1,183 million in Asia, 27 million in the Near East, 188 million in Africa, and 66 million in Latin America, Asia would receive 81% of the bilateral development assistance funds, or $851 million, as opposed to the $407 million now allocated.

## ASEAN COUNTRIES GROWTH

Senator Inouye: You note that, "The five states which comprise ASEAN are growing at an annual growth rate of 6.8 percent at a time when the economies of other countries are generally stagnant." As an expert in economic development, to what do you attribute this remarkable performance?

Mr. Staples: All of the ASEAN countries, including Indonesia, currently are classified by the World Bank as middle-income developing countries. There are several factors that have affected these countries' ability to grow at such high rates.

1. Agricultural progress was more successful than in most other Asian countries. Total per capita food production increased by 47 percent from 1971 to 1980 in Malaysia; in Indonesia the increase was 16 percent and in Thailand, 27 percent. In East Asia as a whole, excluding Japan, the increase was only 13 percent. In South Asia, per capita agricultural development fell below the 1971 level.

2. Gross savings in these countries generally were higher than those in other Asian countries. In Indonesia, gross savings were 30 percent of GDP compared to an average for middle income countries of about 25 percent, in Malaysia 34 percent and in Singapore, 26 percent.

3. The growth in exports for these countries generally was higher than the average for middle income countries. In Thailand, export growth for the period 1970-79 was 12 percent,

Philippines, 6.2 percent; Malaysia, 6.5 percent; Singapore, 11.0 percent; and Indonesia, 6.5 percent. The average for middle income countries during this same period was only 4.3 percent.

4. Growth rate of manufacturing was higher than the average for middle income countries. For the period 1970-79, the average rate of growth of manufacturing was 6.6 percent for middle income countries. The rate in Thailand was 11.4 percent, Philippines 6.7 percent; Singapore, 9.3 percent; Malaysia, 12.4 percent; and Indonesia, 12.5 percent.

5. The growth rate of investment from 1970-79 was higher in the ASEAN countries than in the middle income countries in general. In Indonesia, gross domestic investment rose by 14.8 percent; Philippines, 10.6 percent; Malaysia, 10.3 percent; Indonesia, 14.8 percent; and Singapore, 6.0 percent. The average for middle income countries was 7.0 percent.

There are other factors that have favorably affected the growth of the ASEAN countries. In general, this growth has been associated with openness to foreign trade and investment and a predominantly market organization of economic activities. A rough measure of "openness" is the ratio of exports to Gross National Product. In 1980, this ratio was 20-25 percent for the Philippines and Thailand compared with an average of 18 percent for all non-aid developing countries in the middle income range. The ratio was 35 percent for Indonesia and 65 percent for Malaysia. Openness to foreign trade and investment indicates a considerable degree of market activity and gives wide scope to private enterprise and the search for profit.

Another important factor was the ability of these countries to reduce their rates of population growth. They have reduced the rate of growth to between 2.1 and 2.4 percent, and all have viable family planning programs.

Senator Inouye: How is this growth related to Official Development Assistance?

Mr. Staples: Official Development Assistance has acted as a catalyst. It is virtually impossible to ascribe a specific portion of the growth of the countries to ODA levels. It has helped diversify agriculture, reduced population growth, assisted in higher educational standards and improved health conditions. Without these resources, some of this progress would not have been possible. However, in general bilateral net ODA aid flows to the ASEAN countries have averaged less than 2 percent of their GNP and, at most, 5 percent of the country's total development budget.

Senator Inouye: How is it related to Multilateral Development Assistance?

Mr. Staples: Again, it is difficult to attribute a proportion of the growth attained by these countries to multilateral aid. ASEAN nations have received assistance from the IBRD/IDA and ADB primarily in the agricultural and rural development sectors, but large amounts of financial resources also have gone into industry and infrastructure. Undoubtedly these have laid the groundwork for the development of the ASEAN nations. Yet, as in response to the previous question, the largest resource input to the ASEAN countries overall development comes from its own resources. As the World Bank stated,"...external capital constituted only a small part of total capital formation [in East Asia]; the largest part, 90% or more of the GDP in the Region, was financed by domestic savings."

Senator Inouye: Can it be said that this rate of growth is more the result of the economic policies of ASEAN nations or more the result of development assistance?

Mr. Staples: These considerations are closely intertwined. In fact, many of the loans given by A.I.D. and the multilateral banks, whether project or non-project aid, contain explicit conditions that are policy-oriented. A PL 480 program can be used to develop appropriate agricultural pricing policies. An electric power project can elicit changes in pricing policy. A fertilizer-improved seed project can effect policy changes in agricultural pricing/distribution/storage systems as well as introduce the private sector into the picture, where it may previously have been excluded. In the case of commodity loan programs, these can include major macro-policy changes which are made possible through the infusion of money. Policy and external resources availability are inextricably combined and although improved economic policies are necessary and essential if developing countries are to move ahead, they are not sufficient and in many cases they require external resources to permit their introduction and implementation.

Senator Inouye: Is the private sector more highly developed in the ASEAN nations than in Latin America?

Mr. Staples: There is a highly developed private sector in all the ASEAN countries as well as in Latin America. Net direct private investment in 1979 is one indication of the role of the private sector in the economy: in Brazil, it totalled $2.2 billion; Argentina, $239 million; Chile, $233 million; in Singapore, $815 million; Malaysia, $873 million and Indonesia, $226 million. In Philippines and Thailand it totalled $52 million and $75 million in total.

## FOOD AND POPULATION IN ASIA

Senator Inouye: According to your prepared statement, 15 percent of the funds requested for Asia are to continue population planning projects, while 70 percent are for agriculture and rural development. What is the record of per capita food production in Asia over the past 10 years? On a per capita basis has food production increased?

Mr. Staples: Total food production rose in each of the Asia countries receiving economic assistance from the U.S. government. However, in three of the countries, population growth rates exceeded the growth rate of food production, with the result that per capita food production actually was slightly below 1969-71 levels.

Per capita production in 1980 (compared to the 1969-71 period) rose 5 percent in the Philippines, 8 percent in Burma, 11 percent in Sri Lanka, 16 percent in Indonesia, 27 percent in Thailand and 47 percent in Malaysia.

In Bangladesh, total food production rose 29 percent while population rose slightly more than that, with the result that in 1980 per capita food production was at approximately 1971's level. This general trend was also true for India and Pakistan; per capita food production in these countries did not improve during the past 10 years. (It should be noted, however, that in some years in India e.g. 1975, 1977 and 1978 per capita food production did exceed the 1969-71 level).

Senator Inouye: Is it A.I.D.'s judgment that funds spent for agriculture and rural development increase the per capita availability of food more rapidly than an equal amount spent in support of population planning program?

Mr. Staples: Investment in food production is a more costly and diversified effort than investment in population planning efforts. The former requires the provision of many expensive major inputs, e.g., irrigation, new variety seeds, fertilizer and the institutional framework that extends the knowledge gained from the research lab to the small farmer. In general, investment in agriculture is a capital intensive, as well as an institutional development process. But its results, increased production and crop diversification provide major returns on the investment. For example, in 1980 total foodproduction in Indonesia increased by 44% compared to 1971; in Thailand by 62%; in Pakistan, 35%. Population planning does not need and cannot absorb the amounts of money required by the agricultural sector. Population planning programs require little capital intensity - they are primarily educational programs. The most costly item is the provision of contraceptive devices. However, population planning is a much more difficult, time consuming process and the returns in the form of reduced fertility rates are further in the future. Nevertheless, concentrating on one part of the problem, agricultural output, at the expense of the other, family planning, would be a mistake. Both are essential.

Senator Inoyue: Is this equally true in the long run?

Mr. Staples: We have been successful in increasing agricultural production. However, during the same period, most countries did witness large rates of growth in population, so that even in those countries that show an increase in per capita food production, the increase was relatively small. For example, per capita production in 1980 in the Philippines was only 16 percent greater than it was about 10 years earlier. On a simple average annual basis, this would be less than a 2 percent increase per year. Thus, in the long run, population must decrease if there is to be any chance of improving the growth of per capita production, and per capita consumption. But this reduction of population growth rates is primarily a question of improving services and changing attitudes. In fact, increasing agricultural production is one way of reducing population growth as it should increase income and therefore reduce the pressures for more children.

Senator Inouye: What factors would you cite to support this judgment? Is it, for example, easier to gain acceptance of improved methods of agriculture than it is to gain acceptance of population planning?

Mr. Staples: The introduction of improved seeds, fertilizer, irrigation, water management techniques, and credit, as well as the development of new and diversified cropping patterns and appropriate price policies are difficult to get accepted. Yet the potential results are more tangible to the farmer. Farmers generally are income oriented and once it is shown and proven that they can earn more income by increasing per unit production, they will at least make a try at improved methods.

To many people in the developing world, although more children mean more mouths to feed, they also mean more hands to work and earn money (even if only a minimal amount). Although the wife may want fewer children, the husband may want more, as children (particularly male) demonstrate virility. Children are also a form of old age insurance to care for the parents in societies that lack any other form of insurance for the aged .

There are, of course, religious and social constraints to population planning while there are not similar constraints to increased agricultural production. Thus, reducing population growth is a longer and slower process.

## HEALTH PROJECTS

Senator Inouye: Last year, your predecessor told the Committee that only one percent of the rural population in Indonesia had access to potable water.

Does AID propose to fund any potable water projects in Indonesia in FY 1983?

Mr. Staples: AID does not propose to fund any potable water projects in Indonesia in FY 83. For your information, a recent WHO Study on Water Supply and Sanitation in Indonesia indicates that between 2-3% of the rural population and 31% of the urban population have access to potable water.

Senator Inouye: Funding proposed for health programs in Asia in Fiscal Year 1983 is approximately one-third less than the amount provided in Fiscal Year 1981. How do you explain this reduction?

Mr. Staples: There have been relatively fewer new health projects initiated during the last three years. Thus as funding for older projects has run out, the overall funding level has declined. Further explanation for the decline can be found by examining trends in health financing by program area. The level of support for health services has remained relatively constant over the period while there has been a substantial decline in funding for water and sanitation programs. These changes are in keeping with the Agency's focus on primary health care.

It is interesting to note that if the proposed $9.5 million from ESF for health projects in Pakistan for FY 83 is included in the total budget for health, the funding levels for FY 81 and FY 83 are not that different.

Senator Inouye: How does funding for potable water projects in Fiscal Year 1983 compare with funding provided for this purpose in Fiscal Year 1981?

Mr. Staples: Development Assistance Health Funding for potable water projects in Asia will decline from $9.4 million in FY 81 to a proposed $200,000 in FY 83. There is no ESF support for potable water projects in Asia in either FY 81 or FY 83.

## BUREAU FOR AFRICA

## STATEMENT OF FRANK S. RUDDY, ASSISTANT ADMINISTRATOR

### SUMMARY OF STATEMENT

Senator KASTEN. The next witness is Mr. Frank S. Ruddy, Assistant Administrator for Africa.

Your prepared statement will be included in full in the record, so if you can provide us with a summary, we will have some questions.

Mr. RUDDY. Mr. Chairman, thank you for the opportunity to be here.

These are serious times for Africa. The price of oil has increased tenfold over the last decade. The market for raw materials and other exports has dried up temporarily.

Senator KASTEN. I might ask you to speak up a bit. We will let the room get cleared. It is difficult for the people behind you to hear, and we do not have amplification in this room.

Mr. RUDDY. Food per capita production in sub-Saharan Africa, while improved, is still substantially below what it was in the 1961-65 period.

Food imports have quadrupled in the last 10 years.

Balance-of-payment crises are more frequent.

Twenty-two sub-Saharan African countries have some kind of arrangement for standby or some extended fund facility arrangments with the International Monetary Fund. In many countries, roads, railroads, bridges, harbor facilities, utilities, et cetera, are deteriorating. Governments just don't have the funds to do anything about it.

Industrial production is stagnant in most countries; investment lags; the private sector is starved for foreign exchange and capital; in many countries parastatals are floundering.

In addition, war and civil strife have taken a heavy toll, not only in those countries which are directly affected but also on their neighbors who must absorb refugees.

These conditions have caused us to review carefully our programs in Africa and sharpen our objectives and the strategies for achieving them. It is evident that there must be a substantial emphasis on economically productive activity in Africa if governments are to have sufficient capacity to absorb development assistance effectively.

The current cost problem for African governments is growing and in the final analysis only greater efficiency and expanding tax bases can relieve its burden.

No matter how well-intentioned the policies of certain African governments have been, all too often they have resulted in severe economic dislocations and disincentives to production. Of particular concern are prices for agricultural inputs and products, policy on parastatals, credit and foreign exchange policy, and budgets, to name just a few.

We intend to support the reform programs which governments agree to with the IMF and the World Bank. In addition, we intend to use our influence and support with reform-minded elements in African governments in conjunction with our technical assistance. We are very aware that unless government policies encourage development, the contribution of donors is simply an expensive form of temporizing.

### PRIVATE SECTOR DEVELOPMENT

Our primary concern in Africa is development and one means to that end is the private sector, and in most African countries that means the indigenous private sector. By "private sector" we mean simply a nongovernmental means of providing goods and services. In our judgment, that is often the most cost-effective way to create jobs and enhance efficiency.

We believe that our current program emphasis is sound and that our productivity-focused priorities—agriculture, technology, policy, institution building, and private sector promotion—are mutually reinforcing and germane to the troublesome problems of Africa today.

The situation in Africa is by no means all bleak. It has been a kind of opportunity for us to make some changes because other government donors as well as ours are seeing a failure of some very well-intentioned but Utopian economic policies. So, we think there are great problems here, but there are also great opportunities. So we remain sanguine. Thank you.

Senator KASTEN: I am not sure that Congress is as sanguine as you.

I can't help but notice what must be a slight family resemblance with the two boys in blue blazers back here.

We welcome you.

We assume those are your two sons; is that correct?

Mr. RUDDY. That is right.

[The statement follows:]

# PREPARED STATEMENT OF FRANK S. RUDDY

## ASSISTANT ADMINISTRATOR FOR AFRICA

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### Overview of Trends in Africa

From what we can observe over the last decade, economic development in Sub-Saharan Africa is becoming more difficult and urgent. After moderate but steady growth and development in the 1960s and early 1970s, the economic performance of Africa has declined, and projections for the 1980s are not bright. At present, average annual growth in per capita GNP is projected between 1.0 percent and negative 0.1 percent between 1980 and 1990.

The downturn in African economic performance is taking place against a background of population growth, relatively slow rates of technological change, and the fact that in many areas the limit of cultivation has been reached.

While Africa's population is estimated to be growing at an average annual rate of about 2.8 percent, food production has not kept pace. Throughout the 70's, the average annual per capita growth rate in agriculture, Africa's most important economic activity, was minue 1.4 percent for all crops. Per capita food production was minus 1.2 percent. Overall production increases, such as they have been, were attained almost exclusively by expanding the areas under cultivation. Food yields per hectare in Africa have been at a lower level than in other regions.

### FY 1983 Request

Thank you for the opportunity to discuss A.I.D.'s FY 1983 economic assistance request for Africa.

For FY 1983 the Africa Bureau is requesting a total of $648.4 million, a 7.0% increase over the FY 1982 level of $606.1 million. The Development Assistance request of $323.4 million is virtually unchanged from the FY 1982 level of $327.5 million. The FY 1983 request of $325 million for ESF is 17.3% higher than the $276.7 million in FY 1982.

The $323.4 million in Development Assistance for FY 1983 will concentrate on the following areas: $142 million for agriculture and rural development activities; $32.4 million for health activities; $30 million for education and human resources development programs; $20 million to address selected development problems; and $7 million for population planning (including $2 million in population activities in the Sahel Development Program). The Sahel Development Program, which is a separate functional account, for which $93.8 million is requested, focuses on food production, environmental reclamation, health, population and related training. In addition to Development Assistance, $325 million in Economic Support Funds is requested primarily for programs in Southern Africa and the Horn. $191.7 million in PL 480 assistance is requested, including $43 million in Title III. The FY 1983 request, if appropriated, will be used to address a series of economic and social problems throughout Africa.

## Potential and Progress in Africa

Notwithstanding what we are witnessing in sub-Saharan Africa, the region has substantial long-term economic promise. Africa has the potential for increasing annual production of cereals by 16 million metric tons from rainfed land and by 9 million metric tons from irrigated land, for an annual production increase of 25 million metric tons. This compares to a total production of 42 million metric tons in the period 1977-79. The potential average annual increase in livestock products is estimated at 1.04 million metric tons.

Sub-Saharan Africa has nine major river basins running through several countries in the Sahel, Central and Southern Africa. Irrigation potential can be compared to the American West. The basins offer the possibility of putting some 14 million hectares under irrigation. Africa is estimated to have over one third of the world's potential hydropower resources. Energy from hydropower is one of Africa's greatest underutilized resources. The natural highways which are formed by the rivers can serve as low-energy alternatives for moving agricultural products to markets and supplies to producers.

The Sahel region alone could put 2 to 6 million hectares under irrigation, and about 1.8 million of that could be under irrigation by the year 2000. This alone would mean a 50% increase in food produced. Significant production increases could be achieved through intensification of dry land production, application of different farm technologies and opening of new lands through onchocerciasis and other disease control programs.

While distribution among countries is very uneven, Africa is a major producer of minerals such as copper, cobalt, chrome, and uranium. There has also been a steady increase in the number of oil deposits located, particularly in coastal waters. Only a small portion of the land has been surveyed in detail and the potential is believed far greater than current production levels would suggest.

With respect to progress, Africa's absorptive capacity has been rapidly enlarging. Today an estimated 60% of all school age children are in primary schools. Since mid-1960 annual secondary and higher education enrollment have increased by 9.8% and 11.1% respectively. Conditions are being created which will increase Africa's ability to use its greatest resource, its population.

In the area of food production, new hybrid cereals varieties have been developed, seed multiplication activities replicated and agriculture research activities initiated. A number of African countries are beginning to re-examine food pricing, parastatal and other policies affecting food and agriculture production. As a result of a joint assessment in Senegal, a declaration was issued calling for the abolishment of two major parastatals, reorganizing rural development agencies and promoting private cooperatives. The government also plans to undertake new pricing policies and revamp the farm credit system. In Somalia parastatals are being disbanded. Private voluntary organizations are continuing to play a significant role, especially at the grass roots level, in the implementation of A.I.D.-funded activities. Under a rural enterprise development project in Upper Volta, business practices of 80 entrepreneurs have been upgraded; loans granted to 120 entrepreneurs, and a demonstration farm established, introducing new technology such as hand mills, peanut presses and other implements.

## Description of the FY 1983 Program

The FY 1983 request concentrates the Agency's efforts on a small number of key interrelated problems facing the African continent. A.I.D. assistance will continue to stress the production aspects of agriculture with particular emphasis on small holders. In that context, special emphasis will be placed on institutional development, policy reform, and building and supporting the private sector wherever appropriate.

## Private Sector Activity

A.I.D. is placing special emphasis on support of the private sector of African economies, particularly for indigenous small and medium size enterprises. We are now reviewing projects to assure that wherever appropriate the private sector is used and supported. For example, in Sudan approximately two thirds of the foreign exchange associated with our CIP program will be reserved for imports for the private sector to assure that it will be able to update its plant and equipment and operate efficiently. We are also actively developing projects to be funded out of the counterpart funds which will be designed to promote and assist small and medium size entrepreneurs. Wherever possible we will, in association with A.I.D.'s Private Enterprise Bureau, be alert to opportunities for the U.S. private sector to participate in African development activities.

We believe that support of the private sector is an efficient way to expand employment and productivity. Moreover, maximizing use of the private sector will lessen the burden of already overextended governments.

We expect PVO grants of approximately $31 million in Africa in FY 83. This includes $25 million from DA and $6 million from ESF funds. We believe that AID/PVO cooperation is an effective means for enhancing the impact and effectiveness of our efforts.

## Agriculture

Helping African nations increase their food and agricultural production and improve food distribution is the major emphasis of A.I.D.'s development assistance program in Africa.

In response to the food deficit problem, A.I.D. has implemented a food/agricultural sector assistance strategy. Its three major components are:

1. Assist in creating national policies and programs that give farmers adequate incentives to expand agricultural output, especially of food.

2. Assist in building self-sustaining institutions that provide appropriate technology, inputs and services at the time and in the quantity necessary for effective production and distribution of food products.

3. Support institutional and human resource development programs that provide the means for greater participation by farmers in the development process, including policy planning, to build popular support and acceptance of programs necessary for self-sustaining growth.

To improve efficiency in the employment of both A.I.D. and host country resources, A.I.D. has placed an increased emphasis on host country economic policies. This effort is being implemented at two levels. At the macro-economic level A.I.D. seeks to insure that its country programs are consistent with the intent of International Monetary Fund and/or World Bank reform agreements with host countries. Where possible A.I.D. measures will actively reinforce host countries' efforts to comply with these agreements. At the sector level A.I.D. will seek to collaborate with host countries on devising ways to improve specific policies. A.I.D. is especially interested in obtaining adjustments in host countries which will increase the influence of market forces in the determination of agriculture prices, liberalize marketing arrangements and expand the role of the African private sector in agriculture-related activities. Private enterprise activities such as a new agribusiness development project in Kenya, along with ongoing activities on the manufacture of farm implements in Uganda and Niger, as well as training, are proposed for funding in FY 1983.

Health:

The goal of the Africa Bureau health sector development program is to assist the countries of the region to address their health problems on a national and regional basis. Health programs are supported for the most part in four general categories:

Primary Health Care - These multi-disciplinary projects provide support for systems of health services for rural communities. Projects usually consist of training village health workers and their supervisors and providing logistic support. Seven basic services are recommended for primary health care systems. $13.9 million is proposed.

Health Planning, Management and Manpower Development - training and technical assistance are provided to countries and regional organizations to develop national capabilities to manage national primary health care programs. Bilateral, regional and multilateral projects address Africa's main constraint to health development - lack of health manpower. $2.3 million is proposed in the category.

Water and Sanitation - Support is provided for developing safe water sources in rural communities, and maintaining environmental safeguards. Education of communities is an important aspect of these projects. $4.7 million is proposed.

Endemic Disease Control - Bilateral, regional, and multilateral projects address the tropical disease problems of vast geographic areas. Diseases such as malaria, schistosomiasis, onchocerciasis, and trypanosomiasis are endemic in most of Africa. Programs include surveillance, sector control, treatment, chemo-prophylaxis, and immunizations. A budget of $10 million is proposed.

Population Program

In Africa, progress in the population sector has been slow. As Haven North and others of my predecessors have noted before me, the population issue in

Africa has to be approached with great care and sensitivity. It must be carefully integrated with the provision of health services, with the opportunities for improvement in income and in general economic growth and employment opportunities. Otherwise it will be distorted and backfire on efforts to establish programs.

The implementation of a family planning program is a slow and difficult process: in part it is a matter of establishing the systems for delivery of health services in conjunction with family planning; in part, it is institutional and a lot is attitudinal. It is a matter of what people want, because A.I.D. cannot force countries to accept population programs.

Seven sub-Saharan African nations (Botswana, Ghana, Kenya, Mauritius, Rwanda, Senegal, Uganda) have declared national population policies. Several others, including Nigeria and Sudan, have recently established national population councils. 23 countries in the region now provide family planning services in government clinics.

### Energy and the Environment

A.I.D. must continue to address the high cost and increasing scarcity of energy resources, deforestation and ecologically unsound agriculture and livestock practices if Africa's productive capability is to be preserved and expanded. A.I.D. will support afforestation, range and soil conservation efforts. These activities will be designed as integrated components of agriculture production systems. In Mali, Senegal, and Burundi projects will focus on fuelwood renewable energy technology.

### Education and Human Resource Development

In FY 1983 A.I.D. will help expand Africa's human resources capacity. Attention will be devoted to: (1) development administration and technical skills training, as pre-conditions to institutional development and the transfer of technology; (2) strengthening indigenous private voluntary organizations (PVOs) and the commercial private sector by helping them develop management and entrepreneurial skills, and (3) expanding training opportunities in the United States through the Africa Manpower Development Project.

An example of technical skills training and development administration is the Agricultural Education Project in the Cameroon, which will create an agricultural university capable of training managers, researchers, planners and teachers who can effectively staff the agricultural support institutions of Cameroon.

Sahel Development Program

The Sahel Development Program was initiated in FY 1978 as a regional effort through which eight African countries cooperate with western donors and oil producing countries of the Middle East (OPEC). Led by the United States and France under the Club du Sahel, 20 bilateral donors are now active contributors to a range of programs and projects to help the Sahel countries become self-sufficient in food and to construct economic infrastructures which will assure sustained economic growth and a better and more secure life for their people. Donor assistance has increased from $1.1 billion in 1976 to $1.5 billion in 1980.

Twenty years from now, the Sahel can be feeding itself. Our long-term economic objective is to assist the countries in the Sahel region to increase agricultural production to levels where basic food imports will not be necessary. Sound economies in the region will contribute to the stability of the countries and provide opportunities for U.S. investments as well as access to mineral resources such as uranium (Niger) phosphates (Upper Volta), iron (Mauritania), bauxite (Mali).

As a result of a development strategy agreed to by the donors and recipient countries, progress is being made. Agricultural research programs have been expanded and strengthened, extension services are reaching the farmer, new agricultural technologies are being introduced, range management and animal health improvements are being applied. The agriculture policy picture is starting to improve. In Senegal and Mali, cereal marketing through the private sector is now being encouraged. The governments of Senegal, Niger, Mali and Upper Volta are adjusting cereal pricing policies to provide more incentive to the farmer for both production and marketing.

In the FY 1983 program A.I.D. will continue to support the Sahel development strategy and direct resources to the agricultural sector, and particularly toward rainfed agriculture which constitutes the mainstay of Sahelian agriculture. A.I.D. is providing technical assistance and key inputs to assist in developing Sahelian agriculture capacity.

A.I.D. is also supporting long range strategies to develop water resources in the Senegal and Gambia river basins. A.I.D. is supporting other donor efforts through its regional program which concentrates on institutional development and basins planning, and through the development of small scale irrigated perimeters which have an impact in the individual countries. Of the $93.8 million request in FY 1983, $27.6 million will be allotted to regional programs directly benefiting the individual countries in the basin area. The balance will be allotted to seven countries in the region under bilateral programs.

Our assistance to Chad has been limited to relief and rehabilitation together with other donors. The civil war has brought extensive damage to Chad's economy. Nevertheless we propose to continue monitoring the situation, looking for improvements before undertaking any extensive or long term development projects.

Sahelian problems with financial management of A.I.D. funds continue to be a matter of serious concern. Steps have been taken to correct serious deficiencies in the accounting and management systems. Host country documents are being verified and accounting systems have been examined to determine their adequacy for certification by A.I.D. officials as a precondition to disbursement of funds. To correct the deficiencies, training programs, workshops and teams have been developed to improve the financial management of the local institutions concerned with the Sahel programs and projects. Donor and recipient countries have acknowledged the seriousness of the problem and collaborative efforts are underway to assure efficient use of funds and accurate accountability.

The Economic Support Fund Program (ESF)

The FY 1983 request for $325 million is intended to provide the United States with the resources necessary to stem the spread of further economic and political disruption and to support the efforts of friends and allies to deal with threats to security and independence. Economic Support Funds totalling $325 million are requested for Sudan, Somalia, Kenya, Mauritius, Seychelles, Djibouti, Zimbabwe, Zambia, Botswana, the Southern Africa Regional Program, Liberia, Niger, Senegal and Zaire.

These countries are currently experiencing a broad range of economic and political problems, such as, balance of payments and budgetary deficits, external debt burdens, deteriorating terms of trade and declining output, and the threat of political instability.

In addition to the political and security objectives of these funds, A.I.D. makes every effort to assure that they have developmental effect as well. For instance, in Zambia and Kenya our Commodities Import Program is targeted on agricultural inputs; in Zimbabwe 80% of the CIP is reserved for the private sector, with local currencies supporting development in traditional areas. ESF funds are a particularly versatile development instrument when used as program assistance in support of policy reform.

PL480

The FY 1983 program request for PL480 is $191.7 million of which $117 million will be allocated to the Title I category. Within Title I, $43 million will be directed to Title III. The $74.7 million balance of the request will be devoted to Title II.

By legislation, PL480 embodies several objectives, among them the economic and social development of PL480 recipient countries. The Africa Bureau is committed to fostering sustained development as the objective of its assistance through PL480 food resources. Specifically, the Africa Bureau seeks to utilize PL480 resources (sales revenues and/or commodities) to address and alleviate the underlying causes of the need for food assistance, particularly in the agricultural and rural sectors. The Administrator has instructed our field missions to enhance the effectiveness of PL480 food aid by: a) seeking policy dialogue with host governments on ways to alleviate the constraints to improved food security; and b) increasing the degree of integration of PL480 programs within the total AID development assistance program.

Self-help measures, under Title I use of local currency sales revenues, and policy dialogue, or integration with other forms of non-food assistance are intended to enhance the development impact of Title I. The Title III program will be continued in Sudan and Senegal and a new program may be initiated in Somalia.

Title II grant commodities have been traditionally channeled into direct food distribution programs through maternal-child health centers, school feeding programs and food for work projects, all of which are administered by U.S. registered private voluntary organizations or by the World Food Program. Similarly under Title II Section 206, we are undertaking programs for food for development in Cape Verde, Mauritania and Upper Volta.

Other Donor Coordination

As the Berg Report noted, donor coordination deserves special emphasis at this time. The serious problems faced by many African countries can only be met by integrated projects and programs. Moreover, as certain governments find themselves less and less capable of meeting the recurrent costs associated with various projects, project and program planning requires an assessment of total donor activities as well as those of individual donors.

The extent of the problem is illustrated by the fact that although the U.S. is a major aid contributor in Africa, our assistance accounts for only 7% of total Official Development Assistance. There are no less than 52 bilateral donors in Sub-Saharan Africa; the 17 member Development Advisory Council (DAC) of the OECD, 7 Arab/OPEC, 9 Arab multilateral, 12 other multilateral, and 7 East Bloc. In addition, there were 34 American PVOs associated with A.I.D. alone in FY 1981. Each of these donors has its own policies, procedures and programs.

A.I.D. is promoting greater cooperation among donors in several ways by encouraging ongoing cooperative efforts in such donor groups as CDA (Cooperation for Development in Africa, formerly CADA) and the Sahel program, and through cooperative efforts with African groups such as ECOWAS and SADCC. We are also seeking opportunities for cofinancing with other donors, both bilateral and multilateral. Thank You.

## ZAIRE

Senator KASTEN. You are requesting a substantial increase for the program in Zaire at a time when we are receiving increasing reports about corruption in the Zaire Government and new charges now that former legislators, political opponents of the government, are being jailed.

First of all, can you substantiate or refute some of them? Given these reports, how can you justify this kind of increase? And, last, can you tell us if there is any realistic chance of these conditions changing in Zaire, which might justify an increase?

First of all, are the reports of corruption and charges correct? Under whatever circumstances, how can you justify this kind of increase?

Mr. RUDDY. Mr. Chairman, I am really not in a position to comment one way or the other on the charges of corruption. I simply don't know. I have read the newspapers, as have you, but that is simply not within my area of jurisdiction.

I think we are very concerned about the situation in Zaire, for various reasons. Although the world market for some of its products has not been what it has been in the past, Zaire is very important to us as a nation for strategic materials, such as cobalt. We recognize with you that there are very severe problems in Zaire.

The State Department has made representation to the government of Zaire that these kinds of problems are going to make it very difficult for us to continue funding at the same, and certainly at an increased, level. I think this point was made in an actual report in a Washington Post article approximately a month ago by Jay Ross, when he was in Zaire.

The World Bank also has made the point in talking to President Mobutu. The president in December of last year acknowledged the difficult strategic situation, and he did personally make a commitment, certainly with his own seal of approval, to guarantee reform.

We think that the CIP program, which we hope will start in 1983——

Senator KASTEN. What program?

Mr. RUDDY. Commodity import program, CIP, we think this kind of thing is going to be very effective in Zaire. We think it is the kind of thing that will put some teeth to Zaire's statement that it is going to encourage the private sector and let it take over some of the operation, which its own parastatals are not carrying off very well. We think there is something to that.

Since 1978, somewhere in the neighborhood of 38—and the number might not be exact but it is pretty close--parastatals in Zaire have been transformed into some kind of private ownership. It is a very difficult situation. We are dealing with the World Bank and with consultative groups to try to get the agricultural sector working.

We are dealing with the IMF on their macroeconomic reform. We are trying to work with them on that, but it is very difficult. It is probably the second most difficult economic situation we have in Africa.

Senator KASTEN. I want to state for the purposes of this subcommittee, which is responsible for allocating these funds, that the beginning of your answer, saying this wasn't your job, that I understand you are not the intelligence branch of the government or the intelligence branch of the State Department. But I think in considering large increases in aid that the question as to corruption and the kinds of other problems that are there is a queston that you ought to address yourself to, simply because you are the person that is in charge of asking for these additional funds.

So, it is a concern of the subcommittee. It is something we would like to follow up. It is something we intend to follow up on prior to disbursement of these funds. I am hopeful that we can work together on that.

I understand it is not your job, but I understand you ought to have that information, and we ought to be aware of what the situation is there.

Mr. RUDDY. I will try to get you a better answer for the record. As far as I can say, I think the answer is yes, there is a substantial corruption problem in Zaire. How it compares with the corruption in other countries in Africa and other countries in the world, that I can't say, but maybe we can get you a more complete answer.

Frankly, I am a taxpayer, too, and I share that same concern that the money not go down the tube.

[The information follows:]

## CORRUPTION IN ZAIRE

The question of which country in Africa or the rest of the world is the most corrupt is, of course, a subjective and debatable one. There is little question, though, that corruption is a substantial problem in Zaire and an issue that has received critical attention from the United States and all major donors. AID is attacking the problems on two fronts. First, funds appropriated by the U.S. Congress are followed very closely by the AID staff to be certain that they reach the designated beneficiaries. The basic accounting standards required of an AID recipient are scrupulously followed in Zaire because corruption has been acknowledged, by donors and Zairois alike, as a severe obstacle to economic development. One method of dealing with this is by having many AID programs implemented directly through private voluntary organizations because they enjoy a good reputation. The Public Law 480 title I program has been limited to wheat as a commodity because it can be monitored and controlled through the continental grain subsidiary in Zaire. The counterpart funds generated from title I sales are very closely controlled and disbursed only through a joint counterpart secretariat in which the AID mission plays a significant role. All these initiatives have established the reputation of AID in Zaire as an organization which is concerned about the use of its funds and from which diversion is not condoned.

At the same time we have supported other donors in insisting upon honest accountability with independent checks and controls on earnings from parastatals, particularly in the minerals exporting sector.

## AFRICAN DEVELOPMENT BANK

Senator KASTEN. I don't want to just dwell on negatives, but the subcommittee has also received a number of reports, some of them confirmed recently by testimony from Secretary Regan, that the quality of the management in the operations of the African Development Bank leaves something to be desired. This is the cause of some concern because AID has spent a significant amount of money, funds basically that were allocated for technical assistance but I undertand they were supposed to go for different kinds of managment training and different kinds of assistance in the operation of the bank, and these funds for technical assistance were supposed to improve the management and the operation of the African Development Bank.

No. 1, could you give us your analysis of the management and operational abilities of that institution? And, No. 2, what has happened that the dollars we have spent have not seemed to have helped?

Mr. RUDDY. We are members, of course, of the African Development Fund. We are not actually members of the Bank.

Senator KASTEN. But we have been providing technical assistance through AID to the bank?

Mr. RUDDY. Yes; I will have to get that answer for the record, Mr. Chairman. I simply don't know. I can tell you this: In my visits to Abidjan, I do share your concern that the money that the United States has made available to the Fund is not at all reflected in the procurement done by the Fund. I was there with several businessmen who were visiting Abidjan and some other countries, along with Secretary Block and Secretary Baldrige, on a trade mission. This is not a point or observation that I made and is one made by businessmen, and one we have tried to take some action on.

The point is well taken. I will get some information on the other points.

Senator KASTEN. I am trying to get a sense of whether or not the money was misspent, misallocated. Maybe we can argue it would have been worse if we had not spent the money or given it for technical assistance.

It seems that there are going to be questions about increased participation in varying degrees with the African Development Bank, on our behalf, anyway, and we will have to get more involved. We may not join, but if we are to join, there may be some questions.

[The information follows:]

### AFRICAN DEVELOPMENT BANK

The AFDB group has set impressive goals for itself. The Bank's recently completed 5-year plan (1977–81) provided for an annual growth rate of 25–27 percent starting from very low levels. During the first 3 years, these targets were met or surpassed. Cumulative loans through 1981 brought total Bank group lending to over 2.5 billion units of account for the 1977–81 program, roughly five times the amount loaned in the previous 5 years (1972–76). During the 1982–86 period the Bank plans to achieve rapid growth rates. Heavy demands will be put on the Bank staff to achieve these targets, making expanded technical assistance an important factor in the Bank's ability to develop sound projects to meet these goals.

AID has provided about $14.2 million in technical assistance to the AFDB since 1968. An evaluation of the ongoing AID grant to the Bank, completed in 1980, concluded that U.S. assistance has had an overall positive effect on loan quantity and quality. Examples of successful loans which have followed United States—funded preinvestment studies are (1) construction of the on-shore pipeline and tankage facilities in Tanzania, and (2) construction of sanitary sewerage, stormwater drainage, and solid waste disposal in Sierra Leone. General areas where U.S. technical assistance has had the greatest impact are the following:

Five U.S. professionals working on the Bank staff have been instrumental in administering feasibility studies on behalf of the Bank, have contributed to the informal training of their African counterparts, and have helped bolster the Bank's professional staff during critical years of Bank growth.

$4.6 million in U.S. grant-financed preinvestment studies have led to an investment in Africa of $170 million by the Bank group, with further investment projected. To date, investment following AID-financed studies has amounted to 10 percent of the Bank's total lending (excluding loans for industry, development banks, power supply, and telecommunications) and 5 percent of African Development Fund lending. Availability of U.S. grant funds for these preinvestment studies has enabled the Bank to influence member countries to finance and implement projects of definite ecomonic and social significance and priority.

The Bank has recently established its own Training Center and plans to increase considerably the amount of training activity to be undertaken there in the next 5 years. U.S. assistance to the Bank has most certainly influenced this expansion of Bank training facilities as the United States has made training activities an important component of its technical assistance package.

The AFDB is aware of weaknesses in its management capabilities and has been working closely with a group of U.S. consultants to improve Bank efficiency. A series of studies has already been completed and additional work is currently underway.

To build upon AID technical assistance to date and to complement the recent AFDB management studies, AID is planning a 5-year fiscal years 1983–87 $15 million package of technical assistance to the AFDB to strengthen its institutional capabilities. The project would assist the Bank to: (1) create a staff career system which will attract greater numbers of qualified African and non-African employees, in approximate proportions of two-thirds and one-third, respectively; (2) improve the Bank management data system so that loans may be processed and maintained more quickly; and (3) improve the functioning of critical Bank units, such as the central programing unit, the Planning and Research Department, the evaluation unit, and the Training Center, which will add to the improved functioning of the Bank.

### SAHEL DEVELOPMENT PROGRAM

Senator KASTEN. Last year we reduced funding for the Sahel development program based on the audit reports which showed widespread mismanagement of the Sahel development program frankly by most of the countries that were involved in that program.

Are you confident that these conditions have improved. Have you requested the Inspector General to go in and take another look to review or update the situation there?

Mr. RUDDY. To answer your first question, yes, I feel pretty confident now that we have gotten the kind of accounting problems that faced us the first time under control. I think AID is in control of the Sahel development program. I don't think there is any question but that when this program was put together to meet the emergencies that were faced at that time, a lot of the work that might ordinarily be done was not done.

There was a grand design; it had some wonderful ideas; but the kinds of practical problems—accounting, tracing of sums, et cetera—were not provided for.

I think we came a cropper there. We have now established along with the Department of Agriculture, training programs based on an accounting system that can be adapted to the needs of all the Sahelian countries. We are reviewing all host country accounting systems right now for adequacy. That is one of the reasons that the actual obligation rate for the Sahel this year is a little slower than it might otherwise be, because we are requiring certification of every single accounting system, and it has to be certified by me personally before we can have those funds obligated.

These are the kinds of things that we are doing.

We are also planning a 3-year, $4 million regional and financial program or project to carry this whole accounting, to make it a green and red system throughout the Sahel.

Now, in answer to your second question, have we asked the Inspector General to go out and take another look, no, we haven't, but we did have the controller's office just recently come back, after having gone through the Sahel and taken a look at the various accounting systems they have in place. We will be very happy to give you a copy of the report. It was very high, very upbeat. If it would be wise to have the Inspector General take another look, we will do that, too.

Senator KASTEN. I am pleased. I was just asking that for the purpose of interest, because frankly I think it is a program for which in general there is widespread bipartisan and bicameral support, especially in view of the tremendous inefficiencies and waste and lack of accurate accounting. It has lost the kind of congressional support that it generally would have, and I think deserves.

If you can provide us with a copy of the report you just referred to by the comptroller, I think that might be sufficient.

[The report follows:]

UNITED STATES INTERNATIONAL DEVELOPMENT COOPERATION AGENCY

Agency for International Development

APR 1 1982

MEMORANDUM

TO: AA/AFR, Mr. Francis Ruddy

FROM: M/FM, Curtis W. Christensen

SUBJECT: Mission Director Certifications: Financial Management in Sahelian Organizations

I have just returned from Dakar where I met with Mission Controllers assigned to posts in West Africa. Controllers from Sahelian countries were asked to describe procedures followed by their Missions in reviewing financial management practices of AID-assisted recipient organizations. Such reviews have been performed to provide Mission Directors with information necessary for "Certifications" which have been required by the Africa Bureau for new or continuing project assistance within the intent of Section 121(D) of the Foreign Assistance Act.

Nearly all of the Sahelian post Controllers reported very positive results from efforts to review and improve the financial systems of AID-recipient organizations. Former Peace Corps volunteers and retired AID Controllers have been recruited under contractual arrangements to augment Mission financial management staff; new accounting systems have been developed and implemented; recipient organizations have hired accountants; and, perhaps most importantly, Mission Directors, Project Officers and Controllers have become acutely aware of the joint responsibility to examine and periodically review the financial management practices of AID-assisted organizations.

Country-specific information is included in the following paragraphs. I would also like to note actions taken by the Missions and FM in response to an IG recommendation that attention be given to additional financial management staffing requirements in the Sahel. In addition to the contract assistance which has been obtained by the Missions at their initiative, we in FM have given priority attention to Controller assignments in Sahelian countries. Our efforts have been quite successful in spite of the need to provide rather extensive language training and the difficulty of overcoming assignment impediments such as the lack of adequate schools for dependent children.

Information concerning the certification procedures and staffing follows:

Senegal

Mission efforts to review and improve the financial management systems of recipient organizations began at the time that the IG Audit in Senegal identified deficiencies, and as a consequence, much had been accomplished at the time that the certification requirement was imposed. Senior Mission Controller Ray King recruited two former Peace Corps Volunteers to help initiate, install and monitor accounting systems which he designed for several projects. King completed two tours in Senegal in December, 1981 and has been transferred to Zaire, but before his departure, he prepared a comprehensive report on "Host Government Accounting Systems in Senegal"

Another experienced and very capable Controller, Doug Franklin, completed language training in December and has now replaced King. The review procedures initiated by King have continued, more projects have been certified, and the former PCV's will perform follow up visits for certified projects at regular intervals. The approach to the certification process has been methodical and thorough. The Mission Director has relied upon and accepted the recommendations of the Controller in the certification process.

### Mali

The Mission in Mali has included a condition precedent in newer projects and has issued PILS for ongoing projects to advise recipient organizations of the financial management conditions which must be met. Members of the USAID Controller's staff found in visits to recipient organizations that accountants were not maintaining adequate records and that it was necessary to set up records for some of these organizations. Acting Controller George Jenkins reported that three of the four projects not yet certified will probably be certified but that the MILS-MOPTI project may not be certifiable. No 1982 obligations are planned for this latter project, but it has also been necessary to suspend further payments to this organization pending remedial action on deficiencies. Rolland Deschambault, a senior Foreign Service Officer and one of our most senior Controllers, has been transferred from Zaire to Mali and may be expected to review the certification status of MILS-MOPTI and other projects in mid-April following his arrival at post.

When Deschambault arrives on assignment, the Mission Controller's staff will include three experienced Americans. A retired AID Controller, Arthur Milot, has also provided services in reviewing recipient financial management practices. Finally, we have suggested that the Mission consider contracting for the services of the CPA spouse of one our American staff members. I am pursuaded that the Mission has acted on the solid advice of a capable Controller's staff and that Rollie Deschambault will amply verify my impressions upon his arrival.

### Niger

The Mission in Niger has insisted that an accountant be assigned to each project by recipient organizations and has recruited a retired AID Controller, Jacques Carbonel, to serve as the accountant for a health project. The Mission has attempted to move to a reimbursement (as opposed to advance payment) basis as the preferred method of financing. When the reimbursement basis is not practical, the Mission provides 30 day advances with a requirement that adequate documentation be submitted with subsequent requests for reimbursement. The USAID Controller has set up accounting systems for the ten major projects.

The certification procedure in Niger is based on reviews conducted by two capable, direct hire Americans in the Controller's Office. USAID Controller Boyd Whipple then provides the Mission Director with a report on the financial management status of all bank accounts maintained for individual projects together with his recommendation for certification. The Mission Director sends the report to the responsible project officer to obtain his opinion.

In addition to a very capable three-man American Controller's staff, and recruitment of Mr. Carbonel, the Mission has contracted for another retired financial management officer, Richard Quirk, and the USAID Controller has arranged for a personal service contract with another American at post to perform "end use checks".

It seems to me that the Mission in Niger has undertaken an amply conservative approach and that perhaps the most significant and apparent benefit has been the recruitment of project accountants by the several AID-assisted organizations.

### Upper Volta

John Davison, the Controller-designate for the Upper Volta, has just completed six months of French language training and is awaiting assignment orders. Davison has been one of our senior Controllers in Latin America and was specifically selected for the Sahel as part of our priority placement efforts. The Acting Controller, George Barwicke, and the third American member of the Controller's staff, Matthew Horween, have been engaged in extensive assessments of the financial management practices of AID-assisted organizations. Horween has been engaged in this effort continuously since November 17,1981.

Barwicke reported that the National Accounting System utilized in the Upper Volta cannot be adapted to accommodate AID accounting requirements and that it has been necessary for the Controller's staff to introduce new systems. The Mission has required that an accountant be obtained by recipient organizations for all new projects.

Barwicke also reported that seven of twenty-four projects in the Upper Volta have not yet been certified. The Mission Director has overruled the Controller in two instances in which the Controller opposed certifications, but the Director has subsequently de-certified one of the projects and in the other instance, certification applied to a project which will end in April 1982 The Acting Controller agrees that the Director's opinions have been sound. I believe that the determined efforts of the Controller's staff have led to thorough appraisals and appropriate systems improvements. The certifications of the Mission Director are soundly based on the combined assessments and opinions of project officers and competent financial management personnel.

## Mauritania

Controller Gene Westlake reported that it is common practice for the Mission in Mauritania to establish revolving funds for project use and to look to AID contractors for administration of such funds. Contractors are then required to provide detailed documentation in support of revolving fund reimbursement requests. Seven projects have such contractor--administrated revolving funds and in another instance, a PASA employee co-signs checks drawn on a separate bank account.

According to Westlake, the Regional Crop Protection project and the Rural Medical Assistance project entail payments directly to the Government of Mauritania. We were told that these two projects are now under review and that new certifications will be required inasmuch as certifications submitted in December 1981 were not submitted in the correct format.

My impression is that the financing procedures in Mauritania do not generally require accountability by indigenous organizations and host government institutions and that the certification requirement does not have the same relevance as in other Sahelian countries. If this impression is incorrect please let me know.

## The Gambia

Mission Controller Mike Bradley reported that organizations in the Gambia follow British accounting procedures, that he and a project officer have performed tests of the procedures and that the Gambian Auditor General has agreed to conduct annual audits of the AID-assisted organizations.

## Summary

I believe that Mission Director certifications may be relied upon as evidence of at least minimally adequate financial management systems within AID-assisted organizations in the Sahel. No certification process can possibly assure a fail-safe system of accounting and reporting, nor take the place of audit, but Missions are conducting proper assessments and in many instances, Missions are providing direct technical assistance in the design and implementation of accounting procedures. There is also considerable evidence that the recipient organizations have accepted the importance and urgency of the systems improvement issue and have recruited accountants to administer the revised or newly installed systems. The Missions have recognized that the certification process is not a one-shot or static effort and have established procedures for recurring reviews. Finally, I believe that our priority efforts to assign American financial management staff in Sahelian countries together with Mission efforts to obtain additional assistance under contracts has amply fulfilled the AID financial management staffing requirements in the Sahel. Mission Directors and Controllers have also recognized that a greater percentage of the Controller staff time must be devoted to project-related financial management as opposed to some of the housekeeping chores that are often relegated to the Controller by default.

If you need further information or if I may be of assistance in future certification inquiries, please call.

## POPULATION PROGRAMS IN AFRICA

Senator KASTEN. You are planning a program of 20 percent reduction in the overall population planning program, according to your numbers, although your overall program goes up by roughly 7 percent. Why is that 20 percent reduction occurring in the population program?

Mr. RUDDY. Most of the bilateral assistance programs in Africa are relatively new and require most of the funding up front, in the start-up period, when they are forward funding for several years.

We were initially planning in fiscal year 1983 to fund $4,500,000 for the Kenya program, but at the suggestion of the House Appropriations Committee we accelerated development of that project so that it now appears that it will take place in fiscal year 1982.

Senator KASTEN. The increase in Kenya will take place in AID?

Mr. RUDDY. In other words, ordinarily we would have had $4,500,000 more than what we have down for fiscal year 1983 in the congressional presentation. At the suggestion of the House Appropriations Committee, that program was moved up to fiscal year 1982.

We are prepared to increase funding for population activities where host countries request it, and the proposal is technically sound and supported by the proposed recipient. Most countries that could fall within this rubric are Burundi, Somalia, Uganda.

Senator KASTEN. Increases in population programs?

Mr. RUDDY. Yes.

## ZIMBABWE

Senator KASTEN. Could you give us a current assessment of the political situation in Zimbabwe? We would be particularly interested in knowing how well the private sector in that country is managing, or maybe even flourishing, with the rate of European migration. Do you have any sense that this may be a general overall economic picture for Zimbabwe?

Mr. RUDDY. Yes, Mr. Chairman. As you know, we propose giving $75 million in the ESF each year for 3 years through fiscal years 1982, 1983, and 1984. Of the $75 million in fiscal year 1982, $40,300,000 will be used for the CIP program which will benefit the private sector in Zimbabwe. The government of Zimbabwe has said that in its development plans it intends to rely on private capital for 45 percent of its development needs, so that is a very substantial statement.

I was in New York about a month ago with Dr. Crocker, and we participated in an American Bar Association African-American Institute seminar on Zimbabwe, where they had American businesses that had invested in Zimbabwe and a lot of countries that had not, and Dr.

Sizzaro was there, and he was talking about the prospects for business in Zimbabwe. His point is that apart from the "isms," Zimbabwe was a very pragmatic government, that business should go there; they should find out for themselves what the conditions were like. He basically was very upbeat.

A representative of Heinz was there, and, as you know, Heinz is contemplating a substantial investment in Zimbabwe. I don't think that has taken place yet, but it still seems to be go. The representative from Union Carbide was not completely without some reservations, but maybe that is because he was there and knew the system a bit better.

A few weeks ago you saw the statement by President Mugabe in the paper along a Marxist leftist line at a press conference. We tried to get the text of that. That seems to be a little out of line with the general thrust of Zimbabwe's direction. We certainly hope it is. We are still fairly confident that Zimbabwe exists as a very important market for our own strategic interests, and we think that despite the speech on Karl Marx and things like that, we think that is kind of cosmetic, and we are still hoping that we have no reason to despair.

On the question of white flight, I do know that there are organized procedures whereby the government of Zimbabwe will purchase certain lands from departing white owners, and I believe in the tribal trust areas in a very orderly due process kind of way. The thing that struck me when I was there in Mutarara is that it was pointed out to me the various whites who were returning. I can't tell you that it is 50/50 or it goes one way or the other. There seems to be considerable movement in the ingress direction.

Senator KASTEN. You are confident then that the private sector will remain strong and will have the opportunity to continue to develop?

Mr. RUDDY. I am not confident. I am hopeful. Like everybody else, I saw that thing in the paper. That scared me very much. I think it does not make a lot of sense, given everything else I have seen, for this new departure to take place. I surely hope it can continue the way it is.

Frankly, we have to take a hard look at that right now. Those are very strong statements. I hope it is just a question of translation or something like that.

Yes; I think it makes us take a very hard look.

### TANZANIA

Senator KASTEN. You are requesting a level of funding for Tanzania at about the same level as last year. This comes at a time when a number of the people in the field agree that their economic program, which is clearly socialist oriented, has been a failure—I would say an utter failure. It also comes at a time when Tanzania has not reached an agreement with the IMF and at a time when the government there continues to refuse to take the steps necessary to improve the economy.

There have been suggestions made by a number of multilateral banks and other people. Under these circumstances, why are we continuing the program there?

Mr. RUDDY. I think what you have in a situation like that—and I discussed this with our Ambassador there—is that the first reaction might be to do exactly what you are getting at, that we ought to cut them off because the economic policy is going nowhere; it is a continual situation of going back to square one and starting again always on a kind of Utopian model, which does not make any sense and which leads to failure.

I traveled around through the Tabora and Arusha area and had a good opportunity to meet a lot of people in Tanzania. I could add to what you said, the party control throughout the country in its villages I find scary. Also, in talking to the various ministers and people in the government, there seems to be an awareness of just what you are saying. Sometimes it seems that the only person that isn't aware of it is the President.

We think that if we stay there at these levels, which are modest, that maybe as the economic dawn breaks on the country, we will be there and maybe have some influence.

We are having some influence right now. Our Ambassador comes from Westinghouse. He knows the real world; he is very tough on policy, and he is making some inroads there. I think that allows him to continue to do it. I think that is the reason we are taking that course. We think that it is a good bet, not that what Tanzania is doing right now is so great, but we think by having a good man like Dave Miller there and having some modest support, maybe we will be able to make a difference.

Senator KASTEN. I hope you are right, but I want you to know that there is concern in this subcommittee, and I think it is fair to say in the Senate and the House of Representatives, as well, about the general trend and the seeming lack of ability to take suggestions and move forward in a positive way, even to indicate that they would like to try.

## SUDAN

What is the situation in the Sudan? Can you give us an update on the efforts that some of the multilateral/multinational groups are making to turn the economy of Sudan around? It seems like the immediate emergencies have lessened somewhat the crisis atmosphere, the economic and military crises, but it is still of great concern, I know, to the Egyptians and to others in the region.

Mr. RUDDY. First of all, I think Sudan is simply the most difficult situation we have in Africa. I don't think anybody can say right now how it is going to turn out. There was a Firestone Tire meeting in February of this year and over $300 million was raised, in addition to the IMF drawings. That was a concerted action involving the United States, France, Italy, Japan, the Saudis. The Saudis themselves have actually pledged and come forward with $100 million.

Senator KASTEN. I think that is significant. It is especially true because there are also some political questions there too, as you can imagine.

Mr. RUDDY. The process right now is that the IMF is reviewing the conditions which are required and will continue to have IMF banking going on right now. Later this month this $80 million is due by Sudan to the Paris club. It is a very serious situation.

The vice president of the World Bank is in Sudan right now and may actually be returning, may have returned.

The idea is that we thought maybe we could have a consultative group in Paris on Sudan this summer. I am informed it is not likely to be until the fall because of the difficulties of getting things together, but they have an external debt of somewhere in the neighborhood of $5 billion. If there were no war at all, Sudan would be in big trouble.

The Libyan threat is a very real thing. It is something that concerns us very much because even without that, Sudan has a debt/income ratio of somewhere around 60 to 70 percent. It is a tremendously economically sick country. We are working together on that. I think there has been, I won't say "unprecedented" but unusual cooperation among the donors, the Arab, European, and the Japanese. The idea is to see if we can treat it in the kind of emergency situation that we treated Ghana some years ago.

In terms of willingness, in terms of cooperation with donors, that part has been very good, but the problems are tremendous.

Senator KASTEN. Thank you very much for your testimony.

I appreciate very much your testimony and also your candor in frank, straightforward answers to some of these very difficult questions.

## SUBMITTED QUESTIONS

The record of the hearing will remain open for 2 weeks, during which time Senators will have an opportunity to submit additional questions. We hope you can get those answers back to us.

We are happy that you didn't have to use your two sons to bail you out. We thank you very much.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

## QUESTIONS SUBMITTED BY SENATOR KASTEN

### PERSONAL VIEWS ON POPULATION PROGRAM

Senator Kasten: I feel I must ask this next question, although I want to assure you it is not meant to embarrass you. What are your personal views with respect to A.I.D.'s population program? The committee has received some reports of concern that your negative attitude is adversely affecting the population program in Africa.

Mr. Ruddy: The U.S. Government's role in providing assistance in family planning is quite clear in the Foreign Assistance Act of 1961, as amended. I assure you that A.I.D.'s family planning activities in Africa are being provided in accordance with that law. Single issue groups have characterized my attitude toward population programs as negative because three out of six proposed population projects have been disapproved during my first year in the job. Let's look at the record. One project was disapproved because the medical standards to be applied under this activity, along with costing of the project (among other basic problems) were not addressed. In particular, I wanted to know whether the medical standards and procedures were the same as required for consumers in the United States, and if not, why a lower standard for Africans. If there were risks involved, who was deciding whether to accept them, the Zairois or bureaucrats in Washington? Another project was turned down because the International Planned Parenthood Federation had given very low marks to the PVO proposed to carry out the activity, and the question of recurrent costs was not even addressed. It was the worst prepared project paper I have ever reviewed at A.I.D. The third project was not submitted for formal review by our technical staff in Washington because they considered it so poorly conceived and written. In the meantime, as part of an overall Agency review, I reviewed all previously approved projects and all such population activities were permitted to proceed on schedule. I do not intend to approve any programs for implementation, population or any other kind, unless they are technically sound, acceptable to the host government, and a good use of U.S. taxpayers' money.

### ASSISTANCE TO KENYA

Senator Kasten: There are some who feel, given the economic situation, that the level of the program for Kenya is not enough, and that they need somewhere between 5 and 10 additional millions in Fiscal Year 1983. What is your view?

Mr. Ruddy: The Kenya program for FY 83 compares with FY 82 as follows:

($ millions)

| Year | Development Assistance | Food for Peace | Economic Support | Total |
|---|---|---|---|---|
| FY 82 | 24.3 | 19.3 | 10.0 | 53.6 |
| FY 83 | 28.0 | 17.9 | 30.0 | 75.9 |

I feel that the program at these levels is tightly focused to obtain a significant impact and allows us to provide the oversight needed for the disbursement of these funds in a responsible and prudent manner. In my view, the present levels represent an adequate increase.

## LIBERIA

Senator Kasten: Recently the Committee received a reprogramming request increasing the funding available to Liberia by $19 million. I believe the bulk of these funds are to be used by Liberia to purchase oil.

Do you anticipate that U.S. funding of these oil purchases, which has been going on now for some time, will become a permanent feature of our assistance program in that country?

How does the overall situation in Liberia compare with a year ago?

Mr. Ruddy: These funds provide Liberia with the critical additional foreign exchange it needs to help maintain itself through FY 1982. The first $16 million of ESF provided earlier this year was used to help meet the GOL's payments for oil imports and other international obligations through December 1981. The additional $19 million is needed to meet a shortfall in the GOL's financial requirements through September 1982. The funds will be deposited in a GOL account in a U.S. bank to meet its off-shore payments needs and possibly budgetary shortfalls. An equivalent amount will be deposited by the GOL in a special account in Monrovia. Disbursements from this account will be jointly approved by the USG and the GOL and will be used chiefly for development activities within its approved budget. I am afraid the direct grant procedure will be a feature of the Liberian future for the next year or two.

Liberia is still going through a critical transition period. The road to recovery is difficult and may be longer than first expected. There has been little economic progress over the past year. But Liberia is a resource-rich country which will continue to attract outside investment provided the political and economic environments are right. For example, the new Ministers of Economic Affairs and Finance are highly competent and are making a sincere effort to come to grips with the country's economic problems. With help from outside and good domestic policies, Liberia's economic prospects can be brighter by the mid-1980's. Its need for outside assistance can be much reduced accordingly. We are currently providing technical assistance toward accelerating their recovery. To help rebuild the Government's economic and financial management capacities, we will soon provide long term and short term advisors and training in customs administration and in budget management and expenditure controls. In addition, a high level public finance consultant is scheduled to go to Liberia this summer for a few weeks to review the GOL's financial situation and recommend corrective measures. To help redirect development efforts toward increasing production in its primary sector, agriculture, we are currently engaged jointly with the IBRD in a sector assessment. This will also serve as informational background for a study and consulting visit to Liberia later this year by a Presidential Agricultural Task Force undertaken as part of the President's initiative at the Cancun Summit last October.

Although the Liberia economy will remain extremely fragile in the short term, there are signs the situation may improve in the future. Recovery in the prices of the country's major exports is expected to occur over the next several years. Iron ore and timber demand are forecast to remain slack for the immediate future but recovery of major export levels is considered likely during the second half of the decade. Rubber, coffee and cocoa export prices, however, could recover before then, as they are less directly linked with productive economic activities of the developed economies.

In the medium term the Liberian economy, which is based soundly on private enterprise, may well benefit from major new investments in oil exploration, iron ore and uranium. A World Bank off-shore seismic survey was completed recently. The GOL is now selling exploration rights for crude oil and off-shore exploration is to start shortly. If exploitable deposits of sufficient magnitude are found, the revenue situation could drastically improve in the medium term. Discussions are well advanced regarding a joint iron ore production investment exploiting deposits in Guinea which would be processed and shipped through existing facilities in Liberia.

## IG AUDITS IN AFRICA

Senator Kasten: The Africa Bureau has received more adverse Inspector General reports than any other -- although in fairness I should quickly add that the conditions A.I.D. works under in Africa are certainly difficult.

Nonetheless, can this Committee have your commitment that you will keep on top of these recommendations, making sure that they are carried out in an expeditious fashion?

Mr. Ruddy: I believe the audit is a valuable management tool to improve program performance. To emphasize this and to give my views on the audit process and our responsibilities thereunder, we have produced a forty minute video cassette tape which has recently been viewed by Africa Bureau staff in Washington and distributed overseas to all A.I.D. missions in Africa. This tape records a panel discussion, co-chaired by A.I.D.'s Inspector General and me, on the audit compliance function with emphasis upon its legal context within the Federal Government, procedural requirements within the context of A.I.D. operations, and the value of audits to A.I.D. program managers in their ongoing efforts to allocate A.I.D. resources economically and more effectively.

Also, since November 1981, I have written four memoranda on audit matters to the A.I.D. principal officer at all Africa field posts. In these, I have shared my concerns about their responsiveness in correcting audit-disclosed deficiencies and, as well, I have included suggestions and other systematic guidance for pre-audit review and other preventive measures which they should take to preclude deficiencies from occurring.

Quite possibly, the foregoing effort has had some salutory effect in that the number of open audit recommendations in our Africa Bureau has dropped from 92 as of September 30, 1981, to 62 as of March 31, 1982. During that six-month period, 43 new audit recommendations were added, and a total of 73 were closed. I am encouraged by this improvement and my commitment will continue toward further lowering of our deficiency profile in the period ahead.

## QUESTIONS SUBMITTED BY SENATOR INOUYE

### LIMITED GROWTH OF AFRICAN PER CAPITA GNP

Senator Inouye: Mr. Ruddy, you paint a very grim picture of economic development in Africa. What would you say is the single most significant factor which has limited average annual growth in per capita GNP in Africa?

Mr. Ruddy: A combination of factors is limiting the growth of per capita income in Africa. Simply stated, income growth has slowed in Africa because, for much of the continent, the aggregate population has expanded to a point where traditional farming technologies can no longer produce the necessary food. The institutions and policies in Africa have so far not been up to the task of promoting widespread technical change and the transition effort has been seriously hampered by large increases in the cost of key imports and capital which took place during the 1970's.

Senator Inouye: Does it now appear that this will continue to be the dominant factor in the decade of the 1980s?

Mr. Ruddy: If African governments implement policies that provide incentives for farmers to produce more and strengthen institutions that develop and disseminate improved production technologies to farmers, we should see modest improvements in per capita income in the 1980s. Of course, this assumes that the cost of key imports and capital will not increase further, and that population growth rates will begin to decline.

Senator Inouye: Does A.I.D. have an Africa-wide strategy for addressing this problem? Clearly no single solution is appropriate for the whole of Africa, but I wonder, is there sufficient coordination of A.I.D. programs to take advantage of the strengths of individual countries?

Mr. Ruddy: In response to the deteriorating food situation in sub-Saharan Africa, A.I.D. has implemented an assistance strategy that has as its centerpiece the increased production and improved distribution of food commodities. This strategy focuses A.I.D. assistance on improving African government policies, building institutions to develop and spread new agricultural production technologies and strengthening local level farmer organizations.

A.I.D. assistance programs in individual countries are coordinated with host country and other donors by resident A.I.D. officers. Regional and Africa-wide programs and projects are adequately coordinated by A.I.D. officers assigned to A.I.D.'s Africa Bureau and its regional officers in West and East Africa.

### AFRICAN RECEPTIVITY TO POPULATION PROGRAMS

Senator Inouye: Rapid population growth is having a significant negative impact on the prospects for development in Africa. Yet, less than two percent of the development assistance proposed for Africa is for population assistance. Why is this? Do you see any signs of greater receptivity on the part of African governments?

Mr. Ruddy: It is true that only a very small part of AID development assistance is presently programmed for population activities in the Africa region. The Africa Bureau is firmly committed to moving ahead with population programs in Africa in accordance with the requirements of the Foreign Assistance Act. It is necessary to emphasize that African nations themselves must WANT our assistance, and must be PREPARED to receive it. That is not only what the law requires, but we have learned through hard experience that money must not be committed too early, or it will be wasted. I would like to assure the Committee of our full intention to carry out the intent of Congress as expressed through the Foreign Assistance Act, while assuring the tightest design commensurate with expeditious project development and the prudent use of taxpayers' money.

Africa is comprised of many countries and the population issue must be addressed country-by-country, and frequently within sections of a particular country. This process is further complicated by a sparsity of reliable data in demographic and migration trends, the relationship of these trends to agriculture, land availability, etc., and the virtual absence of reliable data about contraceptive use in the whole of Sub-Saharan Africa.

Information I have seen suggests a very low contraceptive use throughout Africa. This would appear to be due to various causes. In one country it may be that various interrelated cultures encourage births. For example, tribal power depends on the number of its members. Rural women who are responsible for working the fields and house work need children to help with their workload. When men leave to go to the cities women take over tending cattle. Against this kind of background many children increase the odds that one of them will succeed and bring economic benefits to the whole family; in another country Islam may be a factor which inhibits expansion of family planning services; in many countries, the desire for large families is shaped by centuries of tradition which places a high value on children.

What all this amounts to is that African attitudes vis-a-vis population change and redirection remain politically delicate and culturally sensitive. Clearly, the population question in Africa is many sided and a part of long adaptive strategies of survival. Some African countries encourage births. Some take the position that their demographic trends will follow those of industrialized countries; namely, that birth rates will decline as development proceeds and as infant mortality and disease rates begin to fall. This requires a fully integrated strategy that reduces the vulnerability of food production, reduces infant mortality, provides improved nutrition and health services, and expands education and employment opportunities. In order for such programs to be effective population programs must be viewed as a high priority concern not only by us, but by the host governments. This must be seen as a major concern of theirs and not an issue which the developing world is imposing upon them as a condition for donor assistance. We have encouraged African governments to integrate population growth concerns into their development strategies and plans and are prepared to help them when requests for assistance are received.

The Africa Bureau is prepared to increase funding for population activities where host governments request it and the proposals are technically sound and supported by proposed recipients. As Africans themselves tell me, population programs are not simply a matter of pouring more money and contraceptive devices into African countries. The Agency recognizes Congress' intent that development planning, including population control measures, is ultimately the responsibility of each sovereign country and that United States assistance shall encourage and support but not dictate self-help efforts essential to development efforts.

With reference to signs of greater receptivity on the part of African governments for population assistance, I would note that studies which I read recently said that in Africa, in particular, host countries give low priority to the provision of family planning services and that almost all countries surveyed in the study "favor or require the integration of family planning assistance with maternal child health or other health programs." In the case of UNFPA, half of its family planning assistance represents support for health activities unrelated to family planning. The study contrasts African countries where population policy generally places little or no emphasis on family planning with Asia where the opposite is said to be true.

A well-known African Ambassador supported that conclusion publicly as follows: ". . . And without wanting to bore you with the population issue, it is more realistic for us to revolutionize our agriculture and industries than a campaign of birth control because the present situation is as follows: rural Africa produces many children so a few can live. Urban Africa facing the economic strains of modern societies can no more afford many children. The net result is that an average farming family which had 10 children may end up with only three or four adults. All the others would have died. Will you have the heart to tell such a mother to limit the number of her children? But I will have the heart to tell the farmer to use oxen, tractor, fertilizer and modern methods of farming to increase his food production. . . ."

## RAPID PRESENTATIONS

Senator Inouye: I have been impressed by the RAPID presentations. Have any African leaders seen this presentation?

Mr. Ruddy: Yes, several African leaders and key government officials have personally viewed the presentation and/or referred to it with respect to making major policy decisions Let me list for you some of those leaders and government officials.

CAMEROON, July 1979:

Director and Assistant Director of Planning, Ministry of Economy and Plan;

Assistant Director of Social Development, Ministry of Social Affairs;

Officials of Ministries of Labor, Health, Public Works and Social Services.

President Ahidjo quoted extensively from RAPID presentation during the March 1980 meeting of the Union Party Congress where he outlined economic and social policy thrusts for the next five years.

SENEGAL, January 1980:

Minister to the Prime Minister;
Minister of Public Works, Employment and Work;
Director of Economic Affairs, Ministry of Foreign Affairs;
Director of Cabinet, Ministry of Higher Education;
Director of Forecasting, Ministry of Economy and Finance;
Director General, Ministry of Education;
Director of Ecole Nationale;

Other (30) senior officials of the Ministries of Plan, Health, Education, Culture, Information, and Department of Statistics;

Representatives of the Presidency, National Assembly, Economics and Social Council, nine Ministries, and the Planning Directorate at the Second Annual Meeting of the National Population Commission.

TANZANIA, February 1980:

Prime Minister;

Ministers of Health, Agriculture, Manpower, Lands, Housing and Urban Development, Development Planning, Capital Development, Water, Energy and Minerals; and senior officials of these ministries.

RWANDA, March 1981:

President Habyarimana;
Minister to the Presidency;
Other officials (about 200).

MALAWI, May and June 1981:

Minister of Education;
Minister of Forestry and Natural Resources;
Minister without Portfolio;

Principal Secretaries, health professionals and academics; other officials (about 150).

BURUNDI, January 1981:

Minister of Interior;
Minister of Health;
Minister of Plan;
Minister of Energy, Mines and Public Works;
Minister of Youth and Sport;
Directors-General of several ministries;
Mayor of Bujumbura.

SWAZILAND, May 1982:

Prime Minister Prince Mabandla;
Minister of Finance;
Minister of Agriculture and Cooperatives;
Minister of Health;
Minister of Works, Power and Communications;
Assistant Minister of Commerce, Industry, Mines and Tourism;
Acting Secretary to the Cabinet;
Permanent Secretaries (7).

NIGERIA, May 1982:

Chief Alhaji Okene, Chairman of the National Population Commission;

Commissioners (12), Executive Director, and Secretary of the Commission.

## CAN DONORS REVERSE NEGATIVE TREND?

Senator Inouye: If the population of Africa continues to grow at its present rate, is there any hope that development assistance -- from all donors -- can reverse the negative trend in per capita food production?

Mr. Ruddy: No. Development assistance is not the long-term answer. The ultimate solution to Africa's development needs are the African nations themselves: what they commit themselves to do to bring about their own development. Foreign assistance can help in the short term, but ultimately African nations will control their own destinies.

The primary goal of every African nation is to provide adequate food for its citizens. Food production is the priority of priorities for African nations (cf. the Lagos Plan). Given serious foreign exchange constraints in all but a few oil producing nations, growth in domestic food production is a must. Sub-Saharan Africa is the only region in the world where food production has declined over the past two decades, and this trend continues. In 1980, of the 26 countries in the world which had major food deficits, 22 were in sub-Saharan Africa. Consequently, both the economic and human costs of this critical situation are extremely great. Thus, it is imperative that A.I.D.'s first priority be to assist in reversing this declining trend. Furthermore, African leaders recognize the U.S. as the world leader in science and technology related to food and agriculture and often seek U.S. technical assistance over that of other potential donors. Given the extent and urgency of the food deficit problem, the Africa Bureau gives food production and distribution higher priority in funding and in personnel than other development needs in this region of the world.

From analyses of the food problem by the U.S. and other external donors and of the comparative advantage of A.I.D. and other U.S. institutions, both public and private, three major components of a Food Sector Assistance Strategy emerge. These are:

1. Assist in creating national policies and programs that give farmers adequate incentives to expand agricultural output, especially of food.

2. Assist in building self-sustaining institutions that provide appropriate technology, inputs and services at the time and in the quantity necessary for effective production and distribution of food products.

3. Support institutional and human resource development programs that provide the means for greater participation by farmers in the development process, including policy planning, to build popular support and acceptance of programs necessary for self-sustaining growth.

Over a year ago, we reassessed our assistance program in sub-Saharan Africa and found that a disproportionate share of our portfolio was not directed at addressing the deteriorating food situation. Relatively little attention was being given to encouraging African governments to identify and implement national policies and programs that would give farmers adequate incentives to produce more food and other agricultural commodities.

Furthermore, many of our projects directed at increasing food production strongly assumed that an appropriate package of improved production technology existed that would significantly increase farmers' yields; or it was wrongly assumed that adequate institutions to develop new technology and disseminate that technology and production inputs were in place. And in many instances, little or no attention was given to involving farmer-producers in decision making that impinged on their lives and livelihood through the development of farmer organizations such as primary cooperatives.

This Administration has commenced to redirect our assistance program. The Bureau's Food Sector Assistance Strategy has provided basic program and project guidance for field missions. All field mission program and agricultural project documents submitted to AID Washington for approval are reviewed to assure that they conform to the Assistance Strategy. Additional policy and strategy guidance for field missions is being prepared now in related areas, e.g., livestock development, food aid, nutrition, input subsidies and agricultural research. Also, we are upgrading our staff that implements the food and agricultural programs through close collaboration with the Science and Technology Bureau and BIFAD.

We believe that this redefinition of strategy and the programmed increases in financial and technical assistance to Africa, along with other donors' contributions, will substantially improve agricultural output and thereby increase per capita production.

## DO AFRICANS WANT FAMILY PLANNING?

Senator Inouye: With reference to family planning, you state in your prepared remarks, "It is a matter of what people want, because A.I.D. cannot force countries to accept population programs." Is it really a question of what people want, or is it a question of inability to deliver services?

Mr. Ruddy: FAA Section 104, in summary form (1) mandates the pursuit of population planning programs and activities and (2) recognizes a nation's sovereignty in determining its own population growth policies and provides for voluntarism in accepting population planning assistance.

In essence, the law provides for a balancing of interests. On the one hand, it establishes a U.S. policy of controlled population growth and USG pursuit of encouraging other nations to adopt a similar policy. On the other hand, the law recognizes sovereignty and political and religious sensitivities of the people and nations. Certainly, there can be no force or coercion practiced on a foreign nation, but the statute requires a pursuit of the goal of controlled population growth through various family planning programs. I guess I would be enthusiastic in seeing that countries deal with the population issue in ways sensitive to human values and dignity.

As to what people in Africa want, studies which I read recently said that in Africa in particular host countries give low priority to the provision of family planning services and that almost all countries surveyed in the study "favor or require the integration of family planning assistance with maternal child health or other health programs." In the case of UNFPA, half of its family planning assistance represents support for health activities unrelated to family planning. The study contrasts African countries where population policy generally places little or no emphasis on family planning to Asia where the opposite is said to be true.

Under the Foreign Assistance Act, the provision of family planning services is a matter of political and religious sensitivity. One might add cultural sensitivities as well since the desire for large families is traditional in much of Africa, as is the high value and premium put on children.

My experience in Africa and with Africans makes it clear to me that our population program in Africa is not a victim of our inability to deliver services; rather it reflects the rather low priority given by Africans themselves to our programs. It is for this very reason I have been trying to explore the possibility of initiatives in the population area which would be in sync with African cultural and religious sensitivities.

The Africa Bureau stands ready to assist any country which wants our assistance in projects which are sound and deserving of support by U.S. tax dollars.

## FOOD ASSISTANCE VERSUS POPULATION PLANNING

Senator Inouye: Does it make sense, on moral and ethical grounds as well as practical considerations, to provide food assistance to countries which do not encourage population planning? Is it not true that rapid population growth has such a negative effect on development that our assistance programs serve only to keep more and more people alive at a minimum level of existence?

Mr. Ruddy: As I mentioned earlier, some countries take the position that birth rates will fall as development proceeds. In Africa, the general perception of survival is still closely linked to the number of healthy offspring whose labor can be applied to the family farm. Labor remains the key scarce input in high risk farming systems. Until infant mortality rates begin to fall, the decline in per capita food production is reversed and more modern farming techniques can be introduced, there will be little noticeable impact in reducing fertility rates. It is the primary goal of every African nation to improve declining food production levels, and this is the centerpiece of the Africa Bureau development program.

Africans themselves must accept that they have a population growth problem; we cannot impose our judgment for that of the host country in development planning. The law requires that our assistance be administered in a collaborative style to support the development goals chosen by each country receiving assistance. The population question must be seen as a major concern by host governments themselves and not an issue which the developing world is imposing upon them as a condition for donor assistance. The Agency recognizes Congress' intent that development planning, including population control measures, is ultimately the responsibility of each sovereign country and that U.S. assistance shall support rather than dictate self-help efforts. In the meantime, as required by the Foreign Assistance Act, we have encouraged African governments to integrate population growth concerns into their development strategies and we are prepared to help them when requests for sound projects are received. A.I.D. has funded or plans to fund some type of population activities in 39 of the 48 sub-Saharan countries.

As we address the population issues facing LDC's, we are also addressing other constraints to development which are of equal concern. I am delighted to report that our programs directed at food assistance policy reforms are making an impact. Over the past two years, a number of African countries began to focus on the relationship between consumer-producer prices and producer output. Countries such as Ghana, Kenya, Liberia, Malawi, Mali, Niger, Senegal, Tanzania, Uganda, Zambia and Zimbabwe have increased producer prices for agricultural products. Tanzania has recently revised its pan-territorial pricing policy; Mali and Uganda have begun to remove state controls from food marketing and Kenya, Niger and Senegal are involved in making similar policy reforms.

## THE LIMIT OF CULTIVATION

Senator Inouye: You have noted that, in many areas, the limit of cultivation has been reached. Is Africa, as a whole, losing cropland through desertification, salinization, and other negative effects on arable land?

Mr. Ruddy: Salinity in soils is not a major factor causing loss of land because there are few irrigation projects in Africa, and where there is irrigation, the geography of the land where irrigation water originates is such that the water contains little or no salts and is not alkaline.

Desertification has occurred to a limited extent in the Sahel along the Sahara Desert because of overgrazing and periodic drought. This land can be reclaimed through careful soil and crop management by (a) selecting adapted crop species, (b) conserving water through improved crop husbandry, and (c) controlling grazing.

Two other major negative effects can be noted. One is population pressure which forces cropping of marginal lands (for example, Rwanda, Burundi and Kenya), as well as more intensive continual cropping without replenishment of soil fertility.

The second negative effect is continuous row cropping of lateritic soils in the high rainfall tropics (Nigeria) with the risk of excessive loss of soil through erosion and the degradation of soil tilth which, by affecting ease of cultivation and ability of plants to germinate, emerge and grow, can reduce yields up to 50 percent.

Senator Inouye: Food production increases, in the past, have been achieved by expanding the areas under cultivation. Since the limit of cultivation has been reached, is it likely that the decline in per capita food production will accelerate?

Mr. Ruddy: Limits to area of cultivation have been reached in some parts of Africa where clearing of additional land has been the traditional means employed for expanding food production to meet needs of population growth.

However, production of food can generally be increased in such cases by a transition to more permanent and intensive types of crop cultivation based on restoring soil fertility through a combination of natural and manufactured inputs. Better management of grazing lands is also a highly desirable way of increasing the efficiency of these resources in Africa. In addition, the potential for food production from clearing additional land in tropical Africa has been described by some authorities as very large. However, this potential is diminished in varying degrees by costs incurred in clearing land, controlling soil erosion and degradation, and settling agriculturalists on these lands.

Since the potential exists in Africa for food production to be expanded through both intensive and extensive land use practices, a decline in per capita food production would not be expected as long as farmers have adequate incentives to grow more food, and have access to improved technologies, adequate production inputs and suitable marketing services.

## POSSIBILITIES OF FAMINE

Senator Inouye: Is the margin of safety in Africa diminishing? That is, when rapid population growth, declining food production, and all other aspects are considered, is famine on a wide scale likely to occur?

Mr. Ruddy: Although unfavorable weather will no doubt continue periodically to create local and regional shortfalls in food production, the probabilities of famine occurring on a wide scale in Africa do not appear to be great over the near term, i.e., the next 10 to 15 years.

Over the longer term, however, the cumulative impact of population increases can be expected to outpace African food production if the downward trend in output per capita is not reversed. Accordingly, A.I.D., like the Africans themselves, continues to place highest priority on food and agricultural production and productivity in Africa, and has increased development assistance funding substantially for agriculture, rural development and nutrition projects. To direct this development assistance toward the goals of increased food production, the Africa Bureau's strategy aims to (1) encourage host governments to develop national policies that will give farmers adequate incentives to expand output; (2) assist in building self-sustaining institutions that provide appropriate technology, inputs and services necessary for effective production and distribution of food products; and (3) support institutional and human resources development programs that provide the means for greater participation by farmers in the development process.

## SAHEL DEVELOPMENT PROGRAM

Senator Inouye: The problems of financial management in the Sahelian countries were highlighted in a series of A.I.D. Auditor General reports last year.

What specific steps has A.I.D. taken to correct these deficiencies?

Mr. Ruddy: A.I.D. has reviewed all active Sahelian projects and found that 84 contain local currency components. Within these 84 projects, there were a total of 183 separate accounting stations which required review.

A.I.D.'s Controller staff, with assistance from contract personnel, have reviewed these 84 projects and, based upon the results of the review and corrective actions taken, our Mission Directors have certified the accounting adequacy of 70 projects. Fourteen projects are still under review and have not yet been brought up to minimally acceptable accounting standards.

Senator Inouye: Have these corrective measures been evaluated?

Mr. Ruddy: In May of 1982, A.I.D.'s Controller met in Senegal with each of our Sahelian Mission Controllers to review the certification process in detail. He reported to A.I.D.'s Assistant Administrator for Africa "that he believes that the Mission Director certification process may be relied upon as evidence of at least minimally adequate financial mangement systems -- as long as periodic follow up reviews are undertaken". We are continually monitoring projects to insure that there is no deterioration in the certified systems.

Senator Inouye: What training programs have been initiated?

Mr. Ruddy: A.I.D., in conjunction with the USDA/Development Program Management Center, has developed and is now conducting in the Sahel a financial skills training program for Sahelian project managers and accountants. The training sessions will have been conducted in each Sahelian country by the end of September 1982.

A.I.D.'s Controller staff is also providing on-the-job training for host country accountants in the operation and maintenance of certified accounting systems.

Senator Inouye: Do all new A.I.D. projects in the Sahel have financial management training components and other measures to insure that funds are effectively managed?

Mr. Ruddy: All new projects are being rigorously scrutinized to insure that when authorized they comply not only with the letter of the law (Section 121(d) of the FAA of 1961, as amended) but with the spirit of the law.

In June 1982, A.I.D. will authorize the Sahel Regional Financial and Program Management project which, for a period of three years, will provide the financial management training and other measures required to insure that funds are effectively managed and that host country capacity to adequately handle A.I.D. funds is improved.

## SUBCOMMITTEE RECESS

Senator KASTEN. The subcommittee stands in recess until Thursday, May 13.

[Whereupon, at 3:30 p.m., Tuesday, May 11, the subcommittee was recessed, to reconvene at the call of the Chair.]

# FOREIGN ASSISTANCE AND RELATED PROGRAMS APPROPRIATIONS FOR FISCAL YEAR 1983

---

THURSDAY, MAY 13, 1982

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
*Washington, D.C.*

The subcommittee met at 2 p.m., in room 1223, Everett McKinley Dirksen Senate Office Building, Hon. Robert W. Kasten, Jr. (chairman) presiding.

Present: Senator Kasten.

## AGENCY FOR INTERNATIONAL DEVELOPMENT

### BUREAU FOR NEAR EAST

### STATEMENT OF MRS. W. ANTOINETTE FORD, ASSISTANT ADMINISTRATOR, BUREAU FOR NEAR EAST, AGENCY FOR INTERNATIONAL DEVELOPMENT

### ACCOMPANIED BY CHARLES W. JOHNSON, DIRECTOR OF THE OFFICE OF DEVELOPMENT PLANNING FOR THE NEAR EAST BUREAU

### INTRODUCTION OF WITNESSES

Senator KASTEN. The subcommittee will come to order.

This afternoon we will continue our hearing on AID's budget request for fiscal year 1983. Our first witness is Antoinette Ford, Assistant Administrator, Bureau for Near East, who will present testimony in support of the administration's request for that region.

This will be followed by testimony in support of the centrally funded program, and the witnesses will be Dr. Nyle Brady, Senior Assistant Administrator for Science and Technology; Julia Chang Bloch, Assistant Administrator, Bureau for Food for Peace and Voluntary Assistance; and Elise Du Pont, Assistant Administrator, Bureau for Private Enterprise.

Mrs. Ford, your entire statement will be included in the record, and in the interest of time if you could summarize it a bit, then we will go to questions.

Thank you for your help on a number of different questions and problems, and I am sure we have not gotten all of them solved. I am happy to have you here today.

### SUMMARY OF STATEMENT

Mrs. **Ford**. I do appreciate the opportunity to take this time to express our appreciation for being able to work with you in the past. We look forward to our continued relationship.

In the formal statement, which has been submitted to the committee, we are today requesting $1.963 billion in Economic Support Funds and $45.4 million in Development Assistance Funds.

Under a different appropriation we are requesting $323.3 million in Public Law 480, titles I and II, planned for countries in the region. I have these figures broken out by specific countries in the statement.

I am prepared to answer any questions that you might have on the countries in the region.

### PREPARED STATEMENT

Senator **Kasten**. Thank you. Your prepared statement will be inserted in the record at this point.

[The statement follows:]

# PREPARED STATEMENT OF W. ANTOINETTE FORD

ASSISTANT ADMINISTRATOR

BUREAU FOR NEAR EAST

Mr. Chairman, I am pleased to be here today to support the President's request for economic assistance funds for countries in the Near East Region. We are requesting $1963 million in Economic Support Funds (ESF) and $45.4 million in Development Assistance funds. Attached is a table summarizing our request. Under a different appropriation, $323.3 million in Public Law 480 Titles I and II is planned for countries in this region.

For the Middle East, we are requesting $1,593 million in Economic Support Funds. This includes $750 million for Egypt, $785 million for Israel, $20 million for Jordan, $8 million for Lebanon, $15 million for Oman, $6.5 million for the West Bank and Gaza, $8 million for Regional Cooperation and $500 thousand for other regional activities.

U.S. interests in the Middle East are clear. The Administration's overriding goal is to help bring peace and security to the region. Our economic assistance programs are an essential element of this policy.

## Egypt

To help support the economic progress in Egypt, we are requesting for fiscal year 1983 $750 million under the Economic Support Fund, the same basic level as in recent years. In addition, $271.3 million is planned under PL 480 -- $250 million under Title I/III and $21.3 million under Title II. We are proposing that two-thirds of the resources made available under the Economic Support Fund be provided as grants ($500 million). The balance of the Economic Support Fund resources ($250 million) and the PL 480 Title I would be provided as loans payable over a period of 40 years, including a ten year grace period. Interest on the loans would be two percent during the grace period and three percent thereafter.

The Administration's request for Egypt is best understood in the context of the quest for peace and security in the Middle East and the rapidly changing, sometimes volatile, political and economic scene there. The assassination of President Sadat was a shock to the Egyptian people and to the world. The orderly succession of President Mubarak was reassuring, but he has inherited an economy beset with significant problems. President Mubarak has already initiated a broad and open discussion of the country's social and economic goals and priorities as well as the options available to achieve them. He has quickly reaffirmed the economic principles underlying President Sadat's "Open Door Policy" while simultaneously asserting that the ultimate purpose of increasing investment and hence productivity is to meet the needs of all Egyptian people. Attendant with this statement of Egyptian policy is the implication that sacrifices may be required to achieve the goal. We welcome President Mubarak's statement of the goal as well as the Egyptian willingness to seek new thoughts and ideas about how it can be achieved. Still, it should be recognized that the process of sorting out priorities, examining the trade-offs between current consumption and future productivity, and the many other difficult problems which confront the Egyptian economy will take time to resolve.

The Government of Egypt's introspective examination of its economic problems is timely. During the last year, the economy suffered several shocks in addition to the death of President Sadat. First, there was a world-wide softening in the oil market which forced Egypt to lower its export prices. While Egypt was able to protect its export market, lower prices have reduced anticipated foreign exchange earnings. In the near term, there is no basis for expecting a recovery of oil prices, Second, non oil exports declined in real terms, as apparently did receipts from tourism and worker remittances from abroad based upon preliminary data. Data concerning these last two items, combined with significant changes in government foreign exchange regulations, resulted in a sharp jump in the demand for foreign exchange and, hence, an open market exchange rate discount of 20 percent of the new rate. Third, domestic inflation appears to be mounting significantly faster than the official, overall rate of 10 percent, especially for non-subsidized items. Fourth, it is likely that domestic inflation is being fueled by a growing budget deficit and, concomitantly, an apparent rapid growth in the money supply.

Even though real growth of the economy approached 9 to 10 percent in the past year, signs of significant weakness are evident. Large segments of the domestic manufacturing sector are not competitive with imports. Domestic price controls, administrative controls on output, restricted access to credit, an underemployed labor force, and drastically underpriced inputs, e.g. energy, skew the allocation of resources in ways which will not serve the long run needs of the Egyptian development effort.

Over the longer term, sustained economic growth and high levels of foreign exchange earnings will depend in large measure on Egypt's success in rationalizing its industrial and agricultural investment policies to move from capital and energy intensive industries to export-oriented labor-intensive industries. In order to make these investment decisions on a rational basis, the pricing system should be altered to reflect market scarcities.

The reforms can be carried out while at the same time maintaining Egypt's commitment to protect and improve the standards of living of its poorer citizens. The task now is for Egypt to make the policy choices to promote growth, efficiency and equity in the Egyptian context.

During President Mubarak's State visit to the United States in February he sought assurances from the Administration that the U.S. would do its best to provide economic assistance in ways which would be responsive to Egyptian needs and which would also promise more expeditious implementation.

The assurances were provided in the form of an agreed statement of principle between the U.S. and Egyptian governments. It marks the beginning of a dialog to enhance the understanding between our two governments on Egyptian economic goals, policy reforms, sectoral strategies, more effective implementation and the ways in which U.S. assistance can help Egypt realize its considerable potential.

As it completes its sixth year since resumption of U.S. assistance, the A.I.D. program has attained considerable momentum. Total FY 1981 program disbursements were $1,027.1 million, nearly equalling obligations ($1,132.9 million). The most impressive FY 1981 gains were in project disbursements, which at $350 million were up 75% over FY 1980. Higher disbursements resulted from a variety of factors, including the increased use of quicker-disbursing program implementation modes, the maturation of a number of large capital projects, and greater attention to implementation by the Government of Egypt and A.I.D.

A.I.D. program results are increasingly visible in such areas as electric power generation and distribution, village infrastructure, telecommunications, port capacity, commercial transport, urban water and sanitation systems, and an expanded population program which is building on accelerating acceptor rates in both urban and rural areas.

In FY 1983 expenditures will exceed obligations by an anticipated $150 million. The overall pipeline, however, remains substantial -- $2.5 billion at the beginning of FY 1982. While the pipeline largely represents reservations of funds for contracted costs of capital projects now in implementation and on schedule, the pipeline also reflects the existence of some projects experiencing delays in final design or in execution. These latter projects are the subject of intensive dialogue and investigation by our mission in collaboration with Egyptian authorities.

Our FY 83 program of economic assistance to Egypt represents a combination of short-term economic stabilization efforts and longer-term activities aimed at developing self-sustained growth with equity. The main components of the Economic Support Fund program are: $250 million Commodity Import Program to help assure the availability of essential raw materials and capital goods for industry and agriculture, some consumer items and to replenish the Trade Financing Facility; $85 million to increase industrial production and productivity, especially in the private sector; $154 million for infrastructure, including water and sewerage, and a new activity to expand the role of the private sector in housing; $35 million for a new agricultural activity based upon the 1981 evaluation of Egypt's research and extension services and the current review of Egypt's agricultural growth opportunities by a U.S. Presidential team; $98 million to finance the on-going portfolio of decentralization projects; $50 million for two continuing education projects; $50 million for new health and family planning activities to follow current sector assessments; and $28 million for other priority concerns, including manpower planning and development, technology transfer and feasibility studies, and an energy planning activity.

## Israel

For Israel in fiscal year 1983 we are requesting $785 million. Two-thirds of the $785 million in Economic Support Funds is requested as a grant ($525 million). The remaining one-third ($260 million) is proposed as a concessional loan with a ten year grace period followed by a thirty year repayment period. Interest will be at two percent during the grace period and three percent thereafter, highly concessional terms. Together with the proposed FMS credits U.S. economic assistance for FY 1983 tangibly reflects our commitment to support Israel, thereby encouraging it take the further risks necessary to achieve lasting peace in the Middle East.

Despite many serious problems, in particular the redeployment of military units from the Sinai, the continuing large oil import bill, and economic stagnation in Western Europe and North America, Israel achieved notable economic success in 1981. All major components of GNP grew impressively. At the same time, the rate of inflation dropped to 102 percent, still much too high, but an improvement over the 111 and 133 percent rates recorded in 1979 and 1980, respectively. Exports were up 5-6 percent over 1980, while civilian imports increased at a slightly higher rate. Overall, the non-defense goods and services deficit was probably between $2 and $2.5 billion as compared with $2.1 billion in 1980. Further, since Israel's foreign exchange reserves continued to grow in 1981, it may be inferred that net capital flows were sufficient to finance the current account deficit and the amortization of Israel's external debt.

Despite the progress achieved in 1981, Israel's basic problems remain unresolved. It must find a way to contain inflation and at the same time restore equilibrium in the balance of payments, and it must achieve these objectives without massive unemployment.

As in the past, the ESF cash transfer program will be implemented on the assurance from Israel that it will import non-defense goods from the U.S. in an amount at least equal to the cash transfer level and that Israel will follow agreed procedures for selecting dry bulk carriers to ship grain.

## Jordan

In fiscal year 1983 we are requesting $20 million for Jordan in Economic Support Funds, the same amount originally requested for FY 1982. Of this amount, $15 million would be in the form of loans, with a twenty year repayment period, appropriately reflecting Jordan's "middle income" status. Over the past five years real growth in Gross Domestic Product has averaged 9 percent per annum. Jordan continues to enjoy an overall balance of payments surplus, stemming from worker remittances, strong export performance and economic assistance provided under the Baghdad Agreements (amounting to about $1.2 billion annually).

Water remains Jordan's priority development problem. Per capita daily consumption, approximately 50 to 60 liters per day, is well below the World Health Organization minimum-safe health standard of 80 liters. Supply and distribution must be expanded, and use, including reflows, intelligently and conservatively managed. In FY 1983, $17 million of the $20 million requested will be used for construction of water and sewage systems for the towns of Karak and Ma'an as well as technical assistance to the national water authority. These three projects are part of a country-wide development plan for urban water and sewage services to deal with problems derived from rapid urban growth. The balance of $3 million proposed for FY 1983 is planned for the Development Administration Training III project to finance the training of Jordanians in the United States.

## Lebanon

Political discord and violence continue to plague Lebanon. The central government continues to seek national reconciliation and to extend its authority throughout the country, but a variety of illegal armed groups and militias are reluctant to cooperate and frustrate the government's efforts.
